There is one feature of this subject that is peculiarly gratifying to me, and I heartily thank Mr. Francis for the article in question. It conceals the fact that fish, having eyes, can see, and that the strange light tints which they are said to have would have no effect, if they could not be put in a stronger light than by the assertion that they are frightened at the flashing of a varnished rod, and that a rod, therefore, should be rendered as nearly invisible as possible against the sky by painting it a sky-blue or cloud color. But if this were done, what a quantity of fish would be lost! The multitude of sins of omission and commission which would this sky-blue mantle, like charity, cover. When fish are frightened at a fishing-rod at all, it is when its shadow is suddenly cast upon the water—which all prudent anglers are very careful to avoid doing, especially on small streams—and, viewed in this light, a sky-blue rod has no advantage, a fancied advantage, and is most decidedly a dis-advantage.

Cynthiana, Ky., March 19th.

TROUT FISHING IN CONNECTICUT.

IT was two o'clock one mild morning in the latter part of April, 1878, when my alarm clock called me from my slumbers for a day's trout-fishing. In about three minutes I was under the window of my neighbor sportsman calling him to action. Before I could get my steak broiled and coffee boiled, he was on hand. Breakfast over, we quickly left the house again in quiet and darkness, taking with us all the paraphernalia of our craft, including a substantial lunch and a jug of coffee.

A feeling of satisfaction came over us as we climbed the hills, and passed out of our village. We were leaving Rockville, in Tolland County. Its score of factories were at this early hour all quiet, its 6,000 busy people at rest. The Hockanum River, which flows from Snipsic Lake though the place, is but a succession of mill-ponds,

We were scarcely out of Rockville when Snipisc Lake appeared in view in the faint gray dawn of the morning. This lake is a favorite resort for fishing and picnicing. Its waters are well stocked with black bass, perch and pickerel, and the State Commissioners have furnished several thousand land-locked salmon, which seem to do well there. One of the salmon recently caught weighed four pounds. A little steamer, owned and run by Capt. Fred H. Thompson, plies around the lake during the summer months, and Capt. Thompson has cleared a grove and built a picnic resort, where shore dinners are served.

Then we passed through Tolland, across the Williamantic River, and at length brought up on one of its eastern tributaries. By the time our team had been cared for, the sun was over the hills, and we felt somewhat of the spirit of the old gentleman who, when he was ready to go to the trout-brook, used to say: "Now, the man who can drink the fastest, take the reins." We hastened to get on our feet, and in a few minutes had a little nap, below which many years since there stood a little mill. The partly broken dam yet holds back a little body of water, and the good will of the owner long ago made obsolete the sign "No fishing," which still adorns the old water-gate. We tried such flies as are likely to suit the caprice of the fish early in the season, but to no avail; yet our disappointment was largely tempered by

the knowledge that in the bottom of our pockets were two boxes of well-soured worms, brought along for just this state of affairs. From past experience we know that school of young trout taking the morning feed where the brook runs into the pond. We wound our flies around our hats, after trying them till our consciences were satisfied, and placing on our leaders some hooks and snells which we had tied and colored with especial care, we baited well and casting both our lines at just the place where the last ripple of the brook's current was visible in the pond, found the fish at breakfast. Forgotten was every care and trouble of life, and the years of toil that have left more grey hairs than dollars. A tremor of pleasant excitement played through every nerve, and we felt only pity for the man who sees no sport in fishing. The trout continued to take the bait till a baker's dozen of plump fellows, running from half a pound down, lay in our baskets. Then they ceased to bite and we could secure no more there. After taking out two more from under the old flume, we fished the brook down, through the weeds, taking now and then a trout and enjoying to its full the beauty of the spring day, and all the sights and sounds such a day brings. Every ray of sunshine seemed to bring health and vigor after a winter of confining labor.

As we enjoyed our noon lunch and cigar in the forest beside a miniature cascade, we seemed to be as far removed from the haunts of men as if in the wilds of Maine. Then we fished back up the brook, and tried the pond again in its deepest part. Following our usual practice, we started for home in time to avoid the darkness and chill of the evening. Our united basket counted twenty-eight and weighed about seven pounds.

The farmers in this section, as well as elsewhere, do not look with much favor on any sportsman they do not know; but the man who has by fairness and courtesy gained their esteem, will find the farmers of Tolland County as hospitable and as cordial as any class of men he meets. In many instances the only way I have been able to repay the kindly services I have received, has been by presents that were accepted as tokens of good will, rather than as pay for entertainment and information. Under such kind and generous treatment the farmer's boy will give away his choicest secrets, will walk miles to feel the snail that feeds on his father's meadow, the best "trout hole" in the river, or the little meadow brook where he caught or saw some "big ones like those in your basket."

The basket of trout mentioned above is as heavy as one may ordinarily expect to take in a day, and often he will have to be content with his basket half as full. Yet we think that it is more satisfactory than to incur a considerable expense in time and money to visit some distant section, even where the trout are expected, and the question is not how many can we take, but how many can we use. The air of our hills is just as health-giving as any, and if our game and fish are less plenty and more difficult to capture, there is the more pleasure and satisfaction in their successful pursuit for that very reason. From April 1st to July 1st is now the open season in this State, but most of the trout are taken between April 15th and June 15th. Before the season opens, the snow of the past winter and the abundant supply of water for the past year, there is a good prospect of sport this season.

The Kennel.

NEW YORK DOG SHOW.—EXPRESS ARRANGEMENTS.—*Editor Forest and Stream*.—As the express companies have agreed to return all dogs free that have been exhibited at this show, provided they have prepaid the usual rates charged by the different companies, I beg to suggest to exhibitors sending dogs to have them addressed carefully.

It is necessary that a chain and collar should accompany each dog. A competent and trustworthy man will be specially detailed off for all dogs coming by express, who will be provided with a sufficient number of attendants at this show, provided they have prepaid the usual rates. The entries close on the 12th of April; but as it greatly facilitates arrangements, exhibitors will confer a favor by sending them in as early as possible before that time.

The prospects for a great and good show continue to increase.

CHARLES LINCOLN, Superintendent.

We understand that Sir William Verner, Bart., will send out several of his crack dogs—bulldogs and bull-terriers—to the coming show, the great bull-terrier Tarquin being among the lot. Tarquin was bred by Mr. Vero Shaw, of England. The third edition of the "Dogs of the British Islands," by J. H. Walsh, Esq. (Stonehenge), contains a portrait of this noble dog. The entries up to date are very much larger than they were last year. The show promises to be a very large one.

A GLADSTONE PUPPY.—*Jackson, Miss., March 16th.*—Poor Otto was about eleven months old when he died. A better puppy it was never my privilege to see—well trained, dropping to shot or retrieve, and behaved beautifully in the field, and I held him as old dog, and he was, no pottering. Otto was the writer's choice of three puppies, the other two being a Joe, Jr. puppy (Tim), and a highly bred lemon and white bitch puppy (Cosette), presented to the owner by a gentleman in Tennessee. The owner of the three puppies, Mr. F. J., worried because Otto would not retrieve, hence used the force method. The puppy, before he was at all broken to fetch, was to flush in the field, and retrieve the first bird he made over him as only the best retriever can do. Ever after he would disdain to fetch anything but a bird. Mr. J. and a friend, Mr. Archie, were hunting over Otto and Cosette one day. Having a covey of birds scattered, Otto came to a point. "Now, Mr. Archie," said Mr. J., "take that shot." Mr. Archie, an elderly gentleman and the best man in the woods, walked up, kicking the grass to flush the bird; up jumped an old hare, and made freely tracks up the hillside; Mr. Archie looking after the hare as she showed him her white tail disappearing over the crest of the hill, and Otto still at a stanch point. "Well," exclaimed Mr. Archie, "that is a stanch point on a hare, and where the hare has been, Why,

Frank, come here. What is the matter with Otto's eye?" Mr. J. came up and discovered a spot of mud entirely covering the dog's eye. He took his coat-tail and wiped Otto's eye as well as he could. The puppy replied, stretched out to his old point. "Well," said Mr. Archie, "that is the stanchest point I ever saw for a puppy—where a hare has been. Come, Otto, old man, that is very beautiful, but it will never do to stay on Molly Cottontail's bed in that way. Why, old fellow, she has gone long ago." Mr. Archie patted the puppy, turning him clean around, still at the point. "Well, this is the most remarkable thing I ever saw," said the elderly gentleman, kicking the grass in front of him. "See here, old man, there is nothing here; come away." Otto still held his point until Mr. Archie had kicked the grass far enough, and a covey of birds arose. To the credit of the elderly gentleman, be it said, he shot once and bagged his bird.

Otto is dead, and with him the promise of one of the best dogs that ever hunted a field. He died, I am afraid, of a mistaken diagnosis of his case. He was sick, but what his ailment was I could not tell. His owner feels his loss keenly. Otto was black and tan, with a white tip to the tail and a narrow white frill on the breast. The only fault I over found with him was a somewhat unusual length of tail. Hope my friend will get Otto's matchsoon.

GEO. C. EYRICH.

IMPORTED SKYE TERRIERS.—Mr. Hume, of the Eastern Shore of Virginia, has just returned from England, bringing with him a pair of genuine sky terriers. The dogs will probably be forthcoming at the New York show.

IMPORTED SETTERS FOR THE MONTVIEW KENNEL CLUB.—The steamer *City of Richmond*, which arrived here on the 9th inst., had on board three very promising young setters from the kennel of Mr. G. T. Teasdale Buckell, of Alford, Lincolnshire, England, from whom Mr. Dew has received quite a number recently. Mr. Dew purchased these beauties from Mr. E. Leewellin, and they were consigned as usual to Mr. E. B. Goldsmith, of 58 Wall street. The setters arrived in good condition, and are as follows: Dashing Rascal, by Dash II., out of Norton; Count Nailer by Count Windsor, out of Norton; Dashing Plover by Dash II., out of Phantom. The dogs were at once shipped, per Adams Express, to Columbia, Tenn., where they arrived safely.

EXERCISE CHAIN WITH TRAVELER.—*St. Leonard, P. Q., March 20th.*—Every dog should be exercised daily, but many dog owners find it impossible to give the necessary exercise to their dogs. The best way to tie up all day. If a dog is too valuable or savage to be allowed to run loose, I can recommend the following plan as giving the dog more liberty than he has when tied up in the usual manner: Get a piece of telegraph or fence wire, the longer the better; slip on it a strong iron ring, so as to run freely along the wire; set two stout posts in the ground about fifty feet apart or longer; let the tops of the posts be only about six or eight inches out of the ground; fasten securely the ends of the wire to the tops of the posts by strong staple or through hole bored in the posts near the top; round off the rough edges of the posts at the top so that the dog's chain will not be likely to catch in anything. You can then fasten your dog's chain to the ring sliding on the wire, and he will have the full run of the distance between the two posts, and for the length of his chain on either side of the wire. The dog's chain should have a swivel, and the wire must be examined to see that there are no flaws or breaks in it. The reader will see at once that this plan can be altered to suit the surroundings; the wire may be stretched like a clothes-line or from fence to fence. Watch dogs do very well so chained, as they can be given the run across a large garden or orchard.

HEMLOCK.

The above excellent arrangement is worthy of the attention of all dog owners. By using a high-stretched wire and a chain of short length, dogs after being washed will be prevented from rolling until thoroughly dried, and yet be allowed to exercise enough to prevent catching cold.

ESSEX COUNTY HUNT, LATE MONTCLAIR HUNT.

The fifth hunting season of the Essex County Hunt of New Jersey has opened most auspiciously. The first meet was announced for the 20th inst., at the kennel at Montclair, N. J., and the second yesterday, at the main entrance at Llewellyn Park, near Orange, N. J. The subscription plan, which was adopted last season, has met with great success, and, in fact, the interest manifested in all parts of the county has led to the adoption of the new name.

It is hoped that those who are interested in the encouragement of the sport of fox-hunting, but who have taken no active part in the hunt, will now come forward and give the support that this healthful and invigorating pastime so well deserves.

The services of Mr. Harry Howard as huntsman have again been secured, and this, with an addition to the pack of fox-hounds, should attract a still larger attendance of ladies and gentlemen at the meets. It is particularly desired that there may be seen in the field a larger attendance of land-owners—particularly the young farmers—for the sport is one that should be made peculiarly their own.

Weather permitting, the meets will take place twice a week, in accordance with the following list of appointments:—

Saturday, March 27th, at 4 P.M., at Mr. N. Sullivan's, Montclair.

Wednesday, March 31st, at 4 P.M., at Llewellyn Park (main entrance).

Saturday, April 3d, at 4 P.M., at Verona Post Office.

Saturday, April 10th, at 4 P.M., at the Common, Bloomfield.

Wednesday, April 14th, at 4 P.M., at Mr. William F. Kidder's, East Orange.

Saturday, April 17th, at 4 P.M., at the Hamilton House, Paterson.

Wednesday, April 21st, at 4 P.M., at South Orange.

Saturday, April 24th, at 4 P.M., at Llewellyn Park (main entrance).

The hunts are open to every one, and all attending the

meets will receive a hearty welcome. Frederick M. Wheeler is master of foxhounds. The following are the officers of the Hunt, and the list of well-known subscribers:—President, Mr. C. W. Nason; Vice-President, Mr. C. A. Heckscher; Secretary, Mr. H. N. Munn; Treasurer and Master, Mr. F. M. Wheeler. Subscribers:—Messrs. C. W. Nason, F. M. Wheeler, N. Sullivan, Dr. J. W. Pinckham, William H. Power, of Montclair; A. Vanderbilt, J. A. Blair, C. A. Johnson, of New York; C. A. Heckscher, D. Robinson, F. E. Martin, E. P. Thurnham, of Orange; H. N. Munn, George Lethbridge, Alexander Hudnut, Llewellyn Park; William F. Kidder, of East Orange.

WORMS IN DOGS.—*Toronto, Canada, March 14th.*—I don't say it is a specific, but once, by accident, a dog of mine eat heartily of a curry and voided a lot of worms. Another time, in camping, seeing the coat starting, and other symptoms—no areca nor santonin being at hand—I administered a dose of "India Curry Powder" with marked and good effect. When other remedies fail, or are not at hand, this might be tried. Probably the curry acted as an irritant, in the two cases quoted; but would have no effect on dogs of a different constitution.

H. B. H.

It is remarkable for a dog to eat curry of his own accord. Your view is undoubtedly a correct one, as the curry powder contains capicum.

BARE SPOTS ON DOGS.—*St. Leonard, P. Q., March 14th.*—In your "Answers to Correspondents" I often see people asking for a recipe to make the hair grow on bare places on dogs. Now I have tried coal oil frequently on cuts and wounds, and I always found the cut to heal cleaner, and the hair to grow quicker and smoother afterward on wounds so treated, than by any other way I have tried. I own a very quarrelsome bull-terrier, accustomed to follow my buggy, and I often have occasion to borrow the oil-can at farmers' houses along the road. A friend of mine had a very old cat that had lost most of its hair from old age. He tried the coal oil, and after some application the cat commenced to grow again, and soon puss had a fine and glossy coat as ever. I may mention that the cat, decidedly objected to the whole business, and was very lively for a day or two after being rubbed.

HEMLOCK.

KENNEL NOTES.

NAMES CLAIMED.—*Nelle II.*—Mr. C. F. Huntman, of La Crosse, Wis., claims the name of Nelle II. for his red Irish setter bitch out of Mr. Geo. B. Claxson's Queen, by Mr. E. C. Waller's Race. Nelle II. was whelped July 10th, 1879, and is now in the kennel of T. M. T. McKennan, of Toledo, Iowa.

Floss II.—Dr. H. B. Vignart, of Poekskill, N. Y., claims the name of Floss II. for his liver and white cocker spaniel bitch, whelped Feb. 6th. Presented by Mr. J. B. Harrington, of Buffalo, N. Y., out of his Floss, by Mr. Battey's Con.

Ray, Bessie and Poets.—Capt. Chas. B. Yeld, U. S. A., Fort Davis, Tex., claims the following names for his pointer puppies, whelped Nov. 1st, 1879, by Scent-Daisy II.—Sensation out of Poets, Whiskey-Sleatford.

Punch.—Mr. John Aspinwall, of Barrytown, N. Y., claims the name of Punch for his Irish water-spaniel dog, out of Judy by Mack, whelped Feb. 1879.

Judy II.—Mr. John Aspinwall claims the name of Judy II. for his Irish water-spaniel bitch, out of Judy by Mack, whelped Feb. 1879.

Moj.—Mr. Frank L. Morrill, of New York City, claims the name of Moj for his red Irish setter-bitch puppy, by Berkley out of Rockwood's Mack, she by Elcho out of Fottier's Ellen.

Jewell.—Mr. Garrett Roach, of this city, claims the name of Jewell for his liver and white pointer-bitch puppy, by Sensation out of his Queen II. Bred by Mr. Roach, whelped Sept. 21st, 1879.

Chum.—Mr. George Van Wagen, of New York City, claims the name of Chum for his liver and white pointer-dog puppy, by Sensation out of his Garrett Roach's Queen II. Bred by Mr. Roach, whelped Sept. 21st, 1879.

Gen.—Mr. George Van Wagen, of this city, claims the name of Gen for his liver and white pointer-bitch puppy, by Sensation out of Mr. Garrett Roach's Queen II. Bred by Mr. Roach, whelped Sept. 21st, 1879.

Pat Ryan.—Mr. N. Blmore, of Granby, Conn., claims the name of Pat Ryan for his red Irish setter puppy, whelped Oct. 23d, 1879, out of Hiddy sired by Red. Pat was presented to Mr. Elmore by Mr. L. B. Jewell, of Hartford, Conn.

Holla Wildair.—Mr. Burr Hollis, of Hornesville, N. Y., claims the name of Holla Wildair for his black and white cocker spaniel stud dog, whelped at the Topeka Kennel, Kansas, Dec. 7th, 1878, out of Waddell's Josie by Whitman's Doctor.

Topey N.—Mr. Burr Hollis, of Hornesville, N. Y., claims the name of Topey N. for his pure liver and tan Burdette cocker bitch, whelped Nov. 20th, 1879, out of Waddell's Belle by Waddell's Beau.

Holla Meado.—Mr. Burr Hollis, of Hornesville, N. Y., claims the name of Holla Meado for his liver and tan cocker bitch, whelped Oct. 20th, 1879, out of Fellow's Fanny by Hollis Wildair.

WHEELS.—*Jennie*—Mr. W. Tallman's field trial winner Jennie whelped on the 31st. four dogs and five bitches, by Mr. Samuel Scranton's Patch. The puppies are all black and white and very handsomely marked. Mr. T. intends raising and breaking a pair of the bitches for his own use.

Rhine.—Mr. Thos. A. Addison's (Chelsea, Mass.) red Irish setter bitch Rhine (Elcho-Juno) whelped on 14th inst. eleven puppies (seven dogs, four bitches), by champion Berkley.

Psycho.—Mr. W. M. Tilton's English setter bitch Psycho (Col. Fennell's Frank-Khoda) whelped on 10th inst. at Westminster Kennel Club Kennels, Babylon, L. I., five puppies (two dogs and two bitches living); sired by Mr. Godfrey's Decimus Dash. Psycho was imported in litter, and her dam Khoda is litter sister to Mr. Macdonald's celebrated dog Rango.

Pat.—Mr. M. Tilton's clumber spaniel Puppy (Duke-Tio) whelped on 15th inst. at the Imperial Kennels, Poms River, N. J., two dog puppies; sired by owner's imported clumber spaniel Trembeck.

Girl.—Mr. R. T. Greene's Jersey City Heights, N. J.) pointer bitch Girl (Maryland-Tell) whelped March 18th eleven puppies (seven dogs and four bitches), by Mr. W. F. Steel's Glenmark (Ogil's Rush-Rump).

Bell.—Mr. S. Wilbert's cocker spaniel bitch Belle whelped Jan. 22nd, by Mr. Andrew Dunn, Jr., of the Union Square Hotel, and Mr. John B. Matthews, the celebrated comedian, are the recipients of valuable prizes from the progeny.

ZRL.—The Massachusetts Kennel Club's (Boston, Mass.) black and

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INTELIGATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 322.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted. No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 25, 1888.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

•We cannot be responsible for dereliction of mail service if money remitted to us is lost.

•Trade supplied by American News Company.

REMOVAL.—On or before May 1st the FOREST AND STREAM will remove into its new offices in the Times building, Nos. 39 and 41 Park Row.

GAME AND FISH RESORTS.—We have been much gratified at the courtesy of numerous friends who have so kindly responded to our request for specific information of fishing and shooting grounds. The season when such information will be put to practical use is now rapidly approaching; and we again call attention to the scope and usefulness of our plan.

The office of the FOREST AND STREAM has long been recognized as the right place at which to apply for directions to the various sporting localities of the country. To make the information thus sought fresh, accurate and reliable we are compelled, in turn, to urge our correspondents and friends all over the land to give us the results of their personal experiences. By receiving such reports, filing them away here and there, transmitting them to others whom they may benefit, we are constantly rendering an invaluable service to the great body of sportsmen.

The managers of various railroads which may pass through good sporting country, the proprietors of summer hotels and residents in game districts will find it greatly to their own interests to transmit to us at an early date such particulars as are designated in our Game Bag and Gun columns.

The spring trout fishing opens in this State, in Pennsylvania, Connecticut, Massachusetts, Virginia, Minnesota and California next Thursday, and at that time the army of anglers will go forth to the streams. Early reports for the FOREST AND STREAM Directory will be duly appreciated by those who avail themselves of the same.

—Do not fail to inspect the display of trout at Mr. Blackford's stand in Fulton Market next Thursday. Next to going out to the trout streams, will be the pleasure of lingering over the beauties to be seen there. The American Fish Cultural Association is happy in the appointment of its annual meeting this year at such a time that the members may avail themselves of the pleasure of examining the rare collection.

—The party who have in charge the American exhibit for the Berlin Exhibition sailed last Saturday from Hoboken in the steamer Neckar. Too much credit cannot be given to Prof. Goode, upon whose shoulders in a great measure fell the task of collecting and arranging the proposed display, and to whose energetic labors the excellence of that display is largely due.

THE NEW YORK BENCH SHOW.

THE entries for the coming bench show of the Westminster Kennel Club are coming in much more rapidly than at the corresponding period of any other exhibition; and there is every promise that the number of animals and the general excellence of the various classes represented will surpass any previous show. The rapid advance in quality of the dogs now presented for competition at the exhibition of the Westminster Kennel Club is very marked. Many dogs, which in the earlier history of bench shows would have received awards or high mention, fall short of such honor because the standard of excellence has advanced. Certainly no agencies have contributed so appreciably to the breeding of fine stock in America as the bench shows in various parts of the country. They have had in their peculiar field the same good effects as those which have followed the annual cattle shows and other competitive exhibitions of live stock.

The Westminster Club has been largely influential in directing popular taste in canine matters. For instance, among pet dogs the much and justly-abused Spitz, once so common and fashionable, was ignored by the Club at its first show, and at subsequent shows. The consequence is that the Spitz has long since deservedly lost caste, and his place is filled by other breeds of pet dogs. We shall not now attempt to speak of the increase in the number of the various classes of pet dogs and sporting dogs now owned in New York, the direct result of former bench shows, for we have not the statistics before us; but this increase is both noticeable and highly encouraging. Doubtless a similar effect has followed the exhibitions of Boston, Philadelphia, Baltimore and St. Louis.

In the selection of judges the committee have been very happy this year. Messrs. Hammond and Wise are well known to all interested, and the gentlemen from abroad need no commendation from us. Dr. Gordon Stables has made special study of the classes which he is appointed to judge, and as a judge at bench shows Mr. Hugh Dalziel has a well-earned reputation for honesty, straightforwardness and impartiality. Competition is keen in the judging ring nowadays; many owners press forward their favorites for the first prize; and the judging must be not only by experts, but by experts who are unprejudiced and impartial. We may at this early day premise that the assignment of the awards will give satisfaction, not to all—that will never be possible—but to the great majority of exhibitors and visitors.

THE NEW YORK STATE TOURNAMENT.—It is a foregone conclusion that the approaching Sportsmen's Convention, to be held at Seneca Falls under the direction of the Seneca Gun Club, will be a grand success. The prize list, although not yet completed, figures over \$3,000. A very generous response is being made by the citizens of Seneca Falls for the purpose of adding a citizens' purse, and the prospects are that the present prize list will far exceed any before offered at a State convention. Reports from the West contain favorable news for an early catch of birds, and there is little doubt of their being secured early. The location of the grounds has not yet been decided upon, but the committee have several in view, any one of which would be excellent. From all parts of the State comes news of new clubs organizing, with the intention of joining the association. There is every reason to hope for an early meeting, and with the renewed interest manifest among the Long Island sportsmen, and intentions expressed from members in Central and Western New York, there can be no reasonable doubt but that the 1888 convention will be the largest ever held.

NOTES.—It is an excellent plan while in the woods to keep a diary, in which each night the incidents of the day may be jotted down more or less fully. The roughest and most incomplete memoranda are better than none at all. Memory is a very capricious faculty of the mind; it responds readily to suggestive notes or tangible mementoes. By means of a few written notes it is possible to bring back almost a complete picture of the entire vacation trip, as pleasant in its recollection as in its actual experience. A worthless bit of bark, a feather, a fur tip, or a flattened bullet, and the numberless little odds and ends of camp-life, preserved by chance and of no intrinsic value, may yet possess in their suggestiveness a worth which renders them more precious than trinkets of silver and gold. The trophies of the hunt, adorning study or dining-room, are naturally objects of pride as evidences of success in the field; but there is a much higher gratification in thinking over the thousand and one incidents and experiences connected with them and brought back to memory by them. If we can find sermons in stones, and books in the running brooks, a cabinet of the nick-nacks of camp life contains material for whole volumes of reminiscences.

We had a most pleasant call last week from "Penobscot," whose frequent contributions to this journal have done so much to interest and instruct their readers. Mr. Libby returns from a four years' residence in Nevada to his home in Maine. Next fall he proposes to make an

extended trip through the Maine woods, and we are promised an account of the trip. "Penobscot" knows the Maine country as well as any man living, and what he may write will be sure to be intelligent and authentic.

Mr. Charles G. Jewett, of Howell, Mich., is one of the exponents of the therapeutic value of field sports, and has proved the efficacy of the rod and gun to change an invalid into a robust, strong man. Mr. Jewett is by no means the only one of our acquaintances who has found in the health-giving properties of exercise, sunshine and pure air the great remedial agencies provided by nature. We can mention men in almost every profession and walk of life who have found health and strength only in the exhilarating rough and tumble of out-of-door occupation. Our correspondence brings us into communication with scores of men of similar experiences. Were there no other good attending participation in the sports peculiar to the forest and stream, this single fact would afford sufficient grounds to encourage and foster such participation.

We need make no apology for reproducing in our columns to-day the bit of native American literature, which our correspondent has embodied in his paper on the "Attractions of Arkansas;" for certainly no sketch of that State would be complete without at least a passing reference to the famous dialogue between the Traveler and the Squatter. The story is an old one; but it is for this very reason all the more interesting, because it pictures a curious phase of social life in the Southwest, which has now almost completely passed away. To be appreciated, the story should be listened to as doled out by a self-taught musician of the backwoods, to whom the peculiar idioms are not altogether novel. It was our good fortune once, on a bright moonlight night, down in Eastern Tennessee, to hear it thus rendered from a vagrant Troubadour from the Florida pine woods, who interpreted the spirit of the original with a disregard of musical harmony and a mutilation of the English language, which we candidly believe was never before approached by mortal man. Or, better still, "Yell" tells us that he should hear it played by an Arkansas fiddler, in a log-cabin, and see it danced to by some Arkansas young folks, on a "punchoon" floor. The dexterity of the dancers in getting over and around the inequalities of this style of floor, without missing a step or breaking the continuity, so to speak, is an inexhaustible source of delight to the spectator, and well worth a day's journey to witness.

PRESIDENT ADAMS ON DOGS.

IT affords us no little satisfaction to be able to present to our readers this week a letter from the late ex-President, John Quincy Adams, "the old man eloquent," narrating some peculiarly interesting, though not unparalleled, instances of the sagacity and memory of the dog. The letter, which has, outside of its attractions to lovers of the dog, an historical interest that will command for it the attention of every one, has never before been published. It was written to Dr. Parkman, of Boston, whose murder by Professor Webster, of Harvard, will be remembered by some of our older readers; when that gentleman was assisting his friend Mr. Audubon in collecting material for the latter's superb work on the Viviparous Quadrupeds of North America.

We owe the opportunity of reproducing this interesting document to the courtesy of a member of the great naturalist's family, in whose possession it now is. To her we desire most cordially to acknowledge our obligations and those of our readers.

The letter is as follows:—

WASHINGTON, 28th March, 1855.

Dr. George Parkman, Boston.

DEAR SIR:—I have received with much pleasure your kind letter of the 9th inst., and am always gratified with every token of your friendly recollection. There are two incidents which I have witnessed indicating instinct, memory and association of ideas in dogs, which made impression upon my mind, and to one of which your letter no doubt refers; my own memory fails me so much that I have no recollection of having mentioned it to you, as I certainly did from the reference which you made to me of it.

Residing at Berlin, during the closing years of the last century, the British Minister of that Court, the Earl of Elgin, had a pair of dogs of the terrier breed with the remarkable peculiarity that their color was white, though generally with two or three chocolate-colored spots on some part of the body. In a litter of puppies bred between them, in 1794, there was one female milk white, without a single spot, purchased of one of the servants of Lord Elgin, who was then in England, for me by an American named Whitcomb, who lived with me as my steward, and whom you have perhaps known in later times as keeper of the house at Concert Hall.

I gave to my dog the name of Dlanche, and educated her myself. Her principal good quality was that common to all the terrier breed, being an admirable rat-catcher, and in that capacity often useful. But as she grew up she had acquired the habit of a lap-dog, and whenever she had the opportunity would jump up into my lap and there coil herself up and go to sleep. If I were sitting at a table writing or reading, so that she could not get into my lap, she would come and lie down between my feet and go to sleep in the same manner.

I indulged her very much in both these habits, considering them as marks of the affectionate nature of the animal, and finding the latter often comfortable to myself by keeping my feet warm, particularly when traveling in a carriage in cold weather.

In 1801 I returned from Berlin to the United States and resumed my residence in Boston. I brought my dog with me. Whitcomb,

who had gone with me from the United States, and lived with me seven years in Europe, came back with me; but as I had here no occasion for a steward, he left me and opened a public house in Boston. He was for several years the keeper of Concert Hall.

In 1893 I was elected a member of the Senate of the United States, and on that occasion broke up my household establishment at Boston. Blanché was then four years old. I could not conveniently take her with me to Washington, and gave her to Whitcomb, who then kept a public house in another part of the town.

Three years later, in the summer of 1896, having occasion to pass some weeks in Boston, my wife and family being at Washington, took lodgings at Concert Hall, then kept by Whitcomb. On the first day that I dined at the common table, where there were perhaps thirty persons, I felt while at dinner, a dog lying down between my feet, which were under the table. It was my poor Blanché, whom I had not to my recollection seen for nearly three years, and whom, I am almost ashamed to say, I had forgotten. While she had so faithfully remembered me. On my pushing back my chair she jumped into my lap with all the lively caresses and marks of attachment and delight usual to her kind. She was not accustomed to jump into my lap or lie down between the feet of any other person but me.

This is the circumstance which I must have mentioned to you; it was when it happened, perhaps, more particularly noticed by me, because it confirmed an idea of the power of memory and the force of habit in the natural history of the dog, which I had formed in very early life, and of which I must also tell you the story.

In the year 1780 I went with my father from Paris to Holland, and in passing through the city of Delft visited the church containing the magnificent monument in honor of William the First, Prince of Orange, the Washington of his age and country. He fell, you know, by the hand of an assassin at Delft, and lies buried under that monument. A figure of him in bronze is exhibited extended on the tablet of the monument, with that of a dog lying at his feet. The reason for which, we were told, was to perpetuate the memory of the fact that his dog actually followed him to his grave, and refusing to leave it or to take any sustenance, there remained attached to him to the end. Whether this fact is strictly historical or whether a little aided with the embroidery of imagination, I do not require; but the sight of the monument with this explanatory comment, you may suppose, was not likely to be soon forgotten by a boy of thirteen. Two or three days after this incident I met at Leyden, another city not far distant from Delft, an English gentleman, a traveler, who had also visited the monument of William the First, and it gave rise to a conversation in which that gentleman stated that he himself had been the owner of a dog to which he had been strongly attached, and which was also much attached to him; that he had given this dog to an intimate friend of his departing for India; that seven years after he went himself to Calcutta and there met with a reception equally cordial from his old friend and from his dog; that the dog instantly recognized his old master, flew to him, and for some time could scarcely be separated from him, though quite happy and equally attached to the master to whom he had been given.

All these anecdotes are but evidence that the nature of the dog is the same as it was in the days of Homer and of Ulysses—in the days of Argus.

Who knew his lord; who knew and strove to meet,
But strove in vain to crawl and kiss his feet;
Yet all he could his tail, his ears, his eyes,
Salute his master to his soul's surprise.
The dog whom fate had granted to behold
His lord, when twenty tedious years had rolled,
Takes a last look, and having seen him, dies—
So close'd forever faithful Argus' eyes.

The second incident, to which I have now alluded, and which I think I never mentioned to you before, relates to a dog of the same breed as my Blanché, but of a prior generation, and which belonged to Whitcomb himself.

In the summer of 1890 I traveled with my family from Berlin by the way of Frankfurt upon the Oder into Silesia, and returned in the autumn by the way of Dresden and Leipzig. At this latter city we halted and spent there three or four weeks. Whitcomb and his dog Pincher were with us through the whole tour. When we left Leipzig and returned to Berlin, Pincher was accidentally left behind, an event which was not discovered until we were some miles advanced on our way, and he was given over for lost. About ten days after we reached Berlin Pincher made his appearance, as ragged and gaunt as a wolf in January, on a land covered with snow and with bluffs stiffened so that he could scarcely move, from which, however, he soon recovered to his usual strength and vivacity.

The distance from Leipzig to Berlin was about one hundred miles. How Pincher had found his way, we were never known. The road which he had gone from Berlin was in the opposite direction, and he had never traveled the direct road from Leipzig to Berlin. This occurrence, therefore, indicated a faculty in the dog more comprehensive than that of memory, perhaps an existence of scent, of which I can yet scarcely form a conception.

Whether these facts will be deemed by you or by Mr. Audubon of sufficient interest to be noticed in his memoir upon the instinct and intelligence of dogs I leave to you and his better judgment. They are at his and your service. I pray you to remember me kindly to him, and also respectfully to Mr. Parkman. I hope to have the pleasure of seeing you in the course of a few weeks, and in the meantime remain your ever faithful friend and servant,
JOHN QUINCY ADAMS.

A CENTURY BENEATH THE WAVES.

WE have recently had the pleasure of examining, through the courtesy of Mr. Chas. Hallcock, a came and a pen-holder made from the oak of an old French frigate which was sunk off Quebec in the year 1756, and which was only last summer raised from her muddy bed and towed to shore. These articles were sent to Mr. Hallcock by Mr. J. W. Dutton, who, as our readers may remember, was the constructing engineer of the celebrated Dufferin Terrace, which clings to the heights of Cape Diamond at Quebec, an account of which appeared some time since in the columns of FOREST AND STREAM. To the kindness of Mr. Dutton we owe the following interesting historical sketch of this old vessel, based on the old records of the French Government in the possession of the Seminary at Quebec. Mr. Dutton says:—

Quebec, as you will doubtless remember, was taken

from the French by the English under Wolfe on the 13th of September, 1759. It was upon this day that the decisive battle was fought that terminated in the defeat of the French under Montcalm, and also in the death of Wolfe on the plains of Abraham. For two or three years before this time there had been rumors of war about Quebec, brought from France by the merchantmen and traders who came across.

The city, and in fact all the country about—even into the States of Ohio, Michigan, New York, etc.—was under the French, who had forts and outposts all over it. Of the inhabitants the Marquis de Montcalm was the head, or in fact the Governor. Upon the rumors of war coming to him, all the works about Quebec were very much strengthened and in many cases doubled. New earthworks were thrown up and new vessels built in the Lower Town to help repel an attack by river. Among these last there was one that was known by the name *Le Grimaldi*. She was built and named in honor of a quarter of a mile from where Montgomery fell nineteen years later. For those days she was a large vessel, but in this age a thousand-ton vessel is not much to tell of. She was built of oak timber, which must have been brought from France, as none of the Western oak forests had then been cut into, it being impossible then to bring the timber down. The vessel was built of the best timber and iron, but she was fated never to touch execution for her country, as shortly after being launched she was sunk just opposite where she was built.

There she lay until last summer, when she was raised and towed to shore. She sank in September, 1756, so that she had lain under the waters of the St. Lawrence about one hundred and twenty-three years. In spite of her long immersion, when they first attempted to raise her, it was found impossible on account of her being sunk in the mud, and it was equally impossible to tear her to pieces as the oak was as solid as on the day she went down. The only thing that was gone was the iron, in those places where it had been exposed, and this had completely rusted away. After several vain attempts to stir her, a diver was sent down, who fixed a heavy charge of dynamite under her. This broke her up somewhat, but it was only after many explosions and two years' hard work that she was finally got rid of.

The wood was eagerly sought for, and now it is almost an impossibility to get a piece of it large enough to make anything of any value. The frigate was the last relic of the old French Government, having been built under the superintendence of the Intendant Bigot. She lay in ninety feet of water, and while she has been there, many are the changes that Quebec has seen—as well in manners and customs as in men. When she was removed, there were found to be over a hundred anchors of all sizes and many hundred fathoms of chain entangled with her. These were of course raised, and in some instances claimed, but most of them were sold by the Government to satisfy expenses.

GAME PROTECTION. BLACKBIRDS FOR CENTRAL PARK.

EVERETT HOUSE, NEW YORK, March 9th.
Editor Forest and Stream.

I enclose you five dollars to form the nucleus of a sum of sixty dollars required for the importation of five pairs of blackbirds, to be turned loose in Central Park. The blackbird is hardy and local in its habits; it does not migrate. I have turned it out at Quebec, where it lived till the end of January, when the last of the colony was caged and sold; this bird, a male, was quite fat and very strong in both feather and wing at that season of the year. I have noticed in Canada the blackbird song both earlier and later than the American song, and as it is an "all-the-year-round bird," and comes to food, it is well suited for Central Park.

Messrs. G. H. Holden, of 357 Sixth avenue, will undertake to furnish alive and in good order five pairs of blackbirds (cocks and hens) for the above sum (\$60), providing they get the order immediately.

The best part of Central Park to try this experiment is where the peacocks and guinea fow are kept. We have all our studies and our manias. Mine was, twenty-five years ago, to kill European insects in America with their natural enemies, European birds; consequently I imported sparrows. Now I advocate that boys should be allowed and encouraged to commence their sporting career by putting salt on a sparrow's tail, or circumventing Mr. Sparrow by any other device, such as brick trap, horse-hair noise or dust shot. From sparrow shooting they will go on to blackbirds, and so on to game.

W. H. KROPP, of Canada.

We hope that Col. Rhodes' generous offer may be met with a prompt and liberal response from the citizens of New York, who are to be directly benefited by the success of the undertaking proposed above. If a disinterested stranger, coming to our city, sees the possibility of adding to the value and enhancing the pleasure of our beautiful Park, and is willing to put his hand into his own pocket and so to give a substantial impetus to the accomplishment of the plan, certainly we should not hesitate to join heartily in the work. The blackbird is a sweet singer; his notes are heard before those of the robin in the evening—the two periods of the day when a bird's song is the sweetest. Col. Rhodes successfully introduced the blackbird upon his own grounds at Quebec, and we can conceive of no possible reason why the experiment, if made now and here, should not be attended with like success. We shall be ready at once to receive subscriptions for this purpose, and hope next week to have the pleasure of giving credit in these columns for the whole sum required. The spring will be so far advanced before the order can possibly reach England that immediate action is urgent.

We have received \$5 from Col. Rhodes, and have added thereto \$5 ourselves, leaving \$50 still to be contributed.

WHAT IS THE REMEDY?—*Nantico, Conn., March 17th.*—I speak from my own observation regarding this section

of the State. Birds were shot and trapped long before the season opened legally, and also after it closed. Now that trout fishing is about to commence, these wretched so-called sportsmen will sneak along the brooks, ashamed of their actions and afraid to be seen, and go to all this trouble and humiliation. Yet these men claim to be gentlemen and law-abiding citizens. I shall keep a close watch this year for these aristocratic poachers—perhaps some of the New London boys will assist me. If one or two can be shown up, perhaps a square fisherman can have some sport. What do you think of a fellow netting black bass? I am told by responsible parties that it was done. Is there any cure for such doings? SCALDS.

Try publishing their names in the FOREST AND STREAM.

BELLEFONTE SPORTSMEN'S ASSOCIATION. — *Bellefonte, Pa., March 8th.*—A meeting of the sportsmen of this place was held Monday evening March 8th to form an association for the protection and propagation of game and fish. Officers were elected as follows: President, George Valentine; Vice-President, H. S. Hale; Treasurer, Theodore Drescher; Secretary, J. D. Geissinger. Board of Directors: S. P. Shugart, Thos. Bernside, S. F. Foster, J. P. Hughes, F. P. Green.

As above stated, this club has for its object the protection and propagation of game and fish, and the enforcement of the laws and ordinances against the illegal killing of the same, the advancement of good fellowship and mutual improvement among sportsmen. This community has long felt the want of an organization of this kind, as our streams and woods are almost depopulated of fish and game, owing to the war of extermination carried on by hunters and fishermen to the utter disregard of all law and common sense. This association has just been started, and any suggestions or anything that will help our organization will be thankfully received by this society.
J. D. GEISSINGER, Secretary.

OTTO.—A bill has been introduced into the General Assembly to prohibit the catching of brook trout or salmon, except by angling, making the close season from Sept. 30th to April 1st, and providing against trespass for the purpose of fishing.

NEW MONTANA CLUBS.—*Helena, March 12th.*—Montana is falling into line. Two more rod and gun clubs duly organized—one in Deer Lodge County and one in Missoula County. Protection of game is the order of the day. B. F. Cope, of West Gallatin, recently shot an elk, and was fined \$50 and costs (about \$80 in all), according to the provisions of the game law. I do hope Congress will pass a law to protect our buffalo and other large game, now being slaughtered by wholesale. It is reported that one man on our border killed 2,000 buffalo this winter for their hides only. At that rate how long can it last?
HELENA

Game Bag and Gun.

GAME IN SEASON IN MARCH.
Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.
Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl. "Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, snipe birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

COOT SHOOTING ON LONG ISLAND SOUND.

TAKING it for granted that many of your readers have never enjoyed the above sport, perhaps a few lines descriptive and to the point may not prove uninteresting.

Of all duck shooting, either inland or on the seacoast, coot shooting is perhaps the most difficult and hazardous. In the first place one has to get to a boat, invariably, although I have killed them from a blind on the South Bay over decoys; but, generally speaking, they can only be killed "in the right fashion," over deep water. At least fifteen men ought to constitute the party (the more the merrier), and they ought to be equipped with suitable duck-boats, not the huge row-boats one sees so often, and enough actually to frighten the silliest coot that ever flew, but good, strong, low duck-boats, decked clean to the cockpit, and able to ride a heavy sea. Thus provided, and with at least 150 feet of strong light rope and a neat lead weight for an anchor, the gunner need never despair of not keeping his place in line. Often and often have I seen a glorious day's sport utterly ruined by not regarding these simple rules—a good boat and plenty of anchor line. Verily, *Veritas* is the key.

Supposing, therefore, that our party of noble "coot-ists" have reached the waters where they intend to form their line, they proceed to draw lots for positions. Sometimes this is done before they leave the shore, but the arrival of one or more outsiders necessitates going over the lottery business again. (I would mention here that the center of the line is considered the best generally.) The line is formed off some convenient mark, such as a point of rocks, and the boats are stationed about fifty or sixty yards apart; any nearer together is positively dangerous. In fact, I never hesitate to keep a good clear space of water between my neighbor and myself, especially if I notice that he is green at the work; he might get excited when the birds were flying about him; and a charge of No. 3 shot at fifty yards I do not fancy personally, do you?

Well, our line is at last formed. I can just make out the nearest boats in the gloom, as their occupants are busy arranging themselves comfortably before the day breaks. We ride gently on the long swells, it almost puts us to sleep, the gentle, lazy motion, when "Boom! Boom!" goes a heavy gun to the southward. In an instant every man is watching keenly for the birds. A

light rosy tint in the east proclaims the approach of day, and we watch the mists rolling away over the water. "Mark e-a-s-t" echoes along the line. A pair of "old white wings" are coming swiftly along in their feeding grounds, when suddenly catching sight of the boats, they endeavor to cross higher up in the air. A sharp report, and one whirls over into the water. The other, swiftly turning at the sound, skims down the line and falls a victim, as he tries to cross. "Mark east!" again rings out. This time a large flock is seen. In a moment, several splash into the water under our fire; while the rest, utterly panic-stricken, cross and recross the fatal line. The fun has commenced in earnest. Almost constantly a rattling volley is kept up along the whole stretch of boats. The birds are flying thick and fast, and you can see the young "Mark" birds. Sometimes the birds seem possessed by the evil genius of the hunter, and frequently the lucky man, who happens to be stationed there has the cream of the shooting. Often the birds are wild and will turn deliberately around when approaching, especially so when they have been shot at a good deal during the season. Occasionally a pair of old loons will come swinging along to vary the monotony, but one has to have a choke-bore of the first quality to shoot these fast birds. I have always considered them unbound and double-riveted, and will never think otherwise.

Broadbill and old-wives sometimes cross the line, but the former are too shy generally. The shooting does not last long as a rule—say from sunrise until 9 o'clock, when it is over until 4 P.M. From that time until dark very good shooting may be had, but the morning's work is always the best. I am speaking now of Long Island Sound especially. In other localities the time to kill them best may of course be different. It is famous sport for those that love duck shooting indeed, as it requires a deal of cool judgment and the right kind of nerves to stop those white wings as they cleave the frosty air. Take my advice, those who desire a day on the "line." Use a choke-bore of not less than nine pounds weight, and with plenty of good powder and chilled shot you will not regret your venture.

BLUE BILL.

BEACH SHOOTING ON JESSUP'S NECK.

THE day was beginning to dawn on the 22d of last October as the Long Island Forester Club, represented by five as agent sportsmen as ever drew bead on a duck, landed at Sag Harbor, a village which might be compared in somnolence with the one rendered more celebrated by the pen of Washington Irving. It has been the custom of the L. I. F. C. to make an annual excursion to these hunting grounds about this time of the last four or five years, and were not surprised to see a wagon awaiting us, and into which guns, baggage and ammunition were piled sufficient to stock an arsenal.

A four-mile drive through cedar woods brought us at last to one of the prettiest and most sequestered hamlets on Long Island, named from an Indian tribe which once dwelt here, Noyac or Noeg (though it is believed that the former is the true etymology, and this is now known by the former name). It lies nestled close by a forest which extends seven miles back to Bridgehampton, fronting Noyac Bay, and commands a beautiful view of Long Island Sound, Peconic Bay and the sandy hills of Shelter Island.

After breakfast we strolled around the vicinity, visiting the former friends of the club. The time passed pleasantly, listening to the old gossip or some thrilling sea yarn spun by an old whaler.

When we awoke early the following morning the moon, which had been shining brightly early in the evening, had gone down, leaving the place shrouded in inky darkness, and the wind howling around the house with almost winter fierceness caused many wistful glances to be cast at the warm beds we had just left.

But the expectations of a great bag which we hoped to make us shake off these feelings, and a good many thrilling parties of hot coffee and rolls, after which, shouldering our guns, we stumbled out on the dark road en route for our destination—Jessup's Neck.

A twenty minutes' walk brought us to the neck. This singular formation of land consists of a low sandy peninsula, one hundred feet in width, extending out into the sound about a mile and terminating in a promontory perhaps eighty feet in height, and named Peconic Bay from Noyac Bay. Having collected firing gear, we make a circular blind about one hundred yards apart, high enough to screen us from the keen eyes of the ducks, and lying inside these cramped quarters we patiently await the breaking of day.

The distant gull in this early light, in his search for food, appears to be magnified to the size of an eagle. Soon the sun appears creeping above the horizon, and reflecting on water and clouds the most brilliant and beautiful colors I have ever seen. A glance along the entire beach reveals nothing but heaps of sea grass, whose tops rustle in the keen blasts which sweep over them. Suddenly a cry is faintly brought to our ears of "Down eastward!" and peeping just over my blind in that direction I can perceive up against the sky a bunch of ducks. They are rapidly nearing us, and we anxiously, breathlessly, watch their course. They are now over one of our blinds. They veer northwesterly and cross over Lon Edwards' stand (one of the L. I. F. C.'s best shots) at lightning speed, their wings going so fast they resemble the spokes of a wheel in rapid motion. A puff of smoke issues up from the blind, and a duck, suddenly arrested in its tremendous velocity of flight, leaves the flock and falls heavily to the ground. It proves to be a coot, of the swiftest of ducks, whose flight is computed to be from sixty to ninety miles an hour.

Now a flock of sheldrakes appear in front, going across the beach. They pass in front of my cover; the gun follows their line of flight a moment and is discharged, but still they keep on their course for two or three hundred yards, and I am chagrined to think I missed what seemed so fair a shot; but suddenly one flutters his wings in a desperate effort to keep up with the rest, but in vain. A great million plunge follows as the water of the bay closes over it.

A small number of ducks are lost here in this manner. Sometimes at the turn of the tide they drift ashore and are picked up next day; but more frequently they either sink, and in their death struggles grasp hold of some marine plants and never come to the surface, or

else are carried out into the sound. One of the most difficult things in duck shooting to a novice is to be able to judge when a duck is within killing distance; also considerable address is required so to aim as to give them the coup de grace before they could pass over this narrow strip of land, and requires one who is truly a dead shot.

But to return to our mutton—the ducks. The fusillade was general from the end of the beach to the mainland. Occasionally a flock will fly along against the entire peninsula receiving a whole broadside of shot, and then pass on leaving their number somewhat decimated. Toward 11 o'clock the flights slacken, and by 12 the sport is over for that day.

The club returned to New York, bearing as their trophy of the morning's shoot twelve coots, six broadbills and five whistlers—a small bag comparatively, but well earned by long and difficult shots.

HARRY HUNTER.

MY FIRST SHOOTING ON AU SABLE FLATS.

IT was in the year 1865, before the Canada company had any thoughts of draining the vast country near the bend of the Au Sable River, that myself and a friend posed going to the marshes for a few days for ducks, which then were to be found in countless numbers in that section. There were not many shooters who were familiar with this ground then, so that we had some fine sport over a ground that was almost a preserve. The Au Sable, I may say, is not the stream of that name known to most of our sporting brethren in the State of Michigan, but one that rises somewhere in the interior of the western peninsula of Ontario, and flows into Lake Huron near a small village known as Port Franks. Before reaching the lake the river winds in a tortuous course to almost every point of the compass, and one of these bends, encircling many hundreds of acres of marsh, is known to all sportsmen who go there as the Devil's Elbow. In the bend of the elbow there were in olden times two lakes known as Lakes George and Burwell, of considerable area, shallow, and partially grown up with rice and other water plants, making one of the best duck grounds for its size in Canada. The lakes were from one to five miles wide and about seven miles in length, with an average depth of say six feet. Some distance below the bend of the river some obstruction existed, which caused the river to overflow the little banks it had, and flood thousands of acres of the adjacent low land. This obstruction was a bar, like the lakes, was grown up with water plants, and in stormy weather was a secure haven for ducks that had been driven in off Lake Huron and the other two lakes by heavy seas and winds. For many years not more than a dozen sportsmen visited this El Dorado in a season; thus, as I said before, it was almost a preserve. So much for our ground.

We started from Stratford, and took with us all our provisions, blankets, etc., sufficient for a trip of ten days, although we found out afterward that we did not require them, as we got lodgings at the house of a French-Canadian by the name of Varey, about two miles from the shooting-ground. This man was one of those who had settled in that place, and contrived to eke out a miserable existence by shooting ducks, fishing, trapping and taking in sportsmen in the fall for the fall for sport—not, reader, "taking them in," as that term is generally understood, for he was one of the fairest men in his charges I ever saw.

My armament consisted of a single-barrel gun, somewhat noted about Stratford, and a double gun borrowed from Joe Turner, of happy memory, and a good weapon by his metal. My stock of ammunition might have served a company of regulars for a week in war time, so extensive was it, and it is needless to remark that most of it came home again.

We arrived at our ground in the evening, after a drive of sixteen miles over a rough road from the railroad station, and after a good supper got things in order for a terrific onslaught on ducks next morning. During the night Jack was taken ill, and after our ducks had had his or too heavy to carry, while no twenty men in the country ever shot so many ducks in a whole trip as I did in this first night of my first duck shooting excursion. We were up long before daylight, and while breakfast was fixing equipped ourselves giving our boots one more coat of waterproof and arranging sundry other little details. These and the good breakfast being disposed of, we started in the forenoon, and the first belonging to Varey, taking turns at pulling to keep warm. Arrived there, it did not take long to run the boat into the cover of the rushes, and very soon the fun began. With daylight the ducks flew, and up to that time I had never seen so many in my life. What wonder, then, that fever (whether "buck" or "duck" I know not) took me, but the flight was passed for that day before my nerves got cool and down again for me to shoot with any success. However, I soon made up for lost time, and during the remainder of our stay, gave a good account of myself.

We were five days on the ground; but after the second, the weather got so fine that the ducks only came in to feed at night, and went out in the lakes, where it was impossible to get them in the daytime. After waiting three days more in hopes of a change, but without securing, we packed up, gave a boy for our team, and returned once more to civilized life, after five days of rest and two of good sport. Our bag, when divided, gave us forty-five, nearly all mallards, so our time was not lost. The expense of the trip only amounted to \$15.

Thus it was not ruinous and well repaid itself, and I may say, although I have been duck-shooting many times since, that this was the only trip I ever had in my life where the receipts exceeded the expenditure.

This fine shooting ground is now only a shadow of what it formerly was, as the Canada company cut a canal from the lakes to the river, about a mile from its mouth, and partially drained them out. Instead of being covered with water and rice, it is now a vast bog, impassable in many places, and during spring and fall one of the best snipe grounds in Canada, especially in fall after a dry summer. With the rice the ducks departed also, and now not one is shot where as many hundred could be killed fifteen years ago. I have been there nearly every year, but it is only to see the glory surely waning, and instead of ducks, employ my summer holiday in catching black bass, of which more at another time.

AU SABLE.

ADIRONDACK DEER HUNTING.—*Moira, N. Y., March 16th.*—I think the deer the coming season will be plenty in the Adirondacks, for there has not been snow enough during the winter for crusting or killing them in yards, as is generally done in winter when the snows are deep. They also will come out in good order, the weather has been so mild, and they could get at their food easily. I have not heard of any being killed during the past winter which is the first one that I have not for many years.

ANDREW JACK.

NEW JERSEY.—*Ocean County, March 31st.*—Shooting has been poor. Ducks are plenty, but hard to get at, as they will not stoop. The flight has already commenced, and thousands are arriving and leaving daily. Wilson's snipe are here, but are very scattering. I have seen and shot a few this week, but the strong easterly winds nearly all the month have kept the tide so high that walking on the meadows is very difficult. We shall have plenty of good sport the first warm days that come.

S. K., JR.

PENNSYLVANIA.—*Applebachville, March 22d.*—I and Mr. Townsend of Philadelphia were down around "Tinkers Island" the 8th of this month. We met with poor success. It was stormy nearly all the time, and the ducks were very wild. All we shot were over stool-ducks. Snipe do not seem to come very thick. I was down in the Big Meadows last Saturday and started two snipe. I think it is most too early for them, but I hope in a week or two they will be plenty. There is any quantity of quails and rabbits left from the winter. I hope by next fall we will meet with good success. Pheasants are very scarce.

S. T. L.

VIRGINIA NOTES.—*Bedford County, Va., March 12th.*—This is a dead time of year in these parts as regards sporting matters, unless one can dignify the annual flights of robins by classing their migrations under that head. For want of more interesting matter we may state that these birds have arrived in unusually large numbers this spring, and the heart of the single barreled schoolboy has waxed extra joyful at their abundance, and the danger to the woods and fields around them in the vicinity of the hood of grass lots around towns and other such localities dear to robins and their youthful pursuers is proportionately increased. The winter in the mountains has been specially favorable to the young trout, and we may hope when the season opens—April 1st—to have better luck than last year.

I hear that black bass are being caught in great quantities over down the Staunton (Roanoke) river, a fact before known. I visited Captain McMurdo's kennels last week and found that gentleman busy at work upon some very fine young dogs, representatives of the canine aristocracy of diverse sections of the Union.

The whistle of the steam-engine is at last to awaken the echoes of the James River Valley, that hitherto have responded only to the music of the boatmen's horns, and the epidemic of bass fishing at the head of the river in the course of a year or two be more easily reached than now.

RINGWOOD.

DUCK AND GOOSE SHOOTING AT GOOD GROUND, L. I.—*Providence, R. I., March 19th.*—Myself and companion, Mr. P., of Providence, arrived at Lane's, Good Ground, L. I., on the evening of March 15th. Found Mr. L. and Mr. S., of New York, and Mr. P., of Hartford, all fine sportsmen, waiting for a flight of geese. Wednesday dawned cold, cloudy and windy, and as Lane said, "a poor prospect for geese." Messrs. D. and S. started early for ducks, and the rest of us, four in number, took the boxes for geese. After the stools were well set out and the boxes emptied of water and sand, the party helped themselves to boxes and waited for the game. They soon how in sight (a bunch of eight), and settled among the stools. We secured only three of that bunch, owing partly to a miss fire from Mr. P.'s gun and the poor shooting of your correspondent. We waited a long time before another set was in sight, and when they did come they were very shy and settled a long way off; and after half an hour of skillful work of the boat, with St., at the helm, Lane thought it best to "give it to 'em," although a long way off. Eight shots rewarded us with seven as fine geese as ever fell in the bay, and soon after a black duck fell to Mr. P.'s gun, of Providence, at a very long shot, and was the last of the bag for that day. We were nearly chilled to the bone, and returned to the house through a severe snow squall. The luck, since then, I know not of.

J. H.

NEBRASKA DUCK SHOOTING.—*Omaha, March 16th.*—A party consisting of General Crook, Major Feney, J. S. Collins and J. W. Petty left to-day at 8 A.M. for a hunt about fourteen miles north of Omaha. They returned at 8 o'clock P.M. with the following bag, 476 ducks, red-heads mostly; 1 Canada goose and 1 trumpeter swan. The same party last spring, on the Platte River, thirty miles west of Omaha, bagged 131 geese, 10 ducks and 3 sandhill cranes. General Crook and J. S. Collins on last Friday, the 13th, killed and bagged 125 ducks in about two hours' shooting at the first named place.

If any of the sportsmen want some good sport this is the best place to come to. The fall shooting is much better than the spring. Parties wishing information will be favored with any reply by addressing Collins & Petty, Omaha.

M.

THE ST. MARY'S AND OKEEFEENOK.—Your recent notices of the St. Mary's River and the Okeefeeno, as "happy hunting grounds," have turned the attention of sportsmen already in that direction, and their experience, no doubt, will bring many more next year, when the folks of Okeefeeno will be better prepared than they were last week. Our party consisted of two Harvard men, one Long Islander, and our correspondent. As one of the party proposes a contribution on the subject, I will not steal his thunder, but cannot refrain from expressing our entire satisfaction at the trip up and down the St. Mary's River, which far exceeded our combined expectations, and we had all had pretty large "river experiences," from our trip up and down the St. Mary's affords perfect "batute" for alligator-shooting. Our rides and shot-guns were in constant requisition; we did not keep count on the trip, but on the down, fifteen fell to our fire. The Captain and Engineer of the *Flora* are both first-class shots, and no doubt have first-rate practice on this beautiful river. Already the banks were ablaze with all kinds of flowering

The Colonel quotes the gist of a paragraph on picking a team. When he says, "He has seen said that such a team is not much of an individual shot, but he would give himself up to the coach and would make a good team man."

If you will review the scores made in the Long-range Tournament held at Creedmoor last fall, you will find that the leading men made on the first two days 3,235 points (within 9 of the best team score on record), and the Tournament was purely an individual match. Another Tournament shot in connection with the Spring Meeting (and I have many letters urging me to propose it), was for five days in one week, say, Tuesday, Wednesday, Thursday, Friday and Saturday, with daily and aggregate prizes, would secure the attendance at Creedmoor of all the long-range men, and the first twelve could be taken, out of which to select a team. This would secure the best individual shooters, and as Col. Clark says, would try marksmanship instead of system and rifles. So much is left to us in manhood to offer as a gallant challenge, and does not bear the appearance of a concession. Let them shoot the match on the conditions of the Tournament, mixing the chances on the several targets, and as they would be obliged to stand at the firing point fifteen feet in advance of the line of scores, the crowd could see clearly who was shooting and make comparisons of individual rivals on the same target. Heretofore the people have been unable to see the shooters, but have had to be content with watching blackboards, at once uninteresting and usually monotonous.

EDWIN A. PERLEY.

New York, March 22d.—*Editor Forest and Stream*.—I think I can safely say that Colonel Clark, of Longhemp, can rest assured of the distinction of being the only long-range rifleman either here or abroad who would question the great utility and efficiency of the American team system, as practiced in all of the international contests except in the first in 1874. It is universally admitted that this was the strong feature of the American teams. If you asked any member of the foreign teams to account for their successive defeats they immediately attributed it to our superior team organization, and deplored the impossibility of introducing the same management in their teams, owing to their different local conditions. The belief that this American team management is a great obstacle to another international match can only be accounted for by supposing that should his views of individual effort be adopted the foreign team might think that Sampson had been shorn of his locks and would consequently fall an easy prey to the Philistines.

I think I know enough of Englishmen, Irishmen or Scots, to say they would not value a victory won under such conditions. There is ample opportunity to test individual merit in the preliminary contests for position on teams, and each member cannot fail to take rank as his merits deserve.

A rifle team depending on individual effort would stand no more chance of winning than a number of oarsmen in the same boat, each pulling his own stroke without regarding his companions, against a well-trained and coached crew. I apprehend that Colonel Clark does not as fully comprehend the working of this system as though he had passed the ordeal of one or two international matches with "very live" competitors. The American team system is based on the axiom that "the whole is greater than a part," and that "there is wisdom in council." Each member is guided by the results obtained by those who have preceded him, as also by the opinion of the "coach," after which he is at liberty to adjust his sights in accordance with his own judgment, which will be frequently more or less modified by the opinions of his associates. It seems that this is a sagacious and comparatively safe method by which to conduct a contest of this kind, and although future wars may lead to modifications and improvements on this plan, it is safe to say that its long features, which have been the envy of foreign rifleman, will be preserved. The Colonel's allusion to the results of the "Spirit of the Times" Match in comparison with match for Palma is in itself a complete refutation of his theories and opinions. If he is desirous of ascertaining who is the superior marksman, he should challenge for an individual match for the championship, in which he would be a redoubtable antagonist. I think such a match could be organized, and this would offer an opportunity for isolated individual effort, which would be much out of place in a team match.

LONG RANGE.

VERBETTER SIGHTS FOR HUNTING.—Chicago, March 18th.—*Editor Forest and Stream*.—I have no wish to enter into any argument with you in regard to the merits of the various rifles, but I can say about our respective opinions to revise them, can satisfy themselves in regard to their relative value. But I must again protest against being criticized by any one who only writes from memory of the impression my communications have upon him. "P." acknowledges that he has not my articles at hand to refer to, but he asserts unconditionally that his views "were commented upon unfavorably by several on this side the water, notably by Mr. Cleveland, who seemed to ridicule the idea of taking such a weapon into the field."

Now I have all my letters at hand, for I always preserve my published communications for reference if necessary, and it is fortunate, in this case, that I have done so. There is not, in any one of them, the slightest reference to "P." or his communications, and I have no recollection of ever having seen any of them till some one called my attention to his letter of July 20th, '78, in which he comments upon what I had said about the use of long-range rifles in the field.

"Of course no sportsman would think of taking the long-range target rifle, with its elaborate arrangement of sights, for the purpose of shooting game," and then went on with the remarks which have elicited so much comment from him. I should hardly have entered on the subject with such a sentence as the above, if I had known that an accomplished sportsman, as "P." evidently is, was actually using and advocating the use of such a gun. I only expressed my honest opinion, and am still not in the slightest surprised to find how greatly I was mistaken. But I shall never utter a word to prove that I was right, or to try to make presently to my side of the argument, but shall simply continue to travel and hunt with a rifle I can pack in a valise, and if ever "P." and I happen to meet, shall be happy to try a friendly match with him.

H. W. B. CLEVELAND.

HUNTING RIFLES.—St. Louis, Mo., March 14th.—I am very glad to hear from our contributor "P." once more—I had begun to think he was lost, "sure." His details are what we (who wish to learn) want. Now as he is almost alone, as far as I can ascertain, in making a light bullet shoot accurately, will be kind enough to describe closely the bullet he uses. We know the weight and crifice already; but it is asked or feathered, smooth or cannelured, and of the make of the latter? And most of all, "how" does it bear upon the rifle? Is it the same .27grs. Express bullet that the Sharps Co. furnish? I would like to know his opinion of the new mid-range Sharps 30in. barrel, hammerless, 40x70 straight shell, and which can be chambered for a bottle-necked 90 to 100grs. shell, and take a 27grs. bullet? Would this gun be a good

one to take for a trip out in the mountains around Helena, Montana.

Not making a special business of hunting bear, would prefer the 7grs. shell, if it would be enough powder-charge. What loading tools are required? Does the mouth of the shell swell and require a reducer? A gentleman, late from the West, told me that many shoot a smooth bullet without a patch, which leads me to ask, if it is the bullet that is made for a paper patch by the Company, or a trifle larger to make up for the said paper patch? In regard to the Maynard, I am of the opinion that the conical bullet referred to, with the 40grs. of powder, the weight would be 300grs. proportion of 71.

HUNTING RIFLE.

SWAGING EVERLASTING SHELLS.—I have experienced the same difficulty with shells that Texas complains of, and having overcome it, send you a sketch of swager. My rifle was sent to the factory for some slight alteration, and while there had the old chamber cut out and a steel bushing put in. On trying my old shells they were all found to be too tight, and even new ones

would stick after a few discharges. I got a piece of machine steel drilled with a 7-16 drill, and sent it to the factory to be chambered with the standard taper, but left a trifle smaller than the gun. It was very nicely done, and in a very short time every shell was reduced and they have given no trouble since. One point in reducing them is to give the shells a good coat of grease, which acts as a liner between shell and chamber, and moreover affords a means of regulating the degree of contraction, so that if the shell be found still too large, it may be further reduced by the use of more grease.

It will often happen that the shell shows a bright zone of contact, and if the position of this ring corresponds on all of the tight shells, it would seem to indicate that the chamber was slightly crooked at that point, or that there was a high place behind it. In such case the chamber may be eased by putting a paste of flour emery, or crocus powder and oil on the bright part of shell, and then grinding out. The shell can be turned by making a hole in the base, cleaning internally with hot chloride of zinc, then inserting a stout, clean, brass wire and filing the shell with melted solder.

Altoona, Pa.

Yachting and Canoeing.

CONSTITUTION OF THE N. Y. A.

ARTICLE I.—This association shall be called the National Yachting Association of the United States.

ARTICLE II.—The objects of this association shall be the advancement and improvement of yachting.

ARTICLE III.—The association shall consist of clubs, duly organized, who are engaged in promoting the purposes of the association.

ARTICLE IV.—The management of this association shall be entrusted to an Executive Committee, consisting of twelve members, elected by the delegates from among their number, no two of whom shall be from the same club, of whom three members shall be elected each year, to serve for a term of three years, except at the first election; when four members shall be elected for one year, four for two years, and four for three years. Members of this committee shall continue in office, in case of a failure of election, until their successors are duly chosen. This committee shall from among their number elect a President and Treasurer, who shall serve for a term of one year, and choose a Secretary from among the members of some club belonging to the association. The Treasurer shall give bonds in the sum of \$2,000, for the faithful performance of his duties unto the Executive Committee. The committee shall hold and have custody of all the property of the association, in trust for the clubs composing the same.

ARTICLE V.—Vacancies in the Executive Committee occurring between the annual meetings, shall be filled by the committee until the next annual meeting, when the vacancy shall be filled by an election of a new member to serve the unexpired term.

ARTICLE VI.—No person not a member of some club belonging to the association, shall be eligible to any office or representation from any club.

ARTICLE VII.—The annual meeting of this association shall be held on the second Wednesday in February of each year. Special meetings may be called by the Executive Committee, and shall be called on the written request of the delegates of five clubs, that are members of the association. Thirty days' notice of such special meeting, at least, shall be given.

ARTICLE VIII.—The election of members of the Executive Committee shall be conducted by means of blank balloting paper, to be sent to the delegates of each club, enrolled in the association, at least thirty days before the annual meeting. These ballots being returned to the Secretary duly filled out, shall be counted by a committee appointed for the purpose at the annual meeting, in open meeting and the result then declared upon the plurality of such ballots for the candidates.

ARTICLE IX.—Each club shall have but one vote in any election, or upon any question, either in the annual or special meetings.

ARTICLE X.—New clubs shall be elected members of this association by means of balloting papers to be forwarded to the delegates of each club, upon a recommendation of two thirds of the Executive Committee, and if upon the return of such ballots duly filled out to the Executive Committee, such new club or clubs shall appear to have been elected by a majority of all the clubs, the Executive Committee shall declare such election and give the newly elected club notice thereof.

ARTICLE XI.—The annual membership dues of each club to this association shall be the sum of fifteen dollars, due on the last day of January in each year, except the first annual dues upon joining or forming this association, which shall be then due.

ARTICLE XII.—Any violation of the rules of the association, by any club which is a member, shall render such club liable to suspension by the Executive Committee until the next annual meet-

ing of the association, and to expulsion by a two-third vote of the clubs represented at such meetings.

ARTICLE XIII.—It shall be the duty of the Executive Committee to hear all questions presented to them, to frame rules and to determine and settle all questions and disputes relating to yacht racing or yachting which may be referred to them for decision, and further the committee shall take such other steps as they shall consider necessary or expedient to carry into effect the objects of the association.

ARTICLE XIV.—The Executive Committee shall submit the sailing rules, etc., to the meeting of the association, and all alterations shall be made by the committee, in rules which have been approved by the association, except by a vote at the annual meeting of the association. Notice of any proposed alteration of the rules shall be given to the Secretary, and by him to each club in the association at least two months before the annual meeting, at which the same is to be presented for action.

ARTICLE XV.—No addition, alteration or amendment shall be made to this constitution at any meeting, except by a two-thirds vote of the clubs represented. At least three months' previous notice of any such proposed change must be given to the Secretary and by him due notice given at once to each club belonging to the association.

Since the above has been printed, the following clubs have joined the Convention by appointing delegates: Southern Yacht Club, of New Orleans, La.; Pavonia Yacht Club, of Jersey City, N. J.; and twenty regularly organized yacht clubs are now participating in the formation of the National Yachting Association of the United States.

The following special request has been sent to all clubs:—

"In order to keep this movement properly moving along, with as little loss of time as possible, it is hoped that all yacht clubs favoring the idea of a national yachting association will adopt this constitution at their first meeting after its receipt, to afford a basis on which to start, and rules for the guidance of the delegates: It will be apparent to all, that this is the first necessary step, and as so many different ideas may pass on this constitution, and so far apart from each other, we hope that any amendments submitted to it will be made a separate matter, and the constitution, simple as it is, be adopted and accepted without any present alteration, as that would oblige our sending the particular alteration to every other club for adoption before it would become binding, and we would never be able to have a constitution. Blank balloting papers will be sent to your delegates to be filled out as their choice for members of the Executive Committee, and a return as early as possible is respectfully requested."

Address all business to Mr. John Frick, Secretary of the Convention, P. O. box 2,070, New York.

THE N. Y. A.

The following letter shows that the N. Y. A. is rapidly extending. We have favorable reports from the East as well. This makes the third club which has joined since the Convention:—

PHILADELPHIA, March 15th, 1880.

John Frick, Esq.

DEAR SIR:—Your communication, relating to the National Yachting Association, reached us in good time, and at the meeting held March 14th was adopted, and Commodore A. E. Bancroft, Vice-Commodore Chas. H. Magee, and Robert Adams were appointed delegates. They will present their credentials at the proper time.

Yours, CHAS. S. SALIS.

Secretary Quaker City Yacht Club, 233 N. Third street, Phila.

MEASUREMENT.

BOSTON, March 10th.

Editor Forest and Stream.—

In relation to the proposed new rule of yacht measurement which you have advocated so ably in your columns, i. e., the use of the three factors of length, beam and depth, one fact seems to have escaped notice. This is, that it is a practical return to the system originally adopted by the English Government, and our own for tonnage measurement, and which was only changed because an arbitrary form of stating the formula enabled marine architects to construct vessels which should evade its intent.

The rule of the English Yacht Racing Association is substantially the same as this old formula. It is the length being found by specified means; to take that length, multiply it by the breadth, then multiply the product by half the breadth and divide by ninety-four. Now why multiply by half the breadth? The answer is, because when that rule was originally adopted, vessels were almost universally built with a depth of one-half their length. This one-half the beam was therefore used, as a historical fact, to represent the depth, and it practically was the multiplication of the product of the length and breadth by the depth. So long as this was the general construction of vessels, the rule worked well. When, however, builders began to construct them of less or greater depth than one-half the breadth, the rule or formula began to work partially to such constructions as had an increased depth. What you propose to do therefore, and what the Nova Scotia Yacht Squadron has done, is merely to alter the wording of this ancient, tried and known formula so that it shall apply as equitably to all classes of model as it formerly did to the class of vessels for which it was devised. You put the word "depth" in place of the words "half the breadth," which were intended to mean depth, and did, in fact, so mean. The question to be considered is, whether such an amendment, restoring the ancient meaning and effect of the rule, is not rather worthy of adoption. Let us hear from the objectors to such a course. Let them give some good reason why it would not work fairly in practice, and develop the best type of yacht. I have before me a recent letter of Hon. F. C. Sumner, Rear Commodore and Secretary of the Royal Nova Scotia Yacht Squadron and member of the Yacht Racing Association, in which he says of this rule you propose: "The advantage of the rule is that it leaves a builder unfettered, and he may build deep and narrow, or beamy and shallow, or moderately deep and of moderate breadth, and work very well in practice, and to enable different types to be judged on a fair basis. The yachts built under the rule have a good proportion of beam to length and a sufficient depth to render unnecessary recourse to the abomination of shifting ballast, which is strictly prohibited." This letter was written to the Secretary of the National Yachting Association Convention officially, and demonstrates the value of that organization in collecting evidence upon this subject, if nothing more. I notice some correspondence said, in your columns, to object to joining the National Yachting Association because it indorses shifting ballast. Such an idea is as incorrect as it is unjust. No such indorsement has been made. When it is done it will be time to object on account of it. I believe the National Yachting Association will not indorse anything fatal to good seamanship, and your correspondent may safely calm his fears and join. The Association is bound to be a success, nay it is a success if he does not, and it will

—A New Haven paper contains an advertisement calling for "a well-trained 'cat-dog,' one that is kindly disposed to the human family, but has a decided antipathy to cats and favors their complete annihilation. For such a dog a reasonable price will be paid. Address, naming breed and price, 'D,' box 892."

—One Staten Island dog whipped another Staten Island dog the other day, and the owner of the whipped dog sued the owner of the whipping dog for damages. It was decided to introduce the two combatants in evidence, and the belligerent brutes were accordingly brought into court. While the Justice was scrutinizing their respective points they broke loose, and within about two seconds that court-room was an apparent dog-pit. The dogs dashed and leaped and sprawled about, the lawyers and spectators climbed up on to the tables, a stampede ensued, and finally the dogs were parted, while their owners were ordered to pack off and settle their differences elsewhere.

NOTICE.—A DOG TRAINER.—The undersigned, now prepared to take a limited number of dogs for thorough handling and breaking, respectfully offers the following well-known gentlemen as references: Mr. F. Schuchardt, 62 William street, New York; Mr. M. R. Dennis, Newark, N. J.; Dr. W. S. Webb, 48 Wall street, New York; Mr. Chas. Heath, Newark, N. J., and Mr. Edward Leverich, 111 Reade street, New York. For particulars and prices apply to Mar25-1f. T. E. SMITH, Stockholm, N. J.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 " .25	.50	1.00	1.50	2.00
Amount to remit us, 3 " .75	1.50	3.00	5.50	8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00

Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six Months, and Eight Dollars Cash, we will send, in place of commission, any one of the following Articles:

Jordan's Manual of Vertebrates. A copy of FOREST AND STREAM for one year. A three-piece double-fur, lacewood tip, full mounted, polished Bass, Trout or Bull Ro.	Cornes' Field Ornithology. One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks. One Russia-leather Fly-book, and one dozen assorted Flies.	One five-foot lancewood Bow, Horn Tips, and one dozen 25-inch Arrows. One pair Club Skates.
--	--	--

To any person sending us, before July 1, 1880, Sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles:

Two copies of Forest and Stream for one year. A four-piece, double fur, guides and reel-band, hollow, butt, extra tip, full mounted, Bait or Brass Rod. One 8-piece do. Fly Rod.	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells. One full-length Fly Book, and two dozen assorted Flies. Covess' Key to North American Birds.	One Gent's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows. One Set Parlor Archery, complete in box. One pair nickel-plated Club Skates. One Parlor Air-Gun.
--	---	---

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter. Address

FLEAS!

USE DR. AL. WATTS' FLEA SOAP. A safe and efficacious remedy and preventive for fleas and all eruptions of the skin produced by them. It cleanses the hair of all impurities, purges it of all disagreeable odor, and possesses the most thorough disinfesting properties. It is impossible for fleas to live where it is used. Price, 25 cents per cake. For sale by all druggists. Wholesale depot, 161 Lincoln street, Boston. Dr. Watts offers for sale the largest assortment in America of dogs of all breeds. The skillful treatment of canine diseases made a specialty. The fact that Dr. Watts has for four consecutive years held by appointment the position of Special Officer of the City of Boston to have charge of unlicensed dogs is sufficient guarantee of reliability. All communications and orders will receive prompt attention. Address DR. AL. WATTS, Mar 23-18 161 Lincoln street, Boston, Mass.

The Kennel.

Neversink Lodge Kennels.

The following celebrated Dogs are in the stud.
DOGS:

St. Bernard dog "Marco," rough coated, two years old; a magnificent animal—Rev. J. Cunningham Macdonald's stock—second prizes Hanover Show and Rochester.
New Foundland dog "Keeper," four years old; first prize Westminster Kennel Show, 1879.
Pointer dog, "Croxeth," liver and white; one and a half years old; out of Lord Seton's renowned stock—one of the handsomest pointers in the United States. Second prize in the Hanover International Show.
Blue Belton setter, "Decimal Dash," eighteen months old; sired by Llewellyn's celebrated "Dash"—a magnificent stud dog—never exhibited.
Irish setter, "Ilover II," pure red; son of Macdonald's champion "Rover." Never exhibited.
English setter, "Ranger II," a pure bred Laverack, son of Macdonald's celebrated "Ranger." His grand sire at Hanover and Paris shows, and second prize in Eastern Field Trials.
Stud fee, \$25.00.

For Sale.

The get of the following thoroughbred Bitches.

St. Bernard "Braunfels," rough coated, out of Prince St. Bernard's celebrated stock; a magnificent bitch, in whelp to "Marco," 1st prize in Hanover and Rochester show.
Pointer "Queen," liver and white, 1st Westminster Kennel Show 1878, in whelp to "Croxeth." Gordon setter "Beauty," 1st Boston Show 1878, 2nd New York Show 1878.
Pointer "Dora," liver and white, out of "Queen" and "Sancho."
Blue Belton setter "Sik."
Irish Setter "Moyna," out of Col. Hilliard's "Palmerston," in whelp to Rover II.
English Setter "Donna," white and lemon.
Pups can be secured, by an early application. Besides I offer for sale pointers and setters of minor quality, but of good thoroughbred stock; full pedigrees. Also, several puppies of champion "Queen," by champion "Sensation."
Having engaged the services of Macdonald's renowned field trial breaker I am prepared to book orders for thoroughly broken dogs, deliverable, autumn, 1880. Particulars will be furnished on application to A. E. GODFREY, Guyard, Orange Co., N. Y.

CHAMPION LIGHT WEIGHT POINTER

"RUSH."

FIELD TRIAL DERBY of 1880

THE first American Field Trial Derby will be run under the National American Kennel Club Rules, about the third week in November, 1880, time and place to be hereafter announced, for setter and pointer puppies whelped on or after APRIL 1st, 1879.

First Prize, \$100; Second, \$100; Third, \$50. Entries, Five Dollars each, to be paid at time of entry; Ten Dollars additional each for starters, to be paid before starting.

Entries, giving full particulars as to color, marking, sex, pedigree and name, may be made on or before APRIL 1st, 1880, to the Secretary of the National American Kennel Club. Any number of dogs, the property of one owner, can run for this stake. The names and pedigree of all the puppies entered will be sent to all the sportsmen's papers for publication. The forfeit money to be added to the stake and divided between the winning dogs in the same ratio or proportion as the stake is divided.

ENTRIES CLOSE APRIL 1st, 1880.
For blank forms of entry apply to
CHARLES DE RONCE,
Secretary N. A. K. C.
(P. O. Box 994) No. 51 Broad St., N. Y. City.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CROSBY are thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

KENDALL'S SPAVIN CURE

is a sure cure for spavin, splint, curb, callous, sprains, swellings, galls, lameness and all enlargements of the joints or limbs. It will completely remove a bone spavin without blistering or causing a sore. It is also good for man as for horse and is used full strength, at all times of the year, with perfect safety. Remember, we claim it will cure a bone spavin and completely remove the bunch without blistering.

Office U. S. Marshal, Western Dist. of Michigan, Kalamazoo, Apr. 15th, 1879.
I received the two bottles of your spavin cure forwarded by express in January last. I am happy to state that it performed all your advertisement called for. In three weeks after I commenced using it, the spavin was entirely removed and a valuable horse restored to usefulness.Very truly yours, JOHN PARKER.
Send for illustrated circular giving Positive Proof. Price \$1. At Druggists also can be got for you. DR. B. J. KENDALL & CO., Prop's, Enosburgh Falls, Vermont.

The "STANDARD TARGET."—For Rifle Practice.
Sixty 6 inches. Bullseye 1 inch. Hammer 1
foot, off-hand. The zones rise by area instead
of diameter.Marksmen will appreciate the new departure
which this target has inaugurated. The accurate
rifleman now gets the true value of his shots,
while on old-style targets the record was so tainted
by the element of chance as to give but a
vague idea of the shooter's skill. For instance,
on a 50 yard Creedmoor "C" target, scoring 4
has ten times the area of a "bull," scoring 5, every
rifleman knows that no degree of skill or care will
give immunity from occasional misses, and under
the old system it was almost the rule for good
marksmen to be beaten by bad ones. One man
would pile up eight sure bulls out of ten, but
lose the other two, while his competitor, "shoot-
ing for fours," would scatter his strays all over
the board center, blundering in the edge of the
bull, and win! Now in deer stalking, and
shooting at 80 yards, the winner would have
wounded and lost one deer, while the loser would
have struck down eight, all shot through the
heart. Of course there are people who still con-
tend that under the old method "all had an equal
chance," which is very true. But it is also true
that their equality of chance would have
been in no wise impaired if they shot the new
down and thrown dice to determine who was the
better shot. In contests of skill every element
of chance should be eliminated.Arrangements have been made for supplying
these targets at a merely nominal price, and it is
now an easy matter to gauge relative skill by
uniform practice, and to communicate definite
results without obscuring them by explanatory
details. The targets are mailed, post-paid to any
address in the United States at fifty cents per
hundred, and quite a liberal discount is made to
galleries and dealers. Send orders to CROSBY,
MAY & SHEPARD, Glen Allen, Virginia.USE THE BOGARDUS PATENT

"THE FISHING LINE."
TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line.
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.
The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed.
It is equalled in the abundance and great variety of
fish contained.
BROOK TROUT abound in the streams, and
the famous AMERICAN GRAYLING is found
only in those waters.
The GRAYLING season begins May 1 and ends Sept. 1.
Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSCAL-
LONGE, also abound in large numbers in the
many lakes and lakelets of this territory.
The sportsman can readily send trophies of his
skill to his friends or "club" at home, as for ice
packing fish can be had at many points.
TAKE THE FISHING LINE WITH YOU. The scenery
of the North Woods and Lakes is very beautiful;
the air is pure, dry and bracing. The climate
is peculiarly beneficial to those suffering with
Hay Fever and Asthma Affections.
The hotel accommodations are good, far surpassing
those of any other country now enough to afford
the finest of fishing.
During the season Round Trip Excursion Tickets
etc. will be sold at low rates, including full in-
formation and accurate maps of the Fishing
Grounds of the State, Grand Rapids, Mich.
Gen. Pass. Agent, Grand Rapids, Mich.

Old Dominion Line.
THE STEAMERS of this Line reach
some of the finest waterways and upland
shooting sections in the country. Connecting di-
rect for Gloucester, Curlew Island, and points
on the Peninsula. City Point, James River, Cur-
lew, Florida and the mountainous country of
Virginia, Tennessee, etc. Norfolk steamer calls
Tuesday, Thursday, and Saturday. Leave, Dela-
ware, Monday and Thursday, at 2 P.M. Full infor-
mation and ticket office, 117 Greenway Street, New
York.

Sportsmen's Boutes.
TO SPORTSMEN:
The Pennsylvania R. R. Co.,
Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the
TROUTING PARKS and FISHING COUREES in the
Middle States. These lines being CONTINUOUS
FROM ALL IMPORTANT PORTS, avoid the diffi-
culties and dangers of reshipment, while the ex-
cellent cars which run over the smooth steel
tracks enable STOCK TO BE TRANSPORTED
without failure or injury.
THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING and FISHING
in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
all the principal cities to KANE, HENRY, A. BEL-
FOLD, CRESSON, RALSTON, MINNEQUA, and other

North. The best Hotel of its kind on the route
to Florida. Rates--\$2.00 and \$3.00 per day.

HOTEL FOR TROUT FISHING.
THE FAR-FAAMED waters of the Mag-
netawan are now within easy access of
Toronto and the outside world, and are still teem-
ing with speckled trout. We have erected a large
and comfortable hotel in Magnetawan Village,
and are prepared to offer every facility to our
sporting friends by way of canoes and guides to
the trout lakes and streams tributary to the Mag-
netawan, and can offer the best of trout fishing
within a mile of our hotel; we will have ice and facili-
ties for packing fish, so that they can be taken
fresh to any part of the Northern States. The
road from Roussau (the head of steam travel has
been Macdonald) and the journey shortened by
half a day, so that parties leaving Toronto can
get here in one and a half days. Come up and
see us.

GUNPOWDER.
DUPONT'S
RIFLE, SPORTING AND BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1825, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.
Nos. 1 (coarse) to 5 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE.
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFGG. The FG for long range rifle shooting; the FFG and FFGG for general use, burning strong and true.

DUPONT'S SPORTING, MINING, SHIPPING, AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridges, Muzzle, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

W. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square capsules of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 1 lb. kegs. A fine grain, quick and clean, for upland and water shooting. Well adapted to shot gun.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 1 lb. canisters and 1 and 1 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 10, and 5 lbs., and cans of 5 lbs. FFG is also packed in 1 and 1 lb. canisters. Burns strong and true. The FFG and FFG are favorite brands for ordinary sporting, and the FG is the standard Rifle Powder of the country. Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER. ALL GRADES FOR EXPORT. OF AN UNMATCHED GRAIN OR PROOF. MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale office.

Shot-Gun and Rifle-Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

A Day's Trout Fishing in Ireland.

PICTURE to yourselves, O long-fleeced and much-enduring victims of American hackmen, the face of one of these unsurpassed extortionists, on being handed 12 cents for the conveyance of yourself and baggage on a dark night the distance of one mile into the country from a railway station in the respectable time of 5.30. The same unsophisticated Paddy, that one April night, two or three years ago, landed me at my friend Jack's hospitable door in — County, Ireland, is possibly now mounted in state upon the box of a gorgeous New York chariot, waiting wearily at the Cunard landing stage for the occasional and unsuspecting Briton who, in the innocence of his heart, calls lightly "for a cab."

Many of my readers have been in Ireland, and will remember that the rapidity with which they were conveyed at 6d. per mile along the excellent highways of that interesting island was as a rule in inverse ratio to the progressiveness of the country through which they passed. This, however, is a ticklish topic. The political state of Ireland, Mr. Parnell and the famine will be upon us if we do not, in the words of my friend Jack—who is a shining light and a "first-flight man" in the thunder and turf hunt—"haste back" to the shelter of that hospitable roof where he himself keeps bachelor hall, as the last representative of a long line of worthy Irish gentlemen, who in due succession "pinked" and "winged" their neighbors or made targets of themselves; performed unparalleled exploits among the claret bottles and bumpers of rum shrub; kept or supported the county hounds, and in old days sat in the Irish Parliament to the detriment of their purses and their paternal acres.

One of these gentlemen was so passionately devoted to the field of honor that it is said, on one occasion when acting as second he was reminded by his *vis à vis*, a personal friend of his own, that his principal's spare pistol which he held in his hand was, contrary to etiquette, cocked. "Well, cock your's and be d—d, and let's have a slap at you in the meanwhile," was this bellicose individual's reply, and tradition says that shots were actually exchanged, *pour passer le temps*, between the seconds,

More pacific thoughts, however, circled round the time-honored mahogany upon that April night. Anything but gouty limbs were stretched beneath it, and the grim gentry from their canvas on the walls must have looked down with contempt at the dull circulation of the decanters upon the table, under which doubtless during life they used to fall with nightly regularity, hopelessly and gloriously drunk. Contempt would certainly have been the uppermost feeling in their manly bosoms had they been able to listen to the enthusiasm with which their degenerate representative and his guest discussed old angling experiences and planned expeditions to the banks of streams that to them had been but landmarks of the chase.

The Irish squire is for some reason or other not nearly so much addicted to trout fishing as his English or Scottish brother. It may be that the abundance of salmon has generated an indifference to the capture of smaller fry, or more probably that the impulsive nature of the Hibernian character finds in the hunting-field and the race-course something more congenial than in the contemplative sport of the angler. Our side of the Atlantic can offer something of a parallel to this in the almost total obscurity under which fly fishing south of the Potomac, till the last few years, remained.

When old times had been fully discussed and old scenes in other lands had been revisited, we laid our plans for the following day, or rather Jack did, and a river, as every brook in Ireland is called, was fixed upon, lying some seven or eight miles distant from the house. April maintains perhaps its traditions more consistently in the south of Ireland than in more fickle latitudes—I should say its English traditions—for what do the anglers of Nova Scotia and New Brunswick, of the White Mountains and the Adirondacks, of Michigan and Minnesota, know about that balmy, sweet-smelling month that Transatlantic fishers love? We in Virginia are among the privileged few upon this side to whom the long, gradual dawn of spring gives, in common with our British cousins, an ideal April, or even a superior one to their's for angling purposes.

As the dog-cart rolls along the smooth and well-graded Irish turnpike everything bodes well for a successful day. Soft showers fall, sparkling in the fitful sunbeams that burst now and again through the rolling clouds, and light up the vast expanse of soft green sward that rolls uninterrupted save by still greener banks, bristling with yellow gorse, to the low-base mountains whose swelling outlines cut the horizon; a landscape in which the shades of green vary only in the red or brown fallows, over which the harvest drags its slow course, hidden among clouds of dust that in the springs of other lands form such a prominent object to the angler's earlier pilgrimages, are here scarcely to be seen.

The ivy hangs in thick clusters and festoons from gray stone bridges, hoary with age, that lift us over sparkling streams whose amber color bespeaks their boggy source. An occasional mill-dam, skirted by velvety meadows and fringed by willows, reflects on its broad surface the changing skies. We miss the stalwart teams, whose bells go tinkling down the roads of the sister island; but in their stead pass long rows of donkey carts, which (pardon the "bull") represent the one-horse system of agriculture here in vogue.

Now we are rattling through the streets of the little market town, where Jack officiates in the dignified position of a Justice of the Peace, to the chagrin of the insurance company who are interested in his life. Here, too, at the outskirts of the town, rises the Church of England, proud and forlorn—a relic, Mr. Parnell, I suppose, would say, of the tyrannies of the past, and where on Sunday mornings Jack unfaithfully takes his solitary seat in a great square pew beneath a row of marble tablets on the chancel walls that commemorate the sainted deeds of the untraveled Irish gentry as to their own importance, so imminently satirized by Thackeray.

The rector himself, whose congregation may on fine days number thirty all told, is one of the now scarce clericals whose performances behind the hounds or round the mahogany are more brilliant than when clad in his sacerdotal robes. He is standing at the rectory gate as Heaven says that the old gentleman's eyes sparkle and that it is by any means the rarity of a good dinner that causes those clerical orbs to kindle, for our parson is not only an aristocrat (being first cousin to Lord Ballincanny, the ex-Patron of the living), but also well clothed with this world's goods, both by property and by the defunct Church of Ireland. No; it is that famous old port laid down years and years ago by Jack's father and over which the parson and the squire have had many a pleasant evening. He waves his stick as we leave him,

and shouts out an injunction to his old friend's son as to the color of the seal and the exact spot in the cellar to lay his hand upon the treasure. Well do I remember that courtly gentleman, Jack's father; as a lad I dined with him on four different occasions, at the Adelphi Hotel, in Liverpool, in as many years. He took to drinking port instead of claret strangely enough in his old age, and accompanied the peregrinations of the bottle with a look that amounted in the case of guest almost to compulsion. I don't mean to say it was a fierce look. Not at all—kindness and hospitality beamed in his eyes—but there was something in that stately old gentleman's manner of starting the decanters on their round which seemed unable to comprehend even the idea of a half empty glass, and the rapidity with which those decanters circulated was to a modern stomach something too awful to contemplate.

But here we are at our destination, a stone bridge—a famous meet of the thunder and turf hounds—and the old horse, once a hunter, pulls up of his own accord and pricks up his ears as if in quest of the gay cavalcade he has in former days so often upon this spot awaited their approach of.

Before us the mountains swell gradually upward, colorless, except for the bright green patches of grass that here and there dash their sides amid the waste of dead heather and ferns. Beneath us the river, in splendid fishing order, dashes against the buttresses of the bridge, its gravely bed being just visible through three feet of clear amber water.

Looking up stream a long, wide, level valley stretches—a valley one would expect to see traversed by a dull canal rather than a sparkling trout stream—and leaving Jack to begin at the bridge I walk a mile or so up the bank, so as to give myself plenty of water before coming on his leadings.

Fishing down stream was always a mania of Jack's, All Irish fishermen, I believe, do fish down stream, while Englishmen and Scotchmen hold the reverse as their creed, though they do not always follow it. With discolored water early in the season and open banks, I have not much choice, and feeling a trifle lazy gladly gave in to the national custom on this occasion.

The surroundings would in January, I must confess, have been somewhat dreary; more so in many ways than the most savage highland glens; more so than the dreariest of lowland moors or Welsh mountains. The verdant flush of spring, however, softened to a great extent the harshness of those patches of rushes and stretches of bog through whose wiry grasses even the April zephyrs whistled. The yellow gorse, covered with gorgeous dross the broken and dilapidated fences, while the triumphant strains of the skylark counteracted the sad cries of the curlews that circled round our head. Civilization had invaded these solitudes at one time, but apparently had "gone West," not altogether, though, for here by the side of a solitary grove of Scotch fir is a son of Erin, with a long-handled shovel, throwing up a turf barrow round one of the very "humblest cois" it has ever been my lot to see inhabited by man, and I have seen some tolerably humble ones among our mountains. If Wordsworth had come across such a cot he would have written pages upon pages on it. If Mr. Parnell had been able to exhibit it to us this winter, he might have been a success as an agitator—who knows?

But I must stop this, as I am upon the property of one of Jack's cousins (which is a state of matters, however, apparently normal during my peregrination in — County), and that worthy angler will justly accuse me of a breach of hospitality. His residence, methinks, must be somewhere in the neighborhood; and on appealing to the bog-trotter, already immortalized by his astonishment at my ignorance, I feel inclined to make the most of the luxury of open water, and determine to make a start at this point. My readers will, I am afraid, think I have been a long time in getting under weigh, and that the heading of this paper is a fraud and a delusion. Still further delay is occasioned by having owing to a miscalculation of the supplies of my fly-bok, to sit down on the bank and fix a cochy-bonda, a fly that, upon previous days, has been my permanent leader, upon every water and under every clime. While doing so, recollections of stories I had heard Jack tell about the particular cousin in question came into my head, and I remembered that he was a "Sunday man." This, gentle reader, does not imply that he has any particular veneration for the Sabbath day, as he has so much for the bailiffs, and had for twenty years held them in such constant awe, that the first day of the week was the only one on which the laws of Ireland rendered it safe for that unfortunate gentleman "to take his walks abroad." Judging from an English standpoint, on which model his establishment

had evidently been framed, there was at first sight a decided look of five-thousand-a-year about it; but if five hundred found its way into the mansion house coffers, his nearest relations did not know how it could get there, as the land had long been under creditors' management. This did not prevent two or three annual visits of the hands on his lawn, and I have myself seen champagne flow like water on such occasions, and watched with inward wonderment the sons and daughters splendidly mounted, and faultlessly got up, leading the pursuing field, as the never-failing Reynard sped swiftly from the groves and shrubberies that surrounded the imprisoned *paterfamilias*. There is a way of working those things in the Emerald Isle, however, which we foreigners are unable to fully understand. I could, perhaps, throw a little light upon the subject; but fly-fishing, once more, is our theme, and not the domestic economy of Hibernian squires.

As our flock make their first sweep in the air, and fall in that unsatisfactory and "kinky" manner that is always the case with a dry cast and a first throw, one of the welcome and oft recurring showers comes lightly pattering on the leaves of the trees, we have turned our backs upon, and dimpling the surface of the swirling pool before us. Responsive comes the flash of a yellow-belly, and the inexplicable tremor that, electric like, communicates itself to the rod's point, and he is fast dashing in every direction through the clear brown water. Another, and another find their way into the basket, now falling a prey to the cooey-bouda, and now succumbing before the equally fatal allurements of the woodcock and orange on the grouse-hackle. While upon the subject of flies, I must confess to being to a great extent a mocker—a state of opinion born rather of personal experience and observation than of theory. Being at one time an ardent fly-tier, and laboring under the delusion for many years that he who fished with bought flies was only half an angler, I was at last forced by the even run of success that season after season, with an increasing disregard for wind and weather, the standard flies, that I gradually reduced my stock to a rather uncommonly diversified experience of every kind of water and every species, and every nationality of the trout family. A fact, which rather clinched my unbelief, was that my steps for two or three years followed frequently along the same river banks that were being, at that time, trodden by the late Mr. Stewart, whom I used occasionally to meet at those historic resting places that are scattered along the banks of Tweed, and where the trout fisherman in Scotland, that land of piscators, was, as his book still testifies, a very complete scoffer. It was difficult to refuse such evidence as that, though it was with something like a sigh that I saw my favorite sport shorn of its entymological mysteries, old foggy though they were, trumpeted up successfully by the incontestable evidence of baskets filled to bursting from unimproved and much-whipped streams, with that constant distinction the champion fisherman of the North Country in those days, even above the army of skillful fishers that this portion of the world produces.

Mr. Francis Francis, of the Field, the mightiest angler of Southern England, from his gently-flowing, willow-bordered Hampshire streams, shouted forth, I recollect, his defiance at these new heresies; but Mr. Stewart and his followers fished on, and slew their trout, and the wariest brook trout in the world, in the teeth of scientific indignation, with their black hackle and their woodcock all tied on that small hook that distinguishes Scottish flies above all others. Could, after that, a poor angler be expected to rush, waist deep, into the stream, and pursue, vainly, perhaps, every winged midge that came sailing past him, and spend precious minutes, when trout are rising, of his time, in a bet, and be surrounded by a paragraph of dubbing and doggerel, of a moirai, of hooks, and thread, and scissors, and pincers, and goodness knows what, endeavoring to make a feeble imitation of the insects whose place above the surface of the stream has in the meanwhile been supplied by some distant relatives of a decidedly superior flavor?

Have you ever seen, dear reader, one of those forefathers' ancestral, those hereditary, fly-books, that our ancestors, at any rate in the old country, contrived somehow or other to carry along the river bank? In the days of my youthful ardor, fired by constant contact with an elderly relative of the "old time" angling school with a desire to surround myself with the cumbersome appurtenances of a bygone age, and imbued with a contempt for the more concentrated conveniences of the modern fly-fisherman, I took the old gentleman's fly-book, which had ever been to me an object of admiration, and enlisted the services of all the ladies of the family in the manufacture of it, upon what I may call the Sir Humphrey Davy style. It was an awful book; the inside game pockets of a shooting jacket were completely filled by this bulky volume. For years, I am ashamed to say, I bore this bundle to the river side. It was the admiration of all youthful aspirants. The young gentleman who had more money than brains, and the sportsman of the Cockney order—offered me twenty dollars for the old bundle of parchment in its red leather case, without the contents. It made immense impressions everywhere, I can assure you.

Nothing could have been prettier than the variety of water offered by the Irish stream. The foaming cascade of his hot and his cold regions was not there, it is true, but rapid and pool, sparkling in the occasional sunbeams and ruffling in the western breeze, alternated with that exact proportion of each that the angler loves. For two miles no tree nor bush impeded the full backward sweep of the line, and the foot trod incessantly on velvet turf.

As regards the trout, too, we were in luck, for they continued to rise, with little cessation, for three hours or more—fine, plump little fellows occasionally, but not often reaching a pound, a trifle smutty in color in the higher waters, and from their peaty character, but emitting more silvery, as we descend the stream, and more like our Allegheny trout, which is surpassed in gameiness, appearance and flavor by the inhabitants of no rivers in the old country, and surpasses those of the majority that I have had experience of; and this latter I mention it for the sake only of the comparison—has not been either cursory or occasional, but thorough and varied.

About one o'clock, just as the basket-strap begins to feel a little tight round the chest, Jack comes strolling up to meet me, as before settled, for luncheon, with his heavy Irish rod lowering above him and his three ponderous Irish flies streaming from his coat. We used to have a joke against him in old days about the weight of his tackle, wherein it was insinuated that he used to single out his fish as they were feeding near the surface, and steer them with his leader. Our baskets, oddly enough, contain exactly the same proportion of fish to one another as they used to do in former days, making a trifling allowance for Jack's knowledge of the water, which is as it should be, and seems a pleasant tribute to pleasant memories. We count out, if I recollect aright, seven dozen trout between us.

Why is it that in writing a sketch of a day's fishing, or of a day's shooting, too, for that matter, the sporting chronicler invariably pulls up, as if he had reached some longed-for half-way haven, at the everlasting, hackneyed, threadbare-worn midday snack? The English writer, whether in Europe, Africa or Asia, pauses to sing, as if it had never been sung before, the noonday delights of the invaluable bill of Kinshasa, and moralizes a little before resuming his sport amid the fragrant clouds of Mr. Wille's Bristol bird's-eye.

His American cousin, though his menu is perhaps more varied, still finds it hard to get through without assuring the public that his inner man did not suffer in any way from want. As for myself I cry "peccavi" as loud as ever. My pen can no more help pausing at that eventful period of the day than my appetite refrains from the basket and luxuries, which Jack's little grove emerges with from behind a neighboring wall—to my intense amazement, and shall we say also satisfaction. I say amazement, for Jack and I had always rather done the frugal on our sporting expeditions upon principle, and I had supposed the boy had driven the carriage back and that Jack had a bite in his pocket for us both. However, for once in a while the cloth was spread, and beneath the heavy bill of Kinshasa, and the bill of the curlews and the screaming of the lapwings, the popping of corks resounded.

What wonder, then, that after such good things fresh vigor attended our evening efforts. The wild moorland scenery was left behind, and our river carried us through scenes which, though peaceful enough, were more redolent of life than the barrens behind us. The trout ceased to rise and did over a pool and a little eddy yielded its tribute. We had to be less reckless now in the manipulation of our lines for tall trees. Willows, poplars, mountain ash and beech threw at intervals their lengthening shadows on the stream and on the meadows, that grew greener and brighter in the light of evening. Here upon the bank, in a sheltered nook of woods, is a gamekeeper's cottage, picturesque in its thatched roof and latticed windows. Have you any mind with it, and of deep pool and big overgrown, not-to-be-trampled trout that the miller doubtless takes wholesale annually.

Runs there are, too, in plenty all through the country, from yonder ivy-covered tower that, four centuries ago, was the stronghold of some petty chief, in whose recesses the pigeons from generation to generation have reared their young, to the stupendous remains of the famous Castle of Ballynagar, that even the sunning of the green hills and the sun and solid relics of an age that Irish history can scarcely throw light upon, and which played, doubtless, an important part in those dim and distant days when the haughty Normans, under Fitzgislebert and De Lacy, wrested from the kings of Leicester their savage kingdom.

But it is time to wind up both our reel and our story. We have a mile to walk to the bridge, where the boy is waiting with the trap, and six miles to drive home, and Jack is getting nervous about the parson, who, like many of those venerable eaters and drinkers still extant, would have a fit if he were kept waiting ten minutes over the regular dinner hour. Both of us agree we have never known fish rise so constantly, without cessation, as on the present occasion, for though we started late and it is yet barely sundown, we count out thirteen dozen trout as the result of our heaving and pulling, and which are poached at will in the dry summer months, and is reckoned only as a second rate stream at the best, is a very fair haul. Devout thankfulness is uppermost in our breasts that we did not—as at first had been our intention—send home the carriage, and trust to our legs to convey both ourselves and our fish home.

The long, gradual twilight falls as we roll homeward between the hills, and the light and gloom of an old country night has fallen before the lights are seen twinkling from Jack's library windows, within which his anxious imagination paints the hungry parson restlessly perambulating, with his eyes on the clock and his thoughts upon the soup. A shout at the lodge, a short spin over smooth gravel and through dark laurel shrubberies, and the light shines from the open door in our faces, and over the smooth lawn, and on the casement of the large bay window, and the light of the fire of that pillar of the church, who, as anticipated, is there to greet us, watch in hand and distress depicted on his countenance, which, it is needless to add, is speedily removed by the mellowing influences shortly brought to bear upon that kindly bon vivant.

Charlemont, Va.

A DAY AT LANE'S.

SCIENTIFIC GOOSE SHOOTING.

WE took the ferryboat at Thirty-four street for Hunter's Point at 3:15—an earlier one at James' Slip would have done as well—on Saturday, the 21st ult., catching the 3.30 train on the Long Island Railroad, for Good Ground and Shinnecock Bay. The train was off on time, and we were pleased to recognize the faces of two of the oldest conductors on the road—Hobson on the left and Smith on the right. The Bay and the river are conductors of the older time, before elevated roads were known, and when to be a conductor was not to bury all the courtesies and instincts of the gentleman behind a blue coat with brass buttons. We were glad also to learn that the Long Island Railroad under its present management is fast acquiring the confidence of the public. Its system of low fares and freights, with

its rigid regularity, may not be so remunerative at first, but will pay in the end, if the public is honestly dealt with, as seems to be the determination of the present Board of Managers.

We noticed several sporting characters on the train, as divers gun clubs and heavy safes gave ample evidence. Upon making a judicious inquiry we found two gentlemen, Messrs. J. S. Mundy and J. W. Phillips, from Newark, were bound with us for "the Sportsmen's Retreat," or more familiarly called "Bill Lane's." Others got off at Moriches, Westhampton and Atlanticville—all noted places for good shooting.

We found Johnny Lane with his vehicle at the station, and after a ride of fifteen minutes were landed at the Retreat, and heartily welcomed by mine host. We found several sportsmen there, and had the satisfaction of learning the geese were moving, some twenty having been killed the day before, and that the prospects were good. After a hasty ablution we were called in to supper, and such a supper! Who that has ever visited that celebrated spot does not hold in reverential memory Mrs. Lane's clam fritters? Were there ever anywhere else such fritters as these? After plate enough would be a desirable thing, but including them, we think, as they fly only in certain weather, and do not stay, would be rather hard, and would not work.

Upon retiring, your correspondent found coming over him one of his old attacks of rheumatism in his right foot. Were he an English nabob, or a generous liver, it might be called gout. It is very painful, and the long night is sagged in a good room and his eyes will not be able to get together. But morning came at last, and blinding down to the lounge in the gun-room, he lay there all day swathing the swollen member with hot applications of soda in the devout hope of being able to get out on the following day; but alas, Monday morning found it not much better and he saw Bill and George, with Mundy, Phillips and Shepherd start with stools across the field. It proved an excellent day for geese. Before reaching the bogs, where were the boxes, a large flock of geese, some 500 in number, arose and flew back and forth, until some more favored party to the west blazed away and sent them off. But others were coming in, and but a short time after the setting of the decoys, the guns could be distinctly heard telling us that the fun had commenced. Your correspondent having propped himself up with a good glass, was able to see the different flocks as they came, and approached the point where the shooters were concealed, and could see the white puffs of smoke and the sudden descent of the falling bodies, and as they struck and threw up the water in the bay, ah! what aggravation—what a situation for a sportsman—nursing a burning, throbbing foot, every movement of which was worse than ten toothaches, listening to those guns and seeing what he was doing, and not being able to do anything, and not meant for ears polite?" Would it have been very wrong and inexcusable if he thought a bad word, just once? Distance lent no enchantment to that view. He wanted to be there himself, and how often he vowed that on the morrow he would go if he had to crawl on his hands and knees to the boat. And when evening came and his foot brought in twenty-nine geese as the result (one being lost in the last hour), and the gun shooting, he was still determined. And the stories they told of this one's making that double shot, and of the long shot, one of Mundy's, with his 40-inch Long Tom, 160 yards as they all agreed. (About how a flock of eleven came in hovering around the stools and they all fired two barrels each and not a bird scored to the account, they had not much to say.) But such things will happen.

There are, of course, frequent and noisome decoys the previous evening, Tuesday morning, when Lane called, found the undersigned suffering some but determined still. With tightly closed teeth and a grip almost of despair, the rubber boot was pulled on, and though excruciating at first, the pain gradually grew to a numb feeling and he started with the rest. Now, lest some of your readers may not understand the *modus operandi* of goose-shooting, I brought to your attention in Shinnecock Bay, let me give you a description.

There are a number of rigs (as they are called) of live decoys around the bay, the largest and best of which is owned by Wm. Lane. His outfit consists of some thirty-eight wild geese, tamed and educated to a certain extent; some of these have been wing-tipped and cured up; others he has raised (as they often note, even in captivity). He has a large, closely-fenced yard inclosing plenty of water where they are kept and are released twice a day when shooting. During the summer, after having clipped one of their wings, they are allowed their freedom, and they never fail to come back at night for their feed and roost, though they may have been far out in the bay. Lane generally takes about twenty or twenty-five of these geese at a time (placing them carefully in boxes) and he has a boy to the point, where a bar runs out. On this point boxes are sufficient to allow a man to lie down comfortably were previously sunk even with the surrounding soil and then trimmed with seige grass, making a complete blind. The decoys, with a hoop or leather strap on each, are staked out on the bar at irregular intervals, say half a gun shot from the blind. An old and educated gander is placed on one of the decoys, and a short distance from the main dock. He is the caller or honker. And a well-trained honker is a very valuable bird. Lane has two that he says he would not take \$200 apiece for.

And here is where Lane's great success over his many competitors comes in. He knows his birds; he studies them; understands their notes and their workings, and while geese often fly around other stools, when they

come in sound of his honker and his companions they rarely fail to come down. It seems taking a mean advantage of the bipeds, but Lane's decoys seem to understand it so well, they enter into the spirit of the whole thing so humanly, so to speak, that when a flock flies over they will call out vociferously, "Come down here." "Come dear ones and see us." "It is all right." And when the guns crack and their fellows do come down they rise up and cackle and shake themselves, and evidently say, "Hia, ha, ha, ha, ha, ha, ha." So well does Lane study his geese that when he takes out a new one and it acts badly or gives out a wrong note, he has been known at once to leave his box, go out and deliberately cut its throat, saying that that goose is not good; he would not only keep away the wild ones, but as "evil communications corrupt good manners," would ruin his whole school.

The next thing, and a very important part of a successful rig, is to have a good "swimmer" of geese. This is the man in the boat that goes off down the bay and around the flocks if there are any settled therein, and by judicious and careful sailing endeavors to drive them within sound of the voices of the stools. This requires at times great judgment and perseverance and a perfect knowledge of the points and bars of the bay. It takes a great deal of practice to get a flock in the right position for a big shot, if geese can be induced to swim up to a blind, a far better shot can be had than to have them fly over or settle among the decoys. One of the best "swimmers," if not the very best in the bay, is George Lane—as yet a boy, but with a man's head on his shoulders—a thorough water dog as all these bay men are. An instinctive talent to take in at once the nature of the occasion and a muscular activity to turn that knowledge to instant account, make him the equal among many who are good; and but a few more years of experience will help him to far outrank the best of them.

Having set our decoys, settled ourselves in our respective boxes, feet toward the stools and guns cocked, we awaited events. George had started off eastward, where the geese sometimes feed when they come in at night. So Bill (who could hold his head higher than any of us were allowed to), his brown cap and florid round face looking, as some one remarked, "so much like a bunch of sand, that the birds couldn't tell the difference," whispered, "Here comes a bunch, keep low," and low we were. Our honker tuned up, and was answered down the bay; the flock joined in, the honk came back multiplied tenfold. Soon the rustle of wings fell on our ears, and it was still. "How is it?" "There are nine in all; but only about half of them right yet. Wait until they walk out clear of the stools. Don't shoot until they rise. Now give it to them." And as we arose, there was an astonished lot of geese—and how they did scramble to get off! But those steel tubes were too much for them. Five out of the nine remained kicking in the water—two of them only being wing tipped. Then came a scene of excitement, and such high rubber-boots came in play, for a winged-geese is not an easy bird to get, nor even to shoot, as they throw their heads and almost entire bodies under water, and go off at no slow pace. The undersigned was not in racing condition, but Shepherd and Mundy each took after a goose, shooting as they ran through the water. Mundy soon got his; but "Shep," with his short legs, could not go so fast, and in his excitement ran in on the high rubber-boots and lost his line after all. Fortunately George came up and shot the goose from the boat. It is not necessary for me to give the particulars of our different shots; how the undersigned, ourselves, made a beautiful double; how Phillip and Mundy bored the same goose; nor of the big buckshot that Phillips put through the very center of that gander.

The water came up sharp and cold, and, as no birds came with it, we sat our lonely boxes and lunch tables out there on the bay, especially if you have had luck. Toward 4 o'clock a large flock, some forty or fifty, came in and settled on a bar about three-fourths of a mile east. George was soon around them and commenced driving. His tactics were admirable, and the way he managed that flock was superb. Not too near, nor too far; back here, on here, and the flock in long line came sailing toward us. A half hour was done. Still nearer; another quarter hour—they were doing splendidly; another quarter, and they would be within sight and hearing of our decoys.

"Steady! Keep down there! Don't show your nose even! Geese have tremendously sharp eyes. Keep cool! Oh, what a shot we'll have! We must get twenty this time. Aim at the hind ends if they are well bunched. You, Mundy, take the extreme right; you next, Phillips; Jacobstaff, you look out for the center; Shepherd and I will tend to our end." These were the orders of General Lane.

Another twenty minutes. "Where are they now? They ought to be pretty near here. What in thunder is the matter? They have stopped, and are going off eastward. Where is George?" George was gone—had left the geese, and could be dimly seen off Ram Pasture Point. "What has happened? How could he leave those geese when in such splendid shape? It must have been something very serious, or George never would have acted thusly."

"Some d—d fool tipped over, I'll bet," grunted Lane, in great disgust. And so it proved. One of the inhabitants, returning home after a tarry at the hotel at Pon Quogue, loaded to the muzzle (we mean he was, not his boat), in and cranking to round the point with no reef at his sail, and I tell you the wind, over to went, his boat rammed into the mud. Having crawled over the mud, the upturned boat, he was yelling like a lion, and, but for George's turning back, would have frozen to death, sure. Well, all praise should be given to George. A human life is of far more value than many geese, but the anatomists on poor whisky were loud and deep.

Of course, all this time, as the geese were in sight, we had to sit close and tell you the wind, over to went, his chance to stir or shake yourself; we shivered and growled. Having dug the mast out, and righted and pulled out the boat, an oar was given the obfuscated individual, and he was told to paddle ashore. And George once more started for the geese, but the sun was only twenty minutes high. It was too late to swim them. The only chance was to put them up, and they might come any day or might go to sea. Soon they arose, Oh, what a flock!

"Which way are they going?" "Can't tell yet," "Here they come!" "We'll have a shot yet." "Give tongue, old boy!" to the gander, and as he spoke out the reply came back, "Here they come, lay low."

There they go over our heads. Ye gods! how big they looked. All passed and lit on a bar to our left, two or three gunshots off. Too late to wait for them to come in to-night. There they sat, forty or more, cackling and pruning their feathers. No chance; what a shame! Blast that confounded fool that upset!

"But hold, here are four right in front of us. How are they, free from the stools?" Lane asks, as he could not see from his box. "Yes," we replied; "right out in the open." "Then it is our only chance; give it to them," and we arose and fired. Three out of the four lay over, the fourth going off with a broken leg to die at sea probably, for he would not be able to rise again after having settled in the water.

And thus ended our day at Lane's, having bagged twelve in all. We soon were homeward bound. Lane says the prospect for goose shooting was never as good as now, and he expects it will continue big until May. "So mote it be."

Among others whom we found at Lane's were Messrs. Albert Peitzer and Hermann Schellberg, two very intelligent Germans, from away in Crefeld, Rhemish Prussia. Having been in the country but a few weeks on business, and erecting the Saturday's White Star steamer, they had taken a run down to Lane's (the FOREST AND STREAM giving the hint). They each, we were informed, own preserves at home, where they shoot the fierce, grunting wild boar, and have thousands of partridges, hares and such like; but this killing ducks out of a box, and the ducks going at the rate of seventy miles an hour, rather look them. However, on Monday they had good sport, and, considering the circumstances, did well. They got some 150 shots. We will not say how many birds they bagged, but they were wonderfully pleased, as the champagne corks on their return to the gun-room will testify. They proved themselves right good fellows, full of humor as well as enthusiasm. We hope to meet them again.

In the party we had the pleasure of joining this time (and we have been down there many times and always found agreeable gentlemen, and have made some lasting friendships) we found in Messrs. Phillips, Mundy and Shepherd three as courteous gentlemen and good shots as one would want to lie beside in a shooting-box. All had their stories and reminiscences, and the days and evenings were short indeed that we spent with them. May we all meet at Lane's and have as good a time again (barring the gout), is the hearty wish of JACOBSTAFF.

Natural History.

DESCRIPTION OF A NEW SPECIES OF BIRD OF THE FAMILY TURBIDIDÆ FROM THE ISLAND OF DOMINICA, W. I.

BY GEO. N. LAWRENCE.

Margarops dominicensis.

Margarops herminieri, Lafr. n. sp. *Lafr.—Proc. U. S. Nat. Mus.* Vol. I., p. 52.

MALE.—The entire upper plumage is of a rich dark brown, the crown is darker and has the edges of the feathers of a lighter shade; tail and quill feathers of a darker brown than the back; axillars and under-wing-coverts white; the lores are blackish brown; the feathers back of the eyes and the ear-coverts have narrow shaft streaks of pale rufous; the feathers of the neck and upper part of the breast are of a warm dark brown, those of the chin and middle of the throat with light rufous centers; those of the lower part of the neck and the upper part of the breast have also light rufous centers, but in addition each feather has a black terminal spot; on the lower part the breast, and on the sides the feathers have white centers, bordered strikingly with brown; the markings of the breast feathers are squamiform in shape; those of the sides, innuolate; the abdomen is white, a few feathers on the upper part are very narrowly margined with brown; under tail-coverts, brown, terminating with white; outer feathers of thighs, brown, the inner, whitish; "Iris, tea color;" there is a naked space around the eye; bill, yellow, with the basal half of the upper mandible dusky; tarsal and toes pale yellow. Length (fresh): 9 in.; wing, 5; tail, 3; tarsus, 1; bill, from front, 15-16; from rap, 11.

Type in U. S. National Museum, Washington.

Mr. Ober sent five specimens of this form from Dominica, all males, and closely resembling each other; it is probable, as in the allied species, that the females do not differ in plumage materially from the males.

Mr. Ober's collection from Dominica contained three species of *Margarops*, which I never had seen before; these were referred to known species, two of them I think correctly; but the one which is the subject of this article I now find was erroneously considered to be *M. herminieri*, Lafr. I supposed these species would be the same as those recorded from the neighboring islands, as they agreed well with the descriptions given of them, and there were no available specimens to compare with.

As soon as I had finished the examination of the birds of each island collected by Mr. Ober, they were placed in a box by themselves and not disturbed again except for an occasional comparison. The collection from Guadeloupe, containing specimens of the true *M. herminieri*, Lafr., was not received until more than a year after that from Dominica. These specimens I labeled *M. herminieri*, Lafr., as a matter of course, they being from the locality of the type; the difference between the birds from the two islands was not observed at that time, as no comparison was made.

This winter, having occasion to review the species of *Margarops*, I got the specimens from the different islands together for the first time, and at once saw that the species from Dominica was quite distinct from the Gua-

delphe bird. It differs from *M. herminieri*, Lafr., in being less in length, of a more robust form, the bill stouter and the tail shorter; the brown coloring throughout is much darker and of a ruddy cast, instead of olivaceous; the centers of the feathers on the throat and upper part of the breast are much more rufous, and have black spots at their ends; the abdomen is pure white, whereas in *M. herminieri* the lower part of the breast and the abdomen are covered with lanceolate-shaped markings, which are very striking, each feather being white with a strongly-defined brown border; only a very small space on the lower part of the abdomen is white; *M. herminieri* has the white ends of the under tail-coverts edged narrowly with pale brown; in the new species they are white without borders, and it has the tarsi and toes stronger and paler in color than those of *M. herminieri*.

AMPHIOXUS LANCEOLATUS.—In two valuable papers which appeared respectively in the January and February numbers of the *American Naturalist*, Mr. Henry J. Rice has given a very full account of his "Observations on the Habit, Structure and Development of the curious Lancelet" (*Amphioxus lanceolatus*), a creature about whose true position in the animal kingdom there has been and still is so much discussion. The author of these papers during the summer of 1878, while engaged in laboratory work at the Chesapeake Zoological Station, succeeded in obtaining two males, a ripe female and about twenty young of these species, and it is on this material that the present papers are based. Previous to this the young of *Amphioxus* had not, we believe, been taken in America. The young remained alive for nearly two months, and thus gave the observer an opportunity of making a series of most interesting observations not only over their habits, but also on their growth and development.

Mr. Rice's most interesting account of the habits of both adult and young of *Amphioxus* is supplemented by a very full and valuable essay on its anatomical structure, to which we can here only allude. The paper as a whole is a valuable one, and throws light on a number of points hitherto in doubt.

WHITE BLUE HERONS.—Dedham, March 14th.—Editor *Forest and Stream*.—Last year while in Florida I caught three young white herons, just hatched, and was able to raise one of them. When I left him South last fall he was about eighteen inches high and finely feathered. He is now turning blue. Is it the "nature of the beast" to change color? Have often heard that they did, but thought it a hoax. If you give me any information on the subject it will greatly oblige me.

C. W. RANTOUL, JR.

The bird, from what you tell us of it, is no doubt *Ardea herodias*, a species which is sometimes white and sometimes blue. Audubon, who had good opportunities for observing this species, regarded the white birds as young, and the blue ones as the adults. This species is often found cursorily mottled in its change from the white to the blue plumage.

PILEATED WOODPECKER.—Springfield, Mass., March 20th.—Editor *Forest and Stream*.—I notice in your last issue, "J. J. B." On this occasion I ask about a bird, and I should judge it is the same kind I shot about thirty years ago. The man that stuffed it said he had stuffed birds over forty years, and never stuffed but one before. I am not much of an artist, but I inclose a sketch of mine; it is the exact size, for I laid my bird on the paper and marked around it with a pencil, and then put in the colors in water colors. I did it in about twenty minutes, and but I hope it will give you an idea of what it is.

The inclosure mentioned by our correspondent is an admirable sketch of a pileated woodpecker (*Hylotomus pileatus*), which well presumes was the bird referred to by "J. J. B."

REULLA.—I have submitted specimens of this curious marine animal to a scientific friend in Boston, who gave it the above name, and stated that it belongs to the corals, family *Pennatulidae*, and is allied to the sea-pens and gorgonians. As this creature has some interesting peculiarities which I have discovered by keeping them alive in a jar of sea water, I will describe it. It is shaped like a leaf of the English violet, about two inches or more in diameter, anchored in the mud by a tube five or six inches long; the leaf is covered with innumerable minute tubercles, and is of a reddish-brown color. This part, for it exactly resembles one, and is called by the fishermen, "the mud leaf;" has a certain power of locomotion, and withdraws itself into the mud when irritated. I collected some of them, and placed them in a jar of sea water. In about half an hour, when they had become quiet, I was surprised to see protruding from these tubercles, tentacles like those of the *Actinia*, about an inch in length, and surmounted by a crown of waving white plumes. The animal then extended with water, and the beautiful purple hue. At night, with the room darkened, the creature on being taken emitted brilliant flames of phosphorescent light, illuminating the whole jar of water. I kept them for two days, when, probably owing to a want of mud to burrow in, they died one by one. Perhaps with an aquarium, properly fitted up to meet their wants, they might be kept alive; and certainly it would be one of the most interesting inhabitants of the aquarium—beautiful by day, and brilliant by night. It is quite rare, I am told, even on the coast. I have never seen it described in American books, though "Nicholson's Manual of Zoology," my friend tells me, mentions a European species, *Pennatula phosphorea*, found in similar localities in England, which has this phosphorescent quality.

S. C. C.

New Smyrna, Florida, March 14th, '90.

—An English scientific journal relates that while the sailors of H. M. S. Faraday, aided by the new system of electric illumination, were one night lowering a cable, they noticed an immense number of fishes of all sizes and shapes, gathering around the spot. By promptly throwing out nets they were enabled to make an extraordinary haul. The electric light may doubtless be employed to advantage by fishing boats.

Fish Culture.

JAMES WOOD MILNER.

BY BARNET PHILLIPS.

[A paper read before the American Fish Cultural Association.]
THE sad duty devolves on me of announcing to you the death of Professor James W. Milner, who, at Wakegon, Ill., on the last day of December, 1879, passed away from this world.

Many of you here must remember what interest Professor Milner took in our proceedings. Thoroughly grounded in all the scientific data, perfectly at home in the practical details of fish culture, there were no questions on an ichthyological or other character we could put to him, that he did not respond to at once, in a singularly terse and clear manner. He had the power of stripping the husk off of matter, and presenting you the perfect grain. This society owes a great deal of its prosperity to the labors of this man. Many of its plans, and especially the widening of its scope—the effort to make it more than local, to extend its influence, were suggested by Professor Milner. If ever any one has his whole soul in the work, it was that man, whose death has now taken away from among us, His quick, nervous manner, his intensity, the power he possessed to make any question lucid, his easy method of explanation, we can hear no more. His place will be one, in this Association, not easily filled. Fully trusted by the Smithsonian Institution, he had charge of some of its most important missions, and there are those present who can testify to the thoroughly conscientious manner in which his task was fulfilled. There are, in this world, many ways of doing one's duty. It was Mr. Milner's ambition to leave no stone unturned that might be an obstacle in the way of scientific progress. You have often heard that saying, that "if war has its heroes, so has science its martyrs." The sacrifice of this has perhaps become trite, but it is none the less true. It was as much overwork as anything else; an excess of zeal which, early in Milner's life, as late in his career, shortened in such an untimely way his days. Brimful of his work, I have seen myself how careless, how utterly indifferent, Mr. Milner was of his person in the prosecution of his labors. It was my good fortune to have been with Mr. Milner as his guest on more than one occasion when he was engaged in his present duties. I remember when on a cold night on Chesapeake Bay, when his men were out on the water catching the shad eggs, that a sudden storm arose. There was no danger to the numerous boats' crews, but the chances were that if his presence was wanting that some millions less of eggs would be the result. Indifferent to the rain, I have seen him hurry from out his berth (it was in the floating hatching-house), and, but half clad, spring into the nearest boat, at midnight, and spend all that night until dawn, going from one boat to boat, encouraging the men in their exertions. The fishermen wanted to have the rivers teeming with fish, and there was enthusiasm enough in Mr. Milner to think himself the instrument for thus furnishing food to millions, and he was perfectly willing to lay down his life for what other men would have been languidly indifferent about. I have myself frequently been distressed with Mr. Milner as to what I deemed to be an unnecessary exposure, and had warned him of possible fatal results, but his reply was, I remember his words distinctly, "I do not think I fulfill my duty thoroughly, conscientiously, in any other way." This somewhat explains the character of the man. The last time I saw him was some two years ago at Gloucester, where he was busy arranging apparatus for hatching cod. The novelty of this duty excited his enthusiasm, and quite possibly he could he had taken some time before was augmented by the chill dampness of a New England fall.

I can but briefly describe this useful life. Mr. Milner was born in Kingston, Ont., January 11th, 1841, and came to Chicago when he was five years old. As a boy he was a hard student, and developed early in life a taste for natural history. He was but a lad when he traveled through Minnesota making collections. At the breaking out of the war he volunteered in an artillery company, and served with distinction to almost its close, having been noted for conspicuous courage and gallantry. After an honorable discharge, he obtained a position in the Chicago post office. Still retaining his love for natural history, he thoroughly filled his position, but, combining with it the study of his favorite topics, this double work was too much for him, and his health broke down.

Retiring from his postal duties, he made explorations in the peat beds, and exhumed the skeleton of a moose, which he supposed belonged to an extinct species. Having written to the Smithsonian Institution in regard to it—describing the remains of this creature—the singular terseness and scientific instinct displayed in his letters attracted the attention of the Smithsonian Institution. This led to Mr. Milner's series being engaged by the Smithsonian. He was first employed by Professor Baird, in 1872, to gather together the statistics of the fish of the Great Lakes. Shortly afterward he joined the United States Fish Commission, in Washington, and was in their employ up to the day of his death. Successive publications of the Fish Commission fully attest Mr. Milner's work and services. In addition to this, he was in close communication all the time with the present distinguished Secretary of the Smithsonian in collecting general statistics, and arranged the literary material for fish propagation in the reports, of which he was most especially editor. Milner's work was wide and extended. At different times he planned various fish-hatching campaigns in North Carolina, Virginia, on the Potomac, on the Susquehanna, at Havre de Grace and at Holyoke. He had under his charge the cod hatching at Gloucester in 1878. The Secretary of the Smithsonian writes in his honor: "He was

very methodical in everything, and as keeper of that portion of the archives under his charge was a notable example of industry, care and precision."

There is some information more than touching, which I have received, descriptive of Milner's last days. He was so enthusiastic in his work, that he went beyond his strength. He believed that with such a mission as was his, that he was invulnerable to the attacks of malaria or overwork, under which so many of his friends had succumbed.

When advised by Professor Baird, in the summer of 1879, to seek his home and take a needed rest, he still lingered at Washington, perfecting his plans for the steamer *Fish Hawk*, which he never was to see afloat, which vessel was the great triumph of American fish culture, and was only called into commission last month. Coming at last home to his wife, he refused to be thought even ill. In a month he was again at his post at Gloucester, entirely forgetful of himself, absorbed as he was in his work. When his task there was concluded he became so ill that he was forced to take to his bed. As soon as he could travel, he hurried on to Washington. There, confined to his room, still, with untiring energy, he conducted the business of the shipment and planting of the California salmon into Michigan waters, by means of the telegraph. His cough continuing, his physician ordered him at once to Aiken, S. C. But finding he could do no work there, but slightly improved in health, he went to Western Florida. Mrs. Milner having met him in New Orleans, she informs me that any idea of rest was even then the furthest from his mind. Florida might do him good, but that was secondary to the fact that he might conduct some work in Florida; there were collections to be made there. Mr. Milner remained in Florida until May, but was no better. It was with a terrible struggle that he then gave up the hope of future usefulness. I cannot imagine any more dread conflict than that which is sometimes waged between a man's active brain and his perishing body. It was in May that this devoted man went home to die. Life was gradually ebbing, but still the mental powers had lost nothing of their force. He could not bear to think that his work might stop with him forever.

A bare chance of life was possible. It might be found in Colorado. Thither he went last September; still he refused mental rest, for life was to him as worth nothing save enhanced by work. He rallied for a while, but then became more physically feeble. The vitality in the man was immense. If he was too weak to write letters, he dictated them. When, in October, the doctors told him that his time was short, then his resignation was supreme. Even then he remembered many of his friends, members of this Association present here to-day, and wanted to send them his last word and greeting. He said—these are his very words: "I am dying without a feeling of ill-will toward any man," and could—(writes to me, Mrs. Milner)—"could you have seen it, your kindness toward all who came under his notice, you could better understand the noble qualities, the untold goodness of this man."

Let us then, respect the memory of James Wood Milner, who was not only of singular service to this world, but who was honest, sincere and endowed with many wonderful gifts. It is to the disinterested efforts of such sterling men as was Professor Milner that we are beholden for the present position we enjoy, and should be lost to us, I am hopeful that the memory of one of our leading officers will always be revered by the American Fish Cultural Association.

The Kennel.

BREAKING DOGS WITH COLD LEAD.

WHITEHALL, VA., Feb. 23d.

Editor Forest and Stream:—

Through the kindness of your correspondent, "Ringwood," I have occasionally the pleasure of perusing your paper. In your issue of the 12th inst. I notice a letter signed "W. F. Steel," deprecating the use of "cold lead" in breaking wild dogs, and, in short, declaring it to be perfectly useless. I decidedly disagree with him. My experience of a dozen years, and the experience of twenty years, and during that time, it may easily be supposed, I have had some pretty wild ones, and I cannot call to mind but one instance in which a dose, or doses of shot, followed by a sound "hiding," have not been effectual. That instance, by the by, was very effectual in its way, for the shot killed the dog, and perhaps, like the doctor's patient, he died cured. I do not mean to say that the shot gun could be part of the regular recognized tools of the dog-breaker—on the contrary, it should only be resorted to as a forlorn hope. At the same time, I repeat, I have never known it to fail, if applied at the proper time, to effect at least a radical improvement. No doubt there are serious objections to it. Some might say it is cruel—though scarcely more so than a series of whips, or whippings, which are apt to do to a dog what the whip does, but after each other mode has been tried in vain, I would have no hesitation in using it, the more so as a dog which you cannot control is worthless. At this moment I have a living monument to the good purpose to which a shot gun in dog-breaking can be put. Shortly before Christmas, '79, I came into possession of a setter dog which had never been broken, though he had been hunted, and I had by his former owner, who declared him quite unmanageable. He was a very fast dog, had a good nose, would stand steady enough to birds for say five minutes, but the moment the covey was flushed he was "all over creation," as his owner phrased it. I have seen him chase a partridge half a mile, and as for rabbits, he was the best rabbit-dog in the country. Now all this was not because he was so much interested in it. He had been whipped over and over again until I was sorry for the poor beast. I suggested the advisability of giving him a dose of shot, but my friend was a young sportsman who shrunk from doing this, but said he would hand over Porter to me and I could do as I pleased with him. I would not have troubled about the beast, but partly for my friend's sake, and partly because the dog was good looking, well bred, extremely fast and had a good nose, I thought I would

try him. Let me say here he was two and one-half years old. My first step was to get acquainted with him. My next to, in general way, make him obedient—not an easy task—but he was not sulky, and came in to hand pretty well. Then I took him out hunting without any gun, but with a steady dog of my own. Well, it was the same old thing. He flushed every covey of birds he found. Then he would not "back stand," and disgusted my setter, "Alb," by taking his point and flushing his birds. Then, worse than all, though quite obedient at home, returning when called (he was always very attentive to the whistle), and ever "down charging," He paid not the slightest attention to whistling, calling, or even stronger language. I regret to say, I beat him unmercifully as soon as I could catch him, and tried again. Presently Alb found a rabbit in a bush. I called Porter, who came with perfect obedience, there being no birds on the wing. He made a faint attempt to "back stand," rushed past Alb to put up the birds and was exceedingly disappointed—there weren't any, and, in fact, looked very foolish. Just then Mrs. Alb, rabbit, who did not understand this fooling, bolted, and so did Porter, notwithstanding he had just received a tremendous beating for that same thing, and that I did my utmost to restrain him, even to throwing stones at him. This satisfied me there was no resort left but the shot gun. Two or three days after the occasion just referred to I took him out again, this time by himself—I, armed with my choke-bore. We soon found birds. I shouted to him and running as fast as I could, I got within about sixty yards, when the birds were flushed. Off went Porter as usual. I shouted to him as loud as I could, and then let him have it. There never was such an astonished dog since dogs were. The shot stung pretty smartly, and before he had fairly recovered from his surprise I had him by a hind leg. I knew it was now or never, and I thrashed him until he was almost dead. Of course he could not have any more to do. Next day a friend happened to come, and we went out for a short time, taking the dogs. Porter hunted first rate, but flushed the first covey he found, which was also the first we found. Fortunately I was not far off, and "ha! you Porter, his back sir," stopped him in time. He came back looking very frightened, and I petted and made much of him. From that moment he was a conquered dog. Of course he was not much afterwards, and I was more than once on the point of giving him another dose, but happily refrained. Now he is the fastest, steadiest dog I have owned for many a day. This is only one instance of many wherein "cold lead" has done good service.

SAPIENS QUI ASSIDUUS.

CLASSIFICATION OF THE COLLIE AT THE NEW YORK SHOW.—*Jersey City, N. J., March 18th.*—I wish to call the attention of the Westminster Kennel Club to the injustice done the breeders of the Scotch collie in classifying the dog and bitch of that breed together at the Fourth Annual Bench Show. Heretofore it has been customary to class them separately. There has been a great interest taken in the collie since the last bench show, and a number have been imported especially to exhibit at this collie bench show. I do not see why the kennel club should make any distinction in the classification of non-sporting dogs, as none are more useful than the collie. Appleton's "American Cyclopaedia" states as follows: "At the head of the list of the domestic canines of temperate Europe stands the shepherd's dog, having been trained from time immemorial to the care of flocks; its peculiar faculties seem to be instinctive, and its sagacity, fidelity and courage are not excelled by any species of dog." I think for the above reasons the collie should at least have a chance, similar to other non-sporting dogs, and I ask the kennel club to make two classes instead of only the one, for if they are exhibited separately I know of at least five bitches in this State that will be entered. I think it is the duty of the kennel club to do all in its power to encourage and promote the breeding of such valuable dogs. Look at the English Bench Show and see the great number of collie dogs that are exhibited; in fact, they are taking the lead over all other breeds. By opening a class for bitches separate from the dogs the kennel club will confer a favor on all lovers of the Scotch collie and also insure a larger number of entries and finer specimens of this breed than has been heretofore exhibited in this country. J. L.

As regards classification, the points of the male and female collie are so much the same that no injustice is done the bitches as far as the judging is concerned. The question, therefore, is only one of prizes, and in making up the premium list the committee were governed to a great extent by the entries in various classes in previous years. However, we observe that a special club medal has been offered for the best collie bitch, providing a bitch does not win first prize, which makes five prizes in all for this breed.

ENTRIES FOR THE DERBY.—*New York, March 23d.*—Be kind enough to publish in your paper the following entries for the Field Trial Derby: Lad (Lincoln-Daisy) bred white and orange setter dog; Dashing Flover (Dash II-Phantom), white and black setter bitch; Blue Queen (Tam O'Shanter-La Prince), blue Belton setter bitch; Blue Princess (Tam O'Shanter-La Prince), bl o Belton setter bitch; Lu (Lincoln-Daisy Deam), white and orange setter d (ou-Nora), black and wt (Dash II-Norma), blue 3 (entered by the Monty Prince Albert (Brusset) picked setter dog—ent dianapolis, Ind.; Lady I and white setter bitch—New Castle, Pa.; Dick and white pointer dog; and white setter dog lung, (Fashion setter dog—entered) C

—An internation at Lincoln, in Ht. June.

player inside. Years ago—it must have been fifty—Mr. Felix suggested the application of the Roman catapult to the purposes of propelling the cricket ball, and Caldecott, several years later, simplified the machine. Again, a newly invented catapult has been rigged up on the turf, the inventors and patentees being J. Wisden & Co. This is claimed to be "the most effective substitute for the professional bowler." At the time of the debut of this automaton many differences of opinion arose respecting the real merits of the instrument of the bowling substitute. The author of "The Cricket Field" waxed sarcastic over it, and the "prophets" of the day went about scratching their heads with fewer half crowns to jingle in their pockets, and wearing an unusually thirsty look. The press of the time then came to their rescue, and from the two following extracts the reader was supposed to be able to draw an opinion for himself: "The catapult is accredited to Mr. Felix, who, according to his own showing, borrowed the idea from the resources of the beleaguered Archimedes and irresistible Marcellus for the more friendly encounter of the cricket ball, directing attacks from which towers and temples went to the ground, to the more humble task of lowering obstinate wickets. Though not quite so good practice as a first-rate bowler, because a ball does not certainly come from it in quite the same manner as it does from the hand, still it is not without some advantages over the services of a good hired bowler. It never tires, is never ill, and it can adapt its pace without spoiling its pitch." Another writer, in the *Sporting Magazine*, 1838, says: "I allude to the catapult, a convenient instrument, which will make any man with eyes in his head a bowler. Let them have a railroad for the ball to run upon, and the bowling is complete. As to the injury it does not the incertainty, but I sincerely hope it will never supersede nature's catapult—a free shoulder, with its proper up pendulaves, a strong arm and a steady hand; and right well he might have added, a supple wrist and a sufficiency of brains.

Lastly we come to the machine-made long-stop, in whose meshes the long taut of byes finds its source; we refer to the stoppage-net. Whence this came, and when it was first introduced on the cricket field, it matters little, but it has been an importation, in our opinion, that has done great harm to American cricket. Fortunately it is the only one of the three labor-saving machines which we have recapitulated that has taken out its naturalization papers, and one is certainly enough. Good bowlers, good wicket-keepers and good long-stops are not such a drug in the American market that we can afford to let machines take part in our practice. If we are to fight our way up in the cricket world we must leave these jim-cracks and innovations alone.

CRICKET AT PORT HOPE IN 1846.—The game was firmly established at Port Hope, Canada, over thirty-five years ago, and we have records of their club playing against Cobourg in the above-named year. It would really be a pity if one of the oldest cricket organizations in the Dominion should be disbanded on the eve of a prosperous season.

AMERICAN CRICKET.—*New York, March 27th.*—It is characteristic of Americans that they are always striving for "something new," something different from any other nation, consequently it is not surprising that they want a new game of cricket, or rather American cricket, with American rules; and hence we see the Cricketers' Association at the head of the "average system" and "revolution" both quite unknown or unheard of in any other country where cricket is played. These advanced ideas may be good enough for some, but are they acceptable to the majority? Do they promote the noble game? This is a very important question, and should be well considered by all cricketers, now that cricket seems to be going ahead in this country; therefore let American cricketers decide whether cricket is likely to advance more rapidly with the new idea or the old.

THE AUSTRALIAN ELEVEN.—A Melbourne correspondent informs us that the Australian team for England and America is nearly complete. They made a start on New Year's Day, and are about to play a strong fifteen of Sydney. The list is as follows: Spofforth, Honner, G. Bannerman and Murdoch from New South Wales, and Alexander, Blackham, Boyle, P. M. Donnell, Palmer and Sligh from Victoria. The two extra men will probably be A. Bannerman and Evans or Kendall. Honner is said to be the hardest and cleanest hitter ever seen in Australia. He stands six feet six inches; can run like a deer, bowl like a catapult, but with plenty of break, and throw a cricket ball 131 yards the first try—altogether rather a "nail-er." They have had some weather out there, too, one day did not rain for overcast and two days after it was 104 in the shade and 118 in the sun. In South Australia it went as high as 172 in the sun.—*London Sportsman.*

—Mr. Chas. W. Dance, of the Staten Island and St. George's clubs, of this city who has been spending Easter in Hamilton, Ontario, was hospitably entertained by Alderman R. Kennedy, of that city, the jovial Captain of the Hamilton Cricket Club, who visited New York and Philadelphia last summer. Captain Kennedy is in hopes the St. George's, Young America and Staten Island teams will visit Hamilton this season and promises them a "gay old time," both on and off the field, and will then pay them another visit next season.

THE CRICKETERS' ASSOCIATION OF THE UNITED STATES.—*Philadelphia, 93 Walnut street.*—The third annual meeting of the association will be held at 93 Walnut street, April 4th, at 4 p.m. Delegates must present credentials properly certified, each club being entitled to one vote.

JOHN P. GREEN, Sec'y and Treas.

—The Germantown Cricket Club is to be governed somewhat differently in the future, and expects a large increase of membership this year.

—The Manhattan Cricket Club will have a strong eleven in the field this season. It has several new members that can play.

—The Hargreave brothers, so long identified with the Germantown Club as its bone and sinew, have joined the Girard Club, of Philadelphia, which is composed mostly of Englishmen, and they will make it a match for any organization in the country.

—We call attention to an article on "American Cricketers and a Foreign Trip" in another column.

—George Lane, professional Staten Island Cricket Club, has engaged passage from Liverpool, England, 15th inst.

—Now that it is positively known that the Philadelphia boys are not "going foreign countries for to see," the Hamiltonians will have to look out, for Captain Kennedy will surely be after them.

—The Australian eleven, which is to visit England early in May will, it is expected, return home via New York, Philadelphia and San Francisco.

—Secretaries of clubs are requested to send in their full addresses at an early date.

—Mr. James Eyrle, of the Staten Island Cricket Club, has been presented by that organization with one of "Cobbett's best" in record of the best bowling—three of the Young America wickets in three successive balls—Young America (2d) vs. Staten Island (2d), July of last year. "Our Jim" is happy.

Answers to Correspondents.

A number of answers are crowded out this week, and will appear in our next issue.

L. P. B., Houston, Tex.—Read our advertising columns.
A. REARIN, Fredericton, N. B.—The address is New Smyrna, Florida.

H. K.—Address of Commodore Jersey City C. O., is Charles E. Chase, 27 Broadway.

W. L. J.—Send to Manning's Yacht Agency, 53 Beaver street, N. Y., for yachts in the market.

W. P. S.—Address Commodore W. D. Lintz, Poughkeepsie C. O., Poughkeepsie, N. Y.

C. O., Erie, Pa.—You will find Jordan's "Manual of Vertebrates" the thing you want. See our issue of March 11th.

G. G. G.—Gelson's anti-fouling paint for yachts is to be had of Gelson & Co., 185 Maiden Lane, N. Y.

C. G. H., Montreal.—A preparation of paraffine dissolved in naphtha or benzine, is used for waterproofing fish lines.

C. F., Montreal.—Chas. Reiche & Bro., Chatham street, New York, can supply you with the birds, and is thoroughly reliable.

H. S. H., Bellefonte, Pa.—Will you be kind enough to tell me where I could purchase some live quail? Ans. We cannot tell you.

ESCALAPIUS, Montreal.—We will give the desired information if you will send us more specific particulars, the kinds of fish you have in aquarium, etc.

RACE HORSE, TEXAS.—The fastest mile time on record is that of Ten Breck, 1:32.1. Your other query we cannot answer, as there is no official time recorder.

E. W., Pekin, N. Y.—A letter addressed to you has been returned. We should advise you to consult the editor of the Jacksonville (Fla.) Sun and Press.

W. H. C., Haverford College, Pa.—Can you tell me the date of the *Harp's Bazaar* in which were sketches of the Eastern Archery Meeting? *Bazaar No. 44*, vol. XII.

W. R. B., Orange, N. J.—Unable to give you Mr. George Hecker's address or the pedigrees of the Laveracks Zip and Naoml. We will be pleased if any of our subscribers can.

AN INQUIRER, Brooklyn, N. Y.—Your horse is not an unusually heavy animal. Whether or not he is fitted for saddle use can best be determined by actual experiment. Saddle him and try it.

REMY, New York.—Which model Winchester did Mr. J. E. Stetson use when he won the medal presented by Schuyler, Taylor & Graham, July 22d, 1876, for rapidity and accuracy? Ans. Model of 1873.

C. N. K., San Francisco.—R. Valentine, Janesville, Wis., did have wild rice for sale. If he has sold it all, your best plan is to order in advance either of him or of Mr. Charles Gilchrist, Port Hope, Ont.

NARGOLIN.—You may purchase the pipe of F. Kaldenburgh & Co., Fulton street, New York. There are several replicas, the comparative merits of which depend upon the use for which they are intended.

C. A. G., Tom's River, N. J.—We cannot discriminate by recommending one brand of shot as superior to another. The various makers claim special advantages, and the merits of each have already been set forth in our columns.

H. W. P., Weyauwega, Wis.—The treatment for foot rot in fish will be recommended to H. H., Brooklyn, N. Y., in this column. We make no charge for receipts, and feel rapid when we can be of real service to our brother sportsmen.

J. A. H.—No firm manufactures waterproof canvas for boats. Use 8 or 10 oz. duck, and apply following: Boil 6 ozs. hard yellow soap in 14 pints water, and add half pound patent driers, 5 lbs. boiled linseed oil, or take reduced proportions. If color is wanted, add paint as desired.

W. J. R., Roxbury Station, Conn.—1. For map apply to the Coltons, William street, New York. 2. The rifle sight is highly spoken of. 3. We have repeatedly refused the advertisement of the firm. As to their reliability apply to Dun, Barlow & Co., New York, or to any other mercantile agency.

T. H. R., Poughkeepsie.—Is there no way of preventing the passing of a bill now before the Legislature permitting persons to fish with nets in the Wallkill? The bill is pending, there is very good, and now they propose to ruin it. Ans. Post your representatives at Albany and secure their intervention to defeat the bill.

M. P. H., New Haven, Conn.—Mr. Vero Shaw, in his excellent "Book of the Dog," states, in a special chapter devoted to the "getting up" of dogs, for shows, that "curly coat which should be flat are sometimes ironed out," and "hand rubbing is most efficacious as a means of both drying and flattening down the coat."

H. W., Cypress Mill, Texas.—For instructions to a novice in the various modes of fishing we commend Hallock's "Gazetteer." The pages devoted to fly fishing, trolling, care of tackle, etc., are exhaustive and explicit, and leave little to be said. Dr. Henshaw's book on the "Black Bass," we may premise, will also be a valuable work; worthy of the study of every experienced angler.

G. H. E., New York.—I have a Winchester Express rifle of .50 cal., shoots very well with the light bullet, but I would rather use solid bullets of about 50 grains, and 50 grains Hazard powder. Would ask your advice whether the rifle would shoot well up to 500 yards? Ans. The gun has slow twist and shallow rifling, and made only for short, light ball, but will shoot with a heavy, long ball.

PRATERIDGE, Dover, N. H.—1. For scroll saws write to R. Simpson, 122 Nassau street, New York. 2. The National Gardener is defunct—dead on the field of honor. 3. For a work on medical botany write to William Wood & Co., publishers, 17 Great Jones street, New York. 4. We did not publish the scores because they could not be obtained, although promised. 5. Beadle & Co., New York, publish penny songs, and there are other firms engaged in the same business.

F. G. C., New York City.—We know nothing of the guns. You may be assured of square dealing if you go to any one of the several gun dealers whose names appear in the advertising columns of this paper. The customer has in their long-established reputation a sufficient guaranty. 2. There are some good trout streams in Sullivan County. Go to J. M. Badley's, at Eldred, where, late reports say, there are plenty of fish.

H. H. E., New Jersey.—Your attention is called to our notice at the head of this column. In issue of March 15th we commenced a series of articles on dog breaking, which may interest you. To get your dog under proper command use a check-cord. It is not ne-

cessary that your lessons should be confined to your house or yard, as you can carry the cord with you in your walks and pursue your instruction in the open fields.

T. B., New York.—1. I have a Sharps military rifle, Borchardt's model, and will go to Wyoming Territory for a couple of years. Do you think this arm a good one for large and dangerous game with the service charge? 2. Could I use a 450 or 500-grain bullet in a Ballard Creedmore rifle, .45 cal., 105 grains powder, Everlasting shell, with reduced charge of powder, say 85 grains? Ans. 1. Yes. 2. Yes.

P. H., Bloomsbury, N. J.—A friend's dog has a large swelling on under jaw; red blotches all along the jaw. It has broken open in one or more places. Dog seems very much affected. He also has small red blotches on forelegs. The dog is a well-bred setter, but from his appearance will not last long. Ans. If the swelling is an inflammatory or painful one, would apply poultices of flaxseed meal. Give a single dose of castor oil and from two to three grains of quinine three times a day. Write further if there is no improvement.

J. W. B., Pueblo, Colorado.—In Colorado the killing, snaring or having in possession of "partridge, pheasant, prairie chicken, prairie hen or grouse" is prohibited, save between Oct. 1st and Nov. 15th. Professional taxidermists are allowed to kill birds and animals for specimens in museums. No person shall kill or transport elk, buffalo, deer, fawn, antelope, mountain sheep or bison between Jan. 1st and Sept. 1st; and then only in reasonable quantities for food. Apply to the Governor or to the Secretary of your State for a copy of the law.

M. B., COUNCIL, Americas, Ga.—See it stated in a Philadelphia paper that a catamount was killed near that city, weighing over fifty pounds. What is the difference between this species and our wild cat? Sixteen and eighteen pounds is an average weight of wild cats here, and twenty-six pounds is the heaviest I ever saw or heard of. How many species of catamount, or wild cat, are there in the United States? Ans. There are three species of the *Felis* in Eastern America; two of them small, of *Lynx rufus* and *L. canadensis*, and one large, *Felis concolor*. The classification in the paper was probably a young one of the last named species.

D. McG., Rutherford, N. J.—I have two bound puppies three months old. One is badly bow-legged and can hardly walk. He seems most afflicted in the first joint and walks on the outside of his feet. I have kept them in a large dog house, locked up, with hardly any exercise. The other puppy is all right. Ans. All dogs, and especially puppies and growing dogs, should have their liberty and be allowed to run about and take plenty of exercise. The larger breeds of dogs should not be kennelled in barrels, as it is apt to crook the legs. If your puppy is afflicted in such a manner as to render it incapable of doing its duty, or if it is of a condition, it may be well to give them a trial.

M. L. V., Savannah, Ga.—1. My Irish setter has lost all the hair around her eyes, and her frequent scratching keeps the parts sore; she has also two sore spots behind the ears. What shall I do for her? 2. I have been advised to keep her from a litter of puppies, only four or five. Is it necessary to do so in order to insure success in raising the puppies? 3. What is the best food for a bitch suckling pups? Ans. 1. Examine carefully for the presence of lice; if found apply a small quantity of kerosene oil, and then thoroughly rub in an abundance of lard or lard-oil. Leave on twenty-four hours and repeat if necessary. 2. A well-conditioned bitch should nurse satisfactorily five or six puppies. 3. Mixed food containing small quantity of meat. If your bitch is sickly secure a young and healthy bitch as foster-mother for her puppies.

H. H., Brooklyn, N. Y.—I have a setter puppy about eight months old; he has just had the distemper, and though he is apparently recovered from that disease still he seems to have been forever since the attack with a sort of spinal paralysis. He has great difficulty in raising himself to a standing position, and seems unable when standing to set himself in motion. By letting me know what would be beneficial for the dog you will greatly oblige. Ans. Yours is only a typical case and one of the common results of distemper. Administer two grains of quinine with one-eighth to one-quarter ounce vomica three times a day. The quantity of vomica must be governed by the resulting symptoms, which will manifest themselves principally by twitchings of the muscles. When this takes place the dose of vomica must be reduced. If you prefer, you might give a large teaspoonful of cod liver oil twice a day in place of the quinine. Feed liberally, and write result later on.

PAUL, West Hoyalston, Mass.—My setter died last week, eight months old. In the morning he was lively and playful. In the afternoon I noticed that he was inclined to be alone and very quiet, his hair coming out by handfuls, not caused by shedding, as he was groomed every day and had been combed and brushed since then. I watched him all the afternoon, and he showed no other sign of sickness than disinclination to move; nose cold and moist, pulse regular. About six he commenced to clamp his teeth and froth badly. After doing so for about ten minutes, he threw back his head and had a fit, which lasted but a few moments; he was then quiet for nearly an hour, when he had another fit, and so on until two next morning, when he died—the fit coming off toward the last. When I saw the first fit coming on, I prepared an injection of sulphuric ether and iodoform, same as I have used in other cases of fits, and gave injection once in about half-hour, none being returned, but did no good. After death opened him and found nothing in stomach or intestines to cause the fits. The liver was mottled; spots about the size of a dime, being very light-colored. His heart was the size of a pint bowl—about eight times its natural size. Can you tell me what ailed him, and what I should have done different in treatment? Ans. A little anxious, as I have a number of other dogs, and the rather sudden death and sickness troubles me. I wish to save the others, if possible, although I may never have a similar case. Ans. From the description which you give, it is impossible to say precisely what was the cause of death, because you omitted to state the condition of the brain and spinal cord. In all probability the disease was chiefly in the heart, which you state was very much enlarged. It is not unlikely that "the fits" were due to the plugging of the blood vessels of the brain membranes with clots, or something firm from the heart. Whatever treatment was adopted, it should therefore have been in the direction of stimulating the heart to increased action. For this case the simplest treatment would have been whisky. If this fails, nothing can do any good. But heart disease should always be recognized by a careful breeder, because it is exhibited by panting and a weak pulse, even if it changes to be regular, which it usually is not. The "shedding of coat" and "mottling of the liver" have probably nothing to do with his sudden death. It was for cases like yours that we arranged with the Columbia Veterinary College, No. 27 West Thirty-fourth street, of this city, to receive all special treatments and furnish a complete diagnosis free of charge, providing that the express charges were prepaid. Had you availed yourself of our liberal offer, the case would have been covered most thoroughly.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW-YORK, THURSDAY, APRIL 1, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

©We cannot be responsible for dereliction of mailservice if money remitted to us is lost.

Trade supplied by American News Company.

REMOVAL.—On or before May 1st the FOREST AND STREAM will remove into its new offices in the Times building, Nos. 39 and 41 Park Row.

—We have received a copy of the constitution of the Long Island Sportsmen's Association, the preamble of which sets forth the objects of the organization to be "to secure the propagation and protection of fish, game and birds by the recommendation and enforcement of judicious laws prohibiting the killing and sale of game and fish during improper seasons, and their wanton destruction by sportsmenlike means; also to foster genuine social spirit and union of action among the several clubs of Long Island and their members, and encourage skill in the use of the rod and gun."

On two points the new association has taken a most commendable stand. One point is the mutilation of pigeons in trap shooting, concerning which the sportsmen of Long Island say:—

This association denounces the mutilation of birds as unsportsmanlike and barbarous, unworthy of gentlemen and calculated to bring trap shooting unjustly into disrepute.

And we pledge ourselves to do everything in our power as an association and as individuals to prevent such practice and punish its perpetrators.

The other movement, which seems to us to be judicious and likely to result in good, is the invitation extended to the farmers of Long Island, who may be in sympathy with the objects of the association, to become honorary members of the body. This is in direct sympathy with the course which we advocated some weeks ago of securing the cooperation and friendship of the proprietors of farm lands. A mutual understanding of their mutual interests by farmers and sportsmen will result in more efficient game preservation than we can ever hope to attain by piling up laws on the subject. The Long Island Sportsmen's Association has a ardent field before it. Rightly fulfilling its mission it may stand as a worthy model for all other organizations of like aim. It has an excellent constitution; we hope that it may live up to the principles therein. Now, as a further step in the right direction, let the delegates who go from Long Island to the State Convention next June infuse their spirit into the other clubs which they meet there.

—Paymaster L. G. Billings, who went out in the Irish relief ship *Constellation*, last Sunday, is well known among the sportsmen of Brooklyn and vicinity as an expert shot, and the owner of some very handsome setters.

—Read the advertisements. This will save much postage, work and paper, now consumed in writing for information there given.

THE ANGLER'S ANNIVERSARY.

THE old definition of fishing—"A rod, with a string and worm at one end of it, and a fool at the other"—has an unpleasant indorsement from the Legislature in the fixing by law of April 1st as the beginning of the open season for trout-fishing in this State; especially does the most earnest and devoted lover of angling feel the apparent truth of the definition when he awakes on the 1st of April to find the ground covered with snow. No man will acknowledge, even to himself, that he is a fool; but some of us are free to admit that we do sometimes look like fools. And, on the first of last April, when we were trudging along a country road on Long Island, with trout-basket slung to our side, and rod in hand, we did feel, that the urchins who met us and asked us where we were going, and how the skating was, etc., etc., had altogether too much reason for their jeers than was pleasant.

The past winter (is it past?) has been so open that there will be an unusual number of trout, and they will be fat. There having been so little ice, it has not been possible for that most destructive of all poaching—fishing through the ice—to be carried on at all. The unusually high temperature has also prevented solid freezing of brooks, and thus there has been no destruction of spawners, or eggs, or young fish, or infusoria. These circumstances combine to insure plenty of fish three years hence, and fat fish this year. The preservation of spawn and infusoria insure good fishing two years hence; and the preservation of spawners and young fish insure fat fish this year.

But we think the fish will be harder to take this year than usual. First, because a warm winter generally means a late and cold spring. Unless the first of April is warm and fine, the fish will be loath to come to the surface to take the fly. By using good-sized, rather bright flies and letting them sink a few inches trout may be induced to take hold, that would never take otherwise. The second circumstance that will work against a full creel is the very fact of the warm weather we have had during the late winter. The trout will not be so hungry; they have had far more feed than usual, and the angler need not expect to find them ravenous.

The number of anglers who will cast a fly on the fish this season will be greater this year than ever before. The crowd of them that we see replenishing their stock of tackle at the best shops indicate the pleasant fact that the lovers of this fine sport have participated in the profits of the present boom. The sales of the larger fishing tackle establishments show that not only more people are buying than ever before, but that the demand for the best goods is altogether unprecedented. No doubt the same thing is true of smaller stores.

IS THERE A SAFE BOILER?

THE increasing frequency of boiler explosions, and the loss of life and property which is invariably coupled with them, is a subject which deserves more attention from our busy inventors and the owners of mill property, and certainly those who expose life and limb to these dreadful sources of power. The latest horror is that which occurred in Frankford, Ind., by which the entire staff of employes of a flax mill were killed while in the act of warming themselves. The details of this frightful accident are almost too shocking to read. The widowed mothers and fatherless children thrown helplessly on to the charities of the public is a part of the sad story, which accords well with the rest of the wholesale devastation, and the utter demolition of the mill finished well the record of death, suffering and loss.

Now it is about time this sort of thing were stopped, and some means taken to prevent such frightful occurrences. We have had enough of such dreadful details of suffering and loss. Where are our boasted brain-workers, whose labors have given a world-wide reputation to our country? Where is the humanity of our moneyed men, whose factories of various sorts cover the land, and whose operatives form the bone and muscle of our manufacturing and commercial industries? Why do these men found an extensive plant, and place therein a boiler which at any moment may blow the whole structure to atoms, scattering wide death and destruction? Although there is a mystery affecting the causes of boiler explosions, still enough is known concerning them which ought at once to condemn that class of boilers (comprising three fourths of those in use) which contain a large amount of water heated to such a degree that when the shell ruptures, which it is always liable to do from a number of causes, the water in it changes its condition into steam instantaneously, and with immense force. When a boiler is new it may be tested to far above the steam pressure it is expected to carry; but sufficient allowance for the weakening of the shell by age, rust, action of the fire, undue strains arising from imperfect settings, bad construction, or careless attendance, is not provided for. Let this subject be well ventilated. Let the inventors and manufacturers of so-called safety boilers prove that their produc-

tions are really safe, and that they will work as economically as those in more general use, and their universal adoption is assured with like benefit to the builders and the public safety. With such a boiler a new field would also open to yachtsmen devoted to the mechanics of an engine. There are eight characteristics a boiler for popular marine use must conform to for successful competition with the death-defying traps of the day. They are: Absolute safety against anything but local failure at the worst; light weight; small space; economy in first cost; repairs and attendance; the highest efficiency in evaporation; capability of using salt or fresh water, and burning effectually various kinds of fuel; long life. Where is there a boiler any man could "run," and no man could blow up if he tried?

THE AMERICAN FISH CULTURAL ASSOCIATION.

THE ninth annual meeting of the American Fish

Cultural Association convened in the Directors' rooms of the Fulton Fishmongers' Association, Tuesday and Wednesday, March 30th and 31st—Mr. Robert B. Roosevelt, President, in the chair. There were present Mr. George Sheppard Page, Vice-President; Mr. Eugene G. Blackford, Treasurer; Mr. James Annin, Jr., Recording Secretary; Mr. Barnet Phillips, Corresponding Secretary; Mr. Seth Green; Mr. Livingston Stone, United States Assistant Commissioner of Fisheries; Dr. W. M. Hudson, Fish Commissioner of Connecticut; Mr. Asa French, Fish Commissioner of Massachusetts; Mr. Hugh D. McGovern, Mr. S. A. Kilburn, artist; Mr. Theodore Morford, Dr. J. P. Trimble, the entomologist; Mr. Samuel Wilmont, the oldest shad fisherman on the Hudson; Mr. James Benkard, Mr. J. S. W. Thompson, and many others, whom, owing to the neglect of the meeting to call the roll, cannot be named.

The first business of the meeting was the reading by Mr. Barnet Phillips of a memorial paper on Professor James W. Milner, which we publish to-day. Mr. Roosevelt followed with a paper detailing the experiments at the New York State Hatchery in crossing various species of fish, the successful experiments having been: Salmon trout with whitefish; salmon trout with the brook trout; brook trout with fresh water herring, with California salmon, and with the California mountain trout; shad with striped bass and with herring.

Mr. Seth Green's report on the introduction of the California salmon into New York State was also read by Mr. Roosevelt.

Mr. Livingston Stone's discussion of the practicability of the transportation of fish was one of the most important papers of the day, the author contending that the mortality of fish while in transit was always due to some cause which it is possible to remove by added experience and increased facilities.

One of the most interesting episodes of the meeting was the practical demonstration, by Mr. James Annin, Jr., of the process of stripping the fish in artificial propagation. A number of gravid trout had been provided, together with the necessary tubs and pans. Mr. Annin, taking the female trout, pressed out the eggs into the pan, and then deposited upon them the impregnating milk, pressed out from the male. The interesting fact was here brought out that the eggs of the trout are always of the color of its flesh. Upon being questioned as to how he determined the females from the males, Mr. Annin replied, "By general appearances;" and it was conceded by the rest of the practical trout culturists present that while a man who was accustomed to the fish could readily distinguish the sexes during the spawning season by the increased size of the gravid fish, and the quicker movements of the males, there was still no absolute mark which might guide the novice. The old theory of the lighter color on the belly was long ago exploded.

Mr. Charles Hallock presented a very entertaining picture of the cod fisheries along the coast of Labrador. Then followed a discussion of the spawning habits of the land-locked salmon; the resulting opinion being that these fish go to running water for the purpose of spawning, because in running water they find a clear, gravelly bottom upon which to deposit their eggs, and that if such a spawning ground is to be found in a lake or confined body of water the fish will spawn there.

Mr. Phillips read a paper prepared, by Mr. George Lemphear, detailing the number of pounds of fish annually sold in the wholesale department of Fulton Market, the exhibit showing, from the tables, that from March, 1878, to March, 1879, of fish belonging to American waters and sold in Fulton Market, 33,529,600 pounds were sold, and from March, 1879, to March, 1880, 31,276,666 were sold, showing an increase for the latter year of 649,700 pounds.

Other papers read were: "Do Grilse Spawn?" by Mr. Sottman, of the Fisheries Commission of Holland; and on the "Pound-Net Fisheries," by Mr. Theodore Reincke, of Sandusky, O.

Wednesday morning the Association listened to a most valuable paper by Professor W. O. Atwater, of Wesleyan University, on the nutritive properties of fish. This essay is the result of a very exhaustive series of chemical

analyses of the ingredients of the flesh of different fishes, and an exhibit of the relative values of each species as an article of diet. A revised copy of the paper will be prepared by Prof. Atwater for publication in the next number of the *FOREST AND STREAM*.

Among the other papers read yesterday was one by Prof. Brook, of the John Hopkins University, on the propagation of the lobster.

All the papers read before the Association will be published in the *FOREST AND STREAM*. The convention has been an interesting one, from which the members have gained new knowledge by the interchange of their experiences, and the stimulating effects of those discussions are seen in the increased interest manifested by the public in fish culture and in all that pertains to the industry.

The members met at the Metropolitan Hotel last evening to partake of the annual dinner. These banquets are always delightful, and that of last night was no exception to the rule.

THE TROUT OPENING.

NEXT to the pleasure of a trip to the trout streams to-day (and far ahead of it, too, the can't-get-aways claim), is that of a visit to the exhibition of trout by Mr. Eugene G. Blackford, at his stand in Fulton Market. These annual displays have become one of the pleasantest features of the season in New York and vicinity. Started in a small way some six or seven years ago, to show some of the practical results of artificial trout culture, these exhibitions have long since outgrown this original design. Now, instead of a limited number of specimens of trout, Mr. Blackford collects on his marble slabs the kings of the brook from all over the world; and in place of the few interested fish culturists, dealers and anglers, great throngs of ladies and gentlemen in an unnumbered multitude, fill the market and press around the stands, where lie in cold and silent state the royal monarchs of the trout streams.

To-day and to-morrow, as the very tasteful and elaborate invitation cards promise their recipients, the display is superior to that of any former year. Mr. Blackford has been for months securing, through his agents at home and abroad, choice specimens from various parts of the world. On one stand are trout from the streams of England, Scotland and Ireland, and by a happy coincidence the reader of the *FOREST AND STREAM* is enabled to-day to see some of the fish of which "Ringwood" writes so entertainingly on our first page. These were secured by Mr. Blackford's agents in the London market. Elsewhere are specimens of trout from France, secured through the courtesy of Capt. Truedelle, of the French line of steamers. Canada is represented by fine specimens of sea trout from the Restigouche, and by some beautiful fish—the finest wild trout in the Dominion—from Three Rivers and the Quebec district. New York State supplies choice specimens of *Salvelinus fontinalis* from the preserves of the South Side Club, Long Island, who have the finest facilities for raising trout of any establishment in the State. Mr. Hugh McGovern, from his ponds back of Brooklyn, sends live trout in aquaria; and live specimens are also exhibited from the establishment of Mr. A. Rackow, Foster's Meadow, L. I.; dead fish from W. E. Robinson, Patchogue, L. I., and from Mr. Ira Hoyt, Halsey Valley, Tioga County. The New York State Hatching-house at Caledonia sends a complete series of the different varieties of brook trout, California salmon and salmon trout, California brook trout and the McCloud River, California, trout; also a display of young fry from one month to one year old. Mr. James Amn, Jr., who has gained much credit among fish culturists for the invention of a method of shipping eggs to Europe in a way which requires no attendant, and who is becoming known as a close observer and a successful fish culturist, will contribute a handsome display of brook trout eggs in the hatching-jars, showing the process, and also a fine collection of wild Caledonia Creek and cultivated brook trout.

From New Jersey, Mrs. Slack sends specimens from her ponds at Bloomsburg. Pennsylvania's quota is furnished by Mr. Jeremiah Comfort, one of the veteran trout culturists of the State, a friend of Thad. Norris, and to whose pond Mr. Norris used often to repair. These fish were brought up and nurtured under the shade of a Quaker brim, and those who know say that while they have lost none of the game qualities possessed by other artificially grown trout, they also have a peculiarly fine flavor, rightly attributed, we surmise, to their placid disposition. From Wisconsin come the specimens contributed by Mr. H. F. Dousman, of Waterville, one of the largest and most successful trout culturists in the United States. Mr. Frank Clark, of Northville, Mich., sends brook trout and California brook trout; while Commissioner B. B. Redding, of California, supplies specimens from the McCloud River and from Truckee River; also from Denver, Colorado. In close proximity to these strangers from the Pacific, the New England visitor to the Fulton Market will find some of the mountain brook trout from the dashing streams of New Hampshire; these are sent by Mr. Geo. H. Dierckman, of New Hampton,

N. H. From the Cold Spring Trout Ponds, Charlestown, N. H., come trout raised by Mr. Livingston Stone; and the same gentleman also sends some whitefish fry hatched from eggs which were imported from Switzerland. There are also to be seen some young land-locked salmon, which were started in jars on Mr. Blackford's stands.

From this brief catalogue of the specimens now on exhibition, it will be seen that Fulton Market is well worth a visit to-day and to-morrow.

AMERICAN CRICKETERS AND A FOREIGN TRIP.—Although a great deal has been said in Philadelphia during the last three years about sending a team of American cricketers abroad, and a number of plans have been outlined by great admirers of the game, it is a fact that nothing at all has been done by the men who would be likely to go as players. At the annual meeting of the Young America Club, Mr. Vaux offered a resolution that Mr. George M. Newhall be authorized to take such steps as he should see fit toward taking a team of Philadelphians to England this summer, and authorizing the Secretary to correspond with the other Philadelphia clubs on the subject; but the whole thing was intended to be discretionary with Mr. Newhall, and he has done nothing at all.

From conversations we have had together during the past few years on the subject, and from what we have heard of his saying to others, we feel sure that he has not seriously considered the subject, for the following excellent reasons:—

First, all the matches for the season are arranged in England early in the winter, and though, no doubt, our team could have had plenty of matches on short notice, there is no certainty that our team could have played on the best grounds, like "Lord's" and "The Oval," without which a trip to the Old Country would be a failure.

Second, on many other accounts the time was too short to map out a satisfactory programme, and have it all arranged with some good and responsible party on the other side.

Third, so far as we know, the men who would be needed have never been asked whether they could get away or not.

Mr. Newhall's modesty has prevented him from being very enthusiastic at any time over the idea of playing in England, but we hardly agree with his reasonings on the subject, and doubt if many of our cricketers would. All he says is true enough, but does not, in our opinion, constitute an argument against playing over there. The idea of winning is not of vital importance in our mind, and we would very much like to see a representative team of Americans go over and try their luck, feeling sure that it would make a fine showing, and do the game good. But any team that decides to sally forth to the enemy's country must be no scratch team, but the very best, and unless it is led by Captain Newhall it will resemble the play of "Hamlet" with the part of Hamlet left out. Let us remind Mr. Newhall, however, that over five and twenty years have sped since we used to watch together the "rise and progress" of the game from the sharp edge of a rail fence over Camden way, and that he owes it as a duty to all American cricketers to lead the first invading van to a foreign shore, before his hand loses its cunning, and there is a creaking noise in his knee-joints. Though nothing can be done this year, we shall look forward to the next with a very Micawberish eye for something to turn up.

NOTES.—The New Jersey amended law provides that no woodcock shall be shot before the 1st of September; and many of the sportsmen of that State are in doubt whether or not the law has jurisdiction over the deeds of a proprietor on his own estate. The game on a man's farm, they argue, is his individual property; the State has no right to say what he shall do with his woodcock any more than it has a right to say what he shall do with his cow. If this reasoning be correct, it would seem that the New Jersey legislators might be engaged in more profitable business than framing game laws, for the public lands alone of the State are hardly extensive enough or rich enough in game to warrant much legislation.

It happens in Jersey that when a gunner shoots a woodcock he generally shoots it on some one's land. If the bird be the property of the man upon whose land it is killed, the person who shoots it and carries it off is as much a trespasser and a thief as the person who steals a man's horse in the night time. Are the advocates of the principle of property in game willing to go so far as this in their arguments?

We should like to see the legality of some of the game enactments tested by a man who would stand the cost of the experiment. For instance, it would be an interesting, and not altogether a profitless undertaking, to get the decision of the highest tribunals as to the right of one State of this Union to debar non-residents from shooting the game, except upon payment of a considerable fee; or the legality of a statute making it a misdemeanor to shoot a pigeon. Without at all questioning

the good results likely to accrue from a non-resident prohibitory law, or the motives leading to its enactment, we are inclined to the belief that in their commendable zeal in game prohibitions some of our legislatures may have lost sight of some of the fundamental principles of our government and society.

We publish in our Natural History columns to-day the description of one of the new birds collected by Mr. Fred. A. Ober, in the Antilles. This bird, as Mr. Lawrence tells us, was before erroneously referred to a known species, but was afterward found to be quite distinct; and we are much gratified to record this addition to the rich results of Mr. Ober's expedition. The *Margarops dominicensis* is the twenty-first new species discovered by our enthusiastic correspondent. Mr. Ober is one of those naturalists who are happily born with a taste for adventure and exploration in new fields. While yet a boy, he had a complete collection of all the birds of his New England home; and later he spent some months in Florida—not the Florida of the conventional tourist—but the Florida of Seminole fastnesses and rare birds and animals, whence he wrote the letters which first made him so pleasantly known to our readers as "Fred. Beverly."

In 1876 he applied to Professor Baird for an "undiscovered country," where he might pursue his favorite study upon ground not before investigated by naturalists. Among such fields presented to his notice was the one chosen, and which has yielded him such satisfactory results. The work which he accomplished has already been published in these columns, and was of such a character as to excite attention among naturalists everywhere; more interest has been manifested abroad than here; and there Mr. Ober has won much credit for his work. The experiences of the two years among the islands were embodied in the volume "Sub-Tropical Wanderings," which was published last fall by Lee & Shepard, Boston, calling forth from the poet Whittier a very complimentary letter to the author.

Mr. Ober is again in the field, collecting farther material for a proposed history of the birds of the Lesser Antilles. While it is unlikely that the present trip will be as notable for the number of new discoveries as was the last, there is still much to find out in the matter of the natural history of the species already secured. As before, we shall publish papers from Mr. Ober's pen, the first of which has already been received, and will appear next week.

Dr. Gordon Stables, of Twyford, Berks, England, who is to act as one of the judges at the Westminster Bench Show, will be in this city from the 23d inst. to the end of the month, and letters may be addressed him in care of this office. Dr. Stables has added to his several works already published a book shortly to be published on "The British Bloodhound"—a subject which is practically new, and to the treatment of which the author has brought the aid of the best breeders of the day, as well as of many old manuscripts and sketches and unpublished documents.

Owing to an unusual pressure upon our space this week, much late news and many other matters have been necessarily and reluctantly deferred. We ask the indulgence of our friends, promising them all attention in due time.

Clarksburg, Montgomery County, Md., has a fox-hunting club, of which Col. T. H. S. Boyd, author of the "History of Montgomery County," is one of the chief promoters and the President.

The annual parade and tilt of the Charleston Light Dragoons is held to-day, April 1st. This is one of the parades of Charleston which is always anticipated with much pleasure.

GAME PROTECTION.

—Commissioner Redding has been instrumental in the introduction into the California Legislature of a bill providing an appropriation of \$2,500 for the importation of song and game birds into that State.

UTAH.—The Utah Game and Fish Protective Society of Salt Lake City has been organized with the following list of officers and directors: President, John Sharp, Jr.; Vice-President, Bolivar Roberts; Secretary and Treasurer, L. S. Hills; Board of Directors, M. H. Walker, Geo. A. Meears, LeGrand Young, H. J. Richards, Salt Lake City; W. W. Cluff, Coalville, Summit Co.; Albert Miles, Peoa, Summit Co.; Aaron Farr, Logan, Cache Co.; W. B. Richards, Menden, Cache Co.; W. P. Nebeker, Lake Town, Rich Co.; Abram Hatch, Heber Wasatch Co.; J. M. Browning, Ogden, Weber Co.; John Adams, Corinne, Box Elder Co.; Wm. Seegmiller, Richfield, Sevier Co.; Joel Grover, Nephi, Juab Co.; J. W. Turner, Provo, Utah Co.; Jos. R. Porter, Porterville, Morgan Co. The society has been established for the

furtherance of game protection and the improvement of the game laws of the Territory. All persons are earnestly invited to coöperate with it in securing these ends.

The close seasons in Utah are: Quail, partridge or grouse, March 15th to Aug. 15th; wild ducks, April 15th to Aug. 15th; beaver and otter, April 1st to Nov. 1st; imported quail or other imported birds are protected for a period of five years; elk, deer, mountain sheep and antelope, Dec. 1st to Aug. 1st. No fish can be taken save with a license (except in Bear and Utah lakes between Sept. 15th and March 15th).

The society has placards and posters, and are in various other ways making the law known.

WALLA WALLA.—The game laws of the counties of Walla Walla and Columbia, Wash. Terr., provide the following periods of protection for game: Deer and elk, Jan. 1st to Aug. 15th; quail (Bob White), is always protected, except what may be trapped for propagating purposes; blue grouse, pin-tailed grouse or prairie chicken, ruffed grouse or pheasant, from June 1st to Aug. 15th—trapping of these birds is prohibited for purposes of propagation. And special provisions provide for fishways, against netting, and against taking in any way whatsoever salmon, salmon trout, bull-trout, except in the Columbia River, between Oct. 1st and April 1st. There is a most sensible provision which declares it a misdemeanor for any one person to kill more than twenty blue grouse, pheasants, or prairie chickens in one day.

PENNSYLVANIA—Bellefonte, Pa., March 27th.—Our association has been growing rapidly since the organization, and it seems to be in great earnest concerning the protection of game and game fish.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

NEW YORK—Oxford, March 24th.—Norwich, N. Y., is the county seat of Chenango County, located on the Chenango River, eight miles from Oxford. It contains many sportsmen, wing-shots and some fine rifle shots. Their club turns out strong numbers, and they hold the championship cup of Chenango County at glass-ball shooting. They are to have a rifle range this season, and will do some fine shooting, I think. W. E. L.

—Duck shooting is now in order at South Oyster Bay; one hour and twenty minutes from Hunter's Point, via Long Island Railroad.

SHINNEDOCK BAY.—New York, March 25th.—When spring directs the flight of the migrating geese and ducks from their winter haunts in the sunny South toward their breeding place in the far north, it also implants in the bosom of the sportsman a desire to meet and salute them on their way. This desire was implanted so strongly in the bosom of the writer and his friend S., that they started for Capt. Lane's famous resort on Shinnecock Bay, on the 13th inst. We found the Captain's house, as usual, full, having representatives from Rhode Island, Connecticut, New Jersey, New York and Germany. The usual luck of sportsmen attended us during our stay—contrary winds, stormy days and the "ifs" that so often stand in the way of a "big bag." The bay is unusually full of redheads, black ducks, brant and geese, but owing to a change in the feed since the new inlet has been running, there are not so many broadbill as heretofore. From this time until about the middle of April the shooting will be first-class, providing, of course, the elements do not interfere. The Captain can accommodate quite a large party as he runs three batteries, with the necessary decoys, and two rigs of live geese stools. Mrs. Lane still conducts the cuisine in a way that tempts the appetite of the most fastidious; fish and fowl from the bay, as served by her, are not to be had in this or any other city.

There are two things that will effectually ruin the shooting on Shinnecock Bay, if not stopped. The first is "dusking," especially the black ducks on their feeding ground. I am credibly informed that the crew of the Government Life-Saving Station, No. 13, practice it almost continually. By the way, it is commonly reported that the whole of that crew are offenders found on the mainland, although it is contrary to rules for more than one man to leave the beach at a time, and then only for the purpose of getting the mail. The second is the use of batteries in shooting ducks; they serve to make the birds wild; they are expensive, requiring two gunners, and are also uncomfortable; they do not compare with shore or point shooting. The Captain informs me that before batteries were used on the bay, that the average bag for a day was much larger than it is now, although with a battery there are times when heavy bags are made. Another thing against battery shooting is that the sportsman has to lie still and see his bird float off before the wind, whereas almost the whole pleasure of shooting lies in handling and examining a bird after it is shot. Some of the gentlemen who own country seats on Shinnecock Bay are agitating the subject of having a law passed similar to the one regulating the shooting at Havre-de-Grace, viz., only three days in the week. It is my opinion that it would be much better to abolish batteries and allow shooting every day except Sunday. The elements take very good care that on the average a person cannot shoot more than three days in each week.

I have just heard from Lane's the result of the shooting on Monday and Tuesday, the 22d and 23d insts.; it was as follows: Monday, *Anser canadensis*, 30; Tuesday, *Anser canadensis*, 12, besides ducks shot by parties employing the batteries. SCARF.

NEW JERSEY—Stockholm, March 23d.—We have had the greatest amount of woodcock here I ever saw. The mountains seemed alive with them. You could go anywhere on the warm side of the mountain and find birds. We have no sporting club in this county at all. The game and fish laws should be printed on cloth or on paper, placed in a cheap frame and nailed up in every hotel in the country. The landlords would be glad to get them.

THE FIRST SNIPER AT NEWARK, N. J.—Of the 1,123 "gunners" that patrol the Newark meadows, there is one disciple of the "shot gun" whose main object in life seems to be the recording of the first snipe of the season. For many years he stood without rivals in his path, but of late other "hunters" have also aspired to the same honor; and early in February the mud holes and sewer mouths are religiously trodden out. For this year, however, the old sport is safe, for he has got to the windward of the boys by putting in a claim of the early bird on Feb. 2d. As it is impossible to go back of this return, it may be expected to hear of the "fast English" on New Year's day, 1891.

PENNSYLVANIA—Wilcox, March 30th.—I am out here now trying to secure a lot of wild pigeons for trap-shooting. The weather has been so cold and stormy for the last three weeks that they are very hard to catch.

DUCK HUNT ON ELK RIVER.—Christiana, Pa.—By invitation from our friend Charles Ulery we spent part of ten days gunning for ducks on Elk River, Md., my first experience with "sink-box." Monday morning found us anxiously looking for the sloop to return from a trip to Havre de Grace with supplies for the coming week, and we were made glad by its appearance about 1 P.M. We at once started for the Bahama Flats. This is a noted place for ducks on their way North in the spring; and as we sailed up this river we saw ducks by the thousands. We soon came to anchor and launched our "sink-box," and we were soon ready with about four hundred decoys, when the sloop sailed away, leaving us in the "sink-box," not alone, as is generally the case, this being a double one for two persons—a decided improvement, as you can have an experienced person by your side, and can learn to call and not shoot at another's duck, as many green horns do. We were in the "sink-box" till 5 o'clock when we had twenty ducks down, very good luck for our first ten hours' shoot. So we returned to Mr. Ulery's. Wednesday being our next shooting day, as the wind was threatening, we did not get on the duck grounds till after 9 o'clock, and soon had lively work. At 5 o'clock we took up with a score of sixty-eighth, all red-heads, which were very fine, weighing five pounds to the pair. So ended a most enjoyable hunt.

I will just say, Mr. C. Ulery will be fully equipped to take parties out the coming season, and if they go away disappointed it will not be his fault. I found Elk River lined on either shore with pond nets, which I think the Fish Commissioners of Maryland ought to look after. I saw one lifted, and they say it is common to get eight or nine barrels at a time. The one I saw contained about nine bushels, and there was full of spawn. The amount taken is yearly growing less; and, if continued, will shortly depopulate the river. G. P.

TENNESSEE QUAIL SHOOTING.—Mr. Jerry Cockrell, at Benton, lately killed a wild albino, or snow-white quail, a remarkably beautiful animal. Recently, in one day, Colonel Charles D. McLean's plantation, near Rossville, in Fayette County, four Memphis gunners bagged 25, 30, 50 and 50 quail and snipe (one woodcock), and all agree they were treated by Charlie and Jim the very "best in the world." Our friend "Guido" was one of the four.

ILLINOIS—Lacon, March 24th.—Ducks have been more plentiful on the Illinois River this spring than for several years. Immense quantities have been killed, and the shooting is yet good and probably will be for the next three weeks. Bags of 100 in a day, to 183 in a half day, mostly mallards, by one of our local Nimrods, have not been uncommon. Twenty to fifty in a half day is common work for our sportsmen. But the killing of ducks on the Illinois River is an art, a trade of itself. The tyrant is more apt to freeze his fingers and get a ducking himself than to bag many ducks. But there is now and then a day that the ducks appear to delight in being killed. They come right in and light right down among the decoys and wait patiently for killing. These are the days I kick out. Capt. Henry Fisher, of our gun club, killed with one gun, in about seven hours' shooting last week, 183 ducks, mostly mallards; 125 another day. BYRNE.

INDIANA—Washington, March 23d.—Duck shooting has been pretty fair around this place this month. Last Monday Jim Mulligan and W. D. Bynum bagged twenty-five, and the day after a party of four got a good many. There are very few snipe at present, and I have not heard of very many being killed. W. P. R.

Mr. D. B. Wier, of Bacon, Ill., has been contributing some seasonable notes to the *Peoria Transcript* about the merits of the several species of ducks finding their way to the market there. His papers have been so much appreciated that the dealers report a sale of twenty birds now to one bird before the articles were written. Mr. Wier's hints on cooking the fowl are reproduced in another column.

GAUGES.—Cincinnati, March 23d.—I have owned ten guns; two 12-gauges, four 16-gauges and four 14-gauges. The hardest shooting gun that I ever saw was made in Berlin, 14-gauge, 30-inch, laminated steel barrels; about 7 pounds in weight. With this gun I have killed woodcock at 70 yards, also squirrels at 80 yards. With the same gun I once broke a mineral water bottle at 75 yards, but like your correspondent I would make some unaccountable misses with it. This gun is still in use. C. S. S.

HUGE GUNS.—Williamport, Pa., March 25th.—As the conundrum "Who invented choke-boring?" has so often been propounded in vain, I think the following, taken from Bechtel's "Technologische Encyclopædie," published in Stuttgart, Württemberg, A. D. 1885, may interest some of your readers:—

"A good many sportsmen claim that a slight contraction of the bore toward the muzzle keeps the shot closer

together, consequently many shot guns are made that differ in this respect from a cylinder-bore." Further on the author says that "some makers rub out the inside of barrels with powdered glass," and that "it has lately been proposed to cut them with a slight spiral thread," as the friction used in this manner would prevent the shot from scattering so much and increase the penetration. However, I do not advise my sporting friends to try this experiment with their fine breech-loaders." To quote further: "The diameter of the bore (called caliber) of a shot gun is chosen of such a size that twenty-two exactly fitting balls will weigh a pound; the caliber of double-barrel shot guns and pistols are usually of such a size that twenty-eight to thirty-two balls go to the pound." In his latter quotation we do not find clear that the author probably meant that single guns were made 22-caliber, and double guns 28 to 32-caliber. The length of barrel would be from three to three and one-half feet. The author goes on to minutely describe the various methods of making gun-barrels and guns, and they do not vary as much from the processes of the present day as most people would think. It strikes me that the average Jäger of that day, who killed a 22-caliber, via the Pennsylvania, at 100 yards, by boat to Norfolk, arriving there on Sunday the 11th inst. No doubt for Currituck until Monday at 6:30 A.M. Spent a dreary day in Norfolk, thinking and dreaming of keese, swan and red-heads, etc., time passing heavily on our hands waiting for our trip on the great side-wheel steamboat *Signet*. Talk about boats! Why, the *Bristol* and *St. John* dwindle into the dark ages of the past in comparison to this great boat, and it is simply impossible to speak of the latter. We left Norfolk on Monday, 8th, at 6:30 A.M. via the Chesapeake and Albemarle Canal, the trip through the inland being dull and monotonous, but a peach tree in full bloom, relieved the dreary and rainy day of some of its unpleasantness; in passing out of the canal we came into the river that leads to the Sound. On each side of which were the finest snipe marshes I ever saw. And I was told that there were abundance of the birds there but we were not after snipe. At 1 P.M. we came into the Sound, my friend Jenkins looking ahead, and seeing a long, black bank rising up out of the water and the boat heading directly for it, spoke to the Captain, asking him if he was going to run into it. "Why," said he, "my friend, that croak you see, why, bless your soul, them's red-heads."

"Whow," says Jenkins.

"I say," says the Captain, "I guess, stranger, you haven't seen many birds, have ye? Why, pshaw, man that's nothing; that accounts for our running so slow, (think of it, six hours going about thirty miles) we might run into them and damage the boat." "Ah, indeed," replies Jenkins. "Be careful, Captain! No accident happen to me the pleasure of this glorious trip." "What's wrong?" said the Captain. "The Capt. Speed now, five knots." "Wonderful," says Jenkins. We now began to see birds in great flocks, keese, swan, black ducks, etc. As we extend into the sound we see little bays or coves here and there, the perfect paradise of feeding grounds for birds, but why don't the birds go there? Simply because they can't get there, for in one small cove we counted some twenty-five out-blinds, which are bushes stuck up in the water so that a man can put a boat inside and two hundred decoys around it, and you can well see how these birds have to come and feed. Now while I believe in all of our means as a sportsman, an absolutely opposed to all such methods as out-blinds and batteries for the shooting of game, as will be shown before I am done. They are, and have been, the greatest curse to all water that have allowed them that can be mentioned. But to continue our trip. Soon we came to the first club on the Sound, the Monkey Island Club. Now we are at Church's Island, but we did not see any churches, but we did see numerous out-blinds that were there, and some plainly flying off of these monumental structures to run into it. "Why," said he, "my friend, at 4:30 P.M. we were at our destination, Van Slack's Landing, after being twelve hours on the boat, and traveling in that time about seventy-five miles. We were completely worn out. On stepping onto the dock we were met by our friend (who by the way is a New York State gentleman) who has moved to this country and gone to farming, melons being his chief crop, having last year forty thousand plants in the ground. He introduced us to the proprietor of Van Slack's Landing, Mr. Nye. Mrs. Van Slack, having worried of living alone, has taken to herself another partner. We found by the display of birds hanging at the house on the dock that the battery had done its work, 164 red-heads having been killed within a quarter of a mile of the steamboat landing.

Monday and Tuesday being steamboat days, and the mail arriving only on those days, it brings together quite a number of the inhabitants of this most intelligent country. Our baggage being taken ashore we are asked to step into a two-wheel cart, before which was a quadruped called a horse, which was caparisoned in a European style, very good, we were asked to hold on, and a woman saddle, over which an eagle to hold up the cart, the whole putting one in mind of the third century in some heathen country instead of this enlightened country of ours. Arriving at the house of Mrs. Nye, all the guests having left some time ago, Mr. Nye ushered in our two guides, in the person of D. W. Lindsey and Joseph S. Parker; and here let me say, that in them we found two as good men as one wishes to have, being sober and attentive and working for the most game. For the morrow, the marsh shooting being very good, we were asked to shoot out of a battery. Being opposed to battery shooting, after some talk we were told that the law allowed shooting in this manner, and so we consented. Tuesday, the 9th, arose and prepared to go shooting, but it commented to rain very bad, and blowing a gale from the east could do nothing but stay in doors all day. In the afternoon we were kindly informed if we attempted to shoot out of a battery we would be arrested, simply because we did not reside in the State. Now I would like some of our wise law-makers to answer this question: Can one State make a law granting to its citizens privileges which a citizen of a sister State cannot come in and enjoy? If so, one State could pass a law prohibiting a citizen from doing business in another State, simply because he was not a resident. I do not believe that the Constitution of the United States holds any such doctrine.

Of course we had to shoot from the marsh. Being a guest of Mrs. Nye, our men selected a point where where the birds were

CONGRESS AND THE YACHTING LAWS.

Editor Forest and Stream:—

I would like to call the attention of yachtsmen through your columns, to a bill relating to yachts now before the Committee on Commerce of the House of Representatives, as it may not be known generally that any such legislation is in progress. The draft of the bill is as follows:—

"In the House of Representatives, March 1st, 1880. Read twice, referred to the Committee on Commerce, and ordered to be printed.

"Mr. Amos Townsend (Rep., Ohio), on leave, introduced the following bill:—

"A bill to amend Section 4,214, of the Revised Statutes, relating to yachts:—

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:—

"That Section 4,214, of the Revised Statutes of the United States, be amended so as to read as follows:—

"Sec. 4,214.—The Secretary of the Treasury may cause yachts, used and employed exclusively as pleasure vessels, and designed as models of naval architecture, if built and owned in compliance with the provisions of Sections 4,133 to 4,135, to be licensed on terms which will authorize them to proceed from port to port of the United States and by sea to foreign ports, without entering at the Custom-house. Such license shall be in such form as the Secretary of the Treasury may prescribe. The owner of any such vessel, before taking out such license, shall give a bond in such form and for such amount as the Secretary of the Treasury shall prescribe, conditioned that the vessel shall not engage in any unlawful trade, nor in any way violate the revenue laws of the United States, and shall comply with the laws in all other respects. Such vessels, so enrolled and licensed, shall not be allowed to transport merchandise or carry passengers for pay. Such vessels shall have their names and ports legibly painted on some conspicuous portion of their hulls. Such vessels shall, in all respects, except as above, be subject to the laws of the United States, and shall be liable to seizure and forfeiture for any violation of the provisions of this title.

"Sec. 2.—That the said original Section 4,214, be, and the same is hereby, repealed.

"Sec. 3.—That this Act shall take effect from, and after its passage.

The vital differences between this and the old Section 4,214 relating to yachts, are that the new law will apply to all classes of yachts, small ones, as well as those "entitled to be enrolled as American vessels" (*i. e.*, of twenty tons and upward). And in this that the new law requires not only the name, but that of the port also, to be displayed on the hull of the yacht. No yachtsman will object to the name, but everyone will be disposed to use bad language when compelled to carry the port also. Much trouble has been initiated upon yachtsmen already by the attempted enforcement of a statute intended for vessels engaged in commerce, which required hull-boards on bow or stern. This provision of the new law is not only useless, but vexatious.

By a recent decision of the Treasury Department, all yachts under twenty tons were considered in the same light as rowboats, and were not liable for any non-compliance to the laws relating to ports, dues, hospital tax, taking out papers, name and port, etc. In fact, "taking one consideration with another, a yachtsman's, loss of a name, and of his craft was under twenty tons.

This new law will now put an end to his term of blissful independence, and compel him to decorate some conspicuous portion of his boat, dwelling with her name and port in three-inch letters. I imagine the small yacht owner would be better pleased with no law, and give up the so-called "benefits of enrolment." However, provided the part relating to the name of port were stricken out the new law will doubtless prove a benefit and an improvement on the old one. It is a great pity that Mr. Townsend did not also embody in his bill a clause exempting yachts from compulsory pilotage, and if not too late it might be done now. Coast-wise vessels are exempt; but suppose we cruise coastwise to Savannah, Ga., thence to Bermuda, thence to Ferdinand or Key West. On entering say Key West, which is as easy to do without a pilot as "rolling off a log," a pilot hails you; you refuse his offer of pilotage; yet you are obliged by law to pay for a service you do not want, and that has not been performed. I know of an instance where a New York yacht entering Key West from Havana was taken to a small boat, and the pilot was paid for nothing but deck. The injustice of being obliged to pay dearly for what you don't want and don't get is too palpable to need any further illustration.

Mr. Townsend's bill is the effort of a true sportsman to assist a noble and many-sport, and if not too late he will without doubt do all he can to improve what he has so well begun. Any suggestions to this end from yachtsmen would probably receive the attention they deserve from him, for if a bill is to be passed for the benefit of yachts, all yachts must be interested in having it cover the ground thoroughly and satisfactorily.

In regard to the present form of yacht licenses we are obliged to procure from the Custom House a yearly renewal. The Seawanhaka Yacht Club is about forwarding to the Secretary of the Treasury a petition signed by many yacht clubs in all parts of the country, asking that a yacht license extend during ownership, and when a yacht is sold the new owner to give bond and take out his license to extend during his term of ownership. The requirements of the law will be quite as well fulfilled by this method as by the old way, and yachtsmen he saved an immense amount of trouble and bother every year. O. E. CROWLEY.

The probabilities are that the common nuisance of "compulsory pilotage" will be abolished. There is no reason why a set of old, dried-up barnacles should fasten themselves as beneficiaries upon the community because they happen to be pilots any more than a set of cobblers because they happen to peg leather. There are more than many pilots for the business, and their charges are outrageously heavy. It is one of the many impositions upon American commerce, and is purely class legislation. Foreigners are naturally surprised that we submit to the exaction of such ornaments.

HEMP OR WIRE?

Editor Forest and Stream:—

This being a slack time of year with yachtsmen, and consequently a season for the interchange of views, I avail myself of your kindness to us brethren of the wire to moot once more the oft discussed question of hemp versus wire for the shrouds of yachts. I may premise that I have tried both, but cannot be truly said undecided as to the absolute merits and demerits of either. There has been a great deal written on the subject, and where learned authorities so widely differ, I do not presume to offer an opinion. I will merely say that many practical yachtsmen who read your paper to contribute their share of information, I am much interested in their comments, and receive them in fitting and yet in the most perfect manner, and what I

want to get at just now is the experience of men who have made comparative tests of the value of hemp and of wire shrouds.

Of course, we all know that wire shrouds are stronger in proportion to their weight, and can, therefore, be made much less weight, and hence equal to 25-inch hemp—only half the weight per fathom. There is, then, a decided saving in weight aloft, and, owing to the reduced size, a diminution of wind-drag—two important considerations. The rigging can also be made neater—a point worth noting. But—there is a "but"—wire requires to be set up taut, or it looks slovenly; and slovenliness is inadmissible on a yacht. Hemp shrouds, on the other hand, while heavier and catching more wind, require to be set up very much softer, and indeed must be looked after constantly, as they stretch and take up a great deal, according to the weather. This is a decided disadvantage to the Corinthian, who, perhaps, keeps but one paid hand, and in this respect wire is more likely to give satisfaction, not stretching nearly as much. Now, the elasticity of hempen shrouds, it is claimed, is of great value as a help to speed, as it prevents the blinding up of the boat, while the wire ties her up, unless the lanyards are made very long to compensate for the loss of elasticity, or spring or india rubber relieves are used for the same purpose. In conversing with seamen the general consensus of opinion was, I found, in favor of slack rigging for speed, and in favor of wire shrouds, which is diametrically opposed to the other axiom that the flatter the sail the faster will the yacht travel. Personally I incline to wire rigging set up taut. I know this is almost heresy, but, authors to the contrary notwithstanding, it seems to me that unless the masts be made so stout as to bear up under the strain of the sail without buckling—as is the case of some of the Newfoundland fishing boats—well set up rigging is absolutely necessary to obtain flatness of mainsail. I think it will be found that the advocates of slack rigging have much to say for themselves, and consequently heavy.

Brett, in his "Notes on Yachts," devotes a whole chapter to a comparison of hemp with wire, and decides in favor of the former on all counts, having evidently a strong prejudice against the latter; but since Brett's day a deal has been learned about wire rigging, and its use has become much more general than was anticipated. "Vanderleecken," in his "Yachts and Yachting," long a standard work, and even now a most useful book of reference acknowledges the splendid performance of vessels fitted with wire shrouds, while not entirely free from the "weak-belly" vessel, whose hull works and springs even moderately. "Marrett" doesn't touch on rigging in his book, and Frazar's "Boat-Sailing," the only American hand-book on yachting that I know of, also passes over it in silence. Not so Dixon Kemp, who enters very fully on the subject in his valuable "Yacht and Boat-Sailing." He quotes Mr. John's report to Lloyds, on the dismantling of ships, in proof of wire-rigging set up taut, and of the considerable stretch of wire rope. At the risk of being lengthy I quote his words, as his book may not, though it should be, in the hands of all your readers: "So far as the requirements of match sailing go, there can be no doubt that the more rigid the rigging can be kept the better are the results. The old-fashioned theory is that the rigging should be very elastic, and that the masts should have plenty of play. This curious fallacy has been maintained by still more curious arguments and theories; and we have known some sailing-masters to slack up the rigging to give it the required elasticity. It is obvious that the mast would have to supply the elasticity under such circumstances, as the strain would not come upon the rigging until the vessel was under way, and then the mast would be most to the breaking point. We need not dwell upon the bad effects of slack rigging and a yielding mast further than to say that anything which tends to render the application of the propelling force intermittent, or to absorb any portion of it and reduce its effect, must in some measure detrimentally influence the speed of a vessel; and if rigid rigging is necessary for the good performance of sailing ships, it is equally necessary for the attainment of the highest results in competitive yacht sailing."

I might fill a column—fully you would not think me—with instances of the reported good effects of slackening up the rigging in a race. It is only the other day that, discussing the point with a friend, whose yachts are noted for their speed, he told me he always slackened up his shroud lanyards before starting in a race, and this with Russian hemp shrouds. At this rate I do not see what the shrouds are there for, especially as I know his masts are very stout in proportion to the size of his crafts. But I am open to conviction, and during the coming season I shall endeavor to test carefully the advantages of slack vs. taut rigging, and my opinion should be glad to hear what others have to say on the subject.

ROBERT CROSS.

We incline to the opinion that there is nothing in slack shrouds, but prefer setting them up taut as a bar. The idea of slack shrouds should be classed with belying sails. There is no danger in wire being set up "taut as a harpstring," and there is nothing like turn-buckles of large thread to do it with, in place of the everlasting trouble of casting aholt lanyards to get a pull on them, and then lose all you gained while seizing them off, leaving shrouds in a tight worse than before—an operation we have witnessed more than once. There is danger, however, in setting up hemp like a bar, especially with light rigging, for when wet it will shrink and either buckle the mast, draw down the deck about the partners, lift the sheer or telescope the headland. The trouble with hemp is, there is more stretch than elasticity to it. Practice seems to indicate strong preference for wire, as in these waters it has about superseded hemp altogether for yachts of all tonnages.

MEASUREMENT.

Editor Forest and Stream:—

Let me briefly state my reasons for (so far as I have investigated) believing that the cubic contents of the circumscribed parallelopiped of a yacht's hull is an adequate and fair measure of her capacity to compare with the same cubic contents from any other yacht. No vessel ever exceeds in cubic contents 70 per cent. of the cubic contents of her circumscribed parallelopiped, and no vessel ever has less than say 40 per cent. of it. For yachting purposes no vessel can vary more than about 10 per cent. of it, and I doubt whether, practically, our modern yachts vary more than 5 per cent., taking into account the necessities of structure which are found to be essential to speed. I speak, of course, of keel-yachts. And the same is true of center-board yachts compared with wing-and-keel. Practically, therefore, the cubic contents of the parallelopiped is in a certain ratio to the actual contents of its yacht in all cases, because he who departs from that ratio is put out of hope of competition. Hence, as all "cubic contents" measurement is but an approximation to the actual

cubic contents of the yacht, length, breadth and depth will practically give about as near an approximation with those of modern build, since it makes no difference in comparing two yachts whether we adopt the actual cubic contents, or the cubic contents of larger solids which bear the same ratio to the actual contents.

Again, looking at it in another way, length is a factor of power and speed, breadth is also a factor, depth is also a factor. Common sense, estimate all the factors in comparing one with another, and allow the builder to make use of all other dimensions within those factors as he pleases. These three factors are necessary and fixed. All others are arbitrary and optional. The natural laws which govern naval architecture will compel a certain approximation to uniformity between them to subserve the purposes. Let the builder open his eyes to find these proportions without being obliged to violate the natural proportions of length, breadth and depth to meet some foolery rules, and we shall see our builders turn their attention to those proportions of form, aside from those, which will lead to true progress and improvement in naval architecture. So much for my present progress in the study of the subject. Finally, the measurement which includes the three dimensions, if not absolutely perfect, is so far ahead of all others as to leave them out of the question.

DAVID HALL RICE.

MOTORS FOR LAUNCHES.

Editor Forest and Stream:—

A short time since, a street car made a trip over the Third Avenue line of some sixteen miles with the usual load of passengers and making the customary stops, propelled by a pneumatic engine with but one charge of compressed air. Why could not the same means be used in operating small steam-yachts and launches, thus doing away with all smoke, steam, coal-dust and danger of explosions?

The air compressor could be located at a convenient place on the docks, and the boat call for a charge when wanted.

CONSTANT RABBER.

THE CANOE CONGRESS.

THE call for the Canoe Congress to be held at Caldwell, head of Lake George, August 3d, 4th, 5th and 6th next, states that it is proposed to organize a National Canoe Convention, that is a club, the membership of which shall be composed entirely of residents of the United States. It is also stated that English and Canadian canoeists will be invited to attend, with their canoes, as guests. It has been suggested, and with good reason, that the proposed organization should not be exclusively a United States canoe club, but that it should be, in the broadest sense, The American Canoe Association, to membership of which any canoeist, be he, or she, residents of Canada, United States, or Mexico, shall be eligible. There is certainly no reason for excluding our Canadian cousins; they are canoeists to the paddle born and they can be counted by thousands. They are cruising canoeists and can make valuable contributions in the way of cruising notes to the canoe paper that it is proposed to publish. I am assured that many gentlemen in Canada, who have been warmly and warmly second the move for the American Canoe Association, and that many Canadians will attend the congress. Such an association, it is confidently believed, may be formed with a membership of at least 200. In the United States the double-bladed paddle is generally used; in Canada, the single-bladed. Canoes for one person are as rarely seen in Canada as canoes for more than one in the States. These differences and the great variety of modes in this country have rendered it difficult to get questions as to what constitutes a canoe and as to what the classification should be. The division into sailing and paddling classes is established. The definition of the word canoe has been referred by Mr. N. H. Bishop, acting as secretary to the signers of the call, to the Commodores of the three canoe clubs, and they have agreed that: "A canoe is a boat that is sharp at both ends and not more than 20-in. beam. She must be a craft that may be effectively propelled by a double-bladed paddle, and she may be propelled either by the single or double-bladed paddle, or by one or more sails. No other means of propulsion can be used."

The question, "what is a canoe?" is frequently asked, and so that reason this definition has been given. There is no reason why canoes may not be sailed or paddled by one, two, four, or eight men, nor why there should not be single and double paddle races. So long as the craft is a canoe, and the conditions are the same for each contestant, it matters little what the conditions may be.

CHAS. E. CHASE.

281 Broadway, New York.

YACHTING NEWS.

NEW JERSEY YACHT CLUB.—The annual meeting for the election of officers of the New Jersey Yacht Club was held last evening at their club house, foot of Eleventh street, Hoboken, which resulted as follows: Commodore, W. H. Dilworth; Vice-Commodore, A. Jemmett; Racing Secretary, Geo. Gartland; Treasurer, Chas. Rogers; Financial Secretary, Ed. Ketchum, Jr.; Corresponding Secretary, Palmer Campbell; Treasurer, Harry Tatham. Regatta Committee: Geo. Gartland, Frank Dilworth, John Peters, Trustees: Kelcham, Dilworth, Rogers, Jemmett, Tatham. Delegates to National Yachting Association: Theo. Rogers, E. Ketchum, W. H. Dilworth. The annual reports of the officers for the past year exhibit a very flourishing condition. The treasury shows a handsome balance in its favor. The members are harmonious and social; the club house is large, commodious, and beautifully located on the bank of the Hudson in the Ellysian Fields. The membership comprises about forty gentlemen, most of whom are engaged in business in New York and Hoboken. They are, with scarcely an exception, ardent lovers of the sport, and lay just claims to seamanship of no ordinary character. They own no very large yachts; but among the squadron of open boats, varying from sixteen to thirty-six feet in length, may be found some of the fastest and best that ever floated in New York Bay. The Consolidated and By-Laws were carefully revised some time since, and have just been issued in neat form, a copy of which would be cheerfully furnished by the Secretary to any gentleman who might desire to join the club.

D.

THE N. Y. C. is in reality the oldest Corinthian yacht club in the country, having adopted limited crews and fixed ballast since 1871. It should receive the support of all amateurs in its neighborhood.

SALEM BAY YACHT CLUB.—Commodore, Wm. G. Salmonfall; Vice-Commodore, Salmon; Treasurer, Wm. F. Parker; Racing Secretary, Salmon; Financial Secretary, Ed. Ketchum, Jr.; Corresponding Secretary, Palmer Campbell; Treasurer, Harry Tatham. Regatta Committee: Geo. Gartland, Frank Dilworth, John Peters, Trustees: Kelcham, Dilworth, Rogers, Jemmett, Tatham. Delegates to National Yachting Association: Theo. Rogers, E. Ketchum, W. H. Dilworth. The annual reports of the officers for the past year exhibit a very flourishing condition. The treasury shows a handsome balance in its favor. The members are harmonious and social; the club house is large, commodious, and beautifully located on the bank of the Hudson in the Ellysian Fields. The membership comprises about forty gentlemen, most of whom are engaged in business in New York and Hoboken. They are, with scarcely an exception, ardent lovers of the sport, and lay just claims to seamanship of no ordinary character. They own no very large yachts; but among the squadron of open boats, varying from sixteen to thirty-six feet in length, may be found some of the fastest and best that ever floated in New York Bay. The Consolidated and By-Laws were carefully revised some time since, and have just been issued in neat form, a copy of which would be cheerfully furnished by the Secretary to any gentleman who might desire to join the club.

Lowell; Treasurer, Geo. W. Mansfield, sloop *Dolphin*, Salem; Secretary, Chas. V. Richardson, Salem; Messieurs, Joshua Brown and W. T. Servy, Regatta Committee; C. A. Benjamin, E. C. Browne, E. B. Dudley.

NICE REGATTA.—Owing to the unfortunate prevalence of the counsels of landsmen in the arrangement of the races, the entries were rather meager for the liberal prizes offered, and only a heterogeneous lot of big and little were found willing to start Thursday, March 11th, in what ought to have attracted the flower of the world's racing fleet. Englishmen were naturally disgusted with the idea of subsidizing sport to the gratification of *une grande foule* ashore, and so the races lost in cost and degenerated somewhat into *une grande spectacle* for the hotels and floating population of the pretty little French seaport. It is always objectionable to mix rowing and sailing races. We have learned something of late in America, and the menagerie features are no longer disproportionately prominent at most races. Our French cousins will have to learn as we did, by experience, that a circus and a yacht match are two different things and won't mix.

VOX POPULI.—From the letter of a well-known yachtsman we extract the following as a sign of the popularity of this journal and the high estimate assigned it by its constituency drawn from the highest social ranks:—"The time has quite gone by when *Poussin* and *Strawman* required testimonials of its value. I am glad to say it is becoming more popular every day, and nothing is more remarkable than the success of its yachting columns. It has become the American *Feld*, and a higher compliment I could not pay it."

THE CABIN LOCKER.—Blacking for tarpaulins: Eight pounds black paint, well ground, one gallon linseed oil, one pound beeswax, one half pound litharge and one pint spirits of turpentine. *Spars:* Scrape thoroughly, sandpaper and apply Crockett's spar composition, lay on thin, filling shakes and seams with "wood filler," to be had of leading paint houses. *Ground coats:* There is nothing like lead color for the purpose. Put on thin, so that subsequent coats can dry.

Yacht clubs can join the National Association on the same terms as those now participating any time before the meeting of April 14th. After the constitution has been ratified, their admission will be subject to a vote the assent of a majority of the clubs being necessary to admission.

NEW PUBLICATIONS.

THE ILLUSTRATED BOOK OF THE DOG.—By Vero Shaw, B. A., Cantab. Assisted by the Leading Breeders of the Day. Illustrated with colored plates drawn from the life. New York: Cassell, Petter, Galpin & Co., 599 Broadway. Complete in thirty parts; price, 40 cents per part.

The Cassells have added to their large stock of books valuable to the sportsman, this most excellent work by Mr. Vero Shaw, whose extended experience as a breeder and exhibitor of dogs, amply qualifies him to write about them in an eminently authoritative manner. From an examination of the eight parts already issued, we are warranted in speaking very highly both of the author's method and of the admirable way in which the plan of the book is carried out. The earlier portions of the book rightly deal with the fundamental and elementary details of kenneling and general management, and then take up the various topics of rearing, breaking, working, feeding, exercise, dealing, judging, buying and selling, grooming, hygiene and diseases. In each one of these branches the reader will find full and explicit instructions, written in a plain, straightforward way, and in a style devoid of cockneyism and familiarity.

The various breeds of dogs are described, with instructions for the care of each, points in judging, etc.

The illustrations are numerous, being portraits of typical dogs, taken from the life. Of the colored plates we cannot say much, the book would be much more pleasing without them. The woodcuts, on the contrary, are generally excellent and all that could be asked. The book is handsomely printed, and, when completed, form a volume which all breeders and dog owners may profitably add to their libraries. We are always glad to see a firm with such unlimited resources as those possessed by the Messrs. Cassell, Petter, Galpin & Co., devoting themselves to extending the public information in respect to our animal friends.

Van Nostrand's Engineering Magazine for April has its customary excellent selection of material. Leading off with a theoretical investigation on the "Strength of Retaining Walls," written for the magazine by Wm. Cain, C. E.; then quotations from the leading engineering journals on "Compound Navies," "Sanitary Construction of Dwelling-houses," "Bridging Naval,

able Waters of the United States," "The Panama Canal from an English Point of View," "Engineering Progress During the Last Fifty Years," the timely subject of "Dynamo-Electric Machines," and much general news, this magazine affords an excellent index and review of the principal transactions in the engineering world.

THE TAXIDERMIST'S MANUAL.—By Capt. Thomas Brown, F. L. S. Twenty-eighth edition. New York: G. P. Putnam's Sons, 182 Fifth Avenue. 1879.

In issuing an enlarged and improved edition of this standard work the Putnam's have added a useful and valuable contribution to the extensive literature of the subject. Taxidermy is an art which is constantly gaining new popularity among amateur students of the several various branches of natural history, more especially among students of ornithology; for the birds are the favorite subjects of out-of-door study. The first edition of Capt. Brown's book was published many years ago, but the directions contained in the volume before us are by no means useless because of this. In 1819 the author was sent by the Edinburgh University to inspect the splendid museum of Mons. DuRoi, chief of the preserving department of the Jardin des Plantes, Paris. The intimacy then and there formed with M. DuRoi afforded ample opportunity for Capt. Brown to learn all the practical details of the different processes employed in the preservation of animal specimens. To the knowledge thus acquired were added the fruits of personal practical experience, and the result is the manual before us, which now having reached its twenty-eighth edition may be said to have fairly earned a place in the taxidermist's library.

The eight chapters treat generally of skinning and preserving quadrupeds, birds, reptiles, fishes, and spiders, worms and insects; preparing skeletons; the manner of collecting different animals; recipes and directions for the various articles used in taxidermy; and lastly of instructions to travelers.

"Krick's Guide to the Turf" is a manual which is absolutely indispensable to horse owners, and those who are interested in the turf. Its author and publisher, Mr. H. G. Crickmore, of the *Turf*, has a wide reputation for the accuracy of his information on all turf matters. The book is published at No. 25 Park Row.

PUBLISHERS' DEPARTMENT.

Brown's Gun Cleaner has been recently tested by the officers of the United States Regulars at Fort Steele, Wyoming Territory, and recommended to the Government for adoption by the army.

(From Hon. Andrew Cornwall, ex-member Legislature, New York State.)

ALEXANDRIA BAY, Jan. 3d, 1880.
H. H. Warner & Co., GENTS—I have been troubled with kidney difficulty for the last three years, and in October last had a very severe attack. I then commenced taking your Safe Kidney and Liver Cure, and obtained relief at once. I have used two bottles, and feel as well as ever, and I shall always keep a supply of Warner's Safe Kidney and Liver Cure in the house.
Yours truly,
A. CORNWALL.

—Among the notable manufacturing establishments of New York is that of Keep's, the manufacturer of Shirts and Gentlemen's Furnishing Goods. Some years ago Mr. Keep devised a method of supplying people with partly-made shirts, that garments which are all cut and ready to be sewed together. Thus, by reducing the cost of what are substantially wholly-made shirts, proved a most successful business undertaking. Keep's partly-made shirts are now sent to every State in the Union, and from a single salesroom on Broadway the manufacturers have moved into a large building, which is now entirely occupied by the various departments. There is nothing so satisfactory in the shape of dress as a well-fitting shirt. Keep's shirts fit well and wear well. We can heartily endorse the man, the shirt and the way in which he does business.

HUNTING THE ALLIGATOR.—Kingston, N. Y., March 2d.—From what I had read of alligators I was led to believe that they were exceedingly dangerous, but closer acquaintance has dispelled that illusion. I now regard them as thorough cowards, except when they are defending their young or are met with when on their land journeys; then they are dangerous, and must be approached with caution, keeping the line of retreat open

in case of emergencies. The best alligator hunting is found in lakes and creeks where they have not been much disturbed. Such places can be found almost everywhere along the St. John's River, Florida, within a short distance of hotels and landings. Good sport may yet be had on the St. John's River itself by hunting from land instead of water. Almost any deep cove remote from the steamer channel is good ground, and the morning of a warm sunny day is the time. The proper weapon is a .40 or .44 sporting rifle. I have been most successful with a .44 mm.-line, using the long cartridge. I have killed a fifteen-footer stone dead at 150 yards with the short .44 cartridge. I have used a .50 caliber rifle, but the lighter rifle will kill just as many and is much the most pleasant in use. When the alligator is floating on the water the eye is the most prominent feature and is the only vital part. When on land or lying on logs a shot behind the fore leg will be effective. If a "gator" is shot in deep water he sinks and is lost. The skinning of a "gator" is a difficult task, especially if the capture be a large one; but the neophyte generally wishes the skin of his first "gator" as a trophy, and can obtain it by making longitudinal cuts from the head to the tail on each side, just under the large bony plates of the back, then cutting a slit down each leg to connect with the cuts on sides. Commence stripping at the tail. The skin may be preserved by salting and drying. Small alligators may be skinned without much trouble. If the head is buried a few inches in the earth for a week the teeth may be extracted without trouble. The teeth are worth from eight to twenty dollars per pound, the largest being the most valuable; a fine large tooth, polished, sells for four or five dollars at Jacksonville. The teeth are shed every year, and have new teeth growing in the sockets. In the large rivers or lakes until they are three or more feet long. Thousands of young "gators" are sold to northern visitors as pets. A tub of water with a stone in the center for them to crawl on makes a good home. For food a few minnows or a little raw meat, cut in small pieces, should be given them once a week. The water should be changed often, and no salt food ever given them. The alligator catches sometimes some hair-breadth escapes from maternal fury, and occasionally can leave their prey and take to the trees, as a "gator" can run faster than a man when its "dander" is up.

NAUTICS.

A BEAR DOG IN A CAGE.—Messrs. Chas. Reich & Bro. of this city, recently received from Berlin, Prussia, the wild beast belonging to an exhibitor, who recently died in that city from injuries inflicted by a royal Bengaltiger. Among the animals thus received were some unaccustomed Polar bears:

It is known that the more presence of an animal in a cage of others of different species, no matter how savage or wild they may be, will sometimes prevent them from fighting. Why this is so animal tapers can offer only theories in explanation. It is said that tigers and lions in the jungle will run from the presence of a dog as they do from that of a man, unless pressed by hunger to stand in defiance of offspring. Mr. Reich, before his death, as an experiment, and without much hope of success, introduced a large dog, a cross between a mastiff and the bull-terrier, into a cage containing two entirely untamed Polar bears, and a Russian black bear. The effect surprised him. The dog instantly asserted a mastery over his companions, although any one of them could have killed him in two or three minutes. He thus stood in defiance of the upper hand, and of not letting any one of them imbue his teeth in warm blood. As soon as trouble threatens, the peacemaker has but to show his teeth and growl in order to restore harmony. Mr. Reich says he does not know of any other case where the native fierceness of a Polar bear has been quelled. Mr. Reich, before his death, used to enter the cage with this happy family and perform the usual high leaping and somersaulting. The dog was introduced. The four brutes traveled in the same cage across the Atlantic and are yet kept together.

50 cts. each paid for the dead birds delivered in good condition at my address.

J. KNOWLTON, 165 Tremont st., Boston, Mass. Feb. 12-2m.

The Kennel.

Neversink Lodge Kennels.

The following celebrated Dogs are in the stud.

DOGS:

St. Bernard dog "Marco"; rough coated, two years old; a magnificent animal—Rev. J. Cunningham Macdon's stock—second prizes Hanover Show and Rochester.

Newfoundland dog "Keeper"; four years old; first prize Westminster Kennel Show, 1872.

Pointer dog, "Croxteth"; liver and white; one and a half years old; out of Lord Sefton's renowned stock—one of the handiest pointers in the United States. Second prize in the Hanover International Show.

Blue belton setter, "Decimus Dash"; eighteen months old; sired by Llewellyn's celebrated "Dash"—a magnificent stud dog—never exhibited.

Irish setter, "Rover II"; pure red; son of Macdon's champion "Rover." Never exhibited.

English setter, "Ranger II"; a pure bred Laverack, son of Macdon's celebrated "Ranger." His get won first at Hanover and Paris shows, and second at Puppy Stakes in Eastern Field Trials 1878.

Stud fee, \$25.00.

For Sale.

The get of the following thoroughbred Bitches.

St. Bernard "Braunfels"; rough coated, out of Prince Solin's celebrated stock; a magnificent bitch in the get of "Marco"; 1st prize in Hanover and Rochester show.

Pointer "Queen"; liver and white, 1st Westminster Kennel Show 1878, 1st Boston Show 1878, Gordon Setter "Beauty"; 1st Boston Show 1878, and New York Show 1878.

"Queen" and "Sancho"; liver and white, out of "Queen" and "Sancho."

Blue belton setter "Sile";

Irish Setter "Moya"; out of Col. Hilliard's "Palmerston," in whelp to "Rover II."

English Setter "Doona"; white and lemon.

Pups can be secured by an early application. Besides I offer for sale pointers and setters of minor quality, but of good thoroughbred stock; full pedigrees. Also several puppies of champion "Queen," by champion "Sensation."

Having engaged the services of Macdon's renowned field trial breaker I am prepared to box orders for thoroughly broken dogs, deliverable, autumn, 1880. Particulars will be furnished on application.

A. E. GODEFROY

Guyard, Orange Co., N. Y.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 " .25	.50	1 " 1.00	2 " 1.50	3 " 2.00
Amount to remit us, 3 " .75	6 " 1.50	1 " 3.00	2 " 5.50	3 " 8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00
Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.	

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any Person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six Months, and Eight Dollars Cash, we will send, in place of commission, any one of the following Articles:

Jordan's Manual of Vertebrates.	Coues' Field Ornithology.	One five-foot lancewood Bow, Horn Tips, and one dozen 25-inch Arrows.
A copy of FOREST AND STREAM for one year.	One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks.	One pair Club Skates.
A three-piece double-ferule, lancewood tip, full mounted, polished Bass, Trout or Bait Rod.	One Russia-leather Fly-book, and one dozen assorted Flies.	

To any Person sending us, before July, 1880, Sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles:

Two copies of Forest and Stream for one Year.	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells.	One Gent's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows.
A four-piece, double ferule, guides and reel-band, hollow, butt, extra tip, full mounted, Bait or Brass Rod.	One full-length Fly Book, and two dozen assorted Flies.	One Set Parlor Archery, complete in box.
One 3-piece do. Fly Rod.	Coues' Key to North American Birds.	One pair nickled-plated Club Skates.
		One Parlor Air-Gun.

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter. Address

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1879, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CROTON are thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

KENDALL'S SPAVIN CURE

Is a sure cure for spavin, splint, curb, callous, sprains, swellings, galls, lameness and all enlargements of the joints or limbs. It will completely remove a bone spavin without blistering or causing a sore. It is also good for man as for horse, and is used full strength, at all times of the year, with perfect safety. Remember, we claim it will cure a bone spavin and completely remove the bunch without blistering.

Office U. S. Marshal, Western Dist. of Michigan, Kalamazoo, Apr. 15th, 1890.
B. J. Kendall, Kalamazoo Falls, Vt. Dear Sir: I received the two bottles of your spavin cure forwarded by express in January last. I am happy to state that it performed all your advertisement called for. In three weeks after I commenced using it, the spavin was entirely removed and a valuable horse restored to usefulness.

Very truly yours, JOHN PARKER.
Send for illustrated circular giving Positive Proof. Price \$1. All Druggists have it or can get it for you. DR. B. J. KENDALL & CO., Prop's., Kalamazoo Falls, Vermont.

AMERICAN ARMS CO.,

103 Milk Street, Boston.

F. H. RAYMOND, Treas.

The "STANDARD TARGET." For Rifle Practice. Size 6 inches. Bulls-eye 11 inches. Range, 100 feet of hand. The zones rise by arc instead of diameter.

Marksmen will appreciate the new departure which this target has inaugurated. The accurate rifleman now gets the true value of his shots, while on old-style targets the record was so falsified by the element of chance as to give but a vague idea of the shooter's skill. For instance, on a 30 yard Creedmoor "center" scoring 4 has ten times the area of a "bull," scoring 5. Every rifleman knows that no degree of skill or care will give immunity from occasional misses, and under the old system it was almost the rule for good marksmen to be beaten by bad ones. One man would pile up eight snug bulls out of ten, but lose the other two, while his competitor, "shoot- ing for fours," would scatter his shots all over the board center. Blunder one shot into the edge of the bull, and win! Now in deer stalking and shooting at 80 yards the veteran woodsman would be wounded and lost one deer, while the beginner would have struck down eight, all shot through the heart. Of course there are people who still contend that under the old method "all had an equal chance," which is very true. But it is also true that their equality of chance would have been in no wise hindered if they should have sat down and thrown dice to determine who was the better shot. In contests of skill every element of chance should be eliminated.

Arrangements have been made for supplying these targets at a merely nominal price, and it is now an easy matter to gauge relative skill by uniform practice, and to communicate definite results without obscuring them by explanatory details. The targets are mailed, post-paid to any address in the United States at fifty cents per hundred, and quite a liberal discount is made to gun clubs and dealers. Send orders to CROSBY, MAT & SHEPARD, Glen Allen, Virginia.

USE THE BOGARUUS PATENT
Rough Glass Ball

Eaton's Rust Preventer.

FOR GUNS, CUTLERY, AND SURGICAL INSTRUMENTS. Safe to handle, WILL NOT rust, and will not corrode. Sportsmen everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes of New York writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns."

Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; B. Kilgus & Co., Cincinnati, O.; E. E. Eaton, Chicago, Ill.; Brown & Hixon, St. Louis, Mo.; T. W. Clark, New York, N. Y.; O. Trimble & Kleibacker, Baltimore, Md.; C. M. & S. Co., Georgetown, D. C.; Jos. C. Grubb & Co., Philadelphia.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinac, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOUS SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed,
if equaled, in the abundance and great variety of
fish contained.

BROOK TRIBUT above in the streams, and
the famous AMERICAN GRAYLING is found
only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Sept. 1.

Nov. 1.

BLACK BASS, PIKE, PICKEREL, and MUSC-
LONGE, also abound in large numbers in the
many lakes and lakelets of this territory.

The sportsman can readily send trophies of his
skill to his friends or "club" at home, as ice for
packing fish can be had at many points.

WATER WITH YOU.

The scenery of the North Woods and Lakes is very beau-
tiful; the air is pure, dry and bracing. The cli-
mate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far sur-
passing the average in countries now enough to
afford the finest of fishing.

During the season round Trip Excursion Tickets
will be sold at low rates, and attractive train
facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
Special Rate.

It is our aim to make sportsmen feel "at home"
in this route. For Tourist's Guide (an attractive
illustrated book of 80 pages, containing full in-
formation and accurate maps of the Fishing
Grounds) send for it to
Gen. Pass. Agent, Grand Rapids, Mich.

Old Dominion Line.

THE STEAMERS of this Line reach
some of the finest water and upland
shooting grounds in the country. Connecting di-
rect for Chincoteague, Cobscook Island, and points
on the Potomac, Chesapeake, and Atlantic coasts,
Virginia, Tennessee, etc. Norfolk stations: Sat-
urday, Thursday, and Saturday. Del. Monday
and Tuesday, at 2 P.M. Full information
given at office, 107 Greenwich Street, New
York.

J. R. DAVIS Proprietor,
Always twenty minutes for Dinner.

THIS HOTEL has been opened by Col.
J. R. DAVIS, long and favorably known as
the proprietor of the Peck House, Wilm-
ington, N. C. The Hotel has been entirely and
thoroughly renovated throughout. The rooms
are elegantly furnished with back walnut mar-
ble-top furniture and hair mattresses. Travellers
and invalids coming South will now find this a
comfortable resting place, a long-felt want sup-
plied. Guests will receive every attention and
comfort, elegant table and attentive servants.
This is the Dining Room, serving South or going
North. The best Hotel of its kind on the route to
Florida. Rates—\$2.00 and \$2.50 per day.

HO! for TROUT FISHING.

THE FAR-FAMED waters of the Mag-
netic are now within any access of
Toronto and the outside world, and are still re-
maining with speckled trout. We have erected a large
and comfortable hotel in Magnetawan Village,
and are prepared to offer every facility to our
sporting friends by way of canoes and guides to
the trout lakes and streams tributary to the Mag-
netic, and can also offer the best of trout fishing
within a mile of our hotel; will have ice and facil-
ities for packing fish, so that they can be taken
fresh to any part of the Northern States. The
road from Houscouk (the head of steam travel) has
been Magnetawan and the journey shortened by
half a day, so that parties leaving Toronto can
get here in one and a half days. Come up and
see us.

J. W. TUTHILL & CLARK, Proprietors,
Magnetawan P. O., Ontario, Canada.

OCEAN HOUSE, Spook, L. I.—First-
class board; near bay and ocean, forest and
lakes; swimming, fishing, riding, sailing, bathing
and rowing. Parties will be met at L. I. R.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFGG for long range rifle shooting; the FFG and FFGG for general use, burning strong and moist.

DUPONT'S SPORTING, MINING, SHIPPING, AND BLASTING POWDERS of all sizes and descriptions. Cannon, Mortar, and Mammoth Powder, U. S. Government standard.

DUPONT'S SPECIAL GRADES FOR EXPORT, to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

W. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder," Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square containers of 1 lb. only.

Hazard's "American Sporting," Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A true grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting," Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loading.

Hazard's "Kentucky Rifle," Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loading.

Hazard's "Sea Shooting," FG in kegs of 25, 124, and 64 lbs., and FG in 5 lb. kegs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and target shooting.

FG is the standard Rifle Powder of the country. Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, of any required GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,
88 WALL STREET, NEW YORK.

DITTMAR POWDER.

Champion Shot Gun and Rifle
POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Compressed Buck Shot.

First Premium Centennial Exhibition. Report "Exact uniformity of size, truly spherical form, high degree of finish and general excellence."

Founded July 4, 1803.

SPARKS' American Chilled Shot.

Rivaling the English and All Others.

STANDARD DROP AND BUCK SHOT AND BAK LEAD.

THOMAS W. SPARKS, MANUFACTURER. Office, No. 121 Walnut Street, Philadelphia.

Miscellaneous.

CURES BY ABSORPTION. RHEUMATISM, NEURALGIA, MALARIA. "Spanule," the wonderful Glycerine Lotion, is a positive cure; it has never failed. "Spanule" has no equal for Chronic Lameness, Lame Back, Lumbago, Sprains, Piles, Chapped Hands, Chapped Feet, and all diseases of the Skin, Erysipelas, Salt Rheum, Eczema, Humors of the Scalp, etc. Diphtheria, Sore Throat, Pneumonia, and all inflammatory diseases. Ladies who suffer from local difficulties find immediate relief, and a permanent cure by using "Spanule." Used in sponge or foot bath. Satisfaction guaranteed or money refunded. Sold by all Druggists. Price, 50¢, and \$1 per bottle. Send for illustrated circular and cards. SAMUEL GERRY & COMPANY, Proprietors, 25 Broadway, New York.

A Skin of Beauty is a Joy Forever.

DR. T. FELIX GOURAUD'S

ORIENTAL CREAM, or MAGICAL BEAUTIFIER

Removes Tan, pimples, freckles, and every blemish on the skin. It has stood the test of thirty years, and is so famous, we taste it to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sarré, said to a lady of the haut ton (a patient):—"As you taste it well use it. I recommend 'Gouraud's Cream' as the least harmful of all the skin preparations." Also Poudre Subtile removes superfluous hair without injury to the skin. MR. M. B. T. GODRAUD, Sole Prop., 43 Bond St., N. Y. For sale by all druggists and Fancy Goods Dealers throughout the United States, Canada and Europe.

KRUC & CO'S
CHAMPAGNES!

STANDARD AND DRY.

The Sportsman's Wine!!

A. ROCHERE AU & CO.

SOLE AGENTS,

6 South William street, New York.

THE POULTRY WORLD,

(MONTHLY) AND

THE AMERICAN POULTRY YARD.

(WEEKLY)

Both publications are exclusively devoted to Poultry.

Published by H. H. Stoddard, Hartford, Conn.

THE POULTRY WORLD is sent post-paid for \$1.25 per year; the AMERICAN POULTRY YARD for \$1.50—both papers for \$2.00. A series of twelve magnificent Chromos, each representing a standard breed of fowls, sent for 75 cents extra to all subscribers to either publication.

CARD'S COMBINED LOADER

The most perfect and reliable in existence. The only one having Shot, Powder and Wad Pouch, Hammer and Crimper, complete in one machine. Will load 100 cartridges ready for use, in 20 minutes. Every Sportsman should have one. Special rates to clubs. Illustrated circulars free.

Address, J. E. SHEPARD & CO., Cincinnati, O.

FRANK H. ATKINSON,

Book and General Job Printer, 36 and 38 John St., New York.

COMPOSING ROOMS OF FOREST AND STREAM

THE FOREST AND STREAM

THE AMERICAN SPORTSMAN'S JOURNAL.

A Day in the Woods.

SECOND PAPER.

IT was unreasonably early the next morning when Henry awoke me out of a short but peaceful slumber. Indeed, so soundly had I slept that scarcely did it seem half an hour since we parted, and left the few smouldering embers dying on the hearth below.

"It's four o'clock," said he. "You rouse the boys. I'll leave the candle here lighted, and there's water in the crock. I'm going down to prepare the coffee. Collect your wits, Harry, and make haste. Oscar will not lose three minutes waiting for us."

I thought he still lingered within the small attic room when I had become conscious enough to answer him, but he had slipped out with the stealth of an Indian. Though Jack Lane, Nevill and the mill; were yet fresh in my dreamy mind, quail shooting, which was to be the sport of the day, was the one thought prominent. Ay, there stood reclining the London double twist, and dangling from the muzzle could be seen the quaint powder-horn and shot-belt, and there, too, hung the short, cozy velvet shooting jacket and the cap staring me in the very eyes from all portions of the room.

Slowly raising the little dormer window until it caught the button, I peeped out into the darkness: it was still as death. The faint crescent of the moon had waned far to the westward, and was slowly sinking behind the woods; a few stars yet glimmered in the heavens, and below my window, (which was even so miniature as to afford scarcely a scant observation) lay Thompson's Pond, as placid as a mirror. Nor can I expel from this phantom-like recollection, for I get it even now—the dank, odorous breath of that autumnal dawn, as it lingered yet awhile ere it gave birth to another sun to shine upon a beautiful world.

"Come, boys, look lively if you mean to have a good day's sport. You'll feel more like sleeping to-morrow morning. There's up this half hour, and the coffee has ceased its around all through the house. There, I've lit your candle for you. Come, Bob—come, Charlie, jump up, will you?"

A few hasty moves placed the trio in quite a respectable appearance, for hunters, and with coats and other accoutrements under our arms we repaired to the room below, partook of a light breakfast of coffee and biscuit, and then not leaving on our record, but actually closed by this same Henry out through the back door out into one of the bluest mornings I ever saw in all my life. We left like the Tenth Hussars under Lord Cardigan, i. e., one arm in a sleeve.

"Uncouple them crazy hounds, Fen," said Henry;

"they haven't ceased howling since they saw the light in the window."

"I'd like to know if the poor beasts are as crazy as you are, to bring a chap out this time of the morning to shoot. Where have you the unfortunate devils, anyway?"

"They're beyond there in the corn cribs. Just whip out the pin from the staple, and you'll see them." Scarcely were the directions from his lips when I let out the dogs, who, hungry as hyenas, ran wild everywhere, and finally finding the gate on their hook, got out into the road, and were everything but manageable.

Knowing the affair to have been a concocted job, I let Henry laugh to his heart's wishes, and walked silently across the lot to Oscar's shanty, where the low, dismal flicker in the eight-squared window gave evidence that that worthy was up and astir, and upon entering we found him endeavoring to forge for himself and dog. Surprised indeed was he at our inopportune visit.

"You see I have to feed the whole barn-yard before I can go quailing. I reckon you chaps slept precious little last night. The Wilsons' ain't got around yet, either, 'cause it's too early. 'Twon't be light enough for a whole hour to come, less it happens that you fellows want to murder the dear little creatures in their beds. And even at that, I'll bet all I shoot this season ye's couldn't find one of them. Yes, dark for an hour yet," and he raised the window to substantiate the truth of his assertion.

"Here, Rink! lap it up, good dog," he continued, placing a tin pan containing that animal's provender beside the hearth. But that "good dog" did not "lap it up" at all. There were two heads into that pan in less time than one could wink nearly, and amid the "gor-r-r's" and howls of the three disputants of the meal, the baby's crying in an adjoining room at the noise, and the excessive laughter of the crowd, you may imagine the scene. As our host was hard in the act of raising the latch to go about the completion of his various *agenda*, an Indian whoop from outside roused the winkle; and sure enough it was George Wilson and his brother Will. Presently Oscar put the quietus upon our rabble by announcing, "I'm ready," and we strode out into as fine a hunting morn as ever gladdened the heart of a Theron.

Our hunting ground was comparatively but a step, in that it was directly opposite the mill. A three-barred fence was the only difficulty in the way, and that obstruction was soon cleared, landing us upon the most picturesque piece of woodland it has ever been my pleasure to ramble into. Dotted it all over were tall, thrifty cedars, whose white, frost-like, conical berries stood in beautiful contrast with the never-dying green. Beneath our feet ran curious vines which, interwoven as they were with the lichens, their leaves dyed to scarlet by the sharp frosts, prepared the most beautiful tapestry for bountiful Ceres and her train ere she bade farewell to the dying year. Here and there grew strips of laurel, copse, or narrow skirting of hickory and oak; at the whole encircled by narrow winding tangles and ceaseless patches of flowering meadow, which, although now decaying, their glory had not departed.

"Well, boys, we can't all go together; we must divide into squads," said Oscar, after taking note of the wind, etc.; "and with your permission, gentlemen, I'll form the files. Bob, you, Charlie and George take Nep and Tip and beat all the way down until you reach Wiggins. Start into that cedar clump there and go right ahead. George will show you the place; look sharp, point your guns straight, and you'll get them. Good luck."

"Henry, you and Will had better make a clean sweep right down to the swamp. You'll find a dried-up ford there. Will knows where it is. Cross that and you'll fetch up with Bob, and tell him to meet me at Wiggins. Poplars at 12 o'clock. I forgot to tell him, Fen and I will take the bay side; and don't forget the hour now. There's your dog, Lyn, snooping up something already. Come, Fen; here, Rink, your restless beast, come here."

"Like parting friends who linger while they sever, Entorced to go, though seeming still unready,"

Highly pleased at having such a companion, I well knew that the only part now left for me to play was to shoot. Whether I should do so indiscreetly in the excitement of the moment, or cool and collectively aim and kill to a certainty, was a question solved only when the time came.

"He's got one; easy; I'll flush the bird," whispered my companion, and they rose to my utter mortification. He smiled at my waywardness of shooting too quick, in doing which I did not rattle a feather. He scored his bird handsomely—a fine, well-matured cock-quail.

"No great or uncommon coincidence, that one naturally timid should miss the first shot of the season, Oscar, considering the game, too—a bird who, rising with such a startling wing, is apt to throw the shooter in a quandary. They are, in my opinion, the most difficult bird to kill at that."

"Oh, no, no, Harry. A grouse is fifty times more dif-

*They are there now—three extremely tall, dead poplars, which have stood unmovable since the days of the Noyack Indians, and which have refused to succumb to the wild, sturdy northwester of many winters.

ficult to stop, and when you get in the timber lands to-morrow you'll remember every word of what I say; and as for myself, I consider quail shooting child's play to that of stopping a grouse instantly, for that is the way to do it. Now 'keep cool,' as Bob continually says, and you'll get the next one sure, the place is alive with them. Did you count that berry?"

"Count them? They might have been a flock of one thousand for ought I know; but I'm loaded, and let's move on, though I expect to go reeling at my next shot. I poured the pellets into this barrel regardlessly."

But the dog was gone, and despite the numerous cries for "Rink, Rink," and whistles without number, it took us some minutes to find him; and actually there he was, like a cast statue, dead on a point—a skirmish on his own hook.

"I'll warn him for that," whispered Oscar, in the same breath ordering my position, which I took beyond a tall cedar. They rose, and again I missed, and again he scored one.

"You get that bird, Fen. See it over there? And come here, Rink." The dog curled his beautiful tail between his legs and gave a backward look. "Here, I say. Will you, will you, will you ever do that again?" and as he laid heavily the chastisement upon the wayward and skulking brute, a series of howls rent the woodlands far and wide.

"You should have called him from the point, Oscar, and chastised him there and then; he does not know now, exactly why you 'fogged' him." "Yes, that would have been the better way; but I don't think at all times—charge! your reckless villain; lie down there! I've taught him better than that. I used to let him flush the birds himself, but had to break him from the habit on account of his chasing them so. He'd run a mile at times, as if the very devil was in his wake. Charlie's dog Tip inherits the same traits from its mother. The first day I had him up here to break, I thought actually, when I fired the first gun, that the fool had run clear back into Kings County."

"Gun shyness, Oscar. The next dog you have to break, and you discover any symptoms of a similar timidity, just lash the animal to a cedar—out here upon the grounds where you intend to teach him—and waste a dozen shots or so over him, and I'll guarantee a speedy cure."

"I shall really try the scheme, Harry, but George's dog, Major, did that art most beautifully—the very fluest I ever did see it done. Did you ever see Major flush a bird, when George would say 'whist'?"

"Yes, I witnessed the event many a time last autumn, and was struck with the beauty and thoroughness of that animal's education. I like that acquirement in a dog; but the great trouble is that few dogs can be taught the trick, and then the accomplishment, to be permanent, necessitates the whaling of half the life out of the poor brute. By-the-bye, where did George get that dog?"

"Some one gave it him. It was but a common mongrel setter; but Oscar, such a dog. George had him educated up to the teeth—the effects of his overflowing kindness, I'll wager any thing."

"Do you really believe so? I have an idea; and, as for me, normally, I should not desire a dog whose ancestors could be traced back to the flood, or beyond that, as some dogs are, so long as he was a good dog, and could out-tramp me. And do you believe Major's death was an accident, or an outburst of George's temper?"

"Ah! yes, Harry, purely an accident, if ever there was one. George never got angry in his life, to such an extent as to be driven to any such desperation as that. Not George; he would not have parted with Maj for his weight in gold; indeed, he feels quite sorry about the affair. You should have seen his interment up in the cock's lot, right where the wigwag was burned, Harry, that's where he lies."

"Well, there are some dogs qualified for the acquirement of no possible art. In fact, the only thing that can be driven into them is a kind of desperation as that, and then the accomplishment, to be permanent, necessitates the whaling of half the life out of the poor brute. By-the-bye, where did George get that dog?"

"Well might you say so, Harry, and he's often—"

"Hold! I think has a care, are you ready?"

I nodded in the affirmative and fired simultaneously. From a bush or perhaps a dead one, one dropped to my left, and two succumbed to the deliberate, steady and unerring aim of my companion. I had my bird in my hand long before the dog could have hoped to mouth him; and as he lay there lifeless, a beautiful cock-quail, with a patch torn from his side, from whence the blood trickled and clogged upon his, alas! forever helpless wing, a feeling of regret stole over me.

"Did you get him?" inquired my friend, after the dog had retrieved his two birds.

"Yes, I got him, but I'm sorry I shot him. I have a spark of humanity lingering somewhere in me, and, if I know myself aright, I believe I never shot one of these little 'Bob White's' but that I did not entertain some feeling of remorse after the deed was done. Not that

for in at the back door walked the old sexton with the hares. He had gone straight to the barn, and there were the birds in a barrel. I accompanied the party to the church tower and saw the birds safely replaced in the mass of filth that had served as a nest—probably for years. There were birds and mice, frogs and snakes, young hares and rabbits, and even fish lying all round in various stages of decomposition. The old owls hissed and snarled, and, but for the fact that they had been away three days, came and sat near and caressed the young, to the Squire's intense delight. The sexton, who was also assistant gamekeeper, shook his head and said: "Don't you think they be a leetle too hard on the hares, Squire?" but the kind old gentleman, with a spirit worthy of Uncle Toby, answered: "Nevill, there are plenty for them and for us too." It is needless to add, the owls were no more disturbed.

Among the strange styles of head gear affected by ladies, one of the most fashionable lately, has been hats trimmed with owl heads and wings. Faust refused to dance with the young witch, because "there sprang a red mouse from her mouth." Somehow, the association of ideas brings this passage to my mind when I see these mouse-eaters on a hat. It is curious to observe what various material for head ornaments feathers are, both in the civilized nations. I have seen hats with feathers from various islands in the South Pacific head dresses made of feathers, as elaborate as those of Paris or New York. A gaudy feather, or bright wing, is easily attached to a head, whether the owner is the possessor of a hat or not. I shall not discuss the propriety of destroying by wholesale, beautiful and harmless creatures, sacrificed because fashion with doubtful motives demands it. I met, however, one feeling akin to horror—a feeling that every true naturalist must experience, at any enormous waste of animal life, whether it be thousands of buffaloes, slain for their hides, or bright-hued birds, for their feathers. Owls, not being generally gregarious, are hardly likely to be exterminated by the million, yet they must be destroyed in considerable numbers to supply the demand.

The owl of wearing owl's heads is by no means new. I saw an Imperial hunting fete at Versailles, when the Empress Eugénie was in her glory—bright, beautiful and, I suppose, happy. The ladies and gentlemen both wore owl's heads on their hunting caps. The fashion spread, and owls of all kinds, from "Le Grand Duc" (as the great horned owl is called) down to the little sparrow-owl, were in great demand. A kind-hearted naturalist protested against such a thing, saying that the owls are the best friends of the agriculturist, and should be protected. However, fashions changed in the spring. The owls had their day, and poor Eugénie had hers; the owls still hoot and blink round Versailles, but the Bonapartes have departed, perhaps never to return.

Many may say they are lords by day,
But the king of the night is the bold brown owl.

When the boys in Europe wish to rob an owl's nest of the young, and cannot reach down the hollow tree, they tie a worsted stocking to a stick, and poke it down. The birds turn on their backs and grasp the stocking with their claws, and are easily drawn up, as they possess the quality of holding on in a high degree, as my torn clothes and lacerated hands testify. I have seen the owl's nest raided, and sometimes, make interesting pets, although there are more differences in individual tempers than most people would imagine. I have living at this time three snowy owls, captured this winter. One was wounded with a rifle ball; one was trapped; the other attacked a hen in mid-day, but was in turn knocked over by a gallant game-cock; the former saw the circumstance, and, as he could not get over the owl's head, he called my attention to it. All my birds are very tame, and will submit to be coaxed on the head, and will take food from the hand at any time of the day or night. I think I may say the snowy owl is an exception among rapacious birds in the quality of its flesh, as it is really tender and well tasted. I have known it eaten on several occasions, and pronounced excellent. One was served up *incoq*, at a public dinner, and was gobbled up by some of the small owls very peculiar.

During the Franco-Prussian war I was at Chantilly, and on several evenings, as I walked along the race-course, I heard a strange cry from the chestnut trees near the moat. *Kew! kew! kew!* rang out loud and clear at regular intervals. I asked one of the chasseurs what it was. He shrugged his shoulders. "How could he tell? It was an owl—dark sign—dark sign!" I appealed to the head-keeper; that worthy not only concurred with Pierre, but sagely added "it betokened war, and his wife's father had heard it before every revolution." However, I watched attentively for a couple of evenings with my gun; my patience was rewarded with a pair of the pretty little scops owl, and the noise was heard no more. The augury was fulfilled, however, for in three months the German hordes were encamped on the course.

The singular cry of the saw-whet, or acadian owl, was a puzzle to ornithologists for a long time. It was attributed to several species before the right author was discovered. This small owl is moderately common near Lake Ontario. I have met with it there at all times of the year. I captured two hardly fledged young on a stump in June, 1877, one of which I lost through the curiosity of a lady, who opened the satchel in which they were packed. The birds looked at her so quaintly that she dropped it in alarm, and one scrambled out and got lost. I kept the other until it was well feathered, and then killed it for a specimen, as it was in the white-fronted immature plumage. The present winter it has been common. I have myself obtained four fine specimens and seen several others. It is by no means as shy bird, although it can see very well by night, and in which they were packed; its castings invariably contain the elytra of beetles.

During the fall of 1878 I was staying at a farmhouse where a very tame and sagacious crow was kept, a gift from myself by the way. The chickens had been sadly thinned by the hawks and owls, and I always kept my gun in readiness. One night when the guinea fowls were unusually clamorous I got out of bed, took my gun, and walked barefooted to the garden, just in time to see a large owl make an unsuccessful dash at one of the watchful fowl. I waited some time in vain for a shot, then went to bed again—only to be aroused by a terrible cawing just outside my bedroom window. I opened the sash, and there was poor Jack—the crow—and a large owl on the ground engaged in a regular rough-and-tumble fight.

I could not shoot for fear of killing the crow, which was a great favorite, so I ran out round the house. The owl escaped in the shadow of the orchard, but I saved poor Jack, though he was the worst frightened bird I ever saw. The next morning I found evidence enough to prove the identity of the robber. Jack had defended himself bravely, for a number of the owl's feathers were scattered around—it was the barred owl, *S. nebulosum*. The enmity between the owl and the crow is popular in Hindoo tradition. Kalkaras, or enemy of the crow, is one of the Sanskrit names of the owl. Aristotle also says "the crow fights with the owl, whose eggs it destroys at midday, while the owl on the other hand eats the crow's eggs at night." The Italians use the expression, "the owl amongst the crows," to indicate a serious danger.

The common screech owl is one of the most audacious of the family. One in my neighborhood last winter made three attempts at a canary that hung near a window; it dashed at the glass with such force as to knock itself down every time. When the canary was removed the owl went and bestowed its attention on the tame doves, six of which were found dead and their heads partly eaten next day. The owl had not only killed the rightful owners of the dove-cot, but had taken possession. There he sat and snarled defiantly at the hired man who would have wrung his head off the owl, but the lady wished it to be sent alive to me; it however escaped in transit. I have one, however, that was caught in a dove-cot, where he had killed and partly eaten four doves. Another in my possession didn't escape so easily, for it killed a female dove and attacked the male, a large, strong bird, and during the struggle the dove broke one of the owl's wings by the vigorous flapping of its own.

If any person wishes to know what opinion small birds have of the owl they have only to fasten one on a pole in a garden in the breeding season, and they will hear more ornithological abuse than ever was expressed on the sparrow question. A robin had built its nest on the window-sill of an out-house in my garden, and when the young were nearly fledged, during the absence of the parents, I placed a stuffed screech owl by the side of their nest. When the young were hatched the effect was ludicrous; the female came first, suspicious as usual, with a mouthful of food. She didn't notice the owl until close to it, but then dashed back screaming and in such confusion that she struck herself against the house. The male bird was soon on the spot, and such a chink-chinking was kept up that one would have thought half the robins in the country were there assembled. I removed the owl after a time, but it was too late to pierce the robins didn't recover their equanimity that day.

The great Virginian owl is the worst enemy of the quail, much more so than any species of hawk, as I have had good proof. My owls are almost frantic to get at my game quails, and the sight of a stuffed one is sufficient to keep the latter wakeful an hour. The disgorged pellets give unmistakable evidence that they prey on these birds in plenty to others, and whenever the quails are found in pairs I have always discovered the owl. I have had for several years a fine female red-tailed hawk, reared from the nest and very tame. I had a male Virginian owl that I kept in the cellar, until he knocked down too many things to please the housekeeper. I then put him in the hawk's house; there was plenty of room, and they didn't fight, but they kept a constant watch upon each other. At every movement of the hawk the owl would be on his legs, always disagreeing, and at night when the owl moved the hawk would screech with terror. After a week I was obliged to separate them, for although they were both enormous eaters, neither had touched a morsel of food since they had been together.

The hawk owl I have met with but once. I was hunting in November, 1877, and while crossing a rough, stony hill, saw a very small owl perched on a bushy tree. I went to the owl, and he came over to me, and I shot him. He was a very fine male hawk owl. I received one the same winter shot by a friend on the Canada shore of Lake Ontario.

Many superstitions respecting owls have prevailed from the earliest times to the present day. Birds of ill omen generally in all countries, they have yet the reputation for superior wisdom among the feathered tribes, and certainly if blank, inexplicable gravity is characteristic of this quality, the owl who "nightly asks who's who, and pauses for a reply," is entitled to all the honors. One belief of the ancients regarding these birds has not descended to our time. At least I have heard of no practical illustration. I think it must have escaped the researches of the apostles of Teetotalism. It is, that the eggs of an owl drank for three days in wine make drunkards abstemious. Philostratus says that no one can ever like wine after eating an owl's egg.

I will conclude this rambling paper with an account of my first experience with the Virginian owl. When I arrived in the State a few years ago one of my first inquiries was respecting this bird. Several friends promised to procure one for me. On returning home one day I found a splendid newly-killed specimen lying on the floor of my room. I was examining my prize, when I came my office boy, cook and general factotum. "A man brought it," said he. "He heard you wanted one, but I am afraid I paid too much for it." "Oh, no, you didn't," I replied; "how much did you give?" "Five dollars," said Ted. "Oh, well! that is rather—well! 'tis a beauty. Here is the money, and there is a quarter for yourself. Many thanks for buying it." I skinned and preserved my specimen that evening. Some weeks after that we were out hunting together, and I shot an owl of the same kind. I incidentally mentioned our first specimen. "Well," said Ted, "behaved real mean about this bird," I have only wanted to tell you, and now I must. I only gave a quarter for it."

PEREGRINE.

A SHOWER OF WORMS.—Washington, D. C., March 5th.—The Baltimore Sun of this date contains a short notice of a "shower of worms" in that city yesterday morning. The fact that the worms could not have come up through the solid Schillington pavement was cited as evidence that they must have fallen from regions above. The same phenomenon was noticed here this morning.

The worms were to be seen in great numbers on the concrete pavement of Pennsylvania Avenue, through which, of course, they could not have made their way. The street railway on the avenue is bouldered, and the sidewalks are of brick and stone. But in these places there were no indications of borings through the interstices to the surface from the soil below. The question is, did they fall from the clouds, and if so, how did they get there. The fifteen puzzle is not a circumstance compared to this.

J. C. R.

Our correspondent can rest assured that the worms came up out of the ground, and not down from the clouds. The first warm rains of early spring always bring out these animals in great numbers. Probably their appearance at this time is connected with the breeding instinct.

BURIED HORNS.—Our correspondent "Sycamore," who started the question "Do deer bury their horns?" revives the topic, and hurls a Parthian dart at his opponents in the following note. He says:—

I was in Druid Hill Park this afternoon taking a look at the deer. In conversation with Capt. Cassell, the Superintendent, we fell upon the burying question. He informed me that they had just ploughed up a piece of ground, and had unearthed more deer-horns than had ever been found before during the whole fourteen years the deer had been confined in the park. As I am the one who first started the discussion, I feel at liberty to add this last word.

Fish Culture.

PROF. ATWATER'S PAPER.—We have been obliged to defer the publication of Prof. W. O. Atwater's paper read before the Fish Cultural Association last week. It will, however, lose none of its interest nor value by the delay. We shall publish it in our next issue.

AMERICAN FISH CULTURAL ASSOCIATION.—The meeting last week was harmonious throughout, and the members uniformly expressed great satisfaction at the results attained. The dinner at the Metropolitan Hotel, in the evening, afforded an opportunity for discussions and speeches less serious than those of the business sessions, and stimulated by the ever-ready humor of the President, each member contributed his share to the general fund of good things.

The officers for the ensuing year are as follows:—President, Robert B. Roosevelt; Vice-President, George Sheppard Page; Treasurer, Eugene G. Blackford; Corresponding Secretary, Barnet Phillips; Recording Secretary, James Annin, Jr.; Executive Committee, F. Mather, G. B. Goode, Samuel Wilmot, Benjamin West, Thomas Ferguson and H. T. McGovern.

A SPAWNING EEL.—"J. K. O." sends this note taken from "Sub-Tropical Ramblings," by N. Pike, Harper's, 1878, page 271, with the remark that it may be of interest to Mr. Roosevelt:—

One day, when out at some distance from the reefs, I had the rare good fortune of watching an eel exude its spawn. I noticed the creature swimming uneasily about, and it excited my curiosity. Although my presence evidently annoyed her, it would appear this was the species she had chosen to deposit her eggs. After gracefully and slowly circling round, she remained for a few moments perfectly motionless, and then the operation commenced, resulting in a beautiful spiral scarlet string of spawn, nearly ten inches in length and over an inch in width. After all was completed, and the eel had carefully examined, with a sudden start it disappeared, and I was unable to capture it. It would appear this was the species reserved them in glycerine, but I am sorry to say they soon faded to a faint yellow. The string resembles, to the naked eye, a delicate scarlet fabric of lace.

YELLOW PIKE-PERCH IN CONNECTICUT.—A new fish for our waters was taken in Scantic River, in a net last week, by Mr. George B. Blodgett. It was brought to me alive, and is now in my trough, quite lively. As it was new to our oldest fishermen, I referred to Dr. Storrs' report on the fisheries of Massachusetts, and found no mention of it. Neither is it included in the Rev. J. H. Linley's list of the fishes of Connecticut. Thinking it might have been introduced by our fish commissioners into our waters, I wrote to Dr. W. M. Hudson for information, and received the following reply: "It has not intentionally been introduced by the fish commissioners, and we have no information of any private efforts to introduce it."

It is remarkable that this section affords such a field for specimens in ichthyology and ornithology. In 1868 I had brought to me in a tub of water, from Scantic river, a compressed turbot (*Sula compressa*). At that time this was the fourth ever taken so far as known—the other three had been captured in the Connecticut River and its tributaries. It was so rare that Prof. Baird requested me to donate it to the Smithsonian Institute (which I did), as they had no representative of that species. The yellow pike-perch is even rarer in our waters than the turbot, so far as I am able to learn. It is an exceedingly voracious fish, and is native to our western waters. According to DeKay, it is found in most of the great lakes and most of the streams and inland lakes in the western part of New York State. "It is found from the Ohio through all the great lakes, and through the rivers of the fur countries up to 1880, parallel with the 49th parallel," says Kiriland; "it is one of the most valuable fishes for the table found in the western waters. It is so abundant in the Maumee river that fishermen take it as an article of commerce."

The body in form resembles a pickerel or pike, but the color and markings are that of a perch, hence its name. The head and mouth are not like either fish—mouth

wide, lower jaw received into the upper, two very long and conspicuous teeth in front of each—those of the lower jaw received into cavities above. The length of my specimen is twelve inches, but they are taken in the lakes more than twice that length. It is reported that one thirty inches long was found dead on the shore of Chautauqua Lake, which had attempted to swallow a duck. The duck's head was thrust through the gills of the fish, and both had perished, attached together.

I have not given a minute and scientific description of this fish, but pointed out some of its most striking peculiarities, so that it can easily be identified.—WILLIAM WOOD, in *Herald Times*.
East Windsor Hill, March 24th, 1880

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout, *Salvelinus fontinalis*; Land-locked Salmon, *Salmo gairdneri*; Smelt.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its season; Boats, Guides, etc.; Name of person to address.

—See the notice above of the FOREST AND STREAM Directory, and act upon the suggestions contained in it.

✓—The trout of Green's River, Long Island, are famous for their game qualities and a flavor which is unsurpassed, we believe, by the fish of any other stream in the world. A happy combination of favoring conditions unite to give them these qualities. Green's River is one of those Long Island streams which bubble up in abundant springs of clear, pure water, and flow down through watercourses and fringes of thicket directly to the sea. Unlike many of the other streams, its course to the salt water is free from obstruction, and untrammelled by dam or screen. The watercourses, the muddy bottoms and the brush on the banks afford a marvelous supply of choice food for the trout, and to this are added the shrimp and other dainties which the fish find when they go down to salt water. Living thus, partly in fresh water and partly in brackish and salt water, the Green's River fish acquire a flavor which, as we have said, is not to be excelled by the daintiest trout in the world. Add to this, that they are game—every inch of them; that in many places one must cast from a boat, and throw long casts at that—and we have a fish which it is well worth while snatching [away from the round of business to capture.

Green's River, we should add, is private property, and is protected from the attacks of poachers by a dense growth of thicket along the banks, and a series of mud-holes and treacherous mire, into which a man who does not know the stream, or who is not guided by some one familiar with it, must inevitably fall; and if, he falls he is lost.—The river has been for years reserved by Messrs. L. H. Abbey and Chas. F. Imbrie, and thither each opening day, with invited guests, they repair with the happy assurance of finding an ample supply of fish for themselves and their guests. Last week these gentlemen went down to Sayville, accompanied by Mr. Joseph Jefferson, who is really an expert with the fly. The success of the party is told in the following note:—

The number of anglers who left this city last Wednesday was entirely unprecedented. Our party consisted of Joseph Jefferson, L. H. Abbey and myself. "Please be before business," we found good not only in theory, but also in practice. On our return we felt as if we had new mainprings in us.

We went to Sayville, Long Island, and made our quarters at the Foster House, where we always find a good table, comfortable bed, and a hospitable host.

On the first we fished Foster's Brook and Green's River above the bridge. In the last named stream we took fifteen trout. These were taken in a few minutes' fishing, during a short period of south wind. During all the rest of the day we had every sort of wind but south, and consequently could get no fish, for it is a well-known peculiarity of this locality that the wind must be either exactly south, or sou-south-west, or one cannot take trout with a fly.

On the second day we fished Green's River below the bridge, and as the wind was right during an hour in the morning and about an hour in the afternoon, we took thirty-six fine trout. Thus our take for the two days was fifty-one in all.

I never passed two more delightful days and evenings than these; not only was the fishing of the right sort, the fish being killed fast enough to satisfy any sportsman, and yet not fast enough to become mere butchery, but the ready wit and kindly wags of Jefferson imparted a zest to the occasion which will give it a most pleasant place in my memory.

CHAS. F. IMBRIE.

—Messrs. Conroy, Bissett & Malleson have on exhibition at their store a very faithful picture of Long Island brook trout, painted by W. Holberton for a member of the South-Side Club. It represents a couple of trout of about a pound weight on a bed of bright green moss and violets. In the background is a very carefully painted split bamboo rod, and in the foreground a glimpse of the

stream is shown. Anglers, as well as lovers of pictures, can see for themselves how carefully true to nature this seasonable painting is treated.

THE NEPISQUIT AND MATAPEDIA.—*New York, March 30th.*—Editor *Forest and Stream*.—A communication in your paper of the 11th inst. on salmon fishing in Canada is likely to mislead some of your readers as may never have been to the Nepisquit River, in New Brunswick, but who may desire to cast their fly on its waters. That stream is leased to private parties, like all other salmon rivers in Canada that are worth anything; but the lower division, which is called the Tough Waters, can be fished by any one on payment of \$1 per day to the Warden. The consequence of this practically open-to-all privilege is a great crowd of anglers, good and bad, and no sport nor pleasure to any one.

And much the same result obtains on the Matapedia or the lower part of it, which is open at the same price. I can't see why recompenses for a considerable outlay in traveling and other expenses, in thrashing waters surrounded by a mob of like foolish and deluded sportsmen, should be made.

I think that your correspondent also estimates the expense of a salmon trip too light. My experience is to allow for all probable outlay, and then double the amount; and this will be the cost on counting up the expense after returning home. MANIATTAN.

MASSACHUSETTS.—*New Bedford, March 24th.*—The fishing season has commenced here at least two weeks earlier than usual. Many of the fishermen have been putting in their "traps" the past week, and considerable quantities of fish have been taken, most of them, although some tautog, and a few mummichog, the earliest yet known, have been caught; also a very few shad. Over 7,000 herring were yesterday brought over in the Vineyard steamer, caught the day before. CONCIA.

CONNECTICUT.—*Bridgeport, April 1st.*—Mr. D. Stirling, of this city, this day brought to basket twelve trout, from half a pound down. Total weight, 31 pounds; time, 4.11 A.M. to 4 P.M. Of all the articles that have ever appeared in your interesting paper, none have interested me more than "A Day's Trout Fishing in Ireland," by "Ringwood." He is one of the few who know how to use their pens, J. M. S.

✓ ADIRONDACK FISHING.—*Indian Lake, March 29th.*—A few stray ducks visit our lakes and streams in the spring, but they are very few. Hunting is very good here in the fall, game consisting of deer, bear, ruffed grouse and some woodcock; no quail. Trout fishing is very good here in the right season in some localities that I know of. One great trouble with the majority of sportsmen who come to the Adirondacks is that they come too late in the season, and sometimes have to return disappointed. I always had the best fishing here say from May 15th until June 25th, and I have fished in this country for the last ten years. If a man comes here at that time he will have the satisfaction of getting some very nice trout, but he must not be afraid to rough it to merit success.

Some of your readers wish to come to this place I would be very glad to inform them of some first-class fishing grounds and also hunting grounds in the fall of the year. There is very good prospect for deer next fall, as they have not been cruised this winter, thanks to the small amount of snow that we have had. Three years ago about two hundred of our noble deer were killed in the deep snow within twenty-five miles around by some of our most unprincipled guides and hunters, who should have been prosecuted if the authorities had done their duty. But I have not heard of a case this winter. O. ST. MAIRE.

THE BEAVERKILL CLUB.—No. 99 Nassau street, New York, April 3d.—The Beaverkill Club has been in successful operation for more than two years, and has absolute control, under its leases and agreements, of the headwaters of that stream in the Adirondacks, which have never been polluted by the refuse of either sawmill or tannery. Permit me to say in your columns, that a few more gentlemen will be admitted to membership upon introduction or satisfactory reference. Gentlemen so disposed are invited to write to, or call upon the undersigned. GEO. W. VAN SICLEN.

THE WICAPPEE SPORTING ASSOCIATION.—The name taken unto themselves by this society of anglers, of the pleasant little village of Fishkill-on-the-Hudson, is "Wicapee" and not "Wicassette," as some have erroneously given it. We shall hope to hear of some of the red letter days of the club.

THE TROUT STREAMS OF ULSTER.—*Stamford, N. Y., March 26th.*—As every summer finds me, rod in hand, enjoying gentle sport in bright waters, it may not be amiss to tell your readers where I delight to go. I used to haunt the lakes and streams of the "North Woods," so well described in Hallock's *Gazetteer* and Wallace's *Guide to the Adirondacks*. But as age has never struck on more accessible waters, The Beaverkill in Ulster County is my favorite of all near-by streams. It affords very fair sport to a skillful hand, has many fine boarding and club houses in its vicinity, and is protected sufficiently to keep netters, poachers and market fishermen away. To reach it, go by New York and Oswego Midland to Morriston station, or to Arkville by the Delaware and Ulster Railroad.

From either station teams at reasonable rates can be had to take you to good quarters on the stream. Driving my own team, I always put up at Tripp's Brookvale Cottage, sure of good stabling for my team, nice beds and good cookery in the cottage, at very reasonable rates.

Murdoch, Flint, Lead, Sliter, Charley Waters, the Joneses and a dozen more keep sportsmen comfortably; but I have made Tripp's my headquarters for ten years back, and shall fly my flag as long as I live.

The Beaverkill from New York is only a day's away, taking an early Hudson River train, and reaching Arkville by Delaware and Ulster Railroad in plenty of time to catch your supper at Tripp's. A line to O. M. Tripp, Turnwood, Ulster County, will insure you a team to carry you right through from the depot at either station named above. NED BUNTLINE.

Rochester, April 3d.—The opening day of trout fishing was favorable to anglers in local waters, and rare sport was enjoyed by several from this city. One man interested in a preserve on the famous Caledonia Creek is said to have taken seventeen pounds of trout from its waters the first day, and then he returned small fish to the stream. Some unpreserved small streams were bait-fished with success, but the anglers were nearly as numerous as the fish; on one stream, about half a mile long, eleven fishermen were simultaneously dropping their bait in its few inches of water. DIVING DECOY.

TENNESSEE.—*Savannah, March 30th.*—I caught my first bass for this season last week. Myself and friend took ten, the largest weighed (several hours after being caught) two pounds; average of ten, one pound. We used live minnows for bait. The fish bit rapidly for about thirty minutes in the middle of the day and then seemed to stop feeding, as we caught only two more during the afternoon. For their size, they were among the gamiest specimens I have ever seen, and afforded us fine sport. Another party, two in number, were out on Friday last and caught nine. Did not learn the weights. WILL.

THE CHARM OF COLEBROOK.

COLEBROOK, N. H., March, 1880.

✓ AS the days begin to lengthen and the balmy air of spring greets us, the true sportsman begins to long for the woods and stream, the open camp, the blazing fire, the migrant thrush of the bed of birch boughs and the sweet and refreshing slumber in the pure air of the forest. He begins in his leisure hours to overhaul his fly-rod and fishing tackle, takes the trusty rifle down from the antlers where it has taken its winter's rest, and anxiously looks it over to find out if perchance a speck of rust has intruded itself upon it. Often in his mind rises the question: "Where shall I go to reinvigorate myself after the toils and seclusion of many months?" May I intrude upon your columns so far as to invite attention to my spring and summer fishing and shooting for the last ten years?

In the "Cocks," above the "Tupper Cocks," thirteen miles above the North Stratford station on the Grand Trunk Railroad, nestles among the hills the village of Colebrook, than which none more charming is found in the old "Granite State." In the beautiful Connecticut River valley, with bold Monadnock Mountains standing sentinel over it, the village itself is a resort most welcome to the stranger and most dear to him who returns to it year after year with fresh pleasure. But the center of a fine fishing country and a point from which, with easy trips, the sportsman can readily reach places where he can take all the trout he ought to take, it is unsurpassed in northern Maine, or New Hampshire. Tumbling and rippling down from grand old Dixville Notch, the Mohawk River affords to him, who desires to take his ease at all night, splendid brook fishing for trout from one and one-half pounds downwards. Ten miles easterly from the village are the Diamond Ponds, and they are rightly named. Clear, silvery sheets of water set in their dark forest surroundings; to lovers of nature they furnish quiet and intense satisfaction apart from the sport of the splendid rush and gallant fight of the inhabitants of the waters. There are two of these ponds, the smaller about two-thirds of a mile long and half a mile wide, and the larger about six times as great. Although the smaller empties into the larger, the trout seem to be almost distinct in their species. Little Diamond furnishes trout from three pounds down to half a pound, few being taken smaller, and they are short, plump and very gummy, while in "Big Diamond" they rarely exceed a pound in weight, though much more numerous, and the fisherman seldom fails to take all he needs.

Twenty-five miles to the north, up the valley, are the Connecticut lakes, abounding in brook and lake trout. Last year the Fish Commission stocked the lakes with land-locked salmon, and they are said to be rapidly increasing in size. Many parties visit these waters and seldom fail to return again. At First Lake there is a good hotel with reasonable prices, and at Second Lake gentleman Chester has a comfortable camp and perfectly equipped all that call upon him. From First Lake there is a path across to Parmaneeche, which those who desire to take long tramps frequently pass. It is eleven miles and a respectable carry. But to go to Parmaneeche—beautiful Parmaneeche—the better way is to go through Dixville Notch to Errol Dam, a distance of twenty miles over a first-rate road, and from thence up the river in the steamer Diamond to Brown's Farm and Fred Flint's camp and thence by boat to "Spotts."

How well I remember the first trip to Parmaneeche with that rugged, good-natured giant, "Spoff Flint," for a guide. The descriptions in the FOREST AND STREAM of the fishing in those waters have been read with great interest by those who have been in that country, but I believe the great mistake made by most of the sportsmen going up the Magalloway is their great haste to reach the lake itself, and consequently they pass many points of great interest and leave their prizes untold. From the head of Aziscoos Falls at Fred Flint's camp to the Little Magalloway is about thirty miles, and in spring the first lake is found where there is quiet water, and the trout are fat and the beauty of the river for him who carries the gun is the abundance of deer, moose and caribou to be found all along its borders. Paddling softly up or down the stream, it is by no means uncommon to find one of these animals feeding upon the lily-pads growing in the water.

From Spoff Flint's camp at Sunday Pond there is a path to Lincoln Pond, which is undoubtedly the finest trout fishing in the Magalloway country. It has been fished the first time it is found where there is quiet water, but I have never seen so uniformly large fish as have been taken from this pond. The fishing and country about Sunday Pond have been so fully described by your former correspondent that further comment is unnecessary, but if your sportsman is not in too great haste to reach the utmost limits of his journey at once, let him tarry along the river; let him stop at Sunday Pond camp and go to Lincoln, Little Magalloway and the falls above "Big Eddy"; let him watch for the four-footed game along the river where fewer sportsmen abound, and my word for it, he will be amply repaid for his time.

Good guides to all points, and among them Wm. T. Keyes, of Colebrook, N. H., can be procured at reasonable prices to any of the points named. Tickets from Boston via Colebrook to Errol Dam, and return over the Boston, Concord and Montreal Railroad, can be obtained for \$12, and the trip will repay any lover of nature, whether he drop a line to the fish, or leave them to "gang their ain gait."

I shall be pleased to give any person who desires any information in my power as to the sporting facilities in this region; J. D. RICHMOND.

The Kennel.

SOMETHING ABOUT BREAKERS AND DOG BREAKING.

SECOND PAPER.

HAVING decided to break the dog to drop to shot, set about it in this way, still remembering to have the check-cord attached to the plain leather collar. Produce a gun, and allow the youngster, who will now be from eight to ten months old, to examine it after his own fashion. You may begin by firing off a cap, and then a little powder, but great care should be taken not to alarm him. During the firing process the dog should be kept lying down, in order to teach him to "charge." You will at once see whether your puppy is disposed to become gun-shy, and if so you must at once bend all your faculties to get him over it. To accomplish this your judgment must be brought into play, and he must be handled according to his disposition. While the accustoming of the dog to the sound of firearms, at either a pigeon match or a rifle gallery, may do for some, others can only be conquered by starving, and then feeding at the report of a light load, the charges to be increased as the dog shows less timidity. Should your pupil prove a tough customer, couple him to another dog which has no such foolish fears, and will steadily "charge." The confidence of the one will impart confidence to the other. Fear is the one factor which nature confers on animals that man has. We have known young dogs to become both gun and whip-shy at sight; in such cases the puppy can be familiarized by being obliged to kennel in close proximity to the article which he holds in dread. One or the other of the above methods will surely cure any young dog of the fear he may have for either the sound of the gun or crack of the whip; later on, however, when the dog has become older and more set in his "tricks and his ways," he will be very difficult to break. It will then require both patience and tact to eradicate his terror. We would, however, suggest that to eradicate give up his task in despair without trying a very simple method, that is, of introducing a bitch, which is in heat, to the presence of the covering subject. Let her be a participant during several lessons, and it will seem astonishing how much powder will have to be burned to produce a result.

Until your dog is quite reconciled to the report of the gun, do not take him up to any one who may be firing. He must thoroughly understand that he is to crouch the instant he hears the sound. After a little perseverance you will succeed so well that you will not be obliged to even raise your hand. If habituated to wait patiently at "charge," however hungry he may be, before permitted to take food, it is reasonable to think he will crouch at the "charge" yet more patiently before he is allowed to seek "dead." Whenever, in the lessons, your young dog has behaved steadily and well, give him a reward. Do not throw it to him; let him take it from your hands. It will assist in making him tender-mouthed, and in attaching him to you. Dispense with the check-cord, and practice the dog in fields in which he is a stranger. Many dogmen have a rap when worked on a new plot in a strange meadow. All dogs, and particularly young ones, should be accustomed to different scenes; thus, in giving your dog exercise, be careful to select different walks in your neighborhood, and at all times when he shall stray away from you make him hunt you up when he has found that he has gone astray and misses you. If you should adopt the plan of whistling and calling to him the moment he leaves your sight, he will always depend upon your looking him up, when it is really the dog that should always have your position correctly located.

When the dog has been thoroughly tested as a good "follower," and has gained sufficient courage to run well ahead of you, and shows interest in all he sees, it will be time to teach him to come to "heel." The object of this order is to make him instantly give up working and come to your heels. If at your heels he should follow you at the street crossings, and to the beat you have mapped out for your day's sport. This will prevent young dogs from expending their force before entering fairly for the day's work. Attach at first a short check-cord, say five feet in length, to the dog's collar, and in a low voice say "heel," and bring the dog close behind you. Keep him there awhile and pat him, but do not otherwise reward him. When you move forward again, say "heel," and as the dog passes you jerk him back, repeating the word "heel" continue your walk, and on every occasion that the dog's nose is thrust forward in front of your legs keep him in place with a back-handed jerk. It will be better to practice the dog to walk to heel on the left side; you will then always know where to look for him. A dog, when once ordered to heel, should never be allowed to disobey by the word "heel." When you command your dog to heel, make him obey at once; all dogs of spirit dislike the restraint, and are apt to loiter in coming in. We have seen dogs that made more excuses than all the imps of schoolboys and Irish servants put together. We have seen cunning scamps, when ordered to heel, suddenly become very much interested in a neighboring tree, cat grass or a series of false points; in fact, resort to all sorts of schemes to protract the season of their liberty and divert the attention of their unwary masters. Should the dog not readily fall into his place at heel you may cut him with the whip every time he presses forward. Soon he will consent to follow as he should, and the cord and whip can be dispensed with. Dogs are keen observers of all gestures and facial expressions, and it will be well to be before they pick up some of the tricks of your head, hand or gun which will distinctly connect with the two commands, "heel"

and "on." It is unnecessary that we should state what these signals should be, believing that they had better be left to follow naturally the orders as you may give them. It is really wonderful how quickly a dog will learn that the exclamation "Ha" is intended to elick and correct him. Few dogs are thoroughly broken to "heel," many handlers being obliged to repeat the order over a score of times in a walk of a single half mile. A common practice resorted to, to keep the dog behind, is to deal stealthily and Quip-like back kicks at the poor brute, or swipe at him at unsuspecting moments with the barrels of the gun. A dog thus hauled generally has his own way, or, when he does come to heel, follows many yards behind. A dog should never be kicked or shaken by the ears. When the sportsman is unprovided with a whip he should make use of the dog's collar at his feet several times, which the dog, eager for sport, will consider a severe punishment, and it is a sort of punishment not soon forgotten. Correction of this kind is much better for the dog than the thumping of clubs and firing of stones.

When flogging must be resorted to, place his head between your knees and whip the after part of his body. The dog should be struck across, not along the ribs; or, in other words, the whip should not be run to lap around his body, but the blow should fall on the whole length of his back. In the above described position the dog cannot bite, and must receive all awarded him. Flogging a strong dog is no easy task; it requires much personal exertion in holding him for the administration; it will put your nerves in a tremble, and be very likely to spoil your shooting. After you have been flogging him, always part friends, and never let him escape while you are chasing him; at least, if he does, do not pursue him, as if he sees (which he soon will) that he is the quicker runner of the two, all discipline will be at an end. Therefore, be thorough as you proceed in your task, if you would insure pleasant sport and avoid barbarity.

THE NEW YORK SHOW.

AS April 12th draws near, the date announced for the closing of the entries, there is a corresponding increase in the labor of Mr. Lincoln and his assistants. Lincoln brings such a large number of applications that the time is nearly exhausted, and the very pleasant truth that in all probability the number of entries for this year's show will far exceed any exhibition of the kind ever held in this country. This is not all, for the high standing of the animals to be shown will surpass anything heretofore seen. In the early days, when bench shows were in their infancy, a competent critic could without much trouble pick out the winners in each respective class. This is not the case of to-day, and we predict that many of the leading classes will contain so many really splendid dogs that the judges will have no easy task to center on the premier favorites. The competition in the sporting classes will be particularly close; hence it will be the more interesting, as the dogs will be a rare lot to select from. It is surprising what great numbers of wonderfully fine dogs have been imported during the past twelve months, many of which were the pick of the English kennels, and over whose high price there has been no dicker.

Since last issue we have gathered the following items of news. Mr. John Davidson, of Monroe, Mich., was asked if he would act at the show this year as judge, but preferred being an exhibitor, and he has entered four of his crack dogs, and will be present during the whole of the exhibition. Dr. Jarvis, of Clarence, N. H., will exhibit his great Irish setter dog Elcho. This beautiful animal was bred by Mr. R. S. Greenhill, of the Irish rifle team. Elcho is six years old, and is the sire of Joe, Jr., who ran against Gladstone in the field match in December last. Dr. Jarvis has decided not to place his dog in competition, being satisfied, as well he might, to let Elcho rest on the laurels he has won in the past.

Mr. Godfrey, the enthusiastic proprietor of the Neversink Lodge Kennels, of Gwynard, N. Y., has subscribed for fifty entry blanks, and purposes sending down a large delegation from his excellent varieties of stock. His pointer, Croxteth, of which we spoke in a recent issue, is said to be in fine trim for the coming contest. From the West the finest selection of large pointers in the country was sent by the St. Louis Kennel Club. Bow is an old favorite, and a great writer of 1878. Faust is well known, and the bitches are said to be grand.

The Baltimore Kennel Club have promised to enter their well-known English and Irish setters and pointers. Mr. F. R. Bevan, of the English Kennel Club, who has judged with Mr. Lort, and also in the English field trials, is on his way here with a number of English setters and retrievers, described as being very handsome animals.

The setter Grouse-Dale, which won first in the puppy stakes and second in the brace stakes, at the recent Eastern field trial, was among last week's entries.

The class of collies will be a very fine one, thirty animals having been promised, the majority of which were imported during the past year. It is to be very much regretted that the Central Park Commissioners have refused to allow the collies, or sheep dogs, to take place in the park trials, which undoubtedly have been an additional attraction to this year's show.

Mr. Gibson, of London, Ont., the great short horn cattle-breeder, will send a number of his recently imported fox-terriers.

No special prize list will be sent out, as all dogs entered in the regular classes are eligible for the specials. Where that class prizes are given, and the specialties, they can be made during the first day of the show.

Messrs. W. T. and J. Messerance, of Newark, N. J., present a double link, triple silver-plated collar, lined with russet leather and dotted with gold-plated cones, and a nicker-plated chain, or lead, which is to be awarded to the best pointer dog or bitch, and is to be competed for by winners in the open and champion classes.

Messrs. Bates and Rice, of the city, offer an elegant silver cup, valued at \$300, to be awarded for the best collection of dogs owned and exhibited by the open or kennel club, both quality and quantity to be considered.

Dogs from England and Scotland, from Canada to Texas, and Missouri to Massachusetts, have been entered, and the show, thanks to able management, promises to be a grand success.

Eastern Field Trials Club was held March 9th. The constitution and by-laws of the club, as revised by a committee of three appointed for that purpose at a previous meeting, were read, and, after slight alterations, adopted. The action of the club, raising the initiation fee from five to ten dollars, was reconsidered, after long discussion. It was decided that until September, 1890, all persons desiring to become members, by being duly proposed and seconded, would have to pay to the Secretary, within thirty days of the date of their election, the sum of five dollars initiation fee, and on Sept. 1st five dollars additional for annual dues. After Sept. 1st, 1890, the initiation fee will be raised to ten dollars. Mr. C. H. Raymond read his report as last year's Treasurer of the club, and it was moved by Mr. Billings, and carried, that the statement be accepted, with the thanks of the club for his services. It was moved that the Secretary should receive a yearly salary of \$100, payable quarterly; resolution carried. Mr. Fentz proposed that a stated amount should be paid for the use of Robin's Island; motion referred to Finance Committee. The Committee on Field Trial Rules had not finished their revision, and it was decided to receive their report at the next meeting. The following gentlemen were present at the meeting: Dr. Aten, Messrs. Colburn, Greene, C. H., and G. B. Raymond, Herzberg, Ryer, Holmes, Billings, De Rongé, Coster, Monroe, Morris, Pentz, Von Lengkerke and Hall. The following gentlemen were proposed for membership, and will be balloted for at the next meeting of the club: Messrs. A. H. Moore, Garrett Roach, George Van Wagener, Charles Richards, H. E. Hamilton, W. H. Holabird and E. Lamb.

ENTRIES FOR THE FIELD TRIAL LEBRY.

NATIONAL AMERICAN KENNEL CLUB.

From March 22d to March 30th, 1890.

(Entries closed April 1st, 1890.)

Frederick Stancille's May Morn, black, white and tan setter bitch, by Gladstone-Clip; born April 27th, 1879.

Edmund Orgill's Rhona, lemon and white bitch pointer, by Snapshot-Rose; birth not given.

Boni, P. Clark's Dog, red bitch setter, by champion Elcho-Rose; born April 20th, 1879.

KENNEL NOTES.

WHITLES-Biddy-Mr. H. P. Dorch's (Goldboro', N. C.) imported red Irish setter bitch Biddy (laid Gauntlet-Peggy) whelped on March 15th ten puppies—six dogs and four bitches—by owner's imported red Irish setter dog Rou. Three of the bitches destroyed.

Pansy-Mr. H. P. Dorch's Pansy (Joe-Gussie) whelped, on March 15th, five puppies—one dog and four bitches—by Rou Bitches destroyed.

Daisy Jones-Mr. H. P. Dorch's Daisy Jones (St. Elmo, out of Pelree's Tip) whelped, on March 20th, five puppies—two dogs and three bitches—by Rou Bitches destroyed.

Belmaid-Mr. W. L. Bradbury's imported beagle Belmaid whelped March 21st six puppies, by owner's imported beagle Major.

Maggie-Mr. Adolph Nelson's (Portsmouth, N. H.) red setter bitch Maggie (Rufus-Cigarette) whelped, on March 23th, twelve puppies—nine dogs and three bitches—by Elcho III., Elcho-Rose. Five of the dog puppies without a white hair. This is a somewhat remarkable litter, as it is the first time the bitch has whelped, and she saw the dog but once.

Magenta-Mr. W. N. Callender's Magenta (Gypsy-Dash) whelped, on March 11th (St. Patrick's Day), five puppies—three dogs and two bitches—by Roy O'More.

Pallas-Westminster Kennel Club's pointer bitch Pallas whelped, on March 26th, nine puppies—five dogs and four bitches—by Sensation.

NAMES CLAIMED—Jack and Jill—Mr. J. Hopkins Smith, of Kittrell, N. C., claims the names of Jack and Jill for his brace of red Irish puppies, dog and bitch, by Dr. Jarvis' Elcho, out of owner's Meg (imported Mill, imported Biddy).

Katrina—Mr. William Bradbury, of Nason, Orange County, Va., claims the name of Katrina for his red Irish setter bitch, out of Dr. J. W. Downey's imported Kathleen, by the Baltimore Kennel Club's imported Dorg, whelped March 12th, 1880.

Kilkenny—Mr. W. N. Callender claims the name of Kilkenny for his red Irish setter bitch puppy, by Rory O'More, out of Hill's Lottie, Elcho-Fix.

Fausta—Dr. Allen B. Clayton, of Chatham, Ont., claims the name of Fausta for his black, white and tan English setter bitch puppy, whelped Dec. 27th, 1879, by Leicester, out of Mr. J. N. Dodge's imported Rose.

SALES—Cartwiz—Mr. M. Von Culin, of Delaware City, has re-purchased Cartwiz.

Bessie O'More and Nellie Plunket—Capt. M. L. Norton, of Greenbush, N. Y., has purchased from Mr. W. H. Finck, Kingston, N. Y., two pure red Irish setter bitch puppies, Bessie O'More and Nellie Plunket, whelped Sept. 27th, 1879, out of his Queen Bess, Plunket-Goldsmith's Nell, by Mr. Callender's champion Rory O'More.

Queen Bess—Mr. W. N. Callender, of Greenbush, N. Y., has purchased from Mr. William H. Finck, of Kingston, N. Y., his pure red Irish setter bitch Queen Bess, Plunket-Nell.

Bred—Regent-Dow—Mr. E. F. Stoddard's imported bitch Regent to champion Dow.

Erin-Erin II.—Mr. Whitford's Erin to Mr. Lucas' Erin II.

Mr. J. W. Wilkinson's Irish bitch to Mr. Lucas' Erin II.

Lady Sensation-Rush—Mr. J. H. Fitch's Lady Sensation to Orgill's champion Rush.

Queen Bess—Mr. H. W. Livingston's Rose to Rush.

Queen Bess—Mr. W. N. Callender's Queen Bess to his champion Rory O'More.

—The *Live Stock Journal* of March 19th contains our article "Judges and their Critics," with this excellent indorsement: "The following remarks appear in *FOREST AND STREAM*, and as they exactly represent our views of the case, we reproduce them for the benefit of our readers."

Dachling and Canoeing.

Meeting of the National Yachting Association, Wednesday, April 14th, at the St. Denis Hotel, New York; 8 P.M.

TIME ALLOWANCE.

ASSUMING that some definite conclusion has been reached concerning a rule of measurement, the next step is to construct a table of the amount of time to be allowed by one yacht to another under the provisions of the rule. In this we can only be guided by the teachings of practice. There is no theoretical way out of the difficulty, no mathematical expressions by which we can be ruled. In short, the times allowed consist of a number of a compilation of observations in practice, a general mean of

parative beam and little depth may be best suited to much of our inland and smooth water navigation, and in such cases more or less shifting ballast may be desirable on the score of safety, yet the same characteristics would be as absurd for a sea-going or deep water yacht as a considerable draught of water would be for sailing in a river filled with sand-bars. The National Association can be of value to our river clubs as well as to our sea or lake clubs, and no small part of its value will be in the establishing of rules which will mark the distinction between these classes of yachts, and give to each that measurement and those regulations which shall be adapted to yachts used in different kinds of waters, just as these yachts have been adapted to navigate. In addition, suppose the open river yachts are to have a measurement based on length, and are permitted shifting ballast, a regulation should be made that they have no booming out of ballast or men to windward of, or outside the limits of, the hull in a race. This would prevent the development of a type of river yacht which is good for nothing. It would render such river yachts sufficiently seaworthy for the waters in which they are to sail, in the same sense that a yacht which is to navigate open and deep water would be rendered seaworthy by being debarred from using shifting ballast, having reference to the waters which she is to navigate.

One thing must be always remembered in looking to English rules and experience in yachting. They have no such extent of shoal water navigation as exists upon our seaboard, and therefore they can afford us but little assistance in devising regulations for yachting in such waters.

When yachting originated in such waters, and developed a class of boats and system of measurement adapted to them. It is only when the extreme of this type of yacht and its system of measurement are attempted to be used in going to sea, that their incapacity for such service manifests itself, and it is only in the latter case that a new type of yacht, or rather a modification of the former type, together with a system of measurement which induces the construction of such modified yacht, becomes desirable and necessary.

DAVID HALL RICE.

Boston, March 29th.

Editor Forest and Stream:

Having read with much interest the discussion in your columns on the subject of yacht measurement, I feel constrained to add my mite to the general fund. In the first place, it seems to me that the present rules for the measurement of vessels and center-boards would be unjust; and further, the present rules would not be fairly applied to large schooners or to small sloops, the former say of five tons and up to thirty, and the latter from eighty tons and upward. The keel boat depends on ballast for her stability to a much greater degree than does the center-board craft, hence we have entirely dissimilar qualities to deal with. Therefore depth should unquestionably form one of the dimensions of keel vessels, and the formula for measurement should include length, breadth and depth, a tolerably fair and easily worked rule for what is already in existence—that is, for measuring small craft. So with regard to small center-boarders, the existing rule for at all events the old rule of the English Yacht Racing Association, namely, length and beam, has been found to be very satisfactory in these waters. In this class of craft it would not do to measure depth, as thereby a dangerous style of "skimming dish" would be called into existence, and by the consequent tendency of such machines to upset easily, the sport would be rendered unpopular and cease to be what it now is, namely, a most valuable school in all in yachting architecture. As to large vessels, it does not seem reasonable that, as under the present New York Yacht Club rule, a premium should be put on seaworthiness by penalizing free-board. The rule, length, breadth and depth, with the proviso that depth shall be taken from the load-water line only, would, it seems to me, put all on a fair footing and prevent the building of any more *Mohawks*, or the unjust penalizing of such fine craft as *Intrepid*. Cubic contents is perhaps the fairest plan of all in theory, but it is too tedious to use, being not only too complex, but it was abundantly demonstrated in your column, unfair and calculated to invite disasters. The methods which I propose have at all events the advantage of being so simple that any measurer can cast up a vessel's tonnage in a few minutes, and they would have the further advantage of allowing builders to model as they chose—whether odd's bend and mackerel tail, or eel's head and catfish stern—without penalty. In fact, it would free modelers from a thralldom which now cripples their efforts and results in an improvement in modeling-skill which certainly has not been developed much in the United States for the last thirty years.

As to the idea of length measurement, I say it is simply ridiculous and unworthy of consideration by any intelligent person who knows anything of the subject.

PORT TACK.

Belleville, Ont., March 26th.

Editor Forest and Stream:

In your issue of the 18th inst. you state a very plain, mathematical problem that seems plausible on the whole, but I take exception to the objection to it. If all yachts were measured by cubical contents there are many that would be certainly handicapped by such a rule.

The sloop *Gad*, by her queer shape and light displacement, would be allowed time by smaller boats who now by our classification do not sail in her class at all, or if they do it is by invitation or by accepting the limit of size that the class calls for.

There certainly would be an injustice in this case and many others of similar kind. No matter where you go, you will always find people trying to evade the rules that are laid at the present time for allowance of difference of size. Builders recognize the importance of a few extra inches of length and are not slow to take advantage, when their reputations are at stake, even at a loss to their pockets. I have been conversing with pretty well-learned yachtsmen, and I find none but what admit that length gives speed. If we adopt your method you certainly will revive the skin-dish model for racing. There are no laurels to be won in cruising unless they are created hereafter. Lots of people who own fast boats do not care to drive them on a cruise. The light hulls are usually discarded as incumbrances. These very same people will allow you to pass them in ordinary sailing and set you down as a nonentity if it is reported as such.

In England, if I understand their rulings, there are classes made by tonnage. This may seem fair, but still it is not if a man desires to race. One person might desire to have plenty of free-board, a little more beam, and less speed; he finds after his boat is built that she is uncomfortable and speedy; thus perhaps 50-100. Another one, desirous of the laurels that he has fallen to the skill and pluck of his predecessor, figures and maneuvers to get a longer boat of the same capacity; watch the result. He comes out in the spring longer, a little wider, out away considerably to make light displacement, and to look at is considered a poor sample of a yacht. He finds on trial that his boat is cranky and un-

safe in fresh winds, but is a skimmer in light zephyrs. He hauls her up and puts a ton of lead on the keel and he finds that he can now carry more sail on his phantom ship. She wins prize after prize during the season. Why? Because our races are sailed in pleasant and calm water usually.

If I were so fortunate as to own a 10-ton cutter and I considered her so perfectly safe at sea as we read of, I would turn her head for the open sea, and I would sink the land from sight and prove her qualities if it took a week to do so; but I am digressing from my subject. From what I have illustrated above, do you not think that "length, breadth and depth" measurement would force us into the same trouble—say building cranky boats?

By present "hereabout" table a man can build comfortable, weatherly boats and not be handicapped by a skimming dish. The only obstacle to light is shifting ballast; when that is done away with there will be more serviceable yachts and better cruisers.

Yacht builders in this country are no fools. If they are left to their own conclusions they will not use excessive beam nor get disproportionate depth. They will invariably do their level best and produce some very fine workmanship.

As I have said in my previous letter, give a man for classification extra length, and restrict him to nothing but shifting by dead-weight. That is the fairest method, and a man's fault will lie in himself if he does not get a proper construction, and not in his neighbor.

Boston, March 29th.

We are afraid our correspondent is going to work the wrong way. Practice has shown that length measurement encourages abnormal beam and handicaps easy models to such an extent as to drive them out of existence. In what manner has already been shown in these columns.

NEW BEDFORD YACHT CLUB.

Editor Forest and Stream:

Thank you very much for your interest in, and kind notices of, the New Bedford Yacht Club, perhaps a few words concerning our proposed future movements may be of interest to the yachting fraternity. I take the liberty of forwarding the same.

Contracts have been signed for the erection of a pile wharf and two-story club-house from the south side of the bridge leading to Fairhaven near Pope's Island. The building will be 40ft. by 25ft.; will have double piazzas eight feet wide on the east, south and west sides, from which a clear and unobstructed view down the river and across the bay to the Elizabeth Islands will be had. A lower 12x12, on the southwest corner, with ample look-out windows, 40ft. from low water mark, will probably enable us to see over Clark's Point all vessels entering the bay from the westward. The lower story will be conveniently arranged for reception-rooms, lockers, row-boats, etc.; so that the upper hall will be wholly available for club uses. A plank walk-way across the bridge will have cars passing our doors on the north side, with an unobstructed sea view on the south, and on all sides free chance for cooling breezes. We think our location cannot be surpassed on the coast.

We propose showing from our signal staff two (horizontally) placed red lights as a guide for all who, arriving at night, may wish to anchor off the club-house, where nine feet of water may be found at low tide.

Our club have added thus far this spring 150 new members, making a total of 230, and we confidently look to a membership of 350 by the middle of the yachting season.

We propose to keep open house for all visiting yachtsmen and their friends, and hope they will all consider this a special invitation "to make themselves at home" in our new quarters, where all information conducive to making their stay in our waters agreeable will be cheerfully given.

By the opening of a new channel through Wood's Hole, yachts from the eastward of 14ft. draft can safely pass through into Buzzards Bay, thereby making a good and expeditious run into our harbor without the necessity of going west to Quick's Hole.

When our house is built and we obtain the necessary ranges I will take the liberty of forwarding them to you, so that our yachting friends may be fully posted as to anchorage off club-house if befogged.

ACQUINET.

In point of membership the New Bedford Y. C. now leads every other club in America. For enterprise displayed in the right direction its management is an example for others, and conclusively shows that the material can be found for the formation of strong clubs, with income enough to make themselves felt as an element of the community at large. New Bedford, through the exertions of its yacht club, has now become the yachtsmen's paradise "down East."

IMPORTED YACHTS.

Editor Forest and Stream:

Allow me to add another bit of information to that given by you in your sensible remarks on "Imported Yachts" in last issue. You say: "We have received, through the kindness of the Secretary of the Treasury, the following authoritative announcement, an observance of which virtually denies imported yachts over 20 tons the right to fly the American flag, and compels them to take out papers, etc., from the Old Dominion, hail from abroad, and sail under the protecting bill of H. M. Colonies of the North." Now the imported yachts could not even manage to do that unless their owners belonged to the only yacht club (British) on the lakes holding an Admiralty warrant, viz, the Royal Canadian; and even then the Admiralty would not grant the special warrant that each yacht must carry unless the owner were a British subject and in a British port. I find that the application for a warrant to fly the blue ensign on an imported yacht was refused on these grounds by the Admiralty. As every yacht owner cannot be expected to go to the trouble and expense of getting a special act of Congress, as Mr. J. G. Bennett did for the *Jeannette* (ex-*Pandora*), the only remedy is what you suggest, a change in the law. Not a very great concession to yachting surely.

ROUGE CROIX.

STEAM MANTRAPS.

Editor Forest and Stream:

The cutter being dead, and I trust (as probably do most of your yachting readers) forever buried, my interest in the nondescript has ended. In fact, this cutter-dish discussion ceased possessing charms for me when I realized the fact that it had degenerated from seemingly debate into a meaningless wrangle and abuse of the two types of boat. *Regules* (cutter) in pace!

By this, I think, the "fish" has caught its (in an editorial way). Well, they have probably rendered their quills and by this time, and any rite I suspect they will be as able to scratch for themselves in the future as they have done in the past.

And now I would like to say a few words on a subject which I think has been but lightly touched upon in your widely-circulated paper. Our "steam launches" are dangerous mantraps; there's no denying it; and something should be done to remedy the evil, as they are a class of boat for which there is a constantly growing demand on our waters. I have reason to believe that the evil has arisen something in the following way: A gentleman desires a launch, goes to the builder, asks his price, and at the same time says "my boat must be very fast."

The builder knows that he will lose his customer if he names a price that will honestly build a roamy boat, which shall be seaworthy and fitted with power sufficient to get speed out of a safe craft. So he takes the work at a figure that retains his customer, and in order not to lose money, yet at the same time desiring to produce speed, he designs a model too deep to be anything but cranky and too narrow to be either comfortable or seaworthy.

Yet there is not the least trouble embraced in producing a steam launch or yacht that shall be fast, reasonable in price, seaworthy as any sailing yacht of her size, and with all the extra comfort that breadth of beam gives. Who, then, is to blame for the fact that our yachtsmen are imposed upon by the unseaworthy shells called launches? Think it over.

THOMAS CLAPHAM.

Answers to Correspondents.

W. H. B., Versailles, Conn.—Judging at the New York Bench Show will commence on the first day, April 27th.

H. D. H., Hollidaysburg.—May a well-bred hound have dew-claws? Ans. Dew-claws are objectionable, and are supposed to point to a faulty pedigree.

GUN, Philadelphia.—For choko-boring apply to Wm. R. Schaffer, of Boston, or to Clark & Snider, Baltimore, Md. See our advertising columns for their more particular addresses.

C. H. E., Hudson, N. Y.—Mr. Macdonald is not in the country at present, and it is not known for certain whether he will be at the New York Dog Show. His address is, Cheadle Rectory, Cheshire, Eng.

We are not authority on cards; and cannot undertake to settle disputes over games. The hand-books on the subject are sufficient sources of information; and to them we respectfully refer those who do not understand the intricacies of the subject.

J. S. A., Cuba.—You may address F. R. Grote & Co., 114 East Fourteenth street, New York, or P. J. Kalenberg, 125 Fulton street, New York, both of which firms deal in ivory. A perfect skeleton of the Manatee would find ready sale among our museums.

CANNONIER, Boston, Mass.—Please give me the names of Irish setter dog imported by Governor Sprague, of Rhode Island, and Irish setter bitch imported by J. B. Moor, of Hartford, Conn.? Ans. Cannot find the information. Perhaps some of our friends can do so.

F. L. M., New York.—Is eighteen pounds too light for an Irish setter bitch puppy four months old? Ans. The weight of puppies varies very much, depending upon the condition of the bitch, general health, care and feed. Eighteen pounds is light, twenty-five being about the standard.

C. R. C., Philadelphia.—I have a setter dog three years old, he is very mopish and sleepy, he has vomited once or twice, and has had the diarrhoea. At times when reclining he breathes heavily, and he is quite thin; his nose is dry. Aus. Give one or two doses of castor oil and laudanum, table spoonful of former, half teaspoonful of the latter. Watch for further symptoms, and if the dog is not better write more fully. This is the most we can advise from our descriptions of the case.

A. K. S., Merion, Mass.—My dog, six years old, has worms; been feeding him on corn must. What shall I do for him? Ans. You neglect to state breed of your dog, which prevents us from specifying exact treatment. Common table salt injected is recommended for pin-worms. Calomel in small doses, after the dog has been fasting twenty-four hours, is excellent for round worms. Male fern or Kausso, for tape worms. Arsenic has been very successfully used. See notice of same in advertising columns.

REFERENCE.—A and B make a match and decide upon C as referee. C declares A the winner. B objects on the ground of partiality and irregularity. 1. Has A won the match? 2. Should the stakeholder pay him the money? Has B any appeal, and if so, to whom? Ans. 1. As we know nothing of the merits of the case, it manifestly would be folly for us to answer. 2. If B thinks that the referee's decision was unfair and prompted by irregular motives, he may appeal to his own back-bone to stand out against the decision.

A. W., Georgia.—I have two dogs, one a Gordon setter three years old and one an Irish setter bitch one year old, that have acquired the habit of eating dirt; symptoms, loss of appetite, languor and emaciation. I feed on meat highly, well cooked, and seasoned with Indian meal and salt. I have purged thoroughly, which seems to have relieved them temporarily; but as soon as they are out of sight they return to the dirt. Ans. Your treatment has been all right enough as far as purgatives are concerned. Remove meat diet for a few weeks entirely and give exercise, allowing dogs access to grass fields which contain the couch, or dog grass.

NORA, Cincinnati, Ohio.—1. Your bitch is evidently suffering from worms. After twenty-four hours of fasting give her dose of freshly powdered arsenic, not two grains of nut to each pound of dog. Follow several hours later with dose of castor oil. Following evening repeat dose of nut, after twelve hours fasting, and the next morning give second dose of castor oil. We would then suggest giving the bitch a tablespoonful of cod liver oil once or twice a day after feeding. This will build her up and put on flesh. 2. Have requested Mr. Charles Lincoln, Superintendent, No. 141 Fulton street, this city, to send you proper puppy blanks for the New York Show. 3. Yes, register your dog.

SWEETMAN, Washington, Ind.—I want a dog for water-fowl shooting and for retrieving on land as well as water. I have read several articles in your valuable paper on the cocker spaniel. To be sure, the cocker is more beautiful and makes a nice pet for the ladies, but I have an idea that they are not fit for cold or hard wet work. Ans. Procure an Irish water spaniel by all means; he is peculiarly fitted by temperament and by a water-resisting coat for the arduous duties required by a sportsman whose predilections lie in the direction of wild-fowl shooting. Of course, the Irish water spaniel will retrieve on land. The cockers are charmingly clever and bustling merry fellows, but not fitted for long, cold and wild days of shooting.

CONGRATULATIONS.—They begin to come already. The *Germantown Telegraph* is the first to speak: "FOREST AND STREAM is about having a fine new office fitted up in the New York Times building, whither it will take up its quarters on the 1st of May. Prosperity go with it."

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTLAND, THE INFLUENCE OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 5353.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with an additional notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 8, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guarantee of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

• We cannot be responsible for dereliction of mail service if money refused to us is lost.

• Trade supplied by American News Company.

REMOVAL.—On or before May 1st the FOREST AND STREAM will remove into its new offices in the Times building, Nos. 39 and 41 Park Row.

WILD RICE.—We have received from Mr. Chas. Gilchrist, of Port Hope, Ont., a sample of the wild rice secured by him, and furnished for sowing in ponds, as was noticed in these columns some weeks since. The seeds are plump, well developed, and evidently in excellent condition. As the success of the undertakings to introduce this cereal into ponds is becoming more generally known, the demand for the seed is largely increasing. We are in receipt of several inquiries for the supply of the same; and as the harvests gathered by our friends have long since been exhausted by the orders received through their advertisement in this paper, we can only counsel patience until a new supply can be secured next season. We hope that those who have the facilities will make special efforts to gather a quantity which may prove sufficient.

NATIONAL AMERICAN KENNEL STUD BOOK, VOL. II.—In another column we notice that the entries for this much needed record book will close May 1st. All persons owning well-bred setters, pointers, mastiffs, Newfoundlanders, terriers, collies, greyhounds, spaniels, St. Bernards, pugs, beagles, foxhounds and all prize-winners or well-bred household pets, good field dogs and handsome canines of every description, will find advantage and satisfaction in entering them in the National American Kennel Club Stud Book. For future reference these entries will be invaluable to dog owners and breeders, as they constitute an official record, which may always be referred to as authoritative, and will be especially advantageous in tracing the pedigrees of the posterity of the dogs entered as of the present year. All entries should be addressed to Mr. Charles De Ronge, Secretary, No. 51 Broad street, New York.

—Mr. Fred. Mather has permanently left the paper with which he has for some months been connected as editor of the fish and fishing department.

—At the meeting of the Directors of the N. R. A., on Tuesday last, the Palma conditions were altered to permit shooting by a British team only. It was also agreed to send a team of six men to Ireland to resume the Irish-American matches. No spring meeting will be held this year. A full report of the action taken, with amended conditions of the "Palma," will appear in next week's FOREST AND STREAM.

TROUT AND TROUT.

WHEN good Father Prout, of blessed memory, wearied of his Lenten diet, he cast a ham bone into the sea and drew it forth again; and by that token, forsooth, the flesh had become fish, for whatever comes out of the sea is neither flesh nor fowl, but fish. Now, no one for a moment supposes that by this ingenious bit of strategy the worthy old priest tried to deceive, or did deceive, his palate as well as his conscience. Such a feat of gastronomy and imagination has been left to our own day of wooden nutmegs and artificial trout ponds. We cast liver into the water and haul it out as trout; but, not stopping here, we rush to the market slabs, where lie in ignominious rows the alleged *Salvelinus fontinalis*, scooped and netted from the ponds, pay a royal price for the scaly prize, and then, perpetuating the delusion, roll the insipid morsels about in our mouths with the ecstatic and pitiable faith that they taste good. Prout was ingenious, so far as ham goes; we are far ahead of him.

We are aware that we are preaching old fogy and unfashionable doctrines—sentiments which will find little sympathy among the deluded fish-eaters, who fancy themselves epicures, judges of what is what, and think that they know a trout when they taste it. They never did eat a real trout, or, if they did, it was so long ago that they have really forgotten how the fish ought to taste. But the books say that trout is a delicacy; the dealers affirm that these speckled monsters are trout; hence, logic is logic, and they smack their lips with satisfaction, and discourse over their glasses of the glory of America's game fish.

This liver-fed sluggard, intrenched in his pond, is gaining ground; he reckons his blind adherents by constantly growing legions. And the true trout—the fish that you and I know, reader—is being pushed to the wall by this fat-bellied parody. The wild streams are becoming "fished out;" even the rainbow-hued fellows in the streams, which only we two know of, by and by, when another shall have stolen our secret and our fish with it, even they will be supplanted by the great, coarse black bass—"the fish of the future," they call him.

Yes, we are undoubtedly on the losing side; but here let us make a stand, utter a word of protest, and linger, even though but a brief moment, over the trout as nature made him. Some of us have met him in his native pool, years ago, before men knew anything about these adulterated abominations, these animated masses of hashed liver and deception. This fish has been for years battling in the fierce struggle for existence; he has gathered strength and muscle and bravado from a thousand tussles with the dash of the waters; what he has eaten he has worked for, and the constant exercise of looking for his dinner has hardened his body and made it compact and firm of texture; the natural food provided thus for him has been transformed into juicy, sweet-flavored flesh; and now, in the pride of his strength and years, he is a fit subject for your costliest tackle and the best skill you know how to put forth. If you have been for years learning how to take a trout, so has he been for years unwittingly preparing for that battle, and you may count on a test of your patience and of your line and rod and wrist, before he will lie panting in your basket, conquered and captured.

It is mortifying the flesh if, when you come back at night, you pretend that such a fish as this was not born into his mountain home just for your own platter and palate. "Catch your hare before you cook him" is good advice for Simple Simons, but it means more than the bare advice to an idiot that the first essential to a dish of rabbit is the rabbit. It means that to enjoy the flavor of a trout you must catch the fish yourself; this adds a delicate taste that the most ingenious chef, with all his skill, cannot command; a satisfaction that money cannot buy,

THE NEW YORK RIFLE CLUB.—Gilt-edge gallery practice has been the aim of the New York Rifle Club, and those who wish to see the simple feat of popping the bull's-eye reduced to a fine art may visit the rooms recently fitted up at No. 211 Fourth avenue, in this city, and inspect a pair of target tunnels of the very best description. It is a club in earnest, with a club room, and all made subservient to the main object of the club, which is the culture of its members in the art of off-hand shooting. On entering, the visitor is in a parlor, or reception room, with its piano and soft, yielding carpet, its heavy window curtains, elaborate chandelier, bronzes and works of art displayed on the walls. Adjoining this is another room, scarcely less sumptuously furnished. Done up in the obtrusively naturalistic Eastlake style, the room suggests us without fear of consequences in breakage and scratching. This is the shooting room, and from a platform in the corner the marksmen may look into the gaping mouths of a pair of tubes of sheet iron, about a yard in diameter, and suggesting a gigantic binocular. These are elevated above the floor, so that the entire floor space may be utilized. After about a dozen feet of iron tubing the shooting tunnels change to a square focus, with three feet a side, interior measurement, and so stretch away out from the back of the building until ninety-six feet is reached from firing point

to target station. The target rests in an iron frame, just large enough to seize the pasteboard sheet on all its edges, so that the bullet passes directly through to a slab of lead fixed behind. This target frame is fixed upon a small car, and by winding a small winch below the tunnel frame the car is brought up abreast of a small door on the side. This door is made to swing toward the firing point and to the interior of the target. Sheathed with iron, it will stop any bullet fired from the gallery end while the door is open. Diaphragms prevent low firing and hitting the tramway car, while the smoke of the firing is drawn off by a smokestack, made to communicate with the chimney near by.

With only thirty members on the roll now, the club will no doubt soon reach its maximum of 100 members. Even now the rooms have become the center of rifle news in the city, and a very popular, pleasant place the club-room has grown to be.

NATIONAL AMERICAN KENNEL CLUB DERBY.—We publish in our Kennel columns the full list of entries to the N. A. K. C. Derby stakes for puppies born after April 1st, 1879. Over one hundred entries have been made, with their forfeit money of \$5 each. We congratulate the managers on such a rousing send off for their first puppy Derby.

PRACTICAL HINTS TO SWIMMERS.—Prof. Marquis Bibbero, of the Royal Polytechnic, London, Eng., gave an exhibition of swimming on Friday last at the Central Park Bathing Establishment, this city, which probably has never before been equaled in this country. His programme contained nine parts, the majority of which were full of instruction, and contained many new and useful suggestions to both tyros and experts, treating of "How to act in case of shipwreck," illustrated; "How to undress on the surface of the water," "Useful swimming," showing the different variety of strokes; "How to breathe while swimming, and how non-swimmers may save their lives," "Easy ways of turning in the water on back and chest," was the Professor's amusing way of showing a "learner's difficulties without a teacher;" "Ornamental swimming," "Swimming with hands and feet bound," Parts 7 and 8—"Submarine feats," "How to save a person from drowning," "How to break away from the grip of a drowning person," and "How to restore the apparently drowned"—were the most useful parts of the exhibition. The Professor, using his attendant for a drowning person, showed that a single lock of hair was sufficient to draw the floating body ashore with, if the person retained sufficient presence of mind to keep quiet. If the person struggles, as is usually the case, he should be approached from behind, his head held on the rescuer's breast, and both go ashore on their backs. The drowning person frequently grasps his rescuer, and endangers both their lives. In this case, if his head can be got under the surface again for a few moments it will confuse him, and breaking away is comparatively easy. Should he grasp his rescuer by the wrists, a quick wrench of the arms will break his hold. Should he grasp him from behind, his hold must be loosened by wrenching back his fingers, as in ordinary cases. When the drowning person gets his arms firmly clasped around his rescuer's neck or around his waist, or gets any other dangerous hold, the rescuer may instantly free himself by putting two of his fingers to the drowning person's nostrils, and thus forcing his head back. This will make a man loosen any hold, in the water or out of it. Even a drowning man cannot keep his grip when this plan is resorted to.

WOODMONT ROD AND GUN CLUB.—The Woodmont Rod and Gun Club, of Washington, D. C., have purchased the well-known tract of land bearing that name on the Potomac, near Dam No. 6. The estate secured there consists of 2,000 acres, and affords magnificent cover, which abounds in turkeys and pheasants, and every variety of smaller game. There are also some deer on the property, and these will be protected for a few years. The grounds front on the Potomac, and on the Virginia side of the river the mountains rise abruptly, and these are full of deer and turkeys, which cross over to the club's grounds to feed. Here, too, is the finest black bass fishing on the Potomac River.

The Woodmont Club, which has been recently organized, has a membership limited to twenty-five, and on its rolls are the following names of prominent gentlemen in Washington: President, A. H. Evans; Vice-President, Gen. T. C. Drum; Treasurer, Major J. O. P. Burnside; Secretary, J. B. Church; Admiral Ammen, U. S. N.; Commodore Earl English, U. S. N.; Parker H. Page, R. K. Evans, Commander R. D. Evans, U. S. N.; Commander Henry Taylor, U. S. N.; Major Marcellus Bailey, J. M. Tinker, W. H. Doolittle, Assistant Commissioner Patents; Gen. A. E. Paine, Commissioner Patents; Major Frank Taylor, U. S. A.; H. A. Seymour, B. E. Ellis, H. S. Nyman, B. F. Guy, A. W. Crossley, M. C. McIntire, Judge L. Hill, Major Justus J. McCarty, Thomas Russell, E. T. Hutchinson.

NOTES.—We made mention some time ago of the interment of a favorite dog in the owner's private lot in Greenwood Cemetery, a proceeding which attracted some attention at the time and much unfavorable criticism. So many written and verbal remonstrances were made to the trustees, and so much intensity of feeling was manifested on the subject, that hereafter the interment of any brute animal in the cemetery will be prohibited. This is altogether sensible; the holiest and most solemn of all human experiences should not be parodied by sentimentalists.

A most seasonable publication is the "Traveler's Official Guide" map, which is furnished as a supplement to the standard hand-book, now put forth by the National Railway Publication Company, 46 Bond street, New York. This map shows the railway connections of the whole country so clearly that one may plan out his route with a moment's glance. We have had the "Official Guide" in our office for years, use it constantly, and have never yet found its information erroneous. We turn to it as often as to the City Directory, and always find what we are looking for.

Prof. Tarleton H. Bean, of the United States Fish Commission, will go to Alaska next month, charged with an investigation into the character and value of the cod fisheries of that coast. This mission is undertaken at the instance of Prof. Baird, who thus proposes to determine the relative values of the Alaska fisheries, as compared with those of Newfoundland and Labrador.

Thomas Bell, the English naturalist, who was the author of numerous works, among them the "History of British Quadrupeds" and "British Reptiles," has just died at the ripe age of eighty-seven. Mr. Bell's home for some years had been at Selborne, and in the very cottage occupied by Gilbert White. Mr. Bell took great delight in making himself familiar with the haunts of the kindly old historian of Selborne, and was never happier than when pointing out to appreciative friends the grounds—preserved so far as practicable—just as White had left them.

"Jacobstaff's" admirable description of decoy goose shooting, published last week, is one of the most graphic and intelligible papers on the subject in print. Even should a gunner return luckless and duckless from a trip to Good Ground, he would be more than repaid by the study of the tame geese, which display a cunning and duplicity worthy of those human creatures known among men as "stool pigeons."

BARBUDA.

AN IMMENSE GAME PRESERVE.

ST. THOMAS, W. I., March, 1880.

I HAVE taken the little island of Barbuda, in latitude 17 deg. 30 min., for description, and my readers must imagine themselves transported backward some two years to the time of a former trip in the month of August, 1877.

This island is one of the northern Caribbees. Isolated as it is, and having no communication with the world save by small sailing vessels it is one of the most attractive spots to a sportsman in the West Indies. Its fame is world-wide, and hardly a British man-of-war has visited the Lesser Antilles without making up a party from its officers for a week's sport at Barbuda. Like those other English islands so closely resembling it in name—Bermuda and Barbadoes—Barbuda is of coral formation, and possesses the barrier of reefs of the second, but not the open bays of the first.

At the river landing where you disembark is a martello tower of solid masonry—a relic, it is supposed, of Spanish occupation centuries ago. A flag is hoisted upon this tower when a vessel arrives, and you await the arrival of horses from the village, three miles from the landing. They come galloping down the lane in charge of a dare-devil darkey, and you mount and ride up to the house through a wilderness of sea-grape and beach-plum, and between great fields, in which graze herds of horses and cattle. Wild pigeons flutter up from the scrub, and wild guinea fowl fly across the fields, causing one to indulge in pleasant anticipations of sport on the morrow. At the house you are ushered into a hall so profusely adorned with guns, rifles and hunters' equipments that you are prepared to receive the warm welcome extended by the burly Yorkshireman, Mr. Hopkins, and later that of his copartner, Mr. Cowly, the clergyman. The house overlooks a vast lagoon, called "Flamingo Flash," on the shores of which are the battlemented ruins of the dwellings of the first proprietors, having such a Spanish, or Moorish aspect, as to suggest the idea that there were dwellers here before the English occupation. Circular towers flank the fortress-like structure, pierced, like the latter, with loop-holes. Notwithstanding, it may have been built by the good Col. Codrington, upon whom the island was bestowed in 1680, and who was later the founder of a college in Barbadoes. For many generations this island remained in the Codrington family (it has lately been returned to the Crown); and that they did

the best they could to develop its resources, and spent vast sums of money in their endeavors to make it a fit place of retreat for an English nobleman, is abundantly evident. There are fields a mile square, surrounded by solid walls so high that even a deer cannot jump them, with gate-posts of masonry, square and massive. Several of these fields, once well cultivated and yielding good crops of corn and cotton, are now abandoned to the goats and guinea fowl. Only in the days of slavery, when labor was cheap and abundant and crops remunerative, could even a wealthy family like the Codringtons build in this sequestered island such durable inclosures. There are living evidences of the thrift and foresight of the early Codringtons in the multitudes of cattle, horses and deer that roam in the vast fields and browse in the scrubby tracts. Barbuda is noted for the excellence of its horses, many of which are sold in the neighboring islands. It is related that the original stock was from a noble strain of blood, that the great-grand sire of the hundreds that now roam these fields was a pure Arab stallion. This may be well believed after an examination of some of the horses and colts here to-day, for though smaller than the ideal horse of the North—owing to the mixture of native blood—they are perfect in shape and full of fire and energy. The deer that may now be numbered by thousands doubtless originated from fallow deer imported from England rather than from the Mexican variety. This I judge to be their origin from those that I examined, shot while I was there, and from a collection of antlers and skulls sent by me to Washington. From the original stock they have multiplied until they cover the island.

Not the least attractive, to a sportsman, are the wild guinea fowl, which, escaping from captivity at an early period, have increased so that they now roam the island in large flocks, and undoubtedly are much more numerous than the deer. With their freedom they have regained that wildness peculiar to them in their native African jungles, and more wary birds, keener of sight and ear, have never been hunted.

The island, though small, is so well covered with thick scrub that it is difficult to hunt through it, and hence every animal that has been introduced for domestic purposes has run wild, and there are, besides deer and guinea fowl, wild goats, sheep and hogs. These, with the large flocks of plover, curlew and duck that visit the island in the winter season, and the great number of doves and pigeons resident throughout the year, added to the great variety of fish to be caught in the lagoon, make life here almost to realize the sportsman's dream of delight—the elysium of his happy hunting ground. The two good Britons holding the lease of this island are worthy representatives of their country. Mr. Hopkins had passed several years stock-farming in Australia, and was well calculated to conduct successfully an enterprise like this, and make remunerative his little kingdom, with its area of seventy-five square miles and nearly a thousand subjects. There are but three white men resident on the island, though there are about eight hundred colored and black inhabitants, who gain a livelihood by cultivating the fields of the proprietors, fishing and wrecking.

The morning after our arrival, at daybreak, we each found a little darkey waiting at the gate to conduct us to the fields. They led the way past the negro village and over a wide common to the first inclosed field, where we separated, my friend taking the lane and myself the wall running toward a thick wood. We had covered several miles before we saw the first flock, a dozen or more feeding in the thin grass. Noting the direction they seemed to be taking, I crept carefully from bush to bush, crawling close to the ground after the most approved style of bushwhacking; but when I ventured to raise my head they were two hundred yards away in another direction from the one I was pursuing. They saw me, too, as I arose, and were on the wing in an instant, sailing over the field like meteors. Then we made a long journey through abandoned fields to the woods, where were little inclosed gardens—the "grounds" of the negroes—where they raised what some Americans would call "garden sass." Here the style of hunting was different, and I thought I should certainly avenge myself with great slaughter, for I had only to keep perfectly still, crawl up to a chink in the wall, and, if there were any birds there, arise and fire as they got up. But I had first to find the fowl (no easy matter, as they run and hide like quail), and then to drop them as they arose (no easy matter either, as they get up in such a hurry that it is a wonder they don't leave their feathers behind). Three times did I approach three different walls, and six times did I discharge my gun at the up-darting forms of as many guinea fowls, but without saving even a feather. In despair I looked at my gun, the same gun with which I had shot turkeys and quail, ducks and plover and snipe in past years, and everything in these islands from a humming-bird to a wild hog, and which had never failed me before. I sat down and looked at it. There it was, the same symmetrical stock of walnut, the broad-breeched barrels, twelve-bore and twenty-eight inches in length; the perfect mechanism that opened and closed the breech so tightly did not admit the escape of a particle of gas. It was as good a gun as Fox, of Boston, could make me

for my work, and I knew the fault must lie in me or in the birds. I tramped back to the house with a heavy heart; nor was I at all mollified when, meeting my friend with a brace of fowl, I missed another shot at a single bird which went sailing by. Not this alone, but my companion, a quick-eyed shot, dropped the same bird at forty yards distance. I saw then that I had been shooting behind the birds, their large size and velocity of flight deceiving me.

Barbuda is so nearly level, in all except the eastern portion, that a heavy rain floods the surface at once. But the water is soon absorbed into the porous lime stone; and during the dry season, there being no springs nor streams, there are few ponds or even moist places. In these ponds the water is brackish; but to them flock all the birds for miles about, at certain times of the day, to drink. One of these shallow ponds, known as the "Bull-Hole," was the favorite resort of doves and other birds, and I rode out one afternoon with the proprietor to collect doves for specimens and for pies. At 8 o'clock they commenced to come in, and we dropped them one after another, until there were forty to three guns; and many more could have been shot.

Toward sunset, one evening, Mr. Hopkins ordered horses, and rode out with me into the scrub to watch the guinea fowl as they went to roost. For an hour before dark they commenced to come in from all directions, concentrating in the copes of high trees, and even roosting in single trees in the open fields. They keep up an incessant calling to one another, and one might think it the easiest thing in the world to pot any number of them at that time. But let it be remembered that they keep their ears open as well as their mouths; and the wider they stretch the latter, the more they open the former. With a well-trained dog, they are as easy to capture as the ruffed grouse, for they are at once driven to tree; and if the dog pursues and barks continuously at the foot of the tree, they give him their whole attention. The hunter has only to creep within shot and single out the lowest one of the flock and fire. It is said that he can sometimes secure half a flock in this manner, as it is related ruffed and spruce grouse have been obtained before the balance take the alarm. He must, however, be securely hidden, as, though their ears are sharp, they depend mostly upon their eyes. The guinea fowl had begun to assemble, but so wary were they that they would invariably discover us and dash out on the opposite sides of the trees before we could obtain a shot. At last, long after the sun was gone, I heard one calling. Carefully working my way through the dense thicket I approached him. There he sat, with his small head and neck outstretched, some fifty yards away. I could get no nearer; the remembrance of the morning's defeat and the afternoon's indignities could not urge me through that thick, thorny scrub with sufficient caution to escape his sharp eyes and ears. So I watched a chance, when his head showed against the sky (though his dark body could not be distinguished from the leaves), and fired. I did, brother sportsman; I potted that bird in the most contemptible manner. And you would have done the same, had you spent two thirds of a hot day in August (a West India August day, at that) in chasing his brethren over scorching fields, and wasting your powder and adjectives in firing two feet behind every one you put up. There was nothing but exultation in my heart as I picked up that bird at the foot of the tree, and worked my way back to my horse.

Soon it was late in the evening, and the brilliant moon cast black shadows beneath the trees in the field. All was silent and hushed. Suddenly there burst out of a tree near by a roaring, rushing body, which made off across the pasture with confused cries. It was a flock of guinea fowl. My companion, more used to their tactics than myself, dropped one of their number before they had got out of range. We approached the next clump of trees cautiously. I even dismounted and carefully examined every limb, the bright light from the moon rendering everything visible, so that we could see, we thought, every knot on the branches. Like a whirlwind from the ocean, there came out of that tree a flock of screaming, cackling fowl, a score or more, which appeared as though evoked by a conjurer's wand from space. That they were in reality veritable birds of flesh and blood, and not shadowy forms, was quickly proved by two hurried shots, which fully established a beloved gun in favor again. Shooting at ghosts is about as satisfactory as guinea-fowl shooting by moonlight, until you have learned that, to get the last one of a gang of a dozen, you must throw up at the foremost, or, to drop a single one, you must sight about three feet ahead of him. On the table, they proved toothsome and tender; and after one initiation the board was kept well supplied. They are rapid runners, restless and uneasy in feeding, and some fields would be deserted in the afternoon that in the morning contained several flocks. "Dey is so roam," said my sable friend—"Dey is so roam; dey is hard to fine."

At 4 o'clock, in the darkness of a morning in August, I was awakened by a rap at my door, and knew perfectly well that said rap proceeded from the black deslayer, William Jack. Hastily dressing and going into outer air, I saw, by the light of the stars, that

William Jack awaited at the gate, and that he held in leash man's most faithful friend, a hound, of the genus cur and species mongrel. Seeing which animal, crouching in a posture that betokened fear of his noble master, so object that his indrawn tail tickled his nose with its tip; so emaciated that his ribs seemed asking for air—so many that he was scaly withal. I inquired for what purpose he intended this beast. William Jack replied that it was to track the deer of the forest that he had secured this dog to aid in the search for the fallow deer of the fields.

William Jack then strode along, after hitching the leash to his girdle, and as W. J. was a tall man, a long-legged man, and the cur was a small cur, a short-legged cur, there was a difference in their gait, for which the dog's povers of locomotion could not compensate. But W. J. did not so much as give the canine attention, but strode on with mighty strides, which, the dog perceiving, did his utmost to prevent. He was not accustomed to trotting along behind a man, held by a restraining rope; he liked to jog along leisurely, to make side darts at lizards and grasshoppers, to scratch his mangy ribs once in a while, and search out the lair of an annoying flea. Consequently he sat down and howled—or rather he tried to sit down and essayed to howl—but he could not seem to find a suitable place, and the complaint he felt would have been promptly choked by the cruel roar. But every dog has his day, and this one somehow drew his head from out the noose and galloped off with a derisive yelp.

Scouring the field he first attacked a herd of goats and then an old bull, and made noise enough in half an hour to frighten away all the deer in a two-mile circuit, which sufficiently explains why deer were not captured that morning. After the chase, the complaint he felt would have been promptly choked by the cruel roar. But every dog has his day, and this one somehow drew his head from out the noose and galloped off with a derisive yelp.

Scouring the field he first attacked a herd of goats and then an old bull, and made noise enough in half an hour to frighten away all the deer in a two-mile circuit, which sufficiently explains why deer were not captured that morning. After the chase, the complaint he felt would have been promptly choked by the cruel roar. But every dog has his day, and this one somehow drew his head from out the noose and galloped off with a derisive yelp.

It was about 9 o'clock, and I was riding a horse that had been sent to me, sitting carelessly in the saddle with my empty gun thrown over one arm and the reins hanging loose. The field I was crossing was a new one, and there were fifty or sixty negro women at work hoeing in it a long line near a wood. The sun had set, and I could not let loose myself as best he might, and he had worried several hogs and sheep and had now dismounted in the copse. His continual yelping suddenly changed to quick, excited cries, which I knew meant deer, and I had just time to throw myself from the horse, slip a cartridge into my gun and the bridge over my arm, when out dashed a goodly doe, heading directly for me. She was so close in range with the wood that I could not fire without repeating some of them, and had to wait until she was a long range off. As I threw up my gun the horse drew suddenly back and spoiled my sight. The deer was so frightened at the report that she ran plump into a heap of brush and fell over on her side, but before I could pop in another cartridge she was up and away.

In the evening William Jack came to me, saying he wished to show me a deer 'fo' sure,' as he knew where they fed every night. Mounting the horses we cantered down the lane half way to the river landing, where we turned into a wood and hitched the beast. William had stereotyped notions about deer-hunting and was a good hunter when he had with him the trained dogs belonging to the proprietors; but in still-hunting I was of the opinion that American deer were in advance of his. These dogs hunted in a peculiar manner; they had been trained to point the deer. Instead of plunging into the bush and skurrying through the thicket like mad, these dogs quietly walk along ahead of the hunter, occasionally looking over their shoulder to see if he is following. When on a fresh deer trail the dog comes to a halt and winks at the hunter to be silent and cautious; then he steps ahead carefully and finally stops before a thicket which is pretty sure to contain a deer.

Barbuda has been the cause of the loss of many vessels, and it is upon the rock bordering this end of the island that most of them go ashore. In years past, these wrecks were the chief reliance of the people, and it is presumed they may be acquitted of any other than laudable desires for gain, if they taught their children to pray, like the wreckers of Bermuda, for a good fat wreck: "God bless the ship and mamma, and send us a good wreck in the morning."

Near "Two-foot Bay," which I visited with the Parson, is a large cave inhabited by bats, from which, as from another "bat cave" in Antigua, good stores of bat guano have been taken. More valuable than this, however, are the phosphatic cliffs near, which might possibly pay as well as the little rock, Redonda, which even Nevis and Montserrat, and the American company, have taken ship-loads of a fertilizer; or the island of Sombbrero, near the Virgin Islands, which has been to the company owning it a mine of wealth. Near the cave was a barren tract covered with cacti; Turke-head cactus sprang up everywhere, and tall candleabra, prickly-pear, and half a dozen other species contributed towards making the trail through this tract a thorny path. But there was no fight with gay warriors, and among them were deer trails in abundance, and near them several heaps of shells.

Shell-heaps, especially such as have been nearly covered by shifting sands, may not offer to the casual observer even a hint of attractiveness; but to one archaeologically inclined, they reveal great secrets. I have never seen a shell-heap that I did not want to explore to its very base; for there were shells and broken shells, thrown together in apparent confusion, speak to us as voices from the dead; they are sometimes the only remains of an unknown race. We dug into these shell-heaps and soon came to charred wood and smoke-blackened shards of pottery, and a little below, to solid earth, the base of the pile. A few shards of pottery and a knife wrought of conch shell were all that revealed to us. Until this, we hunted carefully for deer, but, though the Parson was an excellent hunter, we searched in vain and returned to the house bootless, save our birds and Carib relics; but I enjoyed it just as much. The naturalist in me predominates over the hunter, and I delight in new birds and scenes more than in sport obtained by the shedding of blood; so we jogged along happy and content, the Parson in the consciousness of having given me pleasure, and I in the serenity of the hour.

To this day there comes back to me the calm atmosphere of that perfect evening, with the perfume of acaia blossoms, that time has not robbed of its strength. And

next day, the Sabbath, I listened with enjoyment to the earnest utterance of the Parson as he exhorted his attentive flock to stricter observance of their duties. The little church (Anglican) is neatly furnished, and chancel and altar, brought over from England, of oak elegantly carved. A congregation of three hundred attentive listeners reward the good man's labors, well-drilled in responses and in song.

"Flamingo Flash" is the name bestowed upon a part of the broad lagoon, on the banks of which is built the "Castle," whose ruins are the resort of numerous bats. Large as doves were some of the bats that had their haunts here. By day they would remain crouched in the nooks and crannies of the ruined walls; towards sunset they would sail forth by one or two at a time, followed by a vast throng as night drew near, and from their tenements would issue such squeakings as from a host of bats, unsurpassed, I think, by those of the multitude evoked by the "Pied Piper" of Hamelin. One of the tales told by the natives about the ruins, which I shot as he swept above the ruins, was that measured twenty-four inches in extent of wing and was four and one-half inches in length; his wing was four inches in breadth. As I walked down to the shore in the cool of Monday morning, the Parson was actively engaged in superintending the distillation of some bay oil, fragrant heaps of the bay filling the air with sweet odor. The trees grow abundantly in the scrub, and is a profitable article when the large price of the oil is considered.

Inclosed by a rim of mangroves is a little island in which the frigate pelicans breed; as we approached it in our boat they arose in a cloud and sailed up into a higher atmosphere; a few lingered a little lower and a little longer than was good for them, and soon were fluttering their wide-extended wings in dying struggles upon the water. They measure seven feet in stretch of wing, and were the same species that breed in the northern coast of the United States, the *Frigata aquila*. Upon the island we found some young, nearly fledged, and a few eggs. Brown pelicans (*Pelecanus fuscus*) breed here also; but they flew away at our approach.

Upon the eastern side of the lagoon we landed upon a beach of shells and sand and plunged into the sea-grapes for searapes. There are now the season for sea-grapes to ripen their fruit, and the red grapes, like berries, hung in tempting clusters; and to feed upon these grapes came birds of various species, but especially the white-headed pigeon (*Columba leucocephala*). This pigeon is abundant in the lone islands and extends northward to the Florida Keys, but is only an occasional visitant of the mountainous islands south of Antigua. It breeds here in Barbuda, and also in Antigua, and resides here throughout the year, with perhaps local migrations among the islands. It is about the size of the American passenger pigeon, though with shorter tail, and is fully as excellent when on the table. The season had hardly commenced, but the pigeons were there in such numbers that we secured sixteen in the short space of one hour.

Other birds feed on the sea-grapes, and they are as delicate and tempting in a pie, as graceful and innocent in the field. There are two species of doves, the larger, *Zenaida martinicensis*, the smaller, *Chamaea passerina*. I found them in every island of the group, but in none so abundant as here; the smaller species fairly swarming about the pools and mud-holes. At a shot, they would arise and settle in such numbers along a branch that a dozen could have been swept from it with one charge.

At the end of a fortnight, every week-day of which was passed in some such manner as I have just described, I bade adieu to my hospitable hosts and crossed the channel to Antigua, though I would gladly have accepted their invitation, oft repeated, to prolong my stay.

FRED BEVERLY.

GAME PROTECTION.

MASSACHUSETTS FISH AND GAME ASSOCIATION.—*Boston, April 3d.*—The annual meeting of this association was held last evening at the headquarters 608 Washington street. The annual report of the Treasurer showed a balance of \$390.47 on hand. The present membership is over 500. Sir Randall Roberts of England briefly addressed the meeting on the subject of fish hatching in Great Britain; the association voted to invite him to address them on the 28th inst. The following officers were elected: President, Walter M. Brackett; Vice-President, Hon. Thos. Talbot, Hon. Daniel Needham, Hon. Chas. Levi Woodbury, Col. Henry Smith, Augustus T. Perkins, Esq., J. Lewis Stackpole, Esq. The present officers are: Treasurer, L. M. Chase; Recording and Corresponding Secretary, Edward S. Tobey, Jr.; Librarian, E. M. Messenger; Executive Committee, W. S. Hills, John Fottler, Jr., C. W. Hersey, F. R. Shattuck, C. T. Jenkins.

WOODCOCK IN NEW JERSEY.—*Editor Forest and Stream.*—If "many of the sportsmen of that State are in doubt whether or not the law has jurisdiction over the deeds of a proprietor on his own estate," as stated in your issue of last evening, it must be because they have very slight acquaintance with the law. The new law referring to woodcock is only an amendment of the general game law passed in 1874. That general game law had a section which exempted from its provisions and penalties proprietors killing or catching game upon their own property, but that section (30) was repealed in 1876, and the game laws of the State are of general application, like other statutes which define crimes and prescribe penalties. In specified seasons, to kill game is a misdemeanor, and during these seasons no "proprietor" has any more right to take the life of a game bird, fish or animal, on the plea that it is "on his own estate," than he would have to take the life of a horse or a man that had strayed upon his premises.

NEW JERSEY.

MONROE COUNTY SPORTSMEN'S CLUB.—*Rochester, N. Y., April 3d.*—The Monroe County Sportsmen's Club held a meeting Thursday night, and elected the following delegates to the State Convention: W. J. Babcock, Edmund Redmond, Seth Green, A. B. Lamberton, H. H. Morse. The Club resolved to approve of the proposition to change the By-Laws of the State Association on fly-throwing by establishing a standard for fly-rod line length, to be 9 ft. 6 in. and 11 ft. 6 in. Powder was discussed, and the views of various members obtained. I think the Monroe County delegates will vote to hold the State Convention of 1881 in New York.

DRIVING DECOY.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

FISH AND GAME RESORTS.—We again invite attention to the Game and Fish Directory, of which mention is made above; and we urge our friends to send us such information as they may possess for the general fund.

—A fox was captured in Trinity Cemetery, New York City, a few weeks ago. They caught one in Greenwood in 1878.

—An engineer on the Mobile and Ohio Railroad ran down a buck in the Mississippi pine woods a fortnight ago, breaking both of the animal's hind legs. Venison was served in the caboose that night.

GODBOUT WINTER SPORT.—A late letter from our correspondent on the Godbout, Canada, tells of the winter there:—

There is little to be done here this winter. Trapping is very poor all along the Labrador Coast. The fall hunt is one-third less than usual. Winter seal shooting, which used to be pretty remunerative, is a complete failure. Small game is very scarce except in Juneau, Seattle. Up to date I have not seen a single prairie (suffrage) grouse. The ptarmigan, which used to be abundant on the north shore, has disappeared. We have not seen any for the last three years. To make up for this, ducks have been and are still unusually numerous. The kinds we have at present are the common eider, long-tailed duck, or old squaws, the Iceland golden-eye and the white-winged golden-eye. I have killed any amount of them since November; in fact, I have killed more than a hundred of Indians here in as far as they could get, which is a good deal; of course they taste a little fishy, but that makes no difference.

There is, however, one great drawback to winter duck shooting, and that is the intense cold. One must be a born gunner to enjoy it. I was out very often for five or six hours in a little canoe among the drifting ice, the thermometer stood at 30 deg. below zero, and even under that sometimes. My best bag was thirty-four eiders and two golden-eye ducks in one morning's shooting (Dec. 30th).

MANITOBA'S ATTRACTIONS.—*Emerson, Manitoba, March 25th.*—It may be interesting to some of the readers of FOREST AND STREAM to hear a little of the shooting to be obtained in this Province, or more especially that to be met with near this point. Ducks and prairie chickens are our principal game, but numbers of swans and geese may be killed within easy distance of Winnipeg. Almost every variety of duck is to be met with, but the mallards exceed others in point of number. There is good decoy shooting in spring, say about middle of April, and in the fall no better flight and canoeing sport can be obtained than that to be had either at Lake Manitoba, distant eighty miles from Winnipeg, or at the Marshes at the mouth of Red River, that is to say, where the river runs into Lake Winnipeg. Last fall the ducks and prairie chickens were very numerous, and a friend of mine had capital sport at Rat River, distant twenty-five or thirty miles from boundary line, and right on the route of the Pembina branch of the Canadian Pacific Railroad. Any party coming through from the States in shooting-car can be landed right on the ground, so to speak; and I feel justified in saying, that they will in every way be delighted with the duck shooting. October will be the best time for them to start. At still later dates, the Indians or Manitobans, Indians can be hired by the day, together with their canoes, at a cost of \$1 per day or thereabouts. Good camping grounds can be found, and, if desired, a steam tug can be chartered at Winnipeg which will carry the shooters to their happy hunting grounds. For prairie chickens I most strongly recommend the country around Hallock, Minnesota, some twenty miles south; but, as a general rule, they are met with in most localities. Last fall on several occasions I killed from eight to seventeen, within half an hour's walk of our railroad station.

We are all strong believers in small shot, using nothing larger than Tatham's No. 7 chilled all the year round. For my own part, I load with 44 or 53 drs. of Dupont's No. 1, ducking powder and 1 oz. of No. 7 shot, and I find that this charge, when properly directed from one of Greener's 10 lbs. choke-boreds, does far better execution than I have ever done when using larger shot.

In conclusion I may say, that if any of the readers of FOREST AND STREAM think it worth their while to pay this Province a visit, I am one of the Custom officers at the boundary line (and as they come through they can't help but meet me). I shall only be too happy to furnish them with any information as regards shooting grounds, etc., that I can give, free gratis—for nothing.

E. G. S.

NEW YORK.—*Rochester, April 3d.*—Woodcock have been here for weeks past, but no snipe have yet put in an appearance. Some of our sportsmen have had good sport with the ducks on Cayuga Lake and the Seneca River; none worth speaking of have been bagged much nearer home.

DRIVING DECOY.

NORTH CAROLINA.—*Raleigh, April 1st.*—I give you result of some shooting by myself during the last winter with a 20-gauge, muzzle-loading, double-barrel shot gun, about thirty hours from New York, in a country where birds are plentiful and the shooting good. The people do not put their lands nor object to you shooting. I shot ten days in December and bagged 59 hares, 315 quail and 1 snipe. During months of January and February I shot nineteen days, bagging 64 hares, 789 quail, and 2 snipe. Had I

been using a breech-loader, as I generally do, my bags would have been, I think, at least a third more. The dogs used were very imperfectly broken, and only one dog used during the nineteen days in mid-winter. Should any one of your city sportsmen want any information in regard to the country I have been shooting over they may address R. S. Kirkland, Raleigh, N. C.

QUAIL.

QUANT OLD WINCHESTER.—*Winchester, Va., March 10th.*—Your good paper finds its way here and is read by many that never take the field with dog and gun. Quant old Winchester has its past and present history. It has Fort Lowden and the well, 150 feet deep, dug by Washington to supply the fort with water; its Braddock street, through which General Braddock and his army marched on their way to the famous Braddock's defeat, and of the last war too many relics remain to enumerate. On the crest of yonder hill lie 10,000 soldiers that gave their lives for the cause—in two inclosures of 5,000 each. One is cared for and made beautiful by the Government; the other is watched over by kindred hearts that drop their tears and flowers believing they are honored dead. "Quant old Winchester" has a quiet and virtuous and most accomplished matrons to me the other day "was, before the war, the very center of good society and culture."

Sportsmen are not as numerous as before the war, from the fact that they have not the means nor the time to indulge. Shooting is good all over the State and in the Shenandoah Valley wild turkeys, quail, partridges and ducks are found in quantities enough to make a good sport. Sportsmen are born, not made; and the mere killing of game, to the true sportsman, is but a small part of the enjoyment of the field. The beautiful scenery of this valley will largely compensate for a moderately sized bag at night, and perhaps, after all, the sportsman will feel as much at peace with himself and all the rest of the world for having had a day out in such a delightful country, as he would have been in a jungle all day slaying them.

The wild turkeys are plenty here, and I think most of those who have given their attention to this bird will agree with me, that they are the wildest and the tamest, the most cunning and wary, and the most stupid and foolish of all birds. The first two or three times starting him, he will put himself into the air the moment he hears you, if half a mile away. Sit out at 100 yards, and time you see or hear him, and he will soon become demoralized and then find some tree-top, or place to hide, and if his head is out of sight, all right, he will permit the dog to point him, and be kicked out within fifteen or twenty steps of the hunter.

The past season has been very favorable for sportsmen, and that most respectable citizen, "the oldest inhabitant," says he never saw such a mild winter. To-day the air is soft and balmy; like a bridal veil upon the brow of a young maiden, the bluish purple haze hangs upon the mountain, inviting spring to come and woo and wed. Catching the inspiration, the woods are resonant with the songs of birds trooping their way northward, and redolent with the perfume of swelling buds and flowers.

D. C.

TEXAS.—*Indianola, March 21st.*—We are having a very wet spring, and game of all kinds is very scarce, although I have not seen as many fowl as there were this fall for many years. They all left after Christmas.

G. A.

OMAHA SPORTSMEN'S CLUB—SPRING HUNT.—*Omaha, Neb., March 21th.*—The members of the Omaha Sportsmen's Club had their annual spring hunt on Thursday. Owing to the scarcity of game it was not quite as successful as previous spring hunts. Those who went out were divided into two parties, or sides—one being chosen by Capt. Hathaway and the other by Capt. Henry Homan, and they hunted man against man. The President of the club, W. H. S. Hughes, made the smallest score, killing a poor little lone bald-headed snipe, giving him a count of one. The Vice-President, George Mills, didn't do much better, as he only killed a bald-pated quail. During the hunt the killing of game was not out of the end of a bird from which was secured by Hughes was a stroke of luck which made his count one better than that of Hughes. It is said by some of their friends that owing to their official position they didn't want to carry off the honors of the hunt, and therefore generously intended to make the smallest possible score; others, however, thought they didn't do their level best. J. W. Petty brought home a handsome string of game, having made the largest count, 203; Gen. Crook, J. W. Petty and Henry Homan hunted on the Platte River, near the Santee lakes, and made a total count of 436—more than the entire score of Hathaway's side; R. N. Withnell and John Withnell hunted on the Platte River, near Forest City; Zack Taylor, who hunted around Missouri Valley Junction, Iowa, didn't find much to shoot and gave up in despair at about 10 o'clock; the morning; Dr. Peabody was out in the vicinity of Horsehoe Lake, but hunted only half a day; J. Windheim took in the Elkhorn; William Krug scouted along the Platte, near Fremont; Messrs. Hathaway, B. E. B. Kennedy, Preston and Sackett hunted around Missouri Valley; W. H. S. Hughes, M. W. Kennedy, George Mills, Z. T. Sprigg, M. Blaine and George Crook hunted along the Elkhorn, near Waterloo. The following members did not go out on the hunt: Judge Lake, H. W. Yates, J. Budd, John M. Thurston, T. L. Kimball, G. H. Collins, Byron Reed, John Harding, A. J. McCartney, on Homan's side; and D. C. Sutcliffe, A. S. Patrick, Dr. Coffman, D. S. Parnelle, John McCaffrey and James Campbell, on Hathaway's side. The hunters brought in their game yesterday afternoon and deposited it in the gun store, where it was counted with the following result:

Capt. Homan's Side.—J. Petty: 3 Canada geese, 24 1 Hudsonian, 8; 6 white fronts, 48; 1 snow, 8; 3 canvas backs, 15; 3 mallards, 9; 18 redheads, 36; 6 bald-pates, 12; 16 green-winged teal, 19; 4 pintails, 8; 2 gadwalls, 4; 2 mergansers, 10; 1 scaup, 1; 1 yellow snipe, 1; total, 103. G. Crook: 1 Canada goose, 13; 5 white fronts, 40; 18 redhead ducks, 26; 4 gadwalls, 8; 4 mallards, 3; 3 green-winged teal, 3; 2 scaups, 2; 1 pintail, 2; total, 101. Z. Taylor: 1 redhead, 2; 1 canvas-back, 5; 1 bald-pate, 2; 1 blue-wing teal, 1; total, 10. R. Homan: 15 redheads, 30; 3 pintails, 6; 8 bald-pates, 16; 3 gadwalls, 4; 3 mallards, 6; 7 green-winged teal, 1; 1 scaup, 1; 18 snow geese, 24; 3 white fronts, 24; 2 Canada geese, 2; total, 132. William Krug: 3 mallard ducks, 9; 3 green-

wing teal, 3; 1 pintail, 2; 1 bald-pate, 2; 1 gadwall, 2; 1 buff-head, 1; 6 redheads, 12; 6 white-front geese, 43; 3 snows, 16; total, 95. Dr. Peabody: 28 redhead ducks, 56; 1 canvas-back, 5; 1 scaup, 1; 1 bald-pate, 2; 1 gadwall, 2; total, 67. Withnell Brothers: 1 Hudsonian goose, 8; 1 merganser, 4; 4 gadwalls, 8; 3 bald-pates, 6; 5 redheads, 10; 3 green-winged teal, 3; 1 scaup, 1; total, 41. Total count, 647.

Capt. Hathaway's Side.—S. R. Hathaway: 2 canvas-backs, 10; 2 bald-pates, 4; 2 gadwalls, 4; 4 shaners, 1; 3 green-winged teal, 2; 1 buff-head, 2; 4 scaups, 4; 11 redheads, 22; 1 yellow-shank, 1; total, 50. Z. T. Sprigg: 10 redheads, 20; 4 gadwalls, 8; 5 bald-pates, 10; 3 canvas-backs, 15; 2 scaups, 2; 1 merganser, 5; 2 pintails, 2; 1 mallard, 3; 1 buff-head, 1; total, 66. G. Booker: 1 scaup, 1; 1 gadwall, 2; 1 hawk, 5; total, 5. Wm. Preston: 3 redheads, 6; 3 gadwall, 6; 1 pintail, 2; 1 golden eye, 3; 5 scaups, 5; 4 buff-heads, 4; 2 green-wing teal, 1; 1 killdeer plover, 1; total, 27. M. W. Kennedy: 4 gadwalls, 8; 1 bald-pate, 2; 2 scaups, 2; 1 jack-snipe, 3; 1 killdeer, 1; total, 15. Dick Berlin: 1 duck, 2. George Mills: 1 bald-pate, 3. Fred Blako: 1 hawk, 5; 4 shaners, 8; 4 bald-pates, 8; 1 gadwall, 2; 3 redheads, 6; 1 wood-duck, 3; 1 scaup, 1; 1 green-wing teal, 1; 1 buff-head, 1; total, 34. P. Windheim: 1 canvas-back, 10; 5 gadwalls, 20; 4 redheads, 8; 4 mallards, 8; 1 snipe, 1; 1 wood-duck, 2; 1 shaner, 1; total, 35. H. B. Sackett: 4 redheads, 8; 1 merganser, 5; 1 pintail, 2; 1 spoonbill, 1; 1 gadwall, 3; 1 bald-pate, 2; 1 scaup, 1; 1 sandpiper, 1; total, 22. B. E. B. Kennedy: 5 redheads, 10; 1 canvas-back, 5; 3 gadwalls, 4; 5 green-wing teal, 5; 1 bald-pate, 2; 1 scaup, 1; 1 buff-head, 1; 3 jack-snipes, 4; total, 32. William Hughes: 1 killdeer snipe, 1. Total count, 292.

CAMP BEDS.

BY AN OLD CAMPER.

"H. Z." "an old camper," in your issue of March 4th, wants to know how to secure a comfortable camp bed? That depends. I have known fine-haired campers with expensive and elaborate outfits, trains of wagons, horses and servants, who sat in arm-chairs to eat from tables that groaned under their loads of good things, and slept on spring mattresses with snowy sheets and lambs-wool blankets, and yet they imagined they were not entirely comfortable. I have seen poor devils, ragged, dirty and foot-sore who were glad to improvise a bed that was luxury to them from an armful of cornstalks or two or three fence rails laid side by side in the mud. Comfort depends upon spirit and circumstance. Luxury is entirely a relative quality. Beds of down and the nectar of the gods may not suffice for one, whilst another may revel in bliss with a cup of water and a crust of bread if a dry blanket is added for his bed. I have passed a very comfortable night on a bleak mountain side between two fires that had to be replenished every half hour to keep from freezing, without coat or blanket and with the butt of my gun for a pillow, because the labors and the hardships of the day had prepared me for it. Discomfort diminishes the exertions for comfort.

I once knew a little frail preacher, whom fortune cast into the wilderness, where he said, "His entire baggage was the framework of an India-rubber pillow, about the size of his ear, which he thought was necessary to his comfort wherever he was. After he had run himself down, and when the dusk of evening was closing in, he thought of his pillow, fished it out of his pocket, blew it up, and placing it at the foot of a spruce tree, went to bed. After his wild rant, "go to your place"—the new position was positive and absolute comfort. That was a camp-bed for you! But before he had closed his eyes a mountain lion appeared on the scene, and discomfort succeeded. The preacher broke down the mountain at such speed that the lion made no attempt to keep up. By and by he met a solitary traveler leading a mule, of whom he excitedly asked, "Where am I? Which way am I going?"

But this is getting a long way from "H. Z.'s" bed. The best bedding for camping use is blankets. If not enough, take more blankets.

It is a fact that if a man can be sufficiently comfortable during the night to sleep well he can stand almost any degree of hardship and hard labor during the day, and the day may be pretty long. But if his rest is spoiled by cold, it is likely that he will not be able to do his day's work. The facilities admit, a good, light, narrow hair mattress, with rubber or oil-cloth on the under side, is the best artificial formation for a bed. But if carrying capacity is limited, confine yourself to blankets. They will, for given space and weight, give more comfort than anything else. The foundation for a bed can almost always be improvised. Fir or spruce boughs, properly cut and placed, make the best bed for one night in the world. Straw, hay, grass, leaves, willows, or any other slender brush, palmetto leaves, moss, pine needles, all make good beds; only if the material is coarse it should be placed evenly and parallel with the position of the sleeper. The only question then is sufficiency of blankets to equalize the inequalities. If there is liability of rain or snow, and your bed is in the open air, the top covering must be of some kind of waterproof material, or on the ground, unless in a very warm climate, because the temperature is more equal. Coats, bedsteads, scaffolds, hammocks, etc., never give the solid comfort of mother earth. Night air changes are almost sure to bring chilliness from beneath. A bed on frozen ground or on snow can be made much more comfortable with the same bedding than it possibly can be in a wagon, cot, or anything else that is off the ground so that air circulates beneath it.

BEAR HUNTING IN THE YELLOWSTONE COUNTRY.—*Yellowstone River, Montana, Feb. 5th.*—Since bear hunting has become popular, I will relate an adventure Mr. Hiram Stewart and I had in 1877 on a small stream that empties into the Yellowstone, known as the Crook. We struck camp at the mouth of the stream to try our skill in killing geese, but after one day's hunt only killed four, and we concluded to go after buffalo. So early next morning we packed our camp on four jacks, mounted our ponies, and started up Fly Creek, which runs south-west of the Yellowstone and heads near the Big Horn Mountains. After two days' travel we came to a large band of buffalo, which we found quietly grazing in a small valley. We

had wandered off north of our watering place, and after looking at the large herd of cows and calves, we concluded to go and look up a good camp, secure our pack animals, and come back and attack them in good style. After we had traveled several miles we saw in the distance a small clump of box-elder, which always denotes water. We soon landed and found to our entire satisfaction a splendid stream at the head of the ravine. As our long-eared packers showed signs of uneasiness, I took a circle and the ravine look for fresh signs of Indians, as they are easily alarmed at the redden of the forest. Once around, I could see no cause for the fright. So I dismounted and went down close to the water to see if there had been any game there during the day. When I was within about three hundred yards of Balsam, I came to a bear track not over three hours made; but the size of that track would scare any jack, to say nothing of the bear that made it. I let my pony go to camp and started on the trail, following it into a dense red-willow thicket, somewhat anxious to try my faithful Winchester on bruin. I crawled on, and, after about twenty yards, I was greeted with a noise between the roar of a lion and the growl of a tiger. As the chances were against my retreat with any speed, I soon got out on clear ground. I looked after him for some time, but could not find him. I called to my friend Stewart, who has had twenty-five years' experience in the chase, and with all kinds of game. He came at once, but on the other side of the ravine, with his Sharps .44 cal., 75-grs. powder, one leg two inches shorter than the other, large white hat, and a buckskin suit. "Well, what have you here?" "I don't know just what, and I don't care about going too far in those willows to find out; but from the looks of this track I would call it an elephant's, if they inhabited this country." There was a trail coming down the bank just opposite me, and I felt sure that it passed near his lair. S. came down this trail until I could see his large hat. I told him he had gone far enough I thought, as he must be very near the spot where I heard the music; but we were both anxious to get first blood. He kept moving down until he was full half way down the bank, when all at once I heard the charge, followed by the deafening crash of his rifle, then a howl. I could see S. scrambling toward a projecting rock, but the bear I could not see for the bushes, but I had not long to wait, for the bear was within twenty feet of him. Quick as thought I fired—struck him in the lungs. The report had scarcely died away, when I gave him one in the neck. With the third shot I broke the spinal marrow, just where it connected with the brain. S. gave one bound, caught the rock, but was so scared he fell back, and the bear nearly tumbled on top of him. He gave one yell that sounded like an earthquake, before he found out it was dead. I crossed the hollow by crawling under the bush, and found him seated by the bear with death stamped on his countenance; his face was like that of a corpse; under his eyes were a dark-yellow shade. After some conversation, I learned he tried for a second shot, but the shell failed to explode; and on dragging the shell the ball struck in the groove of the jaw, which we were to give leg-bail, which in that case would not have lasted long. On butchering the bear we found his ball had struck the brute in the breast, and went down about ten inches between the skin and flesh and lodged there, doing no harm at all, although the ball was mashed flat as a large copper. This bear weighed twelve hundred pounds. We took all the fat to camp and had one hundred and seventy-five pounds of tallow, and one oil, which we sold for cents per pound for cooking purposes. My companion would not have the robe at all; he said I had saved his life, and I should keep it as a token of his respect toward me. When skinned on the ground it would square nine feet. This was a grizzly; and in his charge at S. he tore up two willows, three inches in diameter. Stewart died a few months after. I think this score had some permanent effect on him. W. A. ALLEN.

SHOOTING MATCHES.

MARLBOROVS VS. MIDDLESEX.—*Marlboro, Mass., April 1st.*—Match between teams of the Marlboro Sportsman's Club, and the Middlesex Sportsman's Club, of Cambridge:—

RECREATION GUN CLUB.—*New York, March 20th.*—At a regular meeting of the Bergen Point Amateur Gun Club, on the 23d inst., it was unanimously resolved that the club name be changed to

ing a lot of hunting arrows made for his use in the woods the

coming season. We shall hope that your readers will be favored before the year is over with many interesting sketches of life in the woods, not only for those who live, but also from many other archers who will learn to love this rare sport.

Who can tell us what "T. A. L." signifies?—Ed.

NORTH BEND ARCHERY CLUB.—Following is the score of the team which shot a match with the New York Club, March 27th:—

	First Round.	Second Round.	Third Round.	Totals.
Mrs. J. O. Blako.....	329	133	135	85
Miss Slatery.....	37	174	153	78
J. W. Wilkinson.....	203	212	223	80
J. O. Blako.....	216	202	248	90
C. Conklin.....	224	202	202	90

CORTLAND ARCHERY CLUB.—Cortland, N. Y., April 24.—The usual regular Wednesday afternoon and evening practice of the Cortland Archery Club was varied this week by a match among the ladies of the club. Three prizes were contested for. Distance, 30 yards; 90 arrows. First prize, a raw-hide backed bow; second prize, three best footed arrows; third prize, line arm guard. Miss Sarah Keator won the bow by a score of 501; Mrs. A. Mahan, second, 343; Miss Sue Ingalls, third, 292. The other members of the club who were present made the following scores: 30 yards; 90 arrows:—

	1st 30.	2d 30.	3d 30.	Total.
Dr. P. O. Hyatt.....	208	212	216	636

NEW YORK ARCHERY CLUB.—New York, April 24.—Editor *Forest and Stream*.—According to promise, I give you herewith, a copy of the resolutions relating to membership in our club, and the making up of teams for matches, which were unanimously passed at our meeting March 31st. They read as follows:—

Whereas, We believe that it is essential to the future welfare and prosperity of this club that it shall be composed of persons living in the city, and having no affiliation with other archery clubs, therefore

Resolved, That no proposals for admission to membership in this club from members of other archery clubs whose names are now upon the roll (if any), shall hereafter, and so long as they shall remain members of other clubs, be ineligible for places upon teams selected to represent this club.

Again, we have amended our constitution so as to read:—
"Applications for membership * * * and identification with no other archery club, except the Private Practice Club, being necessary qualifications for admission."

Thus your readers may see exactly what the New York Archery Club has done; and while I do not propose to enter into any discussion here at this time, it seems to us that what we have taken course that other clubs will be compelled to follow, and which we support of those that have experienced the trouble we forewarn we would have. Besides, with your extensive experience, we are pleased to remember that you have always advocated such measures. Should a club be young and weak, they might omit such decided measures; but when a club is as extensive and strong as the New York, needing no support, only that of its own members, it becomes a necessary step in order to preserve the interest of its members. No good can ever come from those who have heart in their club, and only attach themselves to another for the benefits it offers over and above the other for the time being. At our last meeting the club elected James B. Morrison, Esq., an honorary member.

The Park Commissioners have given their permission to the club to use the Sixth-fifth street Lawn in the Central Park, and we shall probably commence to shoot outdoors about May 1st.

JAS. W. AUTEN, JR., Secretary.

Cricket.

THE ONTARIO CRICKET ASSOCIATION.

The most important event that has occurred for many years in the Canadian cricket world was the holding of a convention on March 27th at Toronto to regularly organize what, in the future, will be known as the Ontario Cricket Association. In compliance with a call, representatives were present from Toronto, Hamilton, Whitby, Port Hope, Ottawa, Peterboro', Uxbridge, Owen Sound, Kingston, Brantford, Paris, Asylum Club (Toronto), Carlton Club (Toronto), St. Catharines, Cobourg and Barrie. The meeting, which was very largely attended, was held in one of the parlors of the Rossin Hotel, and besides the club delegates there were present cricketers from different parts of Ontario.

Mr. H. Totten, of the Toronto Club, was called to the chair, and Mr. W. Lowrey, of the Carlton Club, to act as Secretary. On motion of Dr. E. W. Sprague of the Toronto Club, seconded by Mr. Chas. Ray of Whitby, it was resolved that the meeting organize itself into an association, to be called the "Ontario Cricket Association." Mr. Merritt, of St. Catharines, spoke briefly, explaining to those present that the object of the proposed association would be to bring the different clubs into closer and more intimate and friendly relations with each other, and the advancement of the interests of the game throughout the Province. Communications were read from Clinton and St. Catharines and from the well-known cricketer the Rev. T. D. Phillips, of Ottawa, heartily endorsing the objects of the meeting.

It was decided that the officers of the association should consist of a President, two Vice-Presidents, an Honorary Secretary-Treasurer and an Executive Committee of fifteen, the officers of the association to be ex-officio members of this committee, and the five members of the committee, with the Secretary, constitute a quorum. On motion of Dr. Sprague, of Toronto, seconded by Mr. Simonds, of Hamilton, it was resolved to invite His Excellency the Governor-General to become President of the association.

The following officers were then elected:—
Vice-Presidents—Mr. Thomas W. Swinard and Mr. P. W. Cumberland.
Secretary-Treasurer—Mr. W. H. Merritt, of St. Catharines.

It was decided that the Executive Committee for the current year be made of delegates from the cities and towns of Ontario, as follows:—Two from Toronto, two from Hamilton, two from Ottawa, one from Port Hope, one from Cobourg, one from Whitby, one from St. Catharines, one from Paris and Galt, one from Peterboro' and Lindsay, one from Chatham and two from Owen Sound, Meaford, Collingwood, Barrie, Orillia, Newmarket and Uxbridge. The following gentlemen were appointed a committee to draft a constitution and by-laws, to be submitted to the various clubs throughout the Province for approval: Mr. Kennedy, of Hamilton; Mr. Kirchhoffen, of Port Hope; Messrs. Tot-

ten and Sprague, of Toronto, and Dr. Lett, of the Asylum Club, of Toronto.

The following remarks appear in the New York *Herald* of April 3d, and as they represent our views, we republish them at this time:—

"At last the much-needed and long-wished-for Canadian Cricketers' Association is a certainty, and in the future the annual international match between the United States and Canada eleven will, in all probability, fully represent the strength of each country, which up to this time has not been the case. While this excellent result has been brought through the agency of such old and well known Canadian cricketers as Alderman R. Kennedy, of Hamilton; Dr. E. W. Sprague and Mr. H. Totten, of Toronto, and the Rev. T. D. Phillips, of Ottawa, yet the credit of suggesting and showing the necessity for such an organization and persistently keeping the matter before the cricketing public of Canada is due to the **FOREST AND STREAM**, of this city. Heretofore the United States-Canada match has been played at uncertain periods, although the system of playing the matches alternately in each country has been adhered to. The selection of the teams on either side has never been representative, until the formation two years ago at Philadelphia of the Cricketers' Association of the United States, since which time the American eleven has been chosen from the clubs of the association, and has proven to be as representative as a team as possible. After the so-called international match played at Ottawa last August, the advantages to be derived from having a regularly systematized organization like the American association were apparent to all those who had the love of the Canadian game at heart, as without one it was simply impracticable to place an eleven in the field that could ever expect to hold its own. Canada of late years has not done herself justice in the cricket field, but now, by careful management and wise selection, she will be able to bring to the Cricketers' Union who has so long held in reserve. Her players should be chosen without fear of favor, and, under good captaincy, this year's match will probably be a very close one.

"Although the new association cannot be said to strictly represent all Canada, yet it justly covers all the important and principal cricketing centers of the Dominion, only leaving out Montreal and Halifax, N. S. The former city was not represented in last year's match and the latter place is too distant to be counted upon. Cricket for several years has not been played at Quebec, and many of the best cricketers live in the same Province. This year's United States-Canada match will be played in this city or Philadelphia."

NOTES.—CRICKET IN CALIFORNIA.—The Western Addition and Laureate Cricket Clubs have joined under the name of the Merion Cricket Club. The following officers were elected for the ensuing year: President, C. L. Mathieu; Vice-President, A. M. Cox; Captain, A. Theobald; Secretary and Treasurer, C. B. Hill; Librarian, J. Ruggles, and Sergeant-at-Arms, L. Burnett.

THE COLUMBUS (OHIO) CRICKET CLUB held an informal meeting on March 27th, and it is thought that there will be considerable interest taken throughout the Buckeye State this season.

THE PENINSULAR CRICKET CLUB, of Detroit, held its annual meeting on the 6th inst. Full particulars in our next issue.

THE GERMANTOWN CRICKET CLUB, of Philadelphia, on March 26th held a special meeting at Wilson Hall, Germantown, which was largely attended. The Constitution of the club was revised, and twenty-one new members elected, and a Committee Report read, covering that through Richard Daff a first-class Nottingham professional has been engaged for the season. The following is the list of officers for the season: President, Mr. Thos. McKean; Vice-President, Mr. Sam'l Welsh, Jr.; Secretary, Mr. F. M. Dissell, 243 South Fourth street; Treasurer, Mr. Alex. W. Wister; Directors, Messrs. Elliott Fisher, Alfred Cope, R. Nelson Caldwell, Francis E. Brewster, and T. W. Kimber.

WHITBY CRICKET CLUB.—At the annual meeting of the above club at Kay's Hotel, Whitby, Ont., recently, the following gentlemen were elected officers for the ensuing year: President, Judge Darthell; Vice-President, Mr. J. R. Barwell; Secretary and Treasurer, Mr. E. W. Trousseau; Executive Committee, Messrs. S. Ray, J. B. Laing, C. Nourse, C. Sarney, and H. J. Campbell.

JUNIOR ST. CATHARINES.—The Junior Cricket Club of St. Catharines met last week and elected the following officers: Captain, G. Speight; Secretary, E. Miller; Committee, R. McDonald, A. Masquie, E. Miller.

THE MERTON CRICKET CLUB, of Ardmore, Pa., at a meeting held March 31st, unanimously agreed to purchase from two to four acres more of ground to add to the present ground of five acres. Thirteen new members were elected. It is proposed also to add large additions to the present club house, and the new grounds are intended not only to increase the size of the cricket ground, but to give ample room for lawn tennis. The Merion Club is technically "booming."

GEORGE WRIGHT writes us, that cricket promises to be lively here in Boston and vicinity this season, and the chances are that he will give up base-ball, attend to his new store, and take up cricket again.

THE TRENTON CRICKET CLUB, of New Jersey, will organize for the season this week. It intends playing a series of games with the Orange, Newark, Paterson, Camden and other clubs in the State during the summer.

THE HAMILTON CRICKET CLUB held its annual meeting on the 5th inst. The prospects for a good season were never better, and already a considerable amount of speculation is going on regarding the results of the next game with the Young America and Staten Island Clubs.

"The report that the Hargreave brothers have joined the Grand Club is unfounded, as no business arrangements will, for the present, prevent them spending enough time to play."

THE GAMER AUSTRALIA.—At the cricket match on the Sydney Cricket Association's ground, on Feb. 21st, Alberts vs. Newtons, Alberts scored all first innings, with a loss of eight wickets. A. Gregory made 131, A. Docker 72, and Massie 55.

THE MANHATTAN CRICKET CLUB has been trying to arrange its fixtures with all its antagonists of last year. Out of a long list, the Merion and Belmont are the only two that have replied.

THE OTTAWA CRICKET CLUB will hold its annual election for officers on the 12th inst.

STAFFORD CRICKET CLUB.—A meeting was held on March 15th for the purpose of re-organizing the Crescent Cricket Club of Stafford, when the following officers were elected for the ensuing year: Patrons, Mr. M. P. Hayes and Mr. A. H. Ireland; President, Dr. Coleman; Vice-Presidents, Mr. R. J. Gerdistone and Mr. F. Holmstedt; Captain, Mr. J. S. Roberts; Secretary, Mr. J. L. Harcourt; Treasurer, Mr. A. Wilson; Committee: Messrs. H. Cameron, G. Baird, R. J. Gerdistone, J. L. Harcourt, T. E. Joslin, J. Watson, and W. W. Hensell.

—Hornum was 1 the wickets about ten hours for his 23d not out.

—Committees would do well to consult Richard Daff's notice in another column.

—The Portsmouth Cricket Club, of New Hampshire, will be pleased to hear from all clubs in this vicinity that intend visiting New England during the coming season. The P. O. C. is a young organization and should have the encouragement of the older clubs. The Secretary is Mr. Samuel Emery, P. O. Box 1,271, Portsmouth, N. H.

REVOLVING.—ANSWER TO "CRICKET."—New York, March 23d.—If the letter signed "Cricket," in your issue of the 4th inst., is supposed to be an answer to my letter of Feb. 9th, I should think your intelligent readers will consider it a miserable failure as well as a misconception. "Cricket" seems to have gone off "half-cocked" like a rusty gun, the shot hitting none of the "game" in my letter, whatever. If "Cricket" can read plain English, he will see it was the **FOREST AND STREAM** that remarked: "This reform was much needed to protect one or two kindred organizations in this city," and not my humble self. Presuming a "Revolver" (Cott's barred, of course), is one who belongs to different clubs, I should judge at least three-fourths of all the cricketers in existence are "Revolvers." The Staten Island Cricket Club has its share, in fact, I think it was started by two or three "Revolvers," Messrs. Moore, Stevens, etc., although I think the latter is only an ex-revolver; then there are Messrs. G. Moore, Hanes, Pliner, Jones, J. and McEyre Sprague, Marsh, Haughton, Woolston and I dare say many others, all revolving "lights" of more or less brilliancy, but according to "Cricket," they are each and every one calculated to dim the luster of the Staten Island Club, and therefore it is opposed to revolving. What! Judging from the above I should imagine the Staten Island Club was very much in favor of revolving—so many lovers of the game. I have no doubt every cricketer in the Maryland Club (the finest cricket organization in the world), is what we Americans call revolvers, and it is my private opinion the more revolvers the better, and more matches the result. Look at Philadelphia with all her cricketers; how many first elevens have ventured as far as New York in the last three years? And what is a more serious question, how many have gone from New York during the same period? Echo answers: "How?"

I think a "Revolving" club would be a very valuable addition to the cricketing fraternity of the United States; they could then revolve all summer and shake up the world-revolvers and what would be the result, think you, beautiful or otherwise to "Cricket?"

A MEMBER OF MANY CLUBS.

Woman's Column.

PAPERS ON BOTANY.—We are pleased to announce that we shall shortly begin the publication, in the *Woman's Column*, of a series of papers on field botany, which we are assured will be found entertaining and practically useful by our lady readers.

LADIES AT THE SCORE.— *Jamestown, N. Y., March 27th.*—Yesterday afternoon a number of ladies and gentlemen assembled at Burns' Gallery for rifle practice. One of the gentlemen, Mr. S. N. Ayres, presented as a prize to be shot for by the ladies, a pair of gold bracelets. The terms were fifteen shots each, at Creed-moor target reduced to gallery distance, position off-hand; possible score 75. The lady who took part in the contest, whose scores were as follows:—

Miss Mary Parkhurst.....	51	Miss F. Loda Brown.....	47
Mrs. Dr. A. F. Ward.....	61	Miss E. F. Warner.....	52
Mrs. A. J. Fenner.....	59		

At the close of the shooting Mr. Ayres presented the bracelets to the winner, Miss Parkhurst, with appropriate remarks, and in giving out the congratulations that followed, all were pleased with the result. Miss Brown and Mrs. Warner are just being "brought out," in rifle practice, which accounts for their scores being so much lower than the others.

R. H. B.

PUBLISHERS' DEPARTMENT.

—The smoke-target ball, we understand, has gone into new hands, and a company has been formed at Titusville, Pa., for their manufacture and sale. The advantages claimed for this ball are cheapness, the absence of debris and the impossibility of disputes about the score.

—The conical-base shell, an advertisement of which will be found elsewhere, has been tested by a great many sportsmen during the past year, and has, so far as we learn, met with their approval. The steel-headed shells are safe, and much cheaper than the ordinary make.

—The Collender billiard tables are generally acknowledged to be the most perfect manufactured. The number of tables made specially for private use is largely increasing.

—Advance sheets of H. P. Hubbard's "Newspaper Directory of the World," published by him at New Haven, Conn., show that there are 10,131 American (United States and Canada) newspapers. The total circulation of a single issue of each of these papers, reaches the enormous aggregate of 20,677,533 copies. This is an average of 3.41 to each paper for a single issue, and taking all issues of the whole for one year a grand total of 1,839,473,592 copies. Taking ordinary forty-pound newspaper at its average measure of 4,000 sheets (solid) to the foot, one issue of all these piled up would measure 5,170 feet (nearly a mile) in height, or for a whole year 459,118 feet (over 87 miles) high. Placed end to end, one issue would extend 13,580 miles; for one year 1,158,474 miles, or over forty-seven times around the earth, and five times the distance from the earth to the moon. In a thousand copies of type there are nearly 2,000 different pieces, and in an average four-page eight-column paper, set in solid brevier type, there are 18,000 ems (about 450 pounds), or 236,000 types in one newspaper. To print one issue of the total 10,131 papers of this average size, there must be handled nearly five million pounds of type, or 2,993,776,000 types. The total number of editions of all these dailies, weeklies and monthlies for one year would make 724,704, and to print them occasions the handling of 2,173,409,949,000 types.

A \$1,000 GUARANTEE.—Warner's Safe Kidney and Liver Cure will positively cure Bright's Disease and Diabetes; and it is guaranteed that it will also cure 99 per cent. of all kidney diseases, 95 per cent. of all liver diseases, and will help to cure every case without injury to the system, when taken according to directions. The sum of \$1,000 will be paid to any person who can prove that it has failed to do this.—H. H. Warner & Co.,—Adv.

J.; and Mr. Edward Leverich, 111 Broad street, New York. For particulars and prices apply to Mar 25-1t. T. E. SMITH, Stockholm, N. J.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 " .25	.50	1.00	1.50	2.00
Amount to remit us, 3 " .75	6 " \$1.50	1 " \$3.00	2 " \$5.50	3 " \$8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880, -	\$100.00
To the one sending the next largest amount, in accordance with the above conditions, -	75.00
To the third on the list, -	50.00
And to the fourth, -	25.00

Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any Person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six Months, and Eight Dollars Cash, we will send, in place of commission, any one of the following Articles:

Jordan's Manual of Vertebrates.	Coues' Field Ornithology.	One five-foot lance-wood Bow, Horn Tips, and one dozen 25-inch Arrows.
A copy of FOREST AND STREAM for one year.	One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Hooks.	One pair Club Skates.
A three-piece double-ferule, lancewood tip, full mounted, polished Bass, Trout or Bait Rod.	One Russia-leather Fly-book, and one dozen assorted Flies.	

To any Person sending us, before July 1, 1880, Sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles:

Two copies of Forest and Stream for one Year.	A good Fishing Outfit, consisting of rod, reel, line, hooks or flies and snells.	One Gent's six-foot self-lancewood Bow, made to weight, and one dozen half-notched polished Arrows.
A four-piece, double ferule, guides and reel-band, hollow, butt, extra tip, full mounted, Bait or Brass Rod.	One full-length Fly Book, and two dozen assorted Flies.	One Set Parlor Archery, complete in box.
One 3-piece do. Fly Rod.	Coues' Key to North American Birds.	One pair nickel-plated Club Skates.
		One Parlor Air-Gun.

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE. Remit, if possible, by postal money order, check, or draft on New York, payable to order of FOREST AND STREAM PUBLISHING COMPANY. If neither money order nor draft can be obtained, inclose money in Registered Letter. Address

BEACON KENNEL.—In stud, white imported bulldog Punch, imported white bull-terrier Crab, imported fox-terrier Ike. Address BEACON KENNEL, 23 Myrtle street, Boston. Mar 25-'80

FLEAS!

USE DR. AL. WATTS' FLEA SOAP, a safe and efficacious remedy and preventive for fleas and all eruptions of the skin produced by them. It cleanses the hair of all impurities, purges it of all disagreeable odor, and possesses the most thorough disinfecting properties. It is impossible for fleas to live where it is used. Price, 25 cents per cake. For sale by all druggists. Wholesale depot, 161 Lincoln street Boston. Dr. Watts offers for sale the largest assortment in America of dogs of all breeds. The full treatment of canine diseases made a specialty. The fact that Dr. Watts has for four consecutive years held by appointment the position of Special Officer of the City of Boston to have charge of unlicensed dogs is sufficient guarantee of reliability. All communications and orders will receive prompt attention. Address DR. AL. WATTS, 161 Lincoln street, Boston, Mass. Mar 25-'80

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinac, Grand Rapids and Cincinnati Short Line
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The FISHING season begins May 1 and ends Sept. 1.
THE GRAYLING season opens June 1 and ends Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSKELGON, also abound in large numbers in the many lakes and lakelets of this territory.
The sportsman can secure the trophies of his skill to his friends or "club" at home, as too for packing fish can be had at many points.

During the season Round Trip Excursion Tickets will be sold at low rates and attractive train facilities offered to Tourists and Sportsmen.
Dogs, Gun and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" in some of the finest scenery and the most direct for Chautauque, Cobb's Island, and points on the Peninsula. City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Wednesday, Thursday and Saturday. Leave, Del. Monday and Thursday, at 2 P.M. Full information given at office, 127 Greenwich Street, New York.

Old Dominion Line.

HO! for TROUT FISHING.

THE FAR-FAMED waters of the Magallowan are now within easy access of Toronto and the outside world, and are still teeming with speckled trout. We have erected a large and comfortable hotel in the journey short of the waters, and are prepared to offer every facility to our sportsmen friends by way of canoes and guides to the trout lakes and streams tributary to the Magallowan, and can offer the best of trout fishing within a mile of our hotel; will have canoes and facilities for packing fish, so that they can be taken fresh to any part of the Northern States. The road from Fossouque (the head of steam travel) has been Macadamized and the journey shortened by half a day, so that parties leaving Toronto can get here in one and a half days. Come up and see us.

Magallowan Post-Office, Ontario, Canada.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLASTING
POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning strong and moist.

SPORTING, MINING, SHOOTING, AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

P. L. KNEELAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square containers of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 4 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 4 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFGG and FFG are the favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesaler at our office,

A Day at Keefoot Lake.

A WAY back among the "50's," on a bright November afternoon, I was sitting on the porch of the palatial residence that stood back some two hundred yards from the east bank of the Mississippi River, opposite the then large and fertile Island No. 10, cleaning my new double-barrel gun, after a previous day's duck shooting on the lake, when my attention was called to a sharp "Hallo!" at the front gate. I went through the hall, opened the front door, and found the rotund figure and smiling face of old Major Lewis sitting on his horse, who saluted me with "Hallo! Alex., where is Wyatt?" I answered, "Down at Nolan's." He remarked, "All right, I am on my way there and will see him. I am notifying the boys of our deer hunt to-morrow. Ed, Nevel's is the place, and seven, sharp, the hour. See that you are not behind time." With that he cantered away. I immediately went about my preparations; cleaned the old man's gun, filled our flasks with powder, put fresh caps and a dozen buck cartridges into each of our shooting coats, and then settled down to steady my nerves for my first experience on the morrow at a first-class deer stand.

The following morning was bright, calm and frosty. Old Aunt Choney had us up to an early breakfast, and six o'clock found us in the saddle, our horses in a lively canter down the Bend toward Nevel's plantation. We had scarcely made a mile, when the distant notes of a horn came vibrating through the woods from the direction of a neighboring plantation. "There," said the old man, "that is Ed's Horn." The last notes had scarcely died away, when the sound was taken up in a louder and longer blast away down to our right. "That is the Major's," I remarked; and our horses pricked their ears and voluntarily increased their speed. They had made but a few leaps, when a new and clear blast came quivering down on our left. "Who can that be?" queried my companion. "That is Dick Donaldson's new horn," I remarked. By this time we came in sight of Mr. Hind's plantation, and found Uncle Sandy H. at the gate equipped and ready for the chase. We had just formed three abreast and given our horses the bridle, when we were greeted by the faint echoes of a horn coming trembling on the

frosty air from away down in the lower end of the Bend. "There, by-god," said Uncle Sandy, "that is Billy Isler's horn."

We were soon at the rendezvous, and found the company riding up in pairs, until ten of us were gathered together. N. was leading his horse through the gate, having his well-worn 10-gauge thrown across his shoulder. A blast or two of his horn brought the snarling pack to attention. He mounted, turned down the long lane, followed by the cavalcade two deep, then through the woods and the canebrake toward Keefoot Lake.

After a brisk ride, and many a sharp cut with the whips at the eager dogs to keep them in check, a halt was called, and by mutual consent N. was chosen leader. That veteran huntsman surveyed his followers, mapped out his ground, and said, "I will go with the dogs myself, Major, you take the lower stand on the lake shore." Then, turning to me, "Alex., you want to kill something; I will give you the Big Sycamore stand, so come with me. You gentlemen, remain here until I come back." I followed him some distance through the canebrake until we emerged into an opening some forty feet across, a well-beaten path running across the center, and a large sycamore tree standing on the left side. "Here is your stand (pointing at the tree), keep your eyes and ears open; have your gun in hand ready; and, when the game runs along the path, aim a little ahead and fire." He turned and left me, adding, Keep cool; don't get excited.

Two long weary hours passed as I stood by that tree, gun in hand, my eyes fixed on the opening in the brake, and my nerves strung to their very highest tension; no deer appeared. Shall I ever forget that trying time? How much I have learned since then! Listening attentively my ears began to drink in the sweet music of the hounds in full cry miles up the lake shore—faint, very faint at first, but growing louder by degrees. On they came, awakening the echoes on the further side of the lake. Oh, how it thrilled my nerves, sending the warm blood coursing through my veins on a double-quick! Even now while I write I live the exciting moments over again. One boom was followed soon after by a second and a third; then two more in quick succession told plainly that more than one gallant buck had run his last race.

On the dogs came, apparently right toward my stand. You ask me how I felt; well, it is useless to deny it. I trembled like an aspen leaf, and I don't think I could have hit a barn-door, to say nothing of a deer. Bang went the Major's gun, some two hundred yards to my right, and with it the course of the hounds was turned back up the lake shore. This gave me a little time to regain my composure, and at the same time threw me off my guard. I stood my gun up against the tree, took one step from behind the cover, folded my arms across my breast, attentively listening to the roosting chase, when in an instant, without a moment's warning, out trotted a huge black bear right in front of me, and not more than ten paces distant. Discovering me it stopped, raised itself slowly on its hind quarters, and surveyed me as calmly as if I had been a brother Bruin, and there I stood like a stump, my gun heavily charged with twelve buckshot in each barrel, on full cock, within easy reach of my left hand, fastidiously, riveted to the spot, my eyes fixed on those of the bear, forgetting that I was out hunting, forgetting my dogs, forgetting my gun, in fact forgetting everything but the towsey brute before me. How long we stood thus eying each other I know not. Finally it showed its teeth several times, dropped on all fours, sprang into the brake, and disappeared. I turned my head slowly and looked at my gun, and uttered the single ejaculation, "Lifer!" I was myself in a moment, realized my loss, and expressed myself in language such as none but a baffled hunter can command. There was no more game for me that day; but I held my post until the horn sounded the recall, when I joined my companions. N. had a fine buck strapped behind his saddle. Major L. also had one, and Dick D. one, and Billy I. had killed two. I said nothing about the gun, my eyes being, and thereby saved my back from being rubbed against the rough bark of a tree, the usual punishment for all such mishaps.

We soon reached Mr. N.'s house, where our generous hostess had prepared a feast equal to that of a king's. While we were discussing the pleasures of the day at the festive board, the game was being dressed and divided into ten equal parts; and as the gun was glinting over the tree tops in the west we each, with a hearty by-by, turned our horses homeward—your humble servant a disappointed but wiser huntsman.

Capé Gardeau, Mo.

CAPÉ ROCK.

THE DOGS' HOME, OF LONDON, ENG.—The nineteenth annual meeting of this institution was held on March 27th at 105 Jermyn street, Col. Burdett in the chair. The report showed that during the past year, the Battersea Institution had found homes for 9,280 dogs, being 538 more than in the previous year. Twenty-four new compartments had recently been made, other erections had been completed at the cost of about £800.

A COSTLY PERCH.

THIS perch inhabited the waters of Lake Richmond. Lake Richmond is situated in the town of Richmond, Berkshire County, Mass., about twenty-two miles east from Chatham and three miles west from Pittsfield, on the Boston and Albany Railroad. To this point the grade is up, hence it is called by the railroaders "The Summit." The lake covers an area of about one hundred acres, and was once quite famous for pickerel fishing, and a favorite resort for fishermen.

Five winters ago a party of Chatham boys, ten in all, resolved upon an excursion to this lake. The time was to be fixed by Ken, who is esteemed, by common consent, as the "boss" fisherman in the place. No party is complete without Ken for a leader. He is a thorough believer in the "signs." Ken is as familiar with the zodiac as the schoolboy is with his alphabet. Among his fishing paraphernalia is always to be found a "Farmers' Almanac," which must be consulted. To the impatient ten the time seemed long, the sign was so slow getting round to the old man's neck. Finally Ken pronounced the sign right, and the boys must be off the next day. All was made ready by night. Wednesday morning dawned with every promise of a perfect day. The air was keen and motionless, and the sun, as it rose above the crest of the hills that skirt our village on the east, seemed to smile approvingly upon the enterprise. Before 8 o'clock we were all on board the train, and off for Richmond. We found the conductor very obliging—our number being so respectable, I suppose. So he waived the ceremony of taking us to the station, a mile beyond, and dropped us at the nearest point to the lake. A party from Pittsfield had arrived there before us. Among them was Dr. —. As we filed out of the bushes upon the ice, one after another, ten in all, the Doctor looked amazed, and as the tenth man emerged from the bushes the Doctor exclaimed, "Good Lord! are there any more of you in there?" When we assured him that there were no more, he seemed relieved, though I noticed a deep shadow seemed to rest on that man's hopes, until the winds were unbottled and swept "The Summit" like a hurricane, which dispersed the Doctor's hopes altogether, and even the Doctor himself, for soon he and his party vanished out of sight for that day.

The plucky Chatham boys determined to weather the storm, meantime hoping that its fury might abate, and bring some luck. Ken watched the signs and published weather reports. When there was a little lull he would report favorably, and our hopes would revive, only to be dashed away the next moment by a fresh gale.

During the short pauses the winds were only gathering up their strength for a fiercer blow. The air was snow, not ether, and in its tremendous rush it cut our ears and blinded our eyes and stopped our mouths. Our lines were frozen to wires, and would have taken as many fish, if they had been crows, with crumpling hooks attached. The gale picked up the lid of a tin pail, and it spun along upon the ice like a runaway top, with a man after it, which he did not recover till it reached the shore, almost a mile away. We constructed as best we could a bough-house, and behind it we all sat, with a few glowing embers at our feet, disconsolate enough, with our coat collars up about our ears.

For a long time we sat there, listening to the sighing of the winds. Not a word was spoken, when one of the party broke the silence by asking Ken when the sign would be right again. Such a shout of laughter as burst forth from those throats was never heard upon "The Summit." It resounded above the storm. If ever the gloom of nature was relieved by a good, hearty laugh it was then. The joke stuck to Ken. It got about in the village, and ever since, on the street and in the store, the interrogation is frequently heard: "Ken, when will the sign be right again?" But Ken is a good-natured fellow, and his faith in signs remains unshaken by the winds.

Another episode behind the hemlock boughs: It was almost night. Not a fin had been taken. Talt, who was of the company, and who is also a good fisherman, being seized with a sudden fit of homesickness, we should have had one fish, anyway. So he baited a small hook, cleared a hole in the ice, and settled himself down to business. A nibble, a twitch of the wrist, and the fish was safely landed. Talt leaped, danced, shouted, and all laughed at the antics he cut up. He could not have been happier if he had caught all the fish in the lake, instead of a four-ounce perch. He stood up, satisfied so did we all, and trudged away to the station to take the next train home.

It was dark when we arrived at Chatham. The day had been pleasant there, and our fellow-townsmen, who felt enough interested to go to the depot, were awaiting our arrival with their little speeches of congratulation all ready. I alighted from the train on the platform, and soon found myself the focus of many inquisitive eyes and the subject of all sorts of questions and cross-questions. I was greatly embarrassed, and turned to my comrades for relief, when lo! every one of them had left the train on the opposite side from the depot, and had gone across lots home. So now we

have a sign that never fails: If a fisherman leaves the cars on the depot side, good luck; if on the other side, bad luck. And with us the question is not "Did you catch anything?" but "On which side of the train did you get off?" The next day we balanced accounts with the following result:—

Costs.—Fare for ten persons to Lake Richmond and return. \$14 00
Time (one day each, at \$2 per day). 20 00
Total. \$34 00
Gains.—One four-ounce perch. \$13 00

HIX.

The only trouble with the astrological genius of "Hix's" story is that he is by several centuries out of his place in history. He should have lived and fished in the days of the Roman Empire, the times of augurs and auspices, when the citizens of the City of the Seven Hills feared to appear in public, to eat their dinners, or even to bathe, without having first carefully consulted the almanac to ascertain the position of the planet Mercury, or how far the moon was from the Crab.

Natural History.

LETTERS ON THE SPARROWS.

SMITHSONIAN INSTITUTION,
WASHINGTON, D. C., March 29th.

Editor Forest and Stream:—

At an early period in the sparrow controversy I ventured to play the dangerous part of prophet to the extent of predicting that the time would soon come when it would be found advisable to offer a reward for killing the obnoxious birds.

The following paragraph appeared in the Washington Evening Star of March 24th. I do not know the author, nor the circumstances of the case, and therefore cannot be suspected of having anything to do with fulfilling my own prediction:—

"War on the Sparrows."—English sparrows are becoming a great nuisance, and citizens are complaining of them greatly. They drive all the singing birds away that feed upon the fruit-destroying worms and insects, and feed themselves upon the very fruit buds that the other birds protect. While the ground was covered with snow a short time ago one gentleman living in the First Ward had five choice pear trees stripped of their buds by these birds. The boys will be delighted to know that the Alexandria (Va.) Game Protective Association, with a view to thinning out the breed, has offered a reward of \$1.50 per hundred for the heads of the birds complained of.—Gazette.

Allow me to add that every position I have taken and maintained during this controversy has been fully established. With regards, yours truly, ELLIOTT COUES.

Which can we best dispense with, our delicious fruits or the English sparrows? It must be one or the other. Owners of fruit trees in this locality are beginning to have their eyes opened by the depredations of *Passer domesticus*, and there's "blood on the face of the moon" that forbodes ill for the prolific imported nuisance. The action of the Alexandria Game Protective Association, which has offered a reward of \$1.50 per hundred for the heads of the birds, is the first step in the right direction that has come to my notice, and no doubt will be good news for a majority of your readers.

If the horticultural and agricultural societies—whose interests appear to me to be more directly affected than the sportsman's—throughout the States infested by the sparrow can be induced to put a premium on the heads of the birds, as the Alexandria Game Protective Association has done, great good will be accomplished in a short time. Of course, in localities where the bird is protected by law, hostilities cannot commence till the law is changed.

I have another, though similar, plan to suggest, which I think will work admirably. It is that in towns or counties several prizes be offered to the boys. First prize to boy bringing in the greatest number of heads in a stated period; second prize to next largest number, etc. Nearly every boy is familiar with devices for capturing small birds, and they would enter the contest spiritedly.

Now that the ball is started in earnest, let it be kept going till *Passer domesticus* shall indeed be a *rara avis*.
Washington, D. C., March 27th. W. F. R.

As an instance of the value which is placed upon the English sparrow in Germany, where it is most plentiful, I quote from a report by a prominent official of Saxony, Herr von Langsdorff. He says: "A scientific investigation of numerous sparrows' stomachs has shown that those pbeleians of the feathered tribe live exclusively on grain during a time of eight or nine months; not to enlarge upon the further fact that the sparrows by their raids on seeds and growing vegetables, cherries, grapes, ripening grain, etc., frequently cause considerable damage." The Board of Agriculture for the Kingdom of Saxony requested Government to abolish the laws protecting sparrows.

A high scientific authority, A. E. Brehm, who formerly had defended the sparrow as a bird rather useful than otherwise, has changed his opinion lately upon convincing evidence, and now declares that "this parasite, which lives at the expense of man, does not deserve protection."

Other writers state the sparrow is driving away the most useful birds, and place the damage caused by a pair at from fifty to seventy-five cents annually.

It will be seen from the opinions quoted, that "the innocent little fellow" (see FOREST AND STREAM, p. 105) is looked upon as a little pest by the Germans, and, from my personal knowledge, I cannot but share that opinion.

RICHARD W. (Texas.)

SMITHSONIAN INSTITUTION,
WASHINGTON, D. C., April 2d.

Editor Forest and Stream:—

A private letter, recently addressed to me by Sir Ferdinand von Mueller, K. C. M. G., the Government Botanist at Victoria, Australia, shows that the European sparrow is regarded with as little favor there as here, by those competent to judge. The publication of the communication may interest your readers, and be of use in showing that the sparrow becomes a pest wherever introduced. The history of the nuisance in this country repeats itself in every quarter of the globe. Says the Baron:—

It may be of some interest to you, dear Dr. Coues, to learn what my Australian experiences are, regarding the introduction of the *Passer domesticus*; hence these few lines of a stranger to you. Nothing can be more regretted than the introduction of these intrusive birds into this part of the globe, where it has not to cope with cold winters, where it breeds all the year round, and drives away from our domiciles the native insectivorous birds. One swallow will, I think, do a thousand times more good than a sparrow in destroying insects, though everyone is aware that this bird will carry lots of small grubs to its young in the nest. But that does not compensate for the mischief done to the buds of our trees, the fruits of our gardens, and the harvest of our fields, by the sparrow. Nearly all kinds of orchard fruits are destroyed or damaged through the sparrows preying upon them, more particularly in centers of population, where they are more safe against larger carnivorous birds. I was personally against the introduction of the sparrow into Australia, having noticed that in Denmark and Germany, during my boyhood, agriculturists endeavored to keep down the sparrow; and anticipating the disproportionate multiplication of this irrepressible bird in a climate like ours in the warm, temperate zone, I should regard it a favor if you could inform me of any advisable measures, which, in your part of the world, have been adopted to check the inordinate increase of these birds; and whether the old observation of Bradley is there borne out, according to which a single pair of sparrows will destroy 3,300 grubs in one week while feeding their young? Would you advise to introduce *Colinus borealis* into Australia, with the view of waging war with the sparrow?

With every feeling of respect, I remain, dear Dr. Coues, Yours,

FERD VON MUELLER.

I regret to add, that I shall be obliged to inform the Baron that in this country, in spite of the warnings and protests of those competent to judge, manlin sentiment and pig-headed stupidity have fostered and encouraged instead of exterminating the pests. Your truly,
ELLIOTT COUES.

While standing in the front part of the store the other day, looking across the street, my attention was called to the action of a large rat, which stole out from under the curbstone across the way. Slowly and stealthily he crept along, and I soon saw that his attention was fixed on a flock of English sparrows that were regaling themselves with much vociferation on the sweepings from a restaurant, which had lodged themselves in the gutter. Arriving within leaping distance, the rodent made a sudden spring, seized a fat hen sparrow, and disappeared under the wall. It strikes me that a consummation devoutly to be hoped for has been reached, when vermin prey on vermin.
EDW. M. SCHUCHMART.

Danville, N. Y., March 28d.

Editor Forest and Stream:—

I never have known a question pertaining to the animal kingdom that has perplexed me as that relative to the English sparrows has. I believe in giving the broadest liberty and amplest protection to all the birds of the air and all the beasts of the field, consistent with human affairs. I feel that naturally the *Passer domesticus* is entitled to life, liberty and the pursuit of happiness, but he certainly gives us little in return for care and protection as any living thing. He never sings, never utters a note that is not annoying, is fighting half his time, and when compared with his lovely congener, the song-sparrow, is an unmitigated nuisance. However, in this note I only want to refer to things, not discuss them. With Dr. Coues here in striking distance, so to speak, one has to be very careful how he talks ornithology, and especially how he touches upon the sparrow question.
J. C. B.

The following extract from a letter to Col. Rhodes, of Quebec, takes the other side of the question:—

QUEBEC, Feb. 21st.

MY DEAR COLONEL:—I have given credit to one of the men to keep a sharp lookout, and to shoot the shrike. The poor sparrows had a rough time of it during the last cold snap. We picked up several frozen stiff and stark. However, the flock that frequents this part of the city has increased greatly in numbers during the last two years. I put up a house for them outside my window some years ago, but the swallows drove them away from it every summer, and took possession, and now they won't come near it. I always thought a sparrow could lick any bird of its own weight until I saw the masterly manner they were handled by the swallows.
A. H.

FALCO SACER NEAR MONTREAL.—Editor Forest and Stream:—I have three specimens of *Falco sacer* which were brought into our market at Montreal, and must undoubtedly have been killed within a few miles of the city. These specimens are very fine and are of both sexes. The habitat who sold me the specimens had not himself killed the birds, but had purchased them along with some wild ducks from another party.

A typical *F. sacer* (determined by Mr. Robert Ridgeway from a photograph sent to him) was also killed by Mr. E. O. Damon, of Northampton, Mass., in the early part of February last, 1890. According to this gentleman the bird sat or perched very erect, and when alarmed "drooped like a heron" and shot its wings in this slumping. It is my belief that this species is less rare than is generally supposed. The resemblance between the *F. sacer* and the race designated *F. labradorus* is very close; but in the case of the latter, *F. obsoletus*, is the name under which the first specimen procured was described and which consequently should henceforth be recognized.
Montreal, March 21st. H. G. V.

See in this connection FOREST AND STREAM, Vol. xiv., No. 3, p. 44.

NEW TESTIMONY ON THE MINK QUESTION.—Your correspondent's yarn about a mink remaining ten hours under water reminds me of a tale I heard on board ship. A Cape Cod fisherman, with his wife and boy, were out in the boat one day, when the old man and woman disagreed about something. The old fellow, enraged at her abuse, struck at her with his oar; in endeavoring to avoid the blow, she fell overboard. The fisherman, now thoroughly alarmed, called to the boy to catch hold of her when she came up; but after waiting a short time, she didn't make her appearance.

"Dern her obstinate pacter!" said the old man, "she won't come up if she thinks we are waiting for her; let's row away a spell."

"Wall," said the boy, "her'll have to come up to blow before long, any way."

PERLGRINE.

Fish Culture.

FISH AS FOOD.

BY PROF. W. O. ATWATER, OF WESLEYAN UNIVERSITY, MIDDLETOWN, CONN.

Mr. President and Gentlemen of the American Fish Cultural Association:—

The subject to which your attention is invited this morning is the study of the food values of some of our different sorts of fish, as shown by chemical analysis. The field of investigation is comparatively new, and, as respects American fishes, hitherto almost untrodden. It is, nevertheless, important.

At the instance of Prof. Baird, Secretary of the Smithsonian Institution and United States Fish Commissioner through whose interest in the matter an appropriation for the purpose has been secured, I have been engaged, with my assistants, for some time past in the analysis of samples of the more common food fishes. From a preliminary report of this work, soon to appear, the following figures are taken. Before giving the results, however, permit me a few words by way of introduction.

Fish constitute one of our most valuable sources of nourishment. They live upon matter dissolved or suspended in the water or found on the bottom of streams, lakes and the ocean, and thus gather for us nutritive material, which without them we could not have. And since cheap and wholesome food is fundamental to the material prosperity, culture and even the morality of a people, it follows that fish culture may be under an important factor of our national welfare.

I deem myself particularly fortunate in the opportunity of presenting this topic to an Association which has done, and is doing, so much to further the good cause of fish culture.

THE TASTE OF FISH.

I think is a thing that advances with the advance of civilization. The tastes of different civilizations vary, however. We read of Roman nobles who were in the way of paying twenty-five hundred sestercies (one hundred dollars) for a single lamprey, and twelve thousand and even twenty-five thousand sestercies for a six-pound mullet, and considered only the lives and gills of these fish fit to set before an emperor. We are told that they sent slaves to foreign lands to fish; that the fish were taken for breeding them at home; that they fed them with veal soaked in human blood, and even with the flesh of slaves sacrificed for the purpose. But this was part of an imperial shoddiness that would devote four hundred thousand sestercies to a single banquet whose guests were content with gross cooking and grosser accompaniments if they could be regaled with peacocks' brains and singing birds' tongues.

The fish of the present time are the members of this Association would be served with less splendor and more wholesome sauce. We of to-day ask for palatable and nutritious food, and, with the increasing culture of our palates and consequent call for variety, we demand more and more kinds, and larger and larger quantities of fish.

THE FLESH OF FISH.

The flesh of fish does not differ essentially from that of mammals. To the epicure it is more dainty, while the poor man can purchase nutritive materials in dried and salt fish for only a fraction of their cost in ordinary meats.

In general, fish has somewhat more water and less solids than the beef, pork, mutton and other common meats. Like the latter, the fatter it is the less water it contains. The amount of fat in the flesh of different species of fish, and in the same fish at different times, varies widely. Cod, bass and bluefish have usually but little fat, while the flesh of eels, shad, trout and salmon, in their season, is very fat. With the leaner fish we use butter or oil to supply the deficiency of fat.

For the best apprehension of our subject, it will be well to devote a few minutes to

THE CHEMISTRY OF FOODS.

We eat meat and fish, milk and bread, to build up our bodies, to repair their wastes, to supply heat to keep our reservoirs warm, and strength with which to work. This is

The common way of putting it. Speaking as chemists and physiologists, we should say that our food supplies, beside mineral substances, are water, albuminoids, carbohydrates and fats, whose functions are to be transformed into the tissues and fluids of the body, muscle and tendon, blood and bone, and by their consumption to produce heat and force. That we may fix more clearly in our minds the nature and functions of the food materials, allow me to call your attention to the table before you, in which I have tried to condense some of the more important facts respecting foods and nutrition.—

NUTRIENTS OF FOODS.

ALBUMINOIDS, CARBOHYDRATES AND FATS.

- ALBUMINOIDS OR PROTEIN COMPOUNDS.
- NITROGENOUS.
- Contain Carbon, Oxygen, Hydrogen, and Nitrogen.
- In Plants.—ALBUMIN: CASHEW; e.g., in gluten of wheat.
- In Animal Body.—ALBUMIN: e.g., in blood serum and white of eggs.
- Albumin:—e.g., in muscle (lean meat).
- In Milk.—ALBUMIN: CASHEW (curd).
- CARBOHYDRATES.
- NON-NITROGENOUS.
- Consist of Carbon, Oxygen, and Hydrogen.
- In Plants.—SUGAR AND CELLULOSE (in woody fiber).
- In Animal Body.—ISOTHERM (in woody fiber).
- In Milk.—MILK SUGAR.
- FATS.
- NON-NITROGENOUS.
- Consist of Carbon, Oxygen, and Hydrogen.
- In Plants.—VEGETABLE FATS AND OILS; e.g., linseed oil, olive oil.
- In Animal Body.—FATS; e.g., fat meat, tallow, lard, etc.
- In Milk.—MILK BUTTER.

FUNCTIONS OF FOOD INGREDIENTS IN NUTRITION.

NUTRIENTS OF FOODS are transformed into **OFFICES IN BODY.**

ALBUMINOIDS are transformed into **ALBUMINOIDS**, e.g., in muscle, gelatin, and casein of milk.

CARBOHYDRATES are transformed into **FATS**, e.g., fat meat and fat (butter) for fuel.

CARBOHYDRATES are transformed into **FATS**, e.g., fat meat and fat (butter) for fuel.

FATS are transformed into **FATS**, e.g., fat meat and fat (butter) for fuel.

ALL contribute to the production of **MUSCULAR FORCE** (7).

This schedule seems somewhat complicated at first sight, as well it may, when we consider the amount of painstaking and costly scientific investigation, some of whose main results it attempts to summarize.

If the time and place permitted, I should be glad to tell you something of the ways in which the facts, as far as we know them, have been found out; of the thousands of chemical analyses of vegetable and animal substances that constitute our foods and the tissues and fluids of our bodies; of the force produced by them; of the men that have been devoted to the experimental study of the ways in which the food is used, the body built up, and its tissues consumed again; of the wonderfully complicated and yet beautifully simple instruments and operations by whose aid the utmost ingenuity of science has sought to discover the subtle processes by which the chemical substances go on in the body and flesh and fat are stored and heat and force produced. Should it to say, that the research of the past fifteen years, especially, has taught us much of the fundamental principles of nutrition, though we are still in the dark as to many of the details, as the interrogation point after the last word in the schedule implies. So let us return to our subject—the nutrients of our foods and their functions in nutrition.

Leaving out, in account, the water and mineral substances which, though essential to nutrition, are not to our present purpose, we have three classes of nutrients in our foods—albuminoids, carbohydrates and fats.

ALBUMINOIDS, PROTOPLASMS.

A child's portion of a dozen years ago, many earnest-minded people on both sides of the Atlantic were startled by an address from Prof. Huxley, on "A Physical Basis of Life." This "formal basis of life," this soulless substance in which vital phenomena were centered while vitality, as a force, was excluded, was protoplasm, a material containing "the four elements, carbon, hydrogen, oxygen and nitrogen, in very complex union. . . . To this complex combination the name protein has been applied, and if we use this term with such caution as may properly arise out of our comparative ignorance of the things for which it stands, it may be truly said that all protoplasm is proteinaceous, or, as the white or albumen of an egg is one of the commonest examples of a nearly pure protein matter, we may say that all living matter is more or less protoplasmic.

As the schedule indicates, we have albuminoids in plants, as in the gluten of wheat; and in the animal body, as in the fibrinogen and fibrinoplastic substances of blood, in the fibrin of muscle, in eggalbumin (white of eggs), and in the casein (curd) of milk.

The albuminoids are the most important of the nutrients of foods. Not only do they share in the formation of the fatty acids in the supply of material for the production of animal heat and muscular power, thus performing all of the functions of the other food ingredients in the body; but they also have a work of their own in the building up of the nitrogenous tissues, muscles, tendons, cartilage, etc., in which none of the other ingredients can share.

THE CARBOHYDRATES.

of which we have familiar examples in sugar, starch and cellulose, differ from the albuminoids in that they have no nitrogen. They have, according to the best experimental evidence, no share in the formation of nitrogenous tissues in the body. It is hardly probable that they are transferred into fats to any considerable extent; their chief use seems to be to supply fuel for the production of animal heat, and very probably of muscular power. They are very important constituents of foods, but much less so than the albuminoids and fats. They occur in only minute proportion in meats, fish and like animal foods. We are well acquainted with

THE FATS.

as they occur in vegetable fats and oils, like linseed and olive oils, in fat meat, tallow and lard, and in butter,

TABLE I.

ANALYSIS OF FISH. INGREDIENTS OF FLESH AND OF WHOLE OR DRESSED FISH AS TAKEN FOR ANALYSIS.

Kind of Fish and Part Taken For Analysis.	FLESH—EDIBLE PORTION.					WHOLE OR DRESSED FISH.				
	Water.	Solids.	Albuminoids (protein).	Fats.	Inedible parts (Nutrients).	Water.	Solids.	Albuminoids (protein).	Fats.	Inedible parts (Nutrients).
1 Flounders—Entrails removed.	83.85	17.15	15.24	0.62	1.29	68.51	4.47	6.33	0.30	0.53
2 Halibut—Posterior portion of body.	79.26	20.74	17.06	1.15	1.10	72.31	27.69	12.14	1.63	1.05
3 Halibut—Section of body.	79.26	20.74	17.06	1.15	1.10	72.31	27.69	12.14	1.63	1.05
4 Cod—Head and entrails removed.	83.85	17.15	15.24	0.62	1.29	33.40	66.60	9.97	1.18	0.88
5 Cod—Head and entrails removed.	83.85	17.15	15.24	0.62	1.29	33.40	66.60	9.97	1.18	0.88
6 Eels—Skin, head and entrails removed.	80.41	19.59	15.90	0.91	1.24	61.61	38.39	10.76	1.27	1.19
7 Alewives—Whole.	73.70	26.30	18.90	3.94	1.46	50.45	49.55	37.51	3.97	1.35
8 Walleye—Whole (Hudson River, that of season).	69.34	30.66	18.50	1.71	1.30	51.58	48.42	35.67	3.23	1.44
9 Shad—Whole (Connecticut River, that of season).	64.34	35.66	14.35	4.43	47.37	61.61	38.39	10.76	1.27	1.19

11 Striped bass—Entrails, head, skin, etc. removed.	79.61	20.39	16.32	1.37	1.37	57.49	42.51	9.01	1.15	0.58
12 Mackerel—Whole.	77.22	22.78	19.05	1.85	0.66	59.18	40.82	11.41	1.23	0.75
13 Mackerel—Whole.	77.22	22.78	19.05	1.85	0.66	59.18	40.82	11.41	1.23	0.75
14 Bluefish—Entrails removed (Maine).	66.41	33.59	17.42	1.25	1.27	49.69	50.31	37.51	3.97	1.35
15 Porage—Whole.	79.69	20.31	17.43	1.46	1.40	61.61	38.39	10.76	1.27	1.19
16 Halibut—Entrails removed.	80.63	19.37	15.03	0.18	1.16	72.73	27.27	8.24	0.68	0.51
17 Lake Trout—Entrails, head, skin, etc. removed.	68.69	31.31	17.23	2.35	56.04	59.97	40.03	47.53	3.99	1.35
20 Brook Trout—Entrails, head, skin, etc. removed.	75.76	24.24	19.02	0.32	1.36	50.51	49.49	33.51	1.42	0.41
21 Whitefish—Entrails, head, skin, etc. removed.	69.66	30.34	21.06	7.11	1.61	64.23	35.77	8.92	3.23	0.71
22 Red snapper—Entrails, head, skin, etc. removed.	75.45	24.55	18.40	0.67	1.45	60.46	39.54	9.87	0.39	0.59

The fats, like the carbohydrates, are destitute of nitrogen. The fats of the food we eat are stored in the body as fats, transformed into carbohydrates, and serve for fuel, but do not form nitrogenous tissue. They are more valuable than the carbohydrates, because they are richer in carbon and hydrogen, the elements which give value to fuel, and because they supply the body with fat.

The albuminoids are often spoken of as the "flesh formers," and the carbohydrates and fats as "respiratory" substances. It was formerly believed, too, that the albuminoids alone can be transformed into the nitrogenous tissues of the body. The functions of respiration and production of muscular energy are in all probability shared by all the nutrients.

To resume briefly—asking your pardon for the repetition—the albuminoids, the nitrogenous constituents of foods (albumen, fibrin, etc.), which make the lean meat, the muscle, the connective tissues, skin, and so on, are the most important of the nutrients. Next in importance come the fats, and last, the carbohydrates—sugar, starch and the like. One reason of the inferior position of the carbohydrates is the fact that they have no nitrogen. The albuminoids can do their own work and all the work of the carbohydrates and fats as well, while these latter can only do their own. With lean meat alone, we might make a shift to get on for a good while, but with carbohydrates and fats alone we should speedily starve.

Now, the flesh of fish, like other animal foods, consists mainly of albuminoids, but has more or less of fats, and contains very little of the carbohydrates. Vegetable foods, on the other hand, consist largely of carbohydrates and contain less of the albuminoids and fats. Science and experience unite in testifying that a proper combination of all makes the most wholesome, as we know it gives the most agreeable diet.

Let us, then, note some of the main facts concerning THE CHEMICAL COMPOSITION OF FISH.

Table I, herewith gives the results of a number of analyses as samples of fish, some supplied through the courtesies of Mr. E. G. Blackford, of your Association, and some purchased at the fish markets in Middletown, Conn., where the analyses were made. Some of the samples were entire fish, others had been dressed. All were taken as they are ordinarily sold in the markets. Each sample on its receipt at the laboratory was weighed, then the flesh (the edible portion) was separated as carefully as practicable from the skin, bones, entrails, etc., weighed and prepared for analysis.

The figures in the table show, first, the composition of the flesh (the edible portion). From this sample, entrails, etc.; and second, the calculated composition of the whole fish—that is, of the whole sample as received, including, in some cases, the entire fish, and in others, the dressed fish.

Taking the flesh (the edible portion), one of the first points that strikes us in looking down the rather curious columns of figures, is the difference in the amounts of water in the different samples.

In one hundred pounds of flesh of cod we have eighty-three of water, and only seventeen of solids, while the flesh of the salmon contains only 66½ per cent. of water and 33½ per cent. of solids. That is to say, about one-sixth of the flesh of cod and one-third of that of salmon consisted of solids, actual nutritive substances, the rest being water. The figures for some of the samples are—

In Flesh of—	Water, per cent.	Solids, per cent.
Flounder	82.6	17.4
Cod	83.1	16.9
Cod, fat	77.4	22.6
Striped bass	78.7	21.3
Striped bass	79.0	21.0
Bute fish	79.0	21.0
Halibut (lean)	79.4	20.6
Halibut	69.3	30.7
Mackerel	77.2	22.8
Mackerel	74.2	25.8
Shad	69.3	30.7
Shad	64.6	35.4
Eels (salt water)	70.4	29.6
Whitefish	69.6	30.4
Brook Trout	75.8	24.2
Lake Trout	68.7	31.3
Salmon	66.4	33.6

A good quality of beef, lean meat, free from bone, contains about 75 per cent. water and 25 per cent. solids, while the fat beef may have as low as 55 per cent. of water. The fish are, on the whole, rather more watery than beef. Still the difference is not very great.

One of the samples, I confess, has disappointed me. With an enthusiastic sportsman's appreciation of both the game qualities and the flavor of the speckled trout, I had looked for a higher percentage of solids in the flesh of that most respected fish. The sample stands well, to be sure, but not at the top of the list. But I take consolation in the fact that this is only a single analysis, and perhaps future results will show that it is below the average. The sample was a cultivated trout, and until we are assured to the contrary, we can assume that in his native streams he would have as solid flesh as his only superior in the sportsman's eyes, the salmon.

If now we consider not simply the flesh, the edible portion, but whole sample, as sold in the markets, either in the entire fish, or that which is left after it is dressed, we have, of course, different figures, just as the percentage of edible solids in a roast of beef would be less than in the meat without the bone.

Looking down the last column of Table I, we find that the sample of flounder contained 7.1 per cent. of edible solids; cod, 10.7; mackerel, 11.6; halibut, 10.6; lean, 15.6; of halibut, fatter, 27.2; of shad, 14.3; of cod, 18.7; of lake trout, 13.6; of salmon, 25.6. I ought to say that these figures are based upon our separations, in the laboratory, of the fresh, uncooked fish. It is not as easy to get the flesh off clean from the bones in this way, as it is after the fish has been cooked. So in the very bony fish more of the flesh went to waste than would be the case at the table, or at an economical household. Such fish therefore appear at some disadvantage in the figures above. I should add that many of the details of the analyses, such as the percentage of so-called "extractive matters," albumen, gelatin, phosphorus, sulphur and other ingredients are omitted from the table. Some of them, however, are very important. We all know what a useful article of commerce is "Liebig's Meat Extract," which is prepared from the flesh of cattle slaughtered in South America and Texas. Fish can furnish an extract of equal value in every way. There is a fortune for somebody, I mistrust, in the extract from menhaden.

Leaving, for the present, the further examination of the table, allow me a few words concerning

THE NUTRITIVE VALUES OF FOODS.

This subject has of late begun to attract very general attention. The chemico-physiological research of the past two decades has brought us where we can judge with a considerable degree of accuracy, from the chemical composition of a food material, what its value, as compared with other foods, for nourishment. The bulk of the best late investigation of this subject has been made in Germany, where chemists and physiologists have already got so far as to feel themselves warranted in computing the nutritive values of foods and arranging them in tables which are coming into popular use.

The valuations are based upon the amounts of albuminoids, carbohydrates and fats.

TABLE II.		Ingredients.		Nutritive value (calculated upon the basis of 100 parts of food material).
COMPOSITION AND VALUATION		Water.	Albuminoids, Protein.	
of				
ANIMAL FOODS.				
(Flesh free from bone.)				
MEAT.				
Beef, lean.	75.71	18.61	1.50	1.18 91.3
Beef, medium.	73.23	21.33	5.19	1.17 104.0
Beef, fat.	71.76	16.93	27.31	1.18 142.0
Veal, fat.	71.31	18.88	7.41	0.7 123.42
Mutton, medium.	74.46	15.11	5.77	1.36 97.6
Pork, fat.	71.40	14.57	31.1	0.72 116.0
Chicken, very fat.	72.63	10.15	15.35	1.09 146.6
Smoked ham.	74.35	27.74	1.60	1.07 175.0
GAME, FOWL, ETC.				
Venison.	75.76	19.77	1.92	1.42 118.88
Hen.	70.63	19.84	9.48	0.91 91.0
Duck.	70.82	22.65	3.12	1.06 101.0
MILK, EGGS, ETC.				
Cows' milk.	87.41	3.41	3.69	0.70 22.8
Cows' milk, skinned.	86.63	3.04	0.79	0.77 18.1
Cows' milk, cream.	61.11	3.70	35.73	0.63 165.1
Butter.	82.69	1.80	80.48	0.51 142.0
Cheese, skinned milk.	48.32	26.58	8.41	0.84 151.0
Cheese, fat.	48.32	26.58	51.17	0.40 151.0
Cheese, very fat.	48.32	26.58	80.48	0.51 142.0
Hens' eggs.	73.67	12.55	11.03	1.12 72.2
FISH.				
Flounder.	82.85	15.24	0.62	1.29 65.0
Halibut.	74.31	18.29	6.38	1.12 68.0
Cod.	83.76	16.24	0.94	1.15 68.0
Eels.	70.41	29.59	1.92	1.18 68.0
Shad.	69.34	30.66	1.71	1.30 68.0
Striped bass.	78.17	21.83	0.97	1.14 73.0
Mackerel.	77.22	22.78	1.85	0.66 68.0
Bluefish.	78.16	21.84	1.92	1.18 68.0
Halibut.	74.31	18.29	6.38	1.12 68.0
Lake Trout.	68.69	31.31	7.23	2.35 68.0
Whitefish.	69.66	30.34	21.06	7.11 68.0
Red snapper.	75.45	24.55	18.40	0.67 68.0
SALT, CURED FISH.				
Salt Cured.	48.32	26.58	0.46	0.38 167.0
Dried Cod.	66.16	33.84	7.80	2.58 156.36
Smoked Herring.	60.42	39.58	1.2	8.51 124.04

From one by Dr. König, who has given more attention to this especial subject than anybody else, I cite a number of analyses and valuations of meat, milk, etc., and add corresponding computations for some of the samples of fish reported above. (See Table II.) The analyses of

cured fish, however, are from Dr. König, our work having extended, as yet, only to fresh fish. This table will help us to a very fair idea of the comparative composition of some of our more common animal foods. The percentages refer to the fresh substance, except as when especially stated as "dried," "smoked," etc. In the meats and fish the bones are excluded, the calculations referring only to the edible portions. The "extractive matters" are essentially the carbohydrates, which in the fish are of little moment, and omitted in both cases. They are not to be confused with the "extract" referred to above, which includes nitrogenous and mineral substances also.

Looking down the first column we see that while medium beef contains 72 per cent. of water, milk contains 87½ per cent. Roughly speaking, beefsteak is about three-fourths, and milk seven-eighths, water. A pound of beefsteak would thus contain four ounces of solids, and, if we assume a pint of milk to weigh a pound, a quart would contain four ounces of solids also; that is, a pound of steak and a quart of milk contain about the same weight of actual nutrients. But we know that for ordinary use the pound of beefsteak is worth more for food than the quart of milk. The reason is simple. The solids of the lean steak are nearly all albuminoid, while those of the milk consist largely of fats and milk sugar, a carbohydrate.

The figures in the table are, I think, worth looking through with some care. Remembering that those for meat and fish apply to only the edible portion, let me call your attention, first, to the varying proportions of albuminoids and fats in the second and third columns. On the whole you will notice that the fish average about the same percentages of albuminoids as the meats, but have rather less fats.

RELATIVE NUTRITIVE VALUES OF THE ANIMAL FOODS.

The figures in the last column are intended to show how the foods compare in nutritive value, "medium beef" being taken as the standard. They are computed by ascribing certain values to the albuminoids and fats and taking the sum in each case for the value of that particular food. The ratio here adopted, which assumes one pound of albuminoids to be equal to three pounds of fats, is that assumed by prominent German chemists. Taking medium beef at 100, the same weight of milk comes to 23.8; butter, 124; mutton, medium, 86.6; fat pork, 116; smoked beef, 140, and so on. The different samples of fish run from flounders, 65; cod, 68; shark, 99; whitefish, 110; salmon, 104, while dried cod leads the list at 848.

These figures differ widely from the market values. But we pay for our foods according to not their value for nourishing our bodies, but to their agreeableness to our palates.

CHEAP VERSUS DEAR FOOD.

Taking the samples of fish at their retail prices in the Middletown markets, the total edible solids in striped bass came to about \$2.30 per pound, while in the Connecticut River salmon, whose price—thanks to our Fish Commission—was very low, we bought the nutritive material at four cents per pound. The cost of the nutritive material in one sample of halibut was fifty-seven cents, and in the other \$1.45 per pound, though both were bought in the same place at the same price, fifteen cents per pound, gross weight.

It makes very little difference to the man with five thousand dollars a year whether he pays twenty-five cents or five dollars a pound for the albuminoids of his food, but it does make a difference to the housewife, whose family must live on five hundred dollars a year. And a little definite knowledge of this sort will be of material help to her in furnishing her table economically.

The cookbooks and newspapers have occasionally something to say upon these points, but their statements are apt to be as vague and wild as in the lack of authoritative information they might be expected to give.

Of course the nutritive values above given are only approximate, since they are made with very imperfect knowledge of either the digestibility of the foods or the influence of palatability and other factors upon their nutritive value, and also because they are based upon very few analyses. But it is certain that we need to know more about these things, and that such investigations, as I have been telling you about, may help us toward that knowledge.

Before closing I ought perhaps to refer briefly to the very widespread but unfounded notion, that fish is particularly valuable for brain food, because of its large contents of phosphorus. Suffice it to say, that there is no evidence as yet (though we hope to have more data before long) to prove that the flesh of fish is especially richer in phosphorus than other meats, and that, even if it were so, there is no proof that it would be of that account more valuable for brain food. The questions of the nourishment of the brain and the sources of intellectual energy, are too abstruse for speedy solution in the present condition of our knowledge.

In conclusion I have to say, that I should be very sorry to be understood as implying that the facts I have given you exhaust, or even begin to cover the subject we have been considering. They are only the very feeble and imperfect beginnings of a kind of investigation, which, if sufficiently encouraged and rightly carried on, may lead after bring knowledge of the greatest value. And, let me add, that while scientific research does so much to promote our material welfare, its highest value is in what it does for the culture of our minds.

NEW FACTS REGARDING CALIFORNIA SALMON.

Through the courtesy of Prof. Spencer F. Baird, we have received the following interesting correspondence, which details certain facts regarding the habits of the California salmon, not generally known:—

LOWER SODA SPRINGS, Shasta Co., Cal., March 31. Prof. Spencer F. Baird, United States Commissioner Fish and Fisheries.

DEAR SIR: Since my last letter to you, Mr. Geo. Campbell has been, by accident, what we consider a wonderful discovery in the way of young salmon.

Mr. Campbell has a fish-pond stocked with trout, and he was engaged hauling gravel from the Sacramento River to put into his runway for his trout to deposit their spawn in. In shoveling up the gravel in the shallow

water, he discovered a great quantity of young salmon; many of them were deposited two feet deep in the gravel. After making the discovery, Mr. Campbell devised a plan to procure a large quantity of the young salmon by using fine wire tacked to strips of wood. One man would place the wire sieve below the spawning beds, and one man, with a shovel, would scoop up the gravel, when the young salmon would wash down against the screen, and in that way he caught about thirteen thousand, which he has put into his ponds. The young salmon are more than one inch long. Occasionally he would find a half dozen or more that were dead, owing, I suppose, to the compactness of the gravel, so they could not extricate themselves. The salmon spawn in the Sacramento River in September. Hence, they have lain there ever since. Mr. Campbell informs me that he has seen young salmon in his ditch, which is led from the river, for the last six weeks. The Sacramento River is very low, and has been during the winter, when I suppose he would find the young salmon still remaining in the spawning-beds.

Mr. Campbell proposes to try an experiment with the young salmon by confining them in his ponds. He tells me that they are very lively, and take their feed with a relish.

I think, from my own observations for more than twenty years, that the most of the young salmon go to the ocean during the spring freshets. However, there are a great many that remain during the summer, but leave in the fall. I have caught a great many during the months of July and August, angling for trout. I am, very truly,

WASHINGTON BAILEY.

CHARLESTOWN, N. H., April 6th.

Prof. Spencer F. Baird, United States Commissioner Fish and Fisheries.

DEAR SIR: Yours of March 30th, inclosing Mr. Bailey's letter about young salmon being found in gravel, is received.

I have long been aware of this habit, which young salmonids have of living in the gravel beds of streams. In fact, they are born there, and, I suppose, remain there for safety. They have surprising muscular power for their size, as you well know, and can work their way through any compact gravel with great facility. It is my opinion that when they are persecuted by larger fish in the river above them, they live and travel long distances, like the Christians in the catacombs, through the honeycombed ground below their enemies, which they find far more easily traversed than is generally supposed. In some instances, of course, they get imprisoned and crushed to death, but I am certain that it is a very tight place that they can't get out of. In some other instances, as they are always heading up streams in the gravel, they get into tight places, having no outlet at the upper end, where they starve because they have no room to turn around and get back again. They are very fearless, however, about venturing into a bank of gravel, and I have often known young trout to work their way through an embankment that you would suppose no living creature could get through.

Mr. Bailey is undoubtedly mistaken in thinking that the salmon fry go to the ocean with the spring freshets. True to the habits of the salmon, they go up stream with a rush of water, and not down stream, very likely availing themselves of the opportunity which the freshet gives them of passing unnoticed by their enemies from their gravelly fastnesses to their summer retreats. At all events, it is certain that they could not do this in low water, but that the chance of safety, for the trout are all the time watching over the gravel beds like cats at a mouse hole. Very truly yours,

LIVINGSTONE STONE.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout, *Salvelinus fontinalis*; Land-locked Salmon, *Salmo oliveri*; Smelts.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Reports, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its season; Boats, Guides, etc.; Name of person to address.

Mr. Geo. E. Call is credited with the capture of a four and a half pound trout in the Nissequague River, Long Island, last Thursday. The fish measured twenty-one inches.

BLACK BASS FISHING IN WEST VIRGINIA.—The Greenbrier River, West Virginia, has been stocked with black bass, and will afford magnificent sport in the coming season. They can be taken at Greenbrier, Roncoveite and Talcott, reached via the Chesapeake and Ohio Railroad; also at New River Falls.

CONNECTICUT.—Two monster trout, weighing respectively three pounds and two pounds and fifteen and a half ounces, were caught in a Putnam pond, near the Rhode Island line, April 6th.

CONNECTICUT—Bridgeport, Conn., April 6th.—Mr. D. Stirling and myself today brought in creel twenty trout; total weight, four and a half pounds; time of fishing, from 8 A.M. to 5 P.M. The last account I sent you was of twelve trout from half a pound down; total weight, three pounds; time, from 11 A.M. to 4 P.M. While dressing trout yesterday we discovered several hundred fine worms about an inch long and size of pins, colored like a fish, in a bunch, near the heart. We have caught many fish, but never saw anything like it before. J. U. S.

CONNECTICUT.—Putnam.—On the 4th inst., Mr. A. F. Sheldon caught three trout which weighed nine pounds, one ounce; they were as large as large cod; he caught them in the saw-mill pond near East Thompson, near Keach's store. They were sent to New York by Mr. Goodhue and were seen in Fulton Market. There are once in a while

some very large trout caught in this pond. They were caught in fifteen feet of water, fishing with worms from the dam. Large trout are often seen there, but few taken. A very large one, said to be four feet long, was seen, but would not bite; also a very large one was hooked, but got away. G. F. W.

NEW JERSEY—Newark, April 12th.—The Essex Fishing Club have elected the following officers: President, Abraham Johnson; Vice-President, Wm. H. Lyle; Secretary, John H. Huegel; Treasurer, David Thompson; Captain, Wm. H. Cleveland. Meetings of the club will be held semi-monthly at their rooms, 326 Bank street.

A BLIND TOMCOD.—John McKay, of Carmansville, N. Y., while fishing for bass off the old Bennett dock, at Fort Washington, last week, caught a little tomcod. On examination the fish was discovered to have no eyes. Yesterday it was dissected by a number of scientific experts, who failed to find any trace whatever of optical organs.

A PATRIOTIC SPORTSMAN.—Eagle's Nest, March 30th.—Editor Forest and Stream:—"I hope I don't intrude," but I do want to say a word to native sportsmen about native industries. There are people who believe no article, and scarcely any animal, is first class without it is imported. I am not one of that class. I have an American shot gun, two American rifles and three American fly-rods, and I defy anyone to produce better of foreign make. I have a fly-book fairly stocked with American flies (made by Abbey & Imbrie, Conroy, Bissell & Malleson), and have just ordered a dozen or so (and a full line) of them from Charles F. Orvis. So you see it is deeds as well as words with me. Why should not we, whose woods and waters cannot in all the world be excelled for game, fowl and fish, and whose annals give proof of sportsmen second to none in the wide world, be able to supply those sportsmen with all the material for use and wear in the field, forest and stream? Why can we not raise our own goods as we can import? I say we can, and a full-blooded native, counting over two centuries back, I mean to stand by native industry as long as I draw sight over a gun-barrel or handle a rod. Yours, in the faith of Walton and woodcraft, NED BUNTLINE.

FISHING IN IRELAND.—The Killarney correspondence of the London *Field* has the following account of an Irish method of fishing, which our correspondent forgot to mention in his entertaining sketch last week: "This gentleman has a novel way of landing his fish, which your readers may not find uninteresting. A gaff he dispenses with altogether, the substitute being a well-trained spaniel, which at a signal from the fisherman plunges into the water and never fails to land his salmon in much less time and a great deal more security than his master could with his gaff, having sometimes to dive to the very bottom of the pool before being able to secure his prey."

The Kennel.

All communications asking advice in regard to the treatment of sick dogs, should reach us before Tuesday of each week to insure a reply in the issue of the following Thursday.

SOMETHING ABOUT BREAKERS AND DOG BREAKING.

THIRD PAPER.

IN this country, where our shooting grounds are for the most part in wild sections, and are either intersected by unbridged streams, or the land is portioned off by sluggish ditches, which, to our cost, we find have no bottom, it is absolutely necessary that both pointer and setter should be broken to retrieve. Unless you have taught your dog to fetch and carry at home, and he has been thoroughly broken to retrieve on both land and water, you will leave many birds behind you entangled in the grass and thickets, and many more just across some unjumpable strips of water. If there is one thing more annoying than another while out shooting, particularly if birds happen to be scarce, it is to make a rattling good shot and then be unable to bag the bird. How frequently do we see our fellow-sportsmen in this sad plight. The bird has fallen in open sight, on the far side of a wide ditch, and during the first five minutes is contemplated with longing eyes. The next five minutes are spent in walking up and down the bank, in unsuccessful attempts to wade across, and scrambling back on the bank again. Five minutes are then employed in pointing the bird out to the dog; twice that time in coaxing him to venture into a step, and intelligently requesting the dog to "Go fetch him, old fellow." If then invariably occupies many minutes more in looking for a log or fence rail. This time consumed for the remaining seconds in the pantomime depends somewhat upon the temperament of the sportsman. Turn where he will, he surely comes back again and again and looks at the bird, in turn, the luckless brute is threatened and cajoled, and the curtain often falls on seeing him take a flying visit into the middle of the pool.

If one would enjoy the perfection of a day's shooting, he must allow no disturbing element to enter into his sport. Dogs that are but carelessly and imperfectly broken, or half broken, are unworthy field companions, as they cannot give the proper satisfaction. A dog that does not retrieve, no matter how perfectly he may be broken in every other respect, is, in our mind, but a half-trained animal. We are well aware that it is a mooted point whether all young dogs should be allowed to retrieve on their first acquaintance with game in the field; but we have never heard one sound reason advanced why they should not be taught to fetch and deliver into your hand anything soft you may occasionally throw for them. Therefore, the next lesson to your dog should be to perfect him in seeking a ball or glove that you may throw

or drop for him and, having him fetch it to you, and then sit up and hold it until, bidden by the command "loose," to drop the article into your hand. Almost all puppies will run a short distance after a ball when rolled along the ground, and discover that to bring it back means to have it thrown again. Commence teaching your puppy to "fetch" by shaking the ball or glove at him, and encouraging him to seize and drop it from you. Then throw it a yard or two farther, gradually increasing the distance, and the moment he delivers it to you give him something palatable. Should he have no inclination to romp or play with the glove, and if you should not be able to persuade him to pick it up between his teeth, cause him to grasp it by tightly pressing his jaws together, speaking all the while impressively to him; scold him if he is obstinate and refuses to take hold of the glove. After a little time retire a few paces, keeping one hand under his mouth to prevent his dropping the glove, while you lead or drag him with the other. When you halt be sure not to take the glove immediately from him; oblige him to continue holding it for at least a minute, lest he should learn to relinquish his grip too soon, before you make him yield to the command "loose," then bestow a reward. Should he drop it before he is ordered to do so, scold him, and repeat the exercise again, until several times before giving him to "loose." He will soon learn to follow with it at your heels.

This is all so readily learned that it is not necessary to dwell longer on it. Make it your endeavor in these lessons to have your puppy look upon the whole proceeding as a game introduced solely for his pleasure, and after he has acquired himself rightly reward him with caresses and pieces of his food. Let it be your aim to leave off at a moment when he has performed entirely to your satisfaction, that you may part friends, and that the last impression made by the lesson may be a pleasing as well as a correct one. Carefully avoid persevering too long a time, lest he become sick and tired of the lesson. Beware of using harsh treatment or compelling your dog at first to hold the ball in his mouth much longer than a minute; later on you can gradually increase the time as you wish. Do not allow him to perform with the ball, acquire bad habits, such as running off with the ball, mouthing it or dropping it near you. Should he do this, walk quietly away, until he learns to come instantly to you and drop the ball into your hand, for, let a dog retrieve ever so carelessly, still while on the move he will rarely drop a ball. Most probably your puppy will be willing to relinquish the ball to you at first; it is therefore well to teach him to fetch it from you, and then to stand he returns. By this you will have proper control over his movements, which will prevent him from turning or dodging away from your hand when extended for the ball. Teaching a dog to sit up is readily done by taking the flaps or chaps in each hand and pressing the dog back upon his haunches, at the same time commanding him to "sit up." Do not let him leave the position until you have taken the glove from him, and then the ball has been delivered into your hand. Do not attempt to pull the ball from his mouth, as he will naturally resist and try to squeeze and bite it, but teach him at the word of command, "loose," to open his mouth wide enough to let the article drop from it. This is done by grasping the nasal bone with one hand, and with the fingers and thumb pressing the flaps sharply against the teeth, as this will force him to open his mouth, which will give you the ball, pressure, saying "loose," and the ball will drop into your other hand. Always repeat the word "loose" while the dog feels the rubbing of his chaps on his teeth, and it will not be long before he will learn to drop whatever he may hold. All hard-mouthed dogs should be handled in this way.

Many dogs, particularly the large, powerful ones, are not hard-mouthed; it is therefore necessary that all dogs should be taught to fetch something soft. It stands to reason that sticks and stones must tend to produce a "hard mouth," and the fetching of these, later in life, may cause him much misery. Some breakers make a young dog fetch a round pin cushion, or a cork ball, in which sharp pointed wires are securely and judiciously buried; nor is it a bad plan, and there need be no cruelty in the law, to make a dog fetch a small ball, and then an excellent article to induce a tender mouth. In time the dog should be accustomed to bring moderately large and heavy, flexible things; this will prepare him for retrieving the large varieties of game when occasion requires. With perseverance you can soon teach your dog to be an excellent retriever, and to carry with a light mouth articles of different sizes. Col. Hutchinson says that he has known a dog fetch a large water bucket, and instructed his spaniel to take up the smallest netting. This performance we do not recommend, of course, but simply mention it to show to what perfection an intelligent animal can be brought. It has been our experience to see, in many years of shooting, but comparatively few well-trained dogs. There is too great an inclination on the part of owners to "away to the merrie green woods" and let the dog be as he will, and the result is the dog's lack of discipline at home. It is the owner's duty that the dog contracts the worst faults. The disposition to let the animal commit the most flagrant errors, provided the one dead or wing-broken bird is secured, is witnessed every day in the field. For the sake of one wretched bird many a fine and stout-hearted dog has been almost ruined, and many a dozen head of game lost in the future. Both poor and good dogs, especially those trained by practical field dogs, are susceptible of being trained to exhibit what nature has already provided them with—a wonderful intelligence. In our opinion, there is not one sporting dog in a hundred that is educated up to his proper standing. Although it is an admitted fact that some dogs, like human beings, are naturally far more gifted than their fellows, yet in our mind the most ordinary brute can be taught to exhibit the qualities that are considered the sufficient requisites of a "first-class dog," that is, to "point" and "fetch."

The educational standard of the sporting dog in America has been placed entirely too low; for he is capable of being by constant and intimate companionship brought to perform many acts in the field that are now narrated as isolated exploits, as being only long to the phenomenon. Dogs are not shown to be as intelligent as they are, and are taught to exhibit in rotation, with absolute certainty, and under the most distracting circumstances, a large number of tricks, many of which are contrary to all the rules of nature, that a well-bred sporting dog can be broken to do more than use his nose, approach his game

without flushing it, and retrieve it in good style? Take, for instance, the trick of walking and jumping on the fore feet. It is, perhaps, the most difficult and wearisome act in the programme. As the back-spring is to the tumbler, so is this to the trick dog, for but one dog out of twenty has the natural balance; and yet there is not a troupe of performing dogs that has not three or four animals that can step off this trick to perfection. We would have the breaker aspire to something higher than to produce a mechanically broken dog. Let his aim be toward intellectual perfection, which he can only accomplish by the establishing of unbounded confidence between himself and his four-legged friend. Make it a study to impress upon your dog that there is a reason for everything he is commanded to do. Thus, in your lessons in retrieving, let him become conversant with every article of your apparel, and with whatever you usually carry about you, so that, should you accidentally drop anything, the observant animal will be almost certain to recover it. Allow him to see you deposit your glove in some place, and send him back for it with the orders, "dead" and "fetch;" also hide the glove where he has been accustomed to find it, and in a variety of ways exercise his intelligence and test his power of scent. Vary your lessons in as many different ways as possible, having him to stop before retrieving the glove, as we described he should at the command "toho," then to "fetch" it, "charge" with it in his mouth without dropping it, and practice him in these orders as you will have to do when you introduce him to the field.

When you are assured that he is perfect in these lessons, and has rehearsed them at various places in your exercise walks, and in the presence of a good steady dog, you may to exercise him in finding boots and beginning working your dog in a spot which is a "sure find" for snipe. Common sense and practice will then decide the fate of your dog; whether bad or good, depends upon yourself. If you handle him carefully, as we have described, he cannot go far wrong. And if you would have a dog to depend upon, and one that will make your holidays both delightful to pass and look back upon, remember that you may have a dog, and that your puppy cannot have too much good, solid work, for it is practice that makes perfect.

THE NEW YORK DOG SHOW.

THE prediction of the managers, as published in last week's issue, has been verified, and the coming show on the 27th, 28th and 29th will be, beyond all question, the largest dog show ever held in either Europe or America. As announced, the entries closed on Monday last, but the mail still continues to bring in a large number of applications. Therefore, it is impossible as yet to form an exact estimate of the number of entries; but we are informed by Superintendent Lincoln that they will reach close upon 1,300. Taking these figures, and comparing them with the results of the previous New York Bench Shows, we find it an increase of about 250 on last year, the exact number of dogs exhibited in 1879 being 953; an advance over 375 in 1878, when 578 were entered, and 325 over the first show in 1877, when the catalogue contained 574 names. Never in the past has there been anywhere such a large number of sporting dogs exhibited as are now booked for the coming show, the pointers and setters alone amounting to over 400. Therefore, it is unnecessary to go further to demonstrate the wonderful interest which is taken in sporting dogs in America than to again compare this year's entries with the last, this time, however, selecting the Birmingham Show—the crack exhibition of England—of last year, when only 160 pointers and setters were shown out of the usual limited entrance of 1,000 dogs. We are not sure that the above does not point out the necessity of yet framing more stringent laws for the protection of game and for the absolute punishment of all offenders of the same.

Since last issue many of the principal kennels in the country have sent in their entries, noticeably that of Mr. A. H. Moore, of Philadelphia, whose twenty entries are said to contain a number of recent improvements. Among his other well-known dogs, Mr. Moore will exhibit the old favorite "Lecky," recently owned by Mr. H. L. Smith, of Strathroy, Ont.; the Irish setters Berkley and Duck, and the little pointer bitch Rose, once the property of Mr. Edmund Orgill. Mr. W. B. Wells, Jr. (Big Point Kennel Club, Chatham, Ont.), sends his champion Irish water spaniel, Mike, which, to our knowledge, is in excellent condition; and his English setter bitch Dido, Druil-Star. Mr. S. Fleet Spier, of New York, has entered his English setter bitch, St. George, the well-known winner of last year, both on bench and in the field, and a host of other dogs from his fine stock. Col. Bradley, also of Brooklyn, will show two magnificent greyhounds, bred by DeWolf, of Manitoba, from stock obtained from the Indians, and originally imported by Gen. Custer. These dogs are lineal descendants of the famous English champion Master Magistrate, and the other two are the property of Mr. J. H. Portman, of Taylor's dog park, and the Toledo Kennel Club's dog Grouse and bitch Bee; these two have never been exhibited here. Mr. Howe, of Brooklyn, has entered his pointer Rex, winner of first last year. Mr. J. H. Whitman, of Chicago, has secured a stall for his English setter bitch Bloss. Mr. M. A. Stearns, of Rochester, sends his English setter bitch Pearl, and Mr. Merrill, of his English setter bitch Grace. The champion Arizona, which arrived here on Tuesday morning, had on board Mr. James Watson, the representative of the London Field. He had under his charge about six dogs in all, including two terrier bitches, one a black and tan and the other an Irish (which, by the way, whelped four fine puppies just as the steamer passed Staten Island), a splendid Gordon setter bitch, the property of Mr. Van Guchem, of Belfast, Ireland, and a remarkably fine bred Scotch collie dog, which was assigned to the owner, Mr. James Lindsay, of Jersey City.

The judges, Mr. Hugh Dalziel—who will represent the *Live Stock Journal* and not the *Field*, as previously stated—and Dr. Stables, sailed yesterday from Liverpool, both having a number of dogs in their care. Sir William Vernon will sail to-morrow on the *Britannia*, from same port, and among the dogs on board will be a fine bull terrier, which is the famous bull-terrier dog, "Largan." Two new special prizes have been offered during the week. Mr. Geo. C. Sterling gives an engraved glass lens-etched set of thirteen pieces, valued at \$25, for the best English setter, native or imported; animals receiving a

V. H. C. to be entitled to compete. Messrs. Thompson & Sons give a fine leather gun-case and an ammunition-compensator for the best English setter, dog or bitch; to be competed for by the winners in the champion and open classes, both native and imported.

DOGS FOR THE NEW YORK SHOW.—Exhibitors will do well to avail themselves of the following hints for marking the boxes or crates in which their dogs are shipped to New York. The address should be as follows:—

Sent by (name) Express Co.
Date
To The Managers of
The New York Dog Show,
Madison Square Garden,
New York.

Feed and water.
Deliver immediately on arrival.

Also put on a return label as follows:—
Return by (name) Express Co.,
To Name of Exhibitor, Address, Feed and water,
Deliver immediately.
To which also sign:—
(Exhibited at New York Dog Show, To be returned free).

OTTO'S PARENTAGE.—*Memphis, Tenn., April 4th.*—*Editor Forest and Stream:*—A recent issue of your paper contains an article headed: "A Gladstone Puppy," and is highly laudatory of said Otto, no doubt deservedly. But only one parent is mentioned—Gladstone, and this note is to say that Otto had a mother, even the mother of Joe, Jr., and of the field-winner, Campbell's Fannie; and grandam of Tom III., winner of the 1878 Nashville Nursery Stake. Buck is also half-sister of field champion Tom, and his full-brother, Night, who won a field championship also at Memphis, Tenn., his mother and sister, Tom and May, winning the brace stake the next year, all native settlers of same strain. Hence I claim Otto got a fair, full share of merit from his unmentioned dam, Buck, Jr., who beat Gladstone, in 1878, for a purse of \$200, at Nashville, as her son Joe did (for the third time) in December, 1879, at Florence, Ala., then for a purse of \$1,000. As it takes a grand dog to beat Gladstone, do not forget Otto had a ma. GUDU.

BREAKING DOGS WITH COLD LEAD.—*Evvington, April 5th.*—*Editor Forest and Stream:*—Appropos of several letters that have recently appeared in your valuable columns on breaking dogs with cold lead, I should like to make a few remarks. To teach a dog he is not to do anything, the punishment ought to be administered while he is in the act; or still better, just as he is about to commit the offense. Shooting a dog, therefore, while in the act of chasing must be correct in principle, but it is dangerous and sometimes cruel, and therefore objectionable. The following plan I would recommend: Put a common twenty-five yard cord round his neck and teach him to "down charge," in doing so let every cut with the whip be accompanied with the word, "down," drill him at this for a few minutes at a time, as often as convenient for a few days, till he immediately drops at the command (also, of course, hold up your hand). After this take him among game, with a steady confidence, and when he would recommence but try and get him to forget that he has on the check-cord. As soon as your steady dog has found game take hold of the cord and watch till your wild friend finds out the fact, upon which immediately call out, "Down!" Ten or so the excitement of the moment will be too much for him, and forgetting all your instructions he will rush forward. Now (never mind your hands), give him such a jerk as will send him head over heels, go up to him and give him a few sharp cuts, not forgetting to use the word, "down" as before. This plan will soon cure him. While on the subject, let me remark that it is useless to punish a dog for chasing after he has committed the offense, except in the case of a trained dog that knows he should not do it. IBEX.

PENNSYLVANIA FOX HUNTING.—The East Marlborough Fox-Hunting Club, with headquarters at Dugdale, Pa., have just completed their organization, and elected the following officers: President, E. G. Cloud; Secretary and Treasurer, Louis Eldridge; Master of Hounds, J. H. Bailey; with a charter membership of sixteen, each of whom contribute to the fund to keep up the club and the company's kennel and furnishing of meat for hounds.

KENNEL NOTES.

IMPORTED DANDIE DINMONT.—In our issue of March 25th we published a notice sent us by a correspondent that Mr. Robert Hume, of Lavistown, Northampton County, Va., had just returned from England, bringing with him a pair of Skye-terriers. Mr. H. writes us that the terriers, dog and bitch are Dandie Dinmonts, not Skyes, and that he will exhibit them at the coming New York show. The dog won in the puppy class in Edinburgh, 1878, and the bitch is said to be equally as fine.

THE TRUFFLE DOG.—Mr. Vern Shaw's serial, "The Illustrated Book of the Dog," contains the following information: The truffle dog is nothing more or less than a dog that has been trained to find truffles, or very rarely, net them with under the designation, truffle dog. Its cultivation is due to the existence of truffles, which it is employed to discover when they are lying in the ground by the help of its acute nose. Any credit, therefore, attained by the truffle dog is certainly due to his better-bred relative the poodle, as the main distinction between the two lies in the former being the leglier dog of the two, and therefore further remarks on the points of the truffle dog would be superfluous.

NAMES CLAIMED.—Nellie Hattick, Mr. Thos. Byth, of Motte, Pa., claims the name of Nellie Hattick for his red Irish setter bitch, by Dirk Hattick out of Tyke, bought of Mr. E. J. Robbins, of Wethersfield, Conn.

Red Dash.—Mr. Ches. Georges, of Hoboken, N. J., claims the name of Red or very rarely, net them with under the designation, truffle dog. Its cultivation is due to the existence of truffles, which it is employed to discover when they are lying in the ground by the help of its acute nose. Any credit, therefore, attained by the truffle dog is certainly due to his better-bred relative the poodle, as the main distinction between the two lies in the former being the leglier dog of the two, and therefore further remarks on the points of the truffle dog would be superfluous.

Victor Hugo.—Mr. J. M. Haynes, of Wilmington, Ohio, claims the name of Victor Hugo for his black, white and tan puppy whelped December 24th, 1879, by Pown (Kock-Pussy) out of Magic (Red Boy-D).

5th, elected the following officers for the ensuing year: President, Mr. George Roach; Vice-Presidents, Messrs. C. J. Hope, Alex. Harvey and R. A. Latas; Treasurer, Mr. A. H. Hope; Secretary, Alex. Harvey, Jr.; Committee, Messrs. R. Kennedy, R. K. Hope, J. H. Park, H. C. Simonds and Dr. Woolverton. Fifteen members were elected, namely: Messrs. H. A. MacKelcan, A. H. Brown, H. Roper, T. Bagwell, V. A. Robertson, V. A. Plummer, T. Simson, G. A. Palmer, J. O. Kent, L. H. Brooks, C. Widlow, M. Wilmore, Price Cramer, A. McClean and T. B. Christian. Mr. Park read a letter from Dr. Savage, of Toronto, in reference to the meeting of the Ontario Cricket Association, recently held in that city, including the rules proposed to be adopted. Mr. Hope moved, seconded by Mr. Simonds, that this club join the O. C. A., which was carried. Before the meeting adjourned the President, Mr. Roach, promised a bat to the bowler getting the greatest number of wickets during the ensuing season.

UXBRIDGE CRICKET CLUB.—A meeting of this organization was held in the Plank House on March 30th, when the following officers were elected for the ensuing year: President, Geo. Wheeler, Esq.; First Vice-President, T. Bolster, Esq.; Second Vice-President, J. J. Gould, Esq.; Secretary-Treasurer, Edwin R. Rogers, Esq. Committee: Messrs. Z. Hemphill, H. Bolster, W. H. Hamilton, R. W. Gilpin and C. H. Widdell. A good ground has been secured for the season, and matches are to be arranged at an early date.

UNIVERSITY OF PENNSYLVANIA CRICKET CLUB.—We are indebted to Mr. J. R. Thayer, Jr., of Philadelphia, for the following interesting remarks regarding college cricket: "We have no matches arranged as yet, but intend making fixtures with Chestnut Hill, Belmont, Germantown, Columbia and Haverford Colleges. There is an unusually large number of men, especially Freshmen, practicing on the campus every afternoon, and we intend forming a second eleven from this material. At our next meeting I intend making a proposition to have a series of matches arranged between Chestnut Hill, Haverford Colleges and the University of Pennsylvania; these to take place on one of the Philadelphia grounds about the middle of June."

THE COLUMBUS CRICKET CLUB, which now numbers about thirty members, held its annual meeting on April 3d, when the following gentlemen were elected officers for the ensuing year: Captain, P. C. Hubbard; Assistant Captain, J. M. Milne; Director, G. W. Rhodes; Secretary, Bryan Collins; Treasurer, W. P. Little. Standing Committee: E. A. Dawson, C. T. Tyler, E. S. Knox, H. R. Hutchinson and the Secretary.

YOUNG AMERICA CRICKET CLUB.—Milwaukee, Wis., April 8th.—Ten years ago, just before base-ball became popular, there was an organization which maintained a successful eleven, known as the Milwaukee Cricket Club. It disbanded when base-ball became popular, but in 1870 it was reorganized and proved victorious in matches with Chicago, Grand Rapids (Mich.) and Racine clubs. In 1877 the principal players having left the city, the interest in the game flagged, nor have we a good eleven since. In 1878 there was formed the nucleus of an adult eleven named the Willow, and adult and junior elevens known as the Young America Cricket Club, also the Bay View Cricket Club, in the suburbs. The latter club was several times defeated in 1879 by the Young America Cricket Club, as was also the Willow. This spring the Bay View has reorganized under better auspices, and the members of the former local clubs have been, by coalition, made members of the Young America Club. This year, for the first time, we have rented exclusively the only inclosed ball-park in the city; it is not a very large one, but much better than none at all. There are more young men interested in the game than of before, and though our players are mostly novices, yet with a little financial aid we shall consider our prospects very encouraging indeed. The President for the ensuing year is the Rev. B. R. Ward, and Mr. John I. D. Bristol, Vice-President. GEORGE OXENRUDE, Secretary and Treasurer.

DORIAN CRICKET CLUB.—April 8th.—The cricket prospects for the coming season at Haverford College are good. As each senior class leaves and takes with it some of the old stand-bys, it always seems as if the college would hardly be able to play against the strongest teams of the Philadelphia district, but as old players leave the college some new ones are found to take their place, so the standard of the Dorian Cricket Club is kept up. During the last season the first eleven played seven matches, of which it won four and lost three, namely, against:—

Old Haverfordians, lost by ten wickets.
Chestnut Hill, won by 147 runs.
Philadelphia, won by five wickets.
Young America, lost by seven wickets.
Merion, won by one innings and 10 runs.
Gormanstown, lost by 80 runs.

The University of Pennsylvania, won by ten wickets.
The second eleven played three matches versus the following second elevens: Old Haverfordians, Belmont and Oxford, and won them all. Of the first eleven Newrick and Mason led in the batting averages, each securing an average of 124. The former obtained 19 and 9 against the Philadelphia Cricket Club, 15 against the Young America Cricket Club and 20 against the Merion. Mason scored 71 against the Chestnut Hill, and 19 and 18 vs. Young America Cricket Club. Lowry and Corbit also did some good work for their team, the former proving himself to be a very valuable bowler. A. M. C.

PENNSYLVANIA CRICKET CLUB. Of Det. Oct.—The annual meeting of this club was held on the 31st inst., when the following named officers were duly elected:—

President—George E. Hand. Vice-President—R. B. Ridgley. Treasurer—Thos. Calvert. Secretary—C. B. Calvert.
Managing Committee—C. C. Hinchman, Fred Bamford, Joseph Taylor, F. Laible, Wm. White, Thos. Morphy. Match Committee—Ford D. C. Hinchman, Frank C. Irvine, Geo. Heighe, Mr. Calvert writes: "We think cricket will 'boom' on our new grounds of eighteen acres. The club-house, grand stand and turf are all in fine order. These improvements cost about \$6,000 last year."

The club has over one hundred members, and has made arrangements with the Recreation Park Association for the use of the beautiful grounds and club-house for a term of years. A number of Canadian teams will visit Detroit during the summer, and we trust elevens from New York and Philadelphia will give the Peninsulars friendly calls this season."

GALT CRICKET CLUB.—The annual meeting of the Galt Cricket Club, of Canada, was held on April 1st, when the following officers were elected for 1880: President, Lieut.-Col. Peck; Vice-Presidents, Messrs. B. S. Strong and W. A. Dickson; Secretary, Mr. George P. Simpson; Treasurer, Mr. J. S. Meredith; Match and Ground Committee: Messrs. T. Peck, G. P. Simpson, J. S. Meredith, P. Parkins, J. M. Fleming, W. V. Ouslow, F. G. Hughes and Thomas J. Blain.

—Fred Norley's "brother" has arrived in New York, and has been engaged by the Manhattan Cricket Club.

—The Port Hope Cricket Club expects to be able to renew its lease and continue to shine in the future as it has done in the past.

ST. CATHARINES CRICKET CLUB.—This club was organized for the season of 1880, on the 25th ult., when the following officers were elected: President, James A. Miller, Esq.; First Vice-President, John Hordorn, Esq.; Second Vice-President, W. Hamilton Merritt, Esq.; Secretary, C. H. Connor, Esq.; Treasurer, J. C. Eccles, Esq.; Field Captain, B. B. McConkey, Esq.; Executive Committee, Messrs. Hamilton, Towers, Taylor, McKay, Crombie, Ingersoll and Cumberland; Match Committee, Messrs. McConkey, Connor, Boswell and H. C. Eccles.

REVOLVING IN CRICKET.

New York, April 8th.

Editor Forest and Stream:—

May I claim sufficient space in your valuable paper to reply to the communication in your issue of April 8th, signed "A Member of Many Clubs"? I desire to do so simply to enlighten the writer of the communication in question in regard to the definition of the technical term "revolver." He seems to consider every cricketer a revolver who is a member of two or more clubs. I do not so interpret it. What I have always regarded as a "revolver" is a player who one day is found playing in one club eleven in a match game, and another day is to be seen in another eleven in another club contest. The mere fact of a player belonging to half a dozen clubs, just to get practice in their club field work, is one thing; that of only playing in club matches as first eleven players, is quite another matter, in my opinion.

Quoting the Marylebone Club as a sample of a revolving club is what the writer characterizes by the term "vosh"—that is, it is no argument at all as every English cricketer knows that that club is in every respect an exceptional organization, and one that always plays what may be called a picked eleven. The English papers for the past two or three years—notably the *Fidd and Land and Water*—have been exclaiming against the custom of having revolvers in club elevens—that is, players who are never seen on the club ground except in match games, and then play in the A eleven one day, the B eleven the next, and the C eleven the next, and so on. What I have always opposed is "revolving" in that it is a system which is utterly destructive of emulation in a club, a system which destroys the club spirit, and which prevents young players from having opportunities to be raised from second elevens to first elevens. At any rate, that is how it has always worked in metropolitan clubs from the time that Sharp joined the old St. George Club while still in the old New York eleven, up to the time that visiting clubs would find, after playing the St. George's eleven in one match, that three or four of the same eleven composed the then young Staten Island eleven. The writer I refer to says: "Look at Philadelphia with all her clubs." Well, look at Philadelphia, and what do you see? Simply the strongest club in the country, the Young America, flourishing as no other club does, on the anti-revolving principle.

If the revolving principle is good for cricket it is equally good for base-ball, and where would base-ball be if it was run on the revolving principle? They tried it among the professional clubs here some years ago, and what was the result? New York has not had a professional team since. It is surprising to read such trash and nonsense as the revolving people bring to bear in favor of their peculiar views. Indeed, it is scarcely proper to apply the term "argument" to some of their talk. What I claim for one thing in this revolving business is, that the use of revolvers in club elevens—that is, in availing yourselves of the services of a first-class St. George's man to play him in a Staten Island or other club eleven to help win the match—thereby keeping out of your own eleven some young aspirant who desires an opportunity to distinguish himself—proves all the credit a victory would otherwise yield, and dampens the ardor of your young players, greatly against the interests of the club. ANTI-REVOLVER.

Answers to Correspondents.

R. L. Camden, Ark.—Should not advise you to choke-bore the cheap gun.

A Reader, Philadelphia.—We have handed your letter to the right party.

W. E. B., Indianapolis, Ind.—The shells are safe but they are apt to stick.

W. G., Baltimore.—The pattern is poor. See table of patterns published by us.

J. D., New York.—The 2 1-10 inch shell holds 70grs FG powder, or 8gr. without the lubricator.

H. S. B., Union Springs, N. Y.—Write to the Commissioner of Immigration, Tallahassee, Fla.

J. W. W., Columbus, Ga.—We have written to the secretaries of the various clubs for the desired information.

M. B., Madison, N. Y.—See advertisements of sporting rifles. Various arms are preferred by different parties.

A. G. T., King's Point, Mo.—For a book on fishing procure Hallock's "Gazetteer"; sent from this office postpaid, \$3.

V. R., Indianapolis, Ind.—I know nothing of the firm. 2. Measure the stock from the front trigger to center of the butt plate.

B., Greenville, Pa.—We call attention to last week's issue where to procure wild rice. Have mailed you the address of a dealer in "pugs."

F. O. D., South Hewick.—Can I shoot HBT shot in a choke-bore gun without chambering, safely; gun is a medium choke. Ans. Yes, if your gun is a good one.

A. S. S., New York.—The army revolver should throw a ball 200 yards. In loading a .44 cal. Winchester repeating rifle cartridge use 20grs. powder and 20grs. lead.

J. G.—To remove varnish from boat or bath-combines, use a scraper and pumice stone; or apply the following: Soda, 2lbs.; soap, 1lb.; boil together and use with hot.

G. B., Leverful Falls.—The shot concentrators in common use are Kay's, Eley's and the thread-wound cartridges. You can procure them of any dealer in sportsmen's goods.

A. M. Aten, Holyoke, Mass.—The chess department of the FOREST AND STREAM was discontinued because of two good reasons; first, we had not room for it; second, it did not pay.

S. H. F., Irackettville, Tex.—Special machines are made for removing the dents in gun barrels. You may send your gun for such repairs to Mr. Henry C. Squires, No. 1 Cortland street, New York.

S. B., Deadwood, D. T.—We would advise you to purchase a

Western broken dog; therefore, look for one in your vicinity. We mail to you the addresses of several parties to whom you may write.

H. M., Colones, N. Y.—Do you know of any stain for fishing rods except aniline that will stain a dark red, or any other color that will look well? Ans. There are several stains. Try dragon's blood.

CHAS. G. S.—Would it be safe to rebore a 15-bore gun into a larger gauge? Ans. That depends upon the thickness of the barrel. Take the gun to Wm. H. Schaefel, 61 Elm street, Boston. Cost, about \$7.

L. P., San Francisco, Cal.—We never did the "13, 14, 15" puzzle, never knew of any one doing it, and can give you no assistance. The transposition from horizontal rows into vertical columns is not a solution of it.

ENO, Worcester, Mass.—In a match at twenty balls, P. being handicapped at 10 and H. at 15 yds, each get their handicap and are ordered to shoot off ten balls each. Both get nine balls. Which wins? Ans. Neither; it is a tie.

E. G. B., Vineland, N. J.—I have a good shooting gun, 12 bore, 28lbs., 30in., which makes a good target at 50 yards with No. 7 or smaller shot. Can I load it with a larger size shot so that it will be a serviceable gun for duck shooting? Ans. Yes.

BOSTON, New York.—Have been informed that the wreck of the *Black Warrior* was a good place for fishing. Please give ranges for finding the same? Ans. The wreck is in the Lower Bay; it is a good spot; but you must apply to some of the fishermen for the ranges.

W. E. A., Morris, Minn.—1. What is the largest weight that has been put up at arm's length, one arm? 2. Also the heaviest weight lifted breast high? 3. When are pike in season? Ans. 1. 65 lbs. 2. 270 lbs. 3. In midsummer. Taken by trolling and by still fishing.

A. J. H. C.—To waterproof canvas canoes, steep the canvas in the following solution:—High water, 1lb.; fine powdered alum, and fine, finely powdered sugar of lead, steep for ten hours. Or simply paint and varnish the canvas. Put the paint on springily, or you will add to the weight.

S. R. U.—Would advise a cruising canoe for general use. For books, see "Baden Powell's Canoe Cruise in the Baltic"; "Canoeing in Kanawha"; Canoe and flying rope, or for heavy sailing canoes, see new edition of Dixon Kemp's "Yacht and Boat Sailing"; just out. Can procure either for you.

G. L., Brooklyn, N. Y.—The revolving shot guns are no longer manufactured. They proved very dangerous weapons. It frequently happened that when the gun was fired more than one of the charges went off at the same time, and those which did not go through the barrel went off through the shooter's hand.

LONGSHORE.—We know of no formula for distributing the peak balliard blocks. The strain will equalize itself on all parts in inverse proportion to the number of sheaves in use. To sweat up the peak easily, the masthead should be long, and the mean lead of the peak well out on the gaff—about 60 per cent, from the jaws.

S. H., New York City.—Your deer-hound is afflicted with rheum. Rub the shoulder with a good stimulating liniment, such as is used for horses. Give internally a small teaspoonful of baking soda, dissolved in a little water, three times a day. Kennel the dog in a warm, dry place, and exercise at regular times.

W. W. W., Williamsport, Pa.—On page 123, March 18, 1880, you make mention of white deer killed in Virginia. Can you inform me where I would be likely to find a doe and one or two fawns, and the probable cost? I desire them for a park. Ans. It is not likely that you can obtain them at all; but it is possible that an advertisement might help you.

J. A. P., Atlantic City, N. J.—I have a fine setter dog about two years old, he had the distemper about five months ago, and I left him with a swelling in his throat, which you can have one hundred yards away. Please inform me what to do for him? Ans. Such cases are rarely ever cured, it is akin to "roaring" in the horse; time and good care sometimes bring about, some improvement.

FOURSHOT, Brooklyn.—1. Will 50rs. strong powder be too much for a 7lbs. muzzle-loading Parker? 2. Will a 70gr. shell hold powder sufficient to throw a .44 cal. 43gr. bullet with force and precision up to 600 yards, and would it answer for bear and buffalo? 3. How can I cast bullets free from flaws? Ans. 1. Too heavy; use 4dr. 2. Yes. 3. Difficult. Heat your bullet mold hot when pouring in the lead.

O. B. M., Raleigh, N. C.—1. Tin coated shot are soft shot with a hardened surface but plunging them into a bath of tin. Chilled shot are hardened by a second process of the manufacture. Neither are injurious to guns. 2. To determine whether or not your gun is choked, at a wad and push it through the barrel. 3. A puppy's tail should be docked when the animal is young. Two years and a half old is too late.

W. E. H.—I have just varnished a Calcutta canoe with eucaly varnish, and I find that the surface feels gritty to the touch, and looks as though sand were under the varnish. Ans. It is probable that fine particles of dust, floating about in the room where the work was done, became mixed into the varnish. Great care must be taken to provide not only against palpable dirt, but also against the invisible particles of dust in the air.

W. B. R., Wolland, Ont.—I have a setter five years old, in good health, but has a great tendency to fatness. Can you point out a cure? Ans. Close confinement and indolence and excessive feeding are among the causes of obesity. Give plenty of vigorous exercise, but once a day, and avoid fattening food. Should the tendency increase in spite of these observations, a small dose of iodine may be given, along with an occasional aperient.

G. B., Columbus, O.—Out of a litter of seven setter puppies, only two are living. They are five weeks old, and have been fed on milk about a week, of which they eat but little. They have no control of their legs and fall over very easily. Both are fat enough, but seem dull and do not play. The whole of the previous litter was affected in the same way and I lost them all. Ans. The puppies seem to be badly nourished. Why does not the mother nurse them? Good food and pure air are your best resources.

G. C., Au Sable Forks, N. Y.—The physical cause for different shades in flesh of brook trout is the variety of food eaten by them. Fish in the same stream, even where different parts of the stream are diverse in character, may offer a sufficient variety of food to cause such a variation in flesh color. The *Au Sable*, with its alternation of swamps, rocky bottom, etc., is a case in point. Other causes are difference of condition, approach of spawning time, etc.

A WEEKLY JOURNAL.

DEVOTED TO FISH AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND SPORT.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 15, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM, PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Contributors of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

Advertisements.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

REMOVAL.—On or before May 1st the FOREST AND STREAM will remove into its new offices in the Times building, Nos. 39 and 40 Park Row.

LONG ISLAND.—The claims of Long Island as a summer residence for New Yorkers have been again and again set forth in these columns; and we are pleased to note that these claims are beginning, year by year, to be more generally appreciated. One important evidence of this fact is found in the increased attention paid to the facilities of travel, particularly by the Long Island Railroad, which, under the able management of Mr. Thomas R. Sharp, seconded by Mr. W. M. Lallin, General Passenger Agent, is fast acquiring both favor and confidence. The road-bed has recently been put into the most perfect order, and the comfort of the cars themselves vastly improved. Another sign of advancement is the constant improvement in real estate carried on along the East and South shores; especially in the vicinity of Bay Shore, Oakdale, Sayville, Bellport, etc. At Oakdale and Sayville, we note the other day, large wooded parks are being laid out, and many acres of land are now newly cultivated. This is right in the center of a trout country; within a circuit of five miles are no less than six streams; and then there is the Bay fishing for bluefish, Spanish mackerel, sheephead, kingfish—and sharks. Ducks, geese and snipe are abundant, with rabbits and quail, if one knows just where to look for them.

—Records—of successive long-distance pedestrian trials show the same advance in the character of the performance that has been exhibited in every branch of newly stimulated athletic exercise. In the match which closed at Madison Square Garden, this city, last Saturday night, Frank Hart, one of the negro competitors, scored for the six days 665 1-10 miles, being twelve miles more than the score of Blower Brown, made in London last February. Hart has at least demonstrated that in a long-distance race the black man may sometimes lead. The second man, Pegram, was also a representative from the Dark Continent, his score being 643 1/2 miles. The other records were: Howard, 534 miles; Dobler, 530; Allen, 525; Krohne, 516; Williams, 509, and Hanwaker, 450.

Long-distance walks would appear to have lost none of their attraction for the New York population. The cash receipts are reported to have been \$27,030.

THE IRISH-AMERICAN MATCH.

It seems assured now that an American team will visit Ireland during the present season to renew once again that charming Irish-American match over the longrangs. The Palma match, from all appearances, must lapse for yet another year, with very good chances of its resumption in 1881, as according to the letter received by Col. Bodine within the past three days from Sir Henry Halford, the opinion is conveyed that there is but the slightest probability of a match in 1880, and in the same letter the English rifle leader says he will set about securing the team of 1881 at once. For the present, then, the National Rifle Association has the single task of getting together six men, with the necessary reserve, who are willing to go over to Ireland, undergo the temptations of Irish hospitality before the match, shoot there with the eyes of all America upon them, and come back with a good account of themselves. The men can be secured, and if the right men are chosen the result is assured. It does not appear that the Irish riflemen have either forgotten anything or learned anything, and woe betide the American team who should now permit any break to come in the series of American victories with the rifle. With our rifles, beyond argument the best now made, and a team system which should equal if not excel that shown in previous years, there should be no sort of doubt of the result as against the each-man-for-himself style of the Irish team and their muzzle-loaders, beautiful samples of workmanship though they may be. With, then, the result so well assured, if the men from the United States be properly presented on the Irish range, the work now is to select and equip the team.

There is a ring of fairness in the open-competition-style of sorting the men which is very popular and very problematical. Theoretically it should produce the best men, but this survival of the fittest does not always follow here, however it may do in other spheres of action. Flukes are constantly occurring, and one which may send a poor man to the front in a competitive selection would bind the committee to him if they took the risk of selection by a certain round of scores only. This may produce the best men and it may not. When all the men are tried and it becomes a groping among a lot of unknowns, then this plan is as good as any, but we here have passed that stage. We could name a dozen men, off-hand, who could be molded into a team which would beat a foreign team with the certainty of fifty to one. Our columns each week spread to the world the doings of our riflemen, and a man is good for his average either in or out of a match. When a marksman swings along at 200 and over, and can, in a series of contests, average well up in the teens, he is a safe man to put on a team, surely, against one who can, according to his own statement, run up a score of 224, and then, when brought into an immediate prospect of a trial of his merit in open competition, turns tail and runs off.

The steady shooter is worth more than the skyrocket shot in a match of moment, and a strong team pulling together is almost sure to vanquish a company of meteors and sticks. With this principle in view, the selection of the American team seems to take the character of a partial competition and a partial selection, and there are no better ones to make the selection than the men who have won for themselves places on the team already. It is not to be supposed that they will take team fellows who are not fit in their opinion to bear their share of the contest. In former years the mixed plan was tried with good success, and with the limited time for the gathering together of the team at this time it would seem specially desirable that some such plan should be adopted in this case.

Another part of the work of the committee having the matter in hand is the provision of a sum of money sufficient to carry the team to Ireland and return. The sum total for this work is not a large one, and the committee of the Association should find no difficulty in raising that sum. The plan proposed of having each man pay his own expenses, or even of looking to the club or section from which he comes to take charge of his financial backing, is a false one, and sure to produce discord and break up that unanimity which is essential to a perfect team system. The men should go out from these shores as the representatives of the nation, and it is the duty of the National Rifle Association to see to it that they go out properly organized, with a measure of accountability to that Association. The opportunities should be given, if need be, to every American citizen to assist in sending this team to Ireland. It is a plan which may be kept up year after year, and it will be a bad precedent to have a team of independent gentlemen going over simultaneously and whose only bond of union is a similar desire to win the match. They should be recognized abroad as direct agents of the United States, or from its people, sent there by its people and on their behalf, and this can be done most thoroughly by placing the financial conduct of the team in the hands of its captain, and in that way giving him the complete control necessary, if he is to be held fully accountable for a good record of the trip. The FOREST AND STREAM will do what it can to help on the work, but will feel

itself free when called upon at all times to criticize fully and sharply what may appear to be amiss in the aims and work of the committee.

NIAGARA AS A NATIONAL PARK.—For the benefit of the individual tourist, as well as for the credit of the two Governments concerned, it is to be hoped that the scheme of rescuing the Niagara Falls from the pitiable condition of their present surroundings, may be put through, until we shall see the river and the Falls as they were before the era of mills and board-fence obstructions and patent medicine desecrations. This plan was first broached by Lord Dufferin, when Governor-General of Canada, and was approved by Gov. Robinson, who brought the project before the attention of the New York Legislature. The Commissioners of the State Survey, to whom the task was intrusted, have just made their report, which recommends that the State of New York and the Dominion of Canada respectively acquire possession of the banks of the river above and below the Falls, clear them of their present obstructions, and so restore them that the observer shall see nothing but the water, the sky, the earth and the vegetation. That means to abolish the paper mills and disgraceful buildings on Bath Island, and the long-standing eye-sores on either side of the stream. Among the names which are appended to the memorial on this subject are those of Ruskin, Carlyle, Luffell, Emerson, Lowell, Parkman, Sir John Lubbock, Lord Houghton, Max Müller, Alexander Agassiz, Horatio Seymour, Thurlow Weed, Charles Francis Adams, and a powerful array of the chief dignitaries of America and England.

We have the Yellowstone and the Yosemite insured to ourselves and to our children's children; with the Niagara Falls likewise set apart, America would possess a trio of the most magnificent parks in the world.

"GOOD IN EVERYTHING."—So seemingly an unpoeitic thing as the sting of an insect was long ago utilized by the poets in the Greek story of Io, metamorphosed through the jealous wrath of Juno into a heifer, and driven hither and thither in frenzied flight over the earth, pursued and tormented by the unrelenting onsets of a gad-fly. And now it appears that even the maligned and universally execrated black fly may yet hold a dignified place, if not in the tales of the poets, at least in the philosophical systems of the day. Discussing the origin and development of barbaric customs, in his new book, "Ceremonial Institutions," Mr. Herbert Spencer comes to the discussion of the question why savage races paint their bodies and faces; and he accounts for the practice as follows:—

"In tropical countries the irritation produced by flies is a chief misery in life; and sundry habits, which in our eyes are repulsive, result from endeavors to mitigate this misery. In the absence of anything better, the lower races of mankind cover their bodies with films of dirt as shields against these insect enemies. Hence, apparently, one motive for painting the skin. Juarros says: 'The barbarians, or unclaimed Indians of Guatemala... always paint themselves black, rather for the purpose of defense against mosquitoes than for ornament.' And then we get an indication that where the pigment used, being decorative and costly, is indicative of wealth, the abundant use of it becomes honorable."

According to the time-honored story of the school-books, Sir Isaac Newton was led by observing the fall of an apple to investigate the law of gravitation. It may not be hazardous to suggest that Mr. Spencer wrote this passage in his discussion of sociology after an afternoon's battling with the pests of the trout stream. However that may be, the Adirondack angler, who linds tar and oil unavailing, may forget the sting of the fly in the consolation afforded by philosophical speculations upon that insect's proper place in the development of the race.

WOODCOCK OUT OF SEASON.—There is much indignation in Hartford, Conn., at the flagrant violation of the game laws of Connecticut, and the defiance of public opinion in the matter as exhibited by some of the members of the leading social club in the city, the Hartford Club. Report has it that some twenty-two woodcock were sold to and bought by Sherman & Cook, of Hartford; that a part of these were bought and served at the Hartford Club, and others were used at private tables. The proof is said to be ample. This is about as wicked and senseless a violation of law and decency as can be in such a matter. The shooting of woodcock on the spring-flight, preparatory to nesting, is a new and outrageous proceeding, anyway; and the eating of the birds at a season when they are absolutely unfit for food, heavy with eggs (as some of these birds were said to be), or devoid of fat, due to the nesting season, is an offense against the table as great in the view of an epicure as was the violation of law in the killing or purchase of the birds.

If there is now opened a warfare on these birds on their passage north, as well as the illegal killing in the summer, to be followed by the more legitimate but severe depletion in the fall, then good-bye to these birds! This whole thing is an outrage on law, decency and appe-

file. Bah? Let the Hartford papers ventilate the matter; and if there are any game clubs in Connecticut, or any prosecuting officers, whose duty it is to attend to such matters, let the punishment be meted out to all concerned, no matter what may be the social standing of the parties. Shame, that ought to follow exposure, would to any decent person be punishment enough, if not obliged to pay heavily besides. And any careful club would expel any member who used the organization in violating the laws or in tempting others to do it by purchase.

There used to be a very strong and effective game club in Hartford. If it now exists it had best make itself felt; and if disbanded, let it be brought to life again. We believe it would have the support of every club in the country, and every fair-minded man, in pushing this matter uncompromisingly.

FISH AS FOOD.—Prof. Atwater's paper, published in our Fish Culture columns to-day, will be found instructive reading for all who are concerned in providing for themselves and others a nutritive diet. It is well worth careful study, for it is the result of a painstaking scientific investigation, and the results obtained are of the highest importance.

When the writer says that fish food is not, as is generally supposed, especially productive of brains, he strikes at the heart of long cherished belief. But there is hardly any subject concerning which there is so much current misconception as the different qualities of various articles of diet. When the doctors and the scientific experts disagree on these points, it is as well for the layman to eat what is put before him, without regard to anything save the gratification of his own individual palate.

PONKAPOG.—Ponkapog, the home of Thomas Bailey Aldrich, is a little village, which, although only twelve miles from Boston, has been almost unknown to outsiders, save to a few anglers and gunners who yearly resort to its excellent fishing and shooting grounds. The queer name is of Indian origin, and signifies "Sweet Water"; besides the name there are many monuments of the Red Men in the form of arrow-heads, sinkers for fishing, and other relics. There is a plenty of fish in the streams, and of game in the woods and fields; and Mr. Aldrich often goes out for a day of genuine, hearty sport.

ASSUMED NAMES.—"Nick" has roused out of a long retirement, and with the revival of his favorite long-range work finds something to say apropos of false names on scoring blanks. The FOREST AND STREAM can utter a hearty amen to all of his conclusions. Bogus names are distasteful at all times and in every pursuit. They are entirely unnecessary on the range, and the argument of those who want practice, that they must perforce shoot in matches of public record, is simply ridiculous, and they presume very much in expecting that the press should become participants in their deceit.

DOG SHOW CATALOGUES.—We wish a catalogue of each of the American bench shows. If any one of our correspondents, who may have duplicates, can furnish us with the same, the favor will be appreciated.

EXCELLENT PUBLICATIONS.—We are constantly being asked what are the most comprehensive works on the dog, the rearing, breaking, working, feeding, exercise, judging and diseases. In answer we can now refer our readers to Messrs. Cassell, Petter, Galpin & Co.'s publication, noticed in another column.

—A potato from "Piseco," of which more anon.

GAME PROTECTION.

ONONDAGA COUNTY SPORTSMEN'S CLUB.—*Syracuse, N. Y., April 17th.*—A meeting of the Onondaga County Sportsmen's Club was held last evening at their rooms in the Kimber Block. The following officers were elected: President, John Bedford; Vice-President, D. W. Peck; Secretary, John Stedman; Financial Secretary, Edwin Lodder; Treasurer, Thomas Kimber, Jr.; Executive Committee, Geo. Lodder, G. C. Luther and H. Ayling. Mr. Bedford and Mr. Stedman have been members of the club since its organization, some fifteen years ago, and Mr. Stedman has always filled the office of Secretary.

FOREST AND STREAM ASSOCIATION.—*Danbury, Conn., April 3d.*—We have recently organized a fish and game club under the above familiar name. It will be our aim to have the laws relating to fish and game enforced, and we shall also look to the stocking of our ponds and fields. The officers are President, A. P. Sturges; Vice-President, Andrew Hull; Secretary, T. G. Wildman; Treasurer, Geo. B. Benjamin, Jr. The members of the Forest and Stream Publishing Company have been elected honorary members of our club. A. P. S.

—The Delaware Game Association sent a number of California quail down the State last week. German quail will be distributed also.

—A number of woodcock have been killed on Second Mountain, back of Orange, N. J., within the past few weeks. The Orange sportsmen should up and at the lawbreakers.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County, means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—The following epitaph is to be found in the churchyard of Woodbridge, Suffolk, England. The spelling would indicate that the stone must now be crumbling and covered with the stains and moss of many years, but the warning is by no means antiquated:—

Here Lieth the Body of
Benjamin Bulkeley
Who Though Lustie and
Strong, was one
That his misfortune, Shot
Himself With a Gun
In the 23d year of his Age.
He Deceased this Life
To the Grief of his Parents
Spectators and Wife.

NEW HAMPSHIRE.—*Colebrook, April 6th.*—Spring is here, and the winter has been a favorable one for game; very light snow-fall. A few deer have been killed near Diamond Pond, ten miles from here, but in the Connecticut Lake region I fail to learn of a single moose or deer having been taken contrary to law. Very few instances of fishing through the ice. Caribou are seen frequently of late on the lakes sunning themselves. The ruffed grouse have not been winter killed. Forty million feet of spruce will be floated toward the sound as soon as the ice is out of the river.

MANCHESTER SHOOTING CLUB.—*Manchester, N. H., April 10th.*—The annual meeting of the Manchester Shooting Club was held at the Haseltine House, 6th inst., and was very fully attended. The report of the Treasurer showed the club to be in a good condition financially, there being quite a sum in the treasury. The following officers were elected for the ensuing year: President, Genj. R. Clark; Vice-President, Geo. F. Elliott; Secretary, Julius E. Wilson; Treasurer, Chas. L. Harmon; Executive Committee, Ira A. Moore, Chas. J. Darrah and Moses Wadehill. Thirteen new members were elected, making the total membership sixty-four. The club was organized for the purpose of holding glass-bait and pigeon shoots (pigeon shooting not allowed in New Hampshire at present time), that its members might acquire proficiency in wing shooting—the matter of game protection, fish propagation, etc., being well looked after by the New Hampshire Game and Fish League, an organization devoted wholly to the above named objects. The Shooting Club raised a sufficient sum of money last winter by contributions to send an order for 300 migratory quail, which will be liberated in this vicinity, and the club will endeavor to protect them. The grounds formerly occupied by the Manchester Base-Ball Association have been secured, which will afford members of the club a place for practice within easy access.

J. E. W.

CONNECTICUT.—*Hartford, April 10th.*—A friend and myself shot three snipe yesterday (April 9th) within the city limits. I have found by long experience that the first snipe generally reach here on the 8th of April.

W. M. H.

NEW YORK.—*Hayt's Corner, April 4.*—Wild ducks have been more plentiful here on the west side of Cayuga Lake than usual for the past two or three weeks, so I am informed, though I have not been out shooting. I think a few days' good shooting could be obtained near Cayuga, six miles south of the New York Central road, by stopping off at the bridge, or Bridgesport. There have been a number of geese seen in the north, and some have been killed in this county, while they stopped to feed on wheat.

FAR ROCKAWAY GUN CLUB.—A meeting of the Far Rockaway Gun Club was held at Debnoud's on Monday evening, April 2d. The following officers were elected for the ensuing year: President, George S. Greene, Jr.; Treasurer, Ernest C. Lamontagne; Secretary, Chas. A. Lummis; Governing Committee—Geo. S. Greene, Jr.; Ernest C. Lamontagne, Chas. A. Lummis, John D. Cheever, Newbold T. Lawrence. New grounds have been engaged at Lawrence, L. I., and a club-house and other conveniences are to be erected immediately.

THE STATE CONVENTION.—*Seneca Falls, N. Y., April 9th.*—The Seneca Gun Club of Seneca Falls, N. Y., under whose auspices the State Sportsmen's Convention is to be held, met at a regular meeting April 7th. Seven new members were elected, and names of five others presented. The club is in a prosperous condition, and the managers are actively engaged with matters pertaining to the Convention. The Bird Committee are in correspondence with different parties in regard to pigeons, but in my judgment the contract will be given to either Phillips of Detroit, or Stagg, of Chicago, both reliable dealers, who would furnish good birds. The matter will be settled probably in a few days. The Prize Committee have been both active and successful, and when the programme is published I shall be mistaken if the sportsmen of New York State do not pronounce it the best prize-list ever offered at a convention. The Parker Brothers, with their accustomed generosity and energy, have already forwarded their prize gun. Parties who have examined it pronounce it a superior gun to any before given the Association. The finish is superb, and good judges say it is a perfect gem. Other prizes will arrive about May 1st, and be placed on exhibition. The Committee on Grounds have not as yet positively decided upon location, but one will be secured which will be desirable and convenient. Every thing promises an early meeting of the Convention.

AN UNIQUE VISITOR.—*Brooklyn, N. Y., April 2d.*—This morning about 7 o'clock my daughter Nellie opened the basement door to take our daily supply of milk. As

she did so she jumped back in some excitement and called "Papa, come and look at this thing!" I passed quickly into the room from the kitchen, and there, under the sewing-machine, squatted a beautiful male woodcock. I essayed to catch him, but he darted past me into the kitchen, with his tail spread out like a fan, past the cat, who was very much surprised; and as soon as he saw the window filled with the house plants he took to wing and flew with great force against the glass. He was momentarily stunned. I picked him up and found he was slightly injured in the left wing, probably by striking against a telegraph wire or similar obstruction while on his mid-night flight to his breeding grounds on the island. He is a beautiful specimen of last year's brood, and I determined to have him stuffed. I once saw one alight on the chains that support the smokestack of a ferry-boat, and when entering the Fulton Ferry slip, New York city, and have heard of one paying a visit to a city yard up town, but never heard of one seeking shelter in a dwelling-house. HENRY THORPE.

NEW JERSEY.—*Ocean County, April 9th.*—Snipe very scarce. The best bag I have heard of to one man was seven. Weather too cold for them. Ice formed last night. Ducks plenty in the broad bay, but do not stool well. I have seen large flocks of canvas-backs this week moving north. Woodcock have come in large numbers, and are preparing to breed. Quail are plentiful, owing to the mild winter. Good shooting may be expected next fall. S. K., JR.

KENTON COUNTY CLUB.—*Cincinnati, April 3d.*—The Kenton County Shooting and Fishing Club, of Covington, Ky., met last night at Auditor Orr's office, where the organization was completed, and the following prominent gentlemen were elected officers for the ensuing year: President, A. D. McPherson; Vice-President, J. A. P. Glose; Secretary, E. S. Studard; Treasurer, J. S. Sandford; Directors: J. D. Hudson, George Perkins and John Leathers. The club, which has been incorporated by the Kentucky Legislature, has nineteen charter members. The general purposes of the club are to enforce the game laws of that State, and to promote the favorite pursuits of its members. It is the intention to purchase a house and grounds near the Latonia Springs and Greenwood Lake. They will also be near grounds where their shooting tournaments will take place. W. E. L.

TENNESSEE QUAIL POTTING.—*Cincinnati, March 31st.*—The following article I clip from the *Commercial* of March 29th, and send for you to judge whether the birds were shot legitimately or not. I certainly consider the article of no credit to the shooter, and also believe most of the 1,500 were poled. Here it is, dated March 25th, 1880:—

"Mr. David Holt, of this vicinity, from September 1st, 1878, to March 31st, 1879, killed 1,800 partridges. He killed fifty-four in five shots; killed eight on the wing at one shot. Of 321 shots he fell 31. He rarely misses a shot. A gentleman who thought he was a crack shot went out to shoot against Holt one day. Two birds flew up and Holt knocked them both down before the other fellow got ready to shoot. He did all the shooting with a small 36in. muzzle-loader. How is that for a record?"

And I, myself, add the same exclamation, W. E. S. The five shots, averaging 10 4-5 birds to a shot, were very fair—as ground covey shooting goes. Other men shooting in the same way have excelled it; however, it is difficult to give statistics, because the persons who do this kind of shooting do not often tell of it in print. The "eight on the wing at one shot" part of it is a figment of the imagination of a man who never saw a bird in the field.

SPRING IN FLORIDA.—*Titusville, Fla., March 25th.*—Just returned from a trip to Banana River, the great game resort of this region. Found raft ducks, or blue-bills, very numerous, but wild. The ducks that we shot we found to be poor. Found also a good lot of black ducks, here called English ducks (*Anas obscura*), and shovellers, or spoon-bills (*Spatula clypeata*), in the marshes. The widgeons and pintails seem mostly to have left this locality on their northern migration. The Florida gallinules, here called coots, are very numerous, swimming in immense solid phalanxes, often several hundred yards long, eight or ten feet wide, as close together that they touch each other, and sailboat can generally sail within twenty or thirty yards where they start to fly. A great havoc is often made in their ranks. They are excellent eating, hardly to be distinguished from rabbit. The great white pelicans seemed to have all gone north, but in their place was an immense army of shore birds, godwits, stilts, killdeer, peeps, etc.

The numerous varieties of heron which swarm on these marshes are now beginning to nest, and are in full plumage. The crack of the plume hunter's gun is heard in all directions; the white heron plumes bring from 20 to 30 cents apiece, and several hundred can be secured in a few days at the rookeries, which, by the way, are always in the wildest and most inaccessible places.

We found no deer, although a few weeks ago they were numerous. This is owing to the fact that the does are lying concealed in the thickets, and their young fawns. The bears are now patrolling the river shore nights for horse-shoe crabs. In a few weeks they will walk the ocean beach for turtle eggs, and then their capture is comparatively easy. AL. I. GATOR.

LOUISIANA.—*New Orleans, April 11th.*—Messrs. O. P. Glessner and H. Hall Traeger, of this city, were in York County last week on a snipe-shooting expedition. They were joined by Mr. Albertus Hibner, of that county, and Sergeant Adam Elssesser, the prospective candidate for Representative. The weather was cool, with a very strong northerly wind blowing, which, together with the erratic flight of this species of game, rendered shooting abilities to the test. They succeeded in bagging thirty-five birds, which were in "fine order." They report having seen several coveys of partridges and numerous scattered birds, which promises plenty of this game next fall.

ARKANSAS.—*Memphis, Tenn., April 9th.*—There have been good bags of snipe made on the Arkansas prairies. I intend having a turn next week, but it is getting rather late. EDMUND OUGILL.

OHIO.—*Port Washington, April 9th.*—I shot a crane

yesterday that measured six feet and two inches from tip to tip of wings, and was four feet and eight inches from toe to point of bill. It is now in the hands of a taxidermist. Ducks are very scarce here. I killed five blue-winged teal last Tuesday. There are lots of quail here, left over from the winter. The river (Tuscarawas) has been too high and discolored for fishing. I am told there are lots of salmon in the river besides black bass and perch. As soon as the water is in order I intend to try for the salmon, and will let you know what success I have.

R. O. Y.

OREGON.—Portland, March 20th.—Had a splendid day's sport on the 14th with the ducks, because of its unexpectedness. Went to the Columbia bottoms, about eight miles distant, in company with three friends. Result: J. R., 7 ducks; L., 5; B., 3, and your correspondent, 18, making a total of 33, mostly pintails and widgeons. I have hung my gun up for this season, and am now looking over fly-books, lines, rods, etc., preparatory to a descent upon the finny denizens of the brook, and then you will again hear of me. MULTUMAH.

P. S.—A party of six returned from a shoot last week with six dozen canvas-backs.

WOLF HUNT.—Boston, April 2d.—Bremer County, Ia., must afford rare sport, according to the account of a recent wolf hunt in Sumner, a township in that county. John Bracken, with his pack of hounds, ran down eleven wolves, large and small.

A DUCK "BLIND."—Vail, March 29th.—Have just returned from the Missouri River bottom, where we (five of us) have been having a glorious duck hunt. We found ducks quite plentiful, although very wild, which added to the value of those we did kill. Earlier in the month some of the boys tried a new dodge on the ducks; they would place decoys on the ice while it was snowing, wrapping themselves in a white sheet, which made a perfect blind, and succeeded in killing a great many, *i. e.*, something over one hundred for one man in two hours. E. B. B.

ANOTHER MAN WHO LIKES THEM.—In this vicinity, since game has become so scarce and wily, there has been a great need felt for some device to concentrate shot for long distances. Our choke bores are good, and the dear old cylindrical must give way and make room for this modern improvement. Yet, even with this improvement, how often does the bird escape! The thing by which to bring to bag this or that particularly desirable game, which has hitherto flown, leaped, or swam so safely, yet provokingly near. But now comes that, which, in the writer's humble opinion, will totally eclipse everything of the kind yet invented—the threaded cartridge; and with two or three of these in the pocket, as one has his day's "outing" he may be reasonably sure of part of this high-flying and wild running game. Our Western and Southern friends, who reside where game is so plenty that they can easily fill their bags with loose shot, may not appreciate a device by which No. 8 shot may be made to do good execution at 120 yards, or more. But I think most sportsmen will join me, and hail with delight this very important improvement for long-range shooting. G. W. E.

North Andover, Mass.

A GUN NOT EASILY STOLEN.

THE late robbery in Buffalo of a Fox gun, which had been stolen from the rooms of a well-known sportsman of that city, offers a few interesting and instructive comments which may present themselves in clear light to the many who happen to use this excellent gun in preference to all others. It appeared by the police court investigation that a couple of young boys, of fourteen and seventeen years respectively, entered the room where the gun was kept, and tempted by the interest it afforded a profitable business time by the appropriation of it without any further ceremony for their own use.

One difficulty, however, presented itself, to wit: the successful transportation of the venture down stairs, as the room where it was kept was the topmost of a four-story building. To accomplish this without any danger of detection it was therefore deemed advisable to detach stock and barrels and convey them separately, well hidden under the shaggy folds of their overcoats, to some place of further safe-keeping. This would have been an easy task in case of any ordinary breech-loader, but the Fox gun, by its peculiar mechanism, presents some difficulties which are not well overcome by any one who is not an expert in matters of gunnery. Though by a few trials the would-be Nimrods succeeded in discovering that it had a sideways action in place of the ordinary tip-up, yet they failed to detach the barrels, which can be instantly disengaged by pressure of a little countersunk knob, ingeniously adjusted to meet this requirement. Main strength and sturdiness was therefore called into requisition to meet the pressing demands upon short time and obviate the fear of possible discovery. The barrels, now widely pushed sideways, were thus placed across the knee, and at last separated from the stock by breaking the solid steel plate upon which they rotate so smoothly as the parts of a watch. This accomplished, a safe retreat with the plunder was made. The whole circumstances of the abstraction were instantly placed in the hands of the detectives, who had a comparatively easy task before them in view of the fact that there are at present but few of the Fox guns in Buffalo, and these of course only in the hands of persons of unquestionable respectability.

It was surmised by the experts that the perpetrators would naturally, for proper solution of the puzzle of the mechanism, enter some gun store, and speedy notices were therefore at once issued to put all dealers upon the alert. Mutilated as the gun was, it nevertheless could be made to work still, and nothing transpired until a trial of it forced the conviction upon its venturesome owners, that the whole thing was in a bad fix and that an equivalent of a few dollars would probably be the best way and means to get rid of the poor baggage. With this object in view a visit to the gun store of Mr. Dan Castle was therefore planned, to exchange the article for a suitable amount of cash. No worse place, however, for immunity of consequences could possibly be chosen. Mr. Castle, a keen-eyed, shrewd old sportsman, knows how to entrap a thief as well as to fatally block up the avenues of escape of the cunning gunner who would comprehend in the least the situation. Under pretence of a scrutinizing examination to determine the

proper *quid pro quo*, some detectives, not far off, were quickly summoned, and by their help the whole programme was materially changed. The gun, though seriously damaged, was promptly restored, and the House of Correction assigned as a residence of indefinite time to the chief perpetrator of the robbery.

If an accident of that kind had happened to an imported gun the repairing of it would probably run up to a snug little bill. The benefit accruing to the owner of a home-manufactured gun, above those made abroad, becomes in this instance manifest, as, by reason of quickly adjusted mechanisms, complicates the slow process of costly hand labor is obviated. While often many dollars are needed to replace any important demolished portions of a foreign-made gun, over and above the long time required to do it, here a couple of hours are sufficient to complete the whole job at an almost nominal expense.

All things even, shooting qualities and excellence of finish, it would appear that in case of accidents, violent or otherwise, the owner of a home-made gun has thus certain advantages which distance to the seat of workmanship in the other case does not well afford.

SHOOTING MATCHES.

NEW HAMPSHIRE.—Manchester, April 8th (Fast Day).—The first glass ball shoot of the Manchester Shooting Club for the season was held on the club grounds in "Squig," this P.M. It was a cold day, with a strong northwest wind blowing across the range; consequently scores averaged poor. Card revolving trap; 18 yards rise; 10 balls each score—

MASSACHUSETTS.—Worcester, April 10th.—The following officers were elected for the ensuing year at the annual meeting of the Sportsman's Club last month: President, A. P. Pond; First Vice-President, W. S. Perry; Second Vice-President, E. T. Smith; Secretary, Stedman Clark; Treasurer, G. J. Rugg; Directors, A. Houghton, Jr., C. D. Holden, A. B. Goodell, and M. B. Gillman. Fast Day, April 10, was very generally observed by the shooting fraternity in this city and environs by glass ball shooting on the grounds of both clubs. The occasion probably brought together more shooters than were ever before gathered in this city for glass ball shooting, and considering swift traps and a decidedly cold day, very creditable scores were made. The day's shooting opened with a friendly match of twenty balls (ten thrown from Holden's rotary trap, and five pairs thrown from stationary traps) 18 yards rise, between teams of five, and the scores were: Marlboro Sports Club, 10; Marlboro, Mass., and the Sportsman's Club of this city, which was won by the Marlboro team, as shown by the score—

Gardner, March 20th.—Following are the scores made by members of the Gardner rifle club at Hackmatack range to-day:

ANOTHER VENTURE.—The repeated failures of steam catamarans do not seem to have deterred others from falling victims to the enticement of high speed, if we are to believe the press dispatches. The latest of these is the "Hudson," an exploring great catamaran from the Iron catamaran Co. is now building at New York in the Hudson. This novel affair will be 200 ft. long, and consists of two cigar-shaped hulls, each 5 ft. diam. and speed 30 ft. apart. The displacement is of No. 8 iron, weighing 7 lbs. per square foot, and the ends of lighter sheets 5 lbs. per square foot. Each hull will have four bulkheads as stiffeners. She is to be decked over for 125 ft., and saloons are to be built on top. The wheel is 8 ft. diameter, located about twenty feet abaft midships; dip of blades, 25 ft. 8 in., and it is intended to make 325 turns per minute. That is the mechanics of the daily press inform us to exhaust. The "Hudson" is to be 28 ft. 6 in. wide, and will make a fast voyage. Heretofore are furnishing the boiler, but are in no way responsible for the undertaking, and small blame to them if they refuse to shoulder the results, which are a foregone conclusion. The boiler is of the col type, 10 ft. diam., steam helix, 730 ft.

—*Adv.* JOSEPH PRATHER,

The boiler is of the coil type, 102 in. diameter, same height, 730 ft.

of two-inch pipe in inside coil; 23ft. 4in., 70ft. 3in., 35ft. 3in. and 10ft. 2 1/2in. pipe in outside oil; pressure, 125lbs. The catamaran will draw 2ft. 5in., and displaces 35 tons without passengers. Why the Commodore selected such a complicated and expensive engine as this Balacon is not understood. When he comes to settle his repair bills and oil account he may wish he had not. As a single hull weighs less than two, and has less skin, it is quite certain that for the expenditure of power greater speed is to be obtained from such a hull than any catamaran can ever afford, the hopes of high speed from this cigar boat are sure to be ruthlessly disappointed; but possibly the Commodore cares more for the deck room, and will be satisfied with as much speed as he can get.

SAFETY BOILERS.—A successful inventor of my acquaintance is making a boiler, which he says possesses every feature described as desirable in your editorial of the 1st inst. I have had some theoretical and practical mechanical experience, and think his claims are well founded. There is but little complication to it; the heating-surface is double that of common boilers, weight for weight; no ordinary pressure would burst it, and it is cheap. When it has been tested, I will give you an account of its working.

DIVING DECOY.

THE NATIONAL YACHTING ASSOCIATION.—The National Yachting Association seems to be gaining ground slowly but surely. Formed four weeks ago by delegates from eighteen clubs, the number has been already swelled to twenty, and many more will, at their next regular meetings, elect delegates, and formally connect themselves with the new Association. Our amateur athletes and oarsmen have found it impossible to get along without their National Associations, and the yachtsmen are wise in following the example set by their neighbors of the oar and the eider-path.—*Spiriting the Times.*

FOLDING BOATS.—We have examined and tried Coughtry's folding boats and his new hunter's boat, under the most exacting circumstances. We found the latter, especially, an excellent substitute for a dinghy on small yachts. Light as a feather, buoyant and dry, stiff and safe, they are to be preferred to the usual run of punts and heavy yaws in every respect, and can be folded in little less space than an old-fashioned gingham umbrella. For sportsmen and those who wish to carry under their arm, they are just the thing. The folding boats are somewhat heavier and stronger, and suitable for yachts of a larger size.

YACHTS' HANDWARE.—As the season for fitting out is now close aboard, it will not be out of place to refer readers to the card of W. & J. Tibbott. At their establishment, 33 Chambers street, will be found a large assortment of hardware and fittings, blocks, chains, anchors, wire rope, etc. This house has been long and favorably known in the trade as the leading one of the kind.

STEAM LAUNCHES.—Mr. Clapham has enlarged his plant, and is prepared to build yachts and steam launches of all kinds. His well-known business integrity and familiarity with all classes of yachts should recommend him to the public. We believe he proposes to make a specialty of light drafts for Florida waters.

CAT-BOATS.—Desmond, of Peck Slip, has finished a couple of finely modeled cat-boats of good depth and moderate beam, which are for sale. They will make excellent boats for family use, and are far safer than most of their kind.

CANOE FITTINGS.—G. W. Renton, 70 West street, Brooklyn, B. I., makes and repairs canoes and boat castings generally. We have in our office a sample of his steering lock for canoes, by which the paddle is kept clear of the side, and can be used more efficiently. Renton supplies the trade and retail dealers as well.

YACHTS FOR SALE.—Attention is called to several yachts offered for sale in another column.

SPORTING BOATS.—The trade in sporting boats of all kinds is reported as very brisk this spring. H. M. Sprague, of Parishville, N. Y., and W. W. Parker, of Minneapolis, Minn., have their hands full, their boats being highly appreciated by those who have tried them.

CONGRESS AND THE YACHTING LAWS.

Editor Forest and Stream:—

Attention is called to a recent number of your paper to the pending amendment of Section 4,314 of the United States Revised Statutes, relating to yachts. As the present proposed bill was introduced mainly at the request of the Cleveland Yachting Association, it is proper for a member of that body to say a word in reply to that article. A very similar bill was introduced during the last session of Congress at the request of an Eastern yacht club, supported by many of the yacht clubs of the country; but it died in a committee. The two changes made in the amendment are to make American yachts, irrespective of size, American vessels; and to allow yachts of all sizes to have their name and port painted in any legible manner on any conspicuous part of their hulls, instead of only on the stern in a manner fixed by statute. There can be no doubt of the propriety of the first change. For many years all yachts of between ten and twenty tons burden had to take out licenses as vessels engaged in the coasting trade. Yachts of less than ten tons were not recognized at all. A recent decision of the department holds that yachts of more than twenty tons burden need not be licensed. The next year, or next Secretary, may bring a different ruling. Under the present decision yachts of less than twenty tons burden are not American vessels; are beyond the pale of the law. Most of the yachts on the great lakes are in this category, yet they take long cruises. One of our Cleveland yachts, for example, of only ten tons burden, sailed last summer over 5,000 miles, sailed on the waters of all the great lakes except Ontario, and spent much of the time in foreign waters. Other yachts of the same port, less in size, sailed but little less distance. These small yachts wish to be American vessels, enjoying of right and not of sufferance all the rights and privileges of American vessels; to have the right in a foreign port to fly the American flag with the ensign of our club; to their enjoying the consideration always given to yachtsmen worthy of the name. We wish, in American waters, to occupy a position of trust instead of one of suspicion; to legally carry a yacht flag; to share the rights accorded to our larger brethren.

The reason to which Mr. Cromwell chiefly objects is that as to painting the name and port. If the smaller yachts are made American vessels there must be some change in the present law, or Mr. Cromwell's objection will apply, for the concluding part of the section now in force reads: "Such vessels," meaning yachts, "shall in all respects, except as above, be subject to the laws of the United States." The laws of the United States—Revised Statutes, Sections 4,178 and 4,334, and 18 United States Statutes at large, chap. 407, p. 232—require the name and port to be painted on the stern in white on black ground, or in yellow or gilt letters, the letters to be not less than three inches in length, thus regulating place, style and size of the lettering. Under this law small

yachts would come if made American vessels, unless the law was changed. I understand these provisions are obnoxious to the owners of large yachts. To change this law the express provision was made in the proposed bill that yachts should only be required to "have their names and ports legibly painted on some conspicuous portion of their hulls." The sections above referred to will no longer govern yachts if the proposed bill is passed. The name and port may be painted in any style or of any size, provided they are legible, and on any part of the hull, it sufficiently conspicuous. The laws regulating trading vessels as to place, style and size of lettering will no longer apply to yachts, because the latter are expressly provided for otherwise. Of course there is some force of difference of opinion as to whether the name of the port should be added to the name of the vessel. I think it should be possible without boarding or halting to distinguish the *Fleetwing*, of Cleveland, from the *Fleetwing*, of Chicago, although both may be of the same size and rig. This is a convenience for the yachtsmen as well as for the revenue officials. Again, it might have been difficult to obtain so radical a change as the omission of the name of the port, while it is hoped there will be little difficulty in procuring the passage of the proposed bill.

Compulsory pilotage for yachts is certainly ofentimes an unnecessary expense, yet it is an evil from which we do not suffer on the lakes. We would have included it in the amendment, but first feared lest asking too much we might get nothing, and second, as it was not included in the bill proposed by the Eastern Yacht Club before referred to, we thought some reason might exist, unknown to us, for not making the change.

With these explanations we trust that all yachtsmen will feel willing to urge their representatives and Senators to support the pending bill.

SMALL YACHT.

Cleveland, O., April 5th.

BALTIMORE YACHT CLUB.

Editor Forest and Stream:—

The Baltimore Yacht Club has elected the following officers for the year 1880: Admiral, William P. Towles; Commodore, William M. Busey; Vice-Commodore, James Towles; Captain of Ordnance, William B. Oliver; Secretary, J. William Middendorf; Treasurer, Edward L. Breese; Measurer, G. Wesley Taylor; Surgeon, Dr. John Getz.

Yachting has heretofore been entirely neglected in Baltimore. Now and then an enterprising citizen has purchased a sail-boat to be used for his family and friends, only to be abandoned after a few summer's use, with the conclusion that "yachting don't pay." The manifest trouble has been that the genius of yachting was wanting. The zealous and enthusiastic personal interest in all the details of sailing, which fosters the art as now understood, and seeks to add the value of intelligent individual experience and observation to the stock of knowledge already acquired, has been conspicuously absent. Our yachtsmen have been mainly passengers on their own yachts, and have felt none of the enthusiasm of a sailor.

At the portals of Baltimore spreads the majestic Chesapeake, affording magnificent yachting ground for a distance of two hundred miles and an average breadth of twenty-five miles. With Old Point Comfort as headquarters, the Atlantic is fairly before one, affording ample opportunity for "blue water yachting," and a safe harbor at a fashionable watering place whenever desired.

The Baltimore Yacht Club proposes to inaugurate this splendid recreation in the Monumental City, and hopes by perseverance and maritime ardor to instill a love of the national life in the breasts of many—possibly even touching the hearts of some of our many millionaires, whose lives are absolutely petrifying for want of active and invigorating exercise.

The new yacht building here by Messrs. Joachim & Brothers has her keel, stem and stern-post in place. She will be a keel schooner, 55ft. long, 21ft. beam; depth of hold, 6ft. 6in. Cabin has four state rooms and large saloon, etc. The club has concluded to name their new yacht the *Rena*.

W. P. T. Better cruising waters could not be found than the noble Chesapeake affords, and we are glad to note the efforts now under way to build up a yacht club with Baltimore for its halting port. Many a time has it been our good fortune to handle the stick of the famous old *America*, with a crew of "piels" from the Naval Academy to man the gear, and many a time sail have we enjoyed from Annapolis across to Kent's Island, thence to the southward to Lookout Point and home again to the sheltered harbor Maryland's capital affords.

Years ago we wondered why Baltimore could not muster a single yacht on its broad bosom of the great bay. Let us hope that the efforts to raise that growing city from its long sleep to nautical activity may meet with the success the proselyting energy of the newly-formed club seems to hold in view. The time will come when Hampton Roads will be the rendezvous for a large fleet from the North during fall and spring, and the Baltimore Y. C. can do much to attract attention to the inducements for yachting, for shooting and for fishing, the Chesapeake and its tributary rivers possess to a degree unexcelled by any other waters in America. We trust the schooner *Rena* will be but the fore-runner to a whole fleet with the colors of the club at the masthead, and that the members of the club will not form only a close corporation with themselves, but will do all in their power to enlist the sympathies of the general public, and to stimulate the spread of love for the noble art of sailing.

THE KATIE GRAY.

Editor Forest and Stream:—

I should like to give you space to the record for 1878 and 1879 of the yacht *Katie Gray*, the most wonderful ten-tonner on the Lakes or on the continent, for that matter. *Katie Gray*, center-board sloop, was built at Cobourg by Alexander Cuthbert in 1875. Length on deck from fore part of stem to after part of stern-post, 26ft. 6in.; extreme breadth of beam, 11ft.; draught of water aft, 2ft. 6in. She was originally shorter, but in 1877 an addition of ten inches was made to deadwood aft, and quarters raised, 18ft. gaff, and 25ft. boom; jib, 24ft. on foot, 40ft. on stay, and 20ft. on leach. She carries 3,000 pounds iron ballast, all stowed under floor, as no shifting ballast is permitted in our races. Racing canvas includes jib topsail, large balloon jib and moderate sized gaff-top-sail. Her record for 1878 is as follows:—

June 20th—Won match at Belleville against *Surprise*, of Trenton, for \$200 a side.

June 20th—Regatta at Trenton, won first prize, beating *Surprise* and *Merlin*, of Kingston.

July 2d—Second in Kingston. Regatta—partially disabled; won by *Kathleen*, of Victoria, of Alexandria Bay, N. Y., third; *Surprise*, fourth; *Laura*, Emma, Zetta, Maud and *Merlin*, of Kingston; and *Idler*, of Brighton, also participated. This race was an anchor start, and *Katie Gray* got off last.

Aug. 2d—Won club race at Belleville, Kelo (Commodore) Cup;

Surprise, second; *Kathleen*, third; *Merlin* and *Emma* gave up.

Sept. 30th—First prize in fall regatta at Belleville; *Kathleen* second; *Gracie*, third; *Bonne*, fourth; *Sylvia*, last.

Her record for 1879 is equally successful:—

June 13th—First prize in summer regatta at Belleville; *Surprise*, second; *Gracie*, third; *Sylvia* last.

July 15th—Beat *Ella*, of Oswego (21 tons) in match at Kingston for \$250 a side; won by 12 min. 23 sec.

Sept. 6th—First prize and Commodore's Cup in R. C. Y. C. Regatta at Toronto; *Emma*, second; *Gracie*, third. *Gipsy*, of Hamilton, *Kestrel* and *Thistle*, of Toronto, also competed. Shifting ballast in this race, which was a test between East and West, and in which the three Eastern yachts beat their competitors from 25 to 40 min. at their own game.

Sept. 23d—Second in fall regatta, Belleville; *Kathleen*, first; *Emma*, third; *Surprise*, fourth. *Gracie*, *Surprise*, *Ella* (Kingston) and *Julie Judd* (Pictou) also competed.

Thus in two years this yacht has won five first and two second prizes in seven races sailed, and in 1879 she also won the Governor-General's silver medal at Toronto, beating all competitors.

PORT TACK.

Belleville, Ont., April 3d.

REMINISCENCE FROM MY LOG.

Editor Forest and Stream:—

In 1863 a young man, now better known as "Captain Jack," called on me to get a yacht built. He desired a sharp, keen, finelined boat, finished in the best manner, staunch and stiff, and guaranteed to fly. This being settled, the yacht was built and christened the *Marianna*. I consulted the youngster as to the size of her sail. "Give her wings!" said he enthusiastically, "and plenty of them!" The boat was 15ft. long (yacht club size), 7ft. beam and 13in. deep. Straight out from the keel, and straight through the entire bottom, sharp as a wedge on her harpoon and the good deal like a flat iron; but her stability seemed to be in her after body. When in racing trim she had only three *meches* of foreboard; her deck, however, was like a camel's back, reminding me of a Chesapeake sneak-boat. She was covered in, with only space enough for the crew (four men) to stick their feet in; this space, when filled, only held eighteen gallons of water, hardly enough to give an oel a drink. She was, indeed, a miniature sail-g life-boat. I took first premium at the Franklin Institute a few years previous, for a boat similar to her. She could be capsized and righted again in half a minute. I put one "wing" (cat) on her, placing the mast directly in the wake of her apron, elongating the heel, straddling the step to get room, for she was as sharp forward as a razor. Her mast was 31ft. long and 5in. at the deck; gaff, 13ft.; boom, 25ft. She made her debut on July 4th; wind northwest, blowing hard, and, as all northwesterers do, veering and squally. Got under way with the fleet. At Tuttle's Point a regular snorter struck her and she gently turned over, spilling two, Mayberry and Haines, into the river; making a curve to the windward, with her "turt" full of water, the outs were soon maneuvered in again, and she came in second boat at Tacony. On her way home she capsized six times, and was righted each time by placing a man on her center-board. Captain Jack declares to this day he only "dumped" five times. The distance sailed was eight miles. On one occasion an excursion steamer loaded with passengers was about to pass our champion, when a heavy puff struck his boat and she "turned up."

The steamer was promptly stopped, every thing worthy of old salts and a first class humane society, was done to save the pitching crew. Two men from the steamer jumped overboard, life preservers and everything loose and floatable was cast upon the troubled waters. While the excitement was at the highest pitch, our "Champion" placed one of his men on the center-board—the ever-ready lever—raising his boat quickly on her feet, and sailed off triumphantly with uplifted caps. At a regatta given at Smith's Island by Zimmerman & Gazelle, these gentlemen publicly presented Captain Mayberry with a handsome silver medal, appropriately designed, as the champion boat-sprinter on the river Delaware. The venerable yacht sailor, "Johnny" Wright, had for years enjoyed this title; no one could dive deeper and come up wetter, or could turn a yacht up easier or oftener than he, but alas for greatness, how transitory! The writer as first officer, and the Champion as second, with two others as crew, left Cooper's Point Sept. 23th 1863, for Cape May, in the *Marianna*. We made the run down to the Capes in 2 1/2 hrs. 50m., as the Cape May Wave of the day was at anchor. We reached home on Oct. 7th in 2 1/2 hrs. 50m. Doubling the Cape on our return just as the sun rose, a pilot boat stood across our bows, and hailed: "Where did you come from?" "New York." "Were you on the coast last night?" "Yes." The crew, "yery." When we remember that we were in a 15ft. boat, carrying a 21ft. mast, with only 3in. of free-board, with every man laying out to windward to hold her up, and on old ocean at daylight, with Christian forbearance we excuse the profanity of the pilot. At the proof of her sea-going qualities, Capt. Mayberry offered a match her against a boat of her length. The celebrated *Doger* was then in her prime, and a race between the boats was long talked about, but never culminated, the *Doger* men eventually declaring they would not sail with a boat that did her best work with her mast-head fly trailing in the water. In short, that when a boat gets "that low," she should be considered up and ruled out. I have had the good fortune since then to build my old friend Mayberry several "fyers," but he still clings to his old love, and the memories of his early yachting days grow fresher and stronger with advancing age. The *Marianna* still survives, in seventeen years, has taken some of the life out of her, but she looks good yet, and as ready as ever to be turned up by her old commander, on short notice.

R. G. W.

BOW-FACING ROWING GEAR.

Editor Forest and Stream:—

Some six months since I purchased of William Lyman, of Middletown, a boat made to his order for me, by Mr. Huanton, of Canton, N. Y. fitted with two pairs of his patent, bow-facing oars. After going over two hundred miles with them in all kinds of weather, sometimes in pursuit of game, and sometimes for exercise and diversion simply, I can strongly commend both oars and boat. It is within bounds to say that these bow-facing oars double the attractiveness of rowing. If we could find people who had always walked backward, and at last discovered how one much more gracefully walks forward instead, their eyes would furnish the best illustration of the practical value of the "bow-facing" invention. The frequent turning and twisting of the head to make sure of the course, avoid rocks, trees, or headlands—all are banished perplexities to him who uses Lyman's oars. If one drops the oars quickly to seize his gun, or for any other purpose, they trail alongside with as little interference, outside or inside the boat, as any old-style oar. If the oars are to be "shipped," the operation is accomplished with as little diffi-

culty. The introduction of the universal joint gives great freedom of movement, combined with almost perfect silence in the pursuit of game.

Now, as to objections, I have found only a few that are worthy of mention. They involve cost, "feathering," use of oars for purposes of paddle and boat-hook, and the time required to attach to, or detach from, the boat. In most cases, and in this case, decidedly, the best is cheapest.

These oars cannot be "feathered," and the objection must stand for what it may be worth. It is best to carry a boat-hook with any kind of oars, and it can easily be combined with an ordinary paddle in one article, if desired. I carry a boat-hook and a light, ordinary oar. They cost little, weigh little and occasionally are of service.

The extra time to attach and detach will average from five to ten seconds, but this objection is more than counterbalanced by the absence of oar-locks that may be easily lost or "borrowed."

A word about cushioned boats. It is by all odds one of the best for rowing I have seen, and has some great advantages for hunting. It is 15 ft. long, weighs 85 lbs., and carries four persons comfortably. It combines safety, speed and comfort to a great degree.

Middleton, Conn., March 29th.

NEW PUBLICATIONS.

THE PACIFIC TOURIST. William's Illustrated Guide to the Pacific R.R., California and Pleasure Resorts across the Continent. By Henry T. Williams. New York, 1879. Price, \$1.50.

This hand-book of Trans-Continental travel is prepared upon a scale never before attempted. It is intended first to be useful, and to this end the editor has detailed at considerable length full descriptions of the railroad routes, places of pleasure resort and noted scenery in the far West, information about towns and cities, routes of summer travel, best localities for hunting and fishing, and such other topics as make this a complete guide. There are special contributions by Prof. F. V. Hayden, Clarence King, Joaquin Miller, and others, with illustrations by Moran, Warren, Snyder, Shelly, Troy and Will. We cannot praise too highly either the plan of the work or the admirable manner in which it is put into execution.

TWENTY YEARS OF INSIDE LIFE IN WALL STREET. By William Worthington Fowler. New York: Orange Judd Company, 245 Broadway, 1880.

Ten years ago Mr. Fowler published a book on Wall street, of

which he sold forty thousand copies. If detailed his own personal experience as a speculator, in a series of pictures of Wall street life, which were so prolific and truthful, that the merits of his book were at once recognized by the press and the public.

The volume now before us is the old book rewritten and brought down to date. To the narrative of the exciting scenes of ten years ago, has been added a history of the gigantic stock movements of the latter part of 1879. There is much truth in the book, as well as much sensation.

BOOKS RECEIVED.

MANUAL OF YACHT AND BOAT SAILING. Dixon Kemp. Philadelphia, 1880. Second and enlarged edition. Price in England, \$6.

A CONNECTICUT DOG STORY.—The New Haven Union is responsible for this:—"A Rockville sporting man, having a fine litter of setter pups—pedigreed stock—was taking special pains to give them a good start in the world, and to this end it was his custom to rise from his bed at short intervals to feed them. It became rather tedious business for him to 'crawl out' during the cold winter nights to attend to their wants, so he tried a new plan. Setting a pan of milk in a warm corner behind the stove, he went to bed, and in the small hours the young canines called for food. Thinking to make one job of it he arose in the dark and carried the pan carefully to the wood-house, when seizing each pup by the nape of its neck he thrust its nose into the pan, and when all had 'got to their work,' returned to his bed. The next morning he was roused by his wife, who wanted to know what in the world he had done with her bread pan. Investigation followed; his wife had wet up a batch of bread and set it behind the stove to rise; this pan our 'shot' had carried to the pups, and they, after gorging themselves with the dough, waddled back to their warm nest. The yeast was good and the puppies rose, looking like so many muffs, with the head of the animal used for trimming, while their legs and tail resembled warts on an early rose potato."

ONE WAY TO BREAK A DOG.—Boston, March 24th.—I read your paper with much interest, especially the one of March 18th. Real things and real facts we all like—fanciful ones rarely. But I must confess I am fearful of being considered imaginary by most of your readers, when I relate the following about my setter dog, Prince. He is six years old. No one has ever shot over him but

myself. For the last four years I have been in the field with him, four or five months each season, commencing in Sept., in Maine, and ending the 1st of Feb., in Virginia, giving him more practice than one dog in a thousand gets. When he points a bird, I take my position and then say to him, "If I kill this bird, I want you to fetch him as quickly as you can," and he will do it. Again, I take my position and say to him, "No, no, Prince; you must not go after this bird," and he stands like a post and makes no move to retrieve the bird, unless ordered to do so. He never catches a hare but will stand and mark the bird, if not killed, as carefully and correctly as I can. He is a pure Laverack. I claim that, if you have an intelligent dog to start with, and keep him entirely under your own training, by kindness and lots of good common sense teaching you can advance him beyond belief.

CLIFF.

THE FOREST AND STREAM, about May 1st, will remove to the new office, now being specially fitted up for its reception, in the New York Times building, Nos. 39 and 41 Park Row. The editors seem to have grown weary of gazing at the varnish sign across the street, and desire to exchange this "for an outlook over the Jersey hills, and to the sunset beyond." We have no doubt but that in the future the FOREST AND STREAM will be just as readable and just as full of the good things which have occupied its columns heretofore, and which make it the most attractive publication of its kind which comes under our notice.—Insurance Monitor.

FOREIGN GUNS TOO CHEAP.—Editor Forest and Stream:—I wish to say a few words through your valuable paper in regard to our American gun-nuts. I have been trying to introduce our home-made guns through this city, for I feel that there are as good guns made in America as abroad; but I find in doing so that there are three in every five who can get a discount of some of the manufacturers far below what they claim is their standard price. Now I call this poor encouragement to the retail dealer to sell American guns, for their discount is small to us. Importers also sell to hardware men, who do not pretend to deal in their goods, as low as I can buy. I, for one, will not attempt to sell more until the manufacturers keep to their retail price. And I want to see other retail dealers stand up for their rights.

A SUFFRER.

New Advertisements.

NOW IN COURSE OF PUBLICATION.

AN ENTIRELY NEW AND

COMPREHENSIVE WORK ON THE DOG.

(demy 4to size), under the title of the

ILLUSTRATED BOOK OF THE DOG.

YEARLY SUBSCRIPTION, \$4.50.

Sportsmen's Routes.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOUS SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed,

if equaled, in the abundance and great variety of

fish contained.

BROOK Trout abound in the streams, and

the famous AMERICAN GRAYLING is found

only in these waters.

THE BROOK Trout season begins May 1st and ends Sept. 1.

THE GRAYLING season opens June 1st and ends

Nov. 1.

BROOK BASS, PICE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily secure a couple of his

skill to his friends or "club" at home, as ice for

packing fish can be had at many points.

PAK & YOU FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful;

the air is pure, dry and bracing. The climate is particularly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries now enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Boat, Guide and Fishing Tackle Carried Free of charge.

It is our aim to make sportsmen feel "at home" at some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chinocheague, Cobb's Island, and points in the Peninsula. City Point, James River, Curlew, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday. Leaves, Del., Monday and Thursday, at 2 P.M. Full information at our office, 127 Greenwich Street, New York.

HO! for TROUT FISHING.

THE FAR-FAMED waters of the Maganetowan are now within easy access of Toronto and the outside world, and are still teeming with speckled trout. We have erected a large and comfortable hotel in Maganetowan Village, and are prepared to offer every facility to our sporting friends by way of canoes and guides to the trout lakes and streams tributary to the Maganetowan, and can offer the best of trout fishing within a mile of our hotel; will have canoe and facilities for packing fish, so that they can be taken fresh to any part of the Northern States. The road from Rousseau (the head of steam travel) has been Macadamized and the journey shortened by half a day, so that parties leaving Toronto can get here in one and a half days. Come up and see us.

HOWIN & CLARKE, Proprietors.

Maganetowan Post-Office, Ontario, Canada.

OCEAN HOUSE, Speonk, L. I.—First-class hotel, with bay and ocean, forest and lakes; gunning, fishing, riding, sailing, bathing and rowing. Parties will be met at L. I. R. I. depot by appointment.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING," FFG and PFG. The FG for long range rifle shooting, the FFG and PFG for general use, burning strong and moist.

SPORTING MIN SHIPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

J. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square casks of 1 lb. each.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 4 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 4 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 124, and 61 lbs. and cans of 5 lbs. FFG is also packed in 1 and 4 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard 16 lb. Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

DITTMAR POWDER.

Champion Shot Gun and Rifle POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

A Skin of Beauty is a Joy Forever.
DR. T. FELIX GOURAUD'S
ORIENTAL CREAM, or MAGICAL
BEAUTIFIER

Removes Tan, pimples, freckles, sallowness, and every blemish on beauty. It has stood the test of thirty years, and is so harmless to use that it is to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre, said to a lady of the haut ton (a patient):—"As you ladies will use them, I recommend 'Gouraud's Cream' as the least harmful of all the skin preparations." Also Poudre Subtile removes superfluous hair without injury to the skin.

MME. M. R. T. GOURAUD, Sole Prop., 48 Bond St., N. Y. For sale by all druggists and Fancy Goods Dealers throughout the United States, Canada and Europe.

Natural History Store.

IN the department of Taxidermy I offer for sale a very fine assortment of Game Birds of the very best work, and a large assortment of native and foreign species, all prepared by first-class workmen.

One case of game birds, which is probably the finest in the country, I offer at \$28.

LY. J. KNOWLTON,
108 Tremont street, Boston, Mass.

CURE BY ABSORPTION.
RHEUMATISM, NEURALGIA, MALARIA.
"Sapanule," the wonderful German Lotion, is a positive cure; it has never failed.
"Sapanule" has no equal for Chronic Lameness, Lumbago, Sprains, Piles, Chapped Hands, Chills, Bunions, and all diseases of the Skin, Erysipelas, Salt Rheum, Eczema, Humors of the Scalp, etc. Diphtheria, Sore Throat, Pneumonia, and all inflammatory diseases. Ladies who suffer from local difficulties find immediate relief, and a permanent cure by using "Sapanule." Used in sponge or foot bath removes all soreness of body, limbs and feet. Satisfaction guaranteed or money refunded. Sold by all Druggists. Price, 60c., and \$1 per bottle. Send for illustrated circular and cards.

most purely to liberate him on the middle of the shore. Using Major Fulton's position, and pulled trigger. At the crack of the gun, down went the big buck with a thud, and away scampered the does. Losing all thought about meat for next year, I sent four or five wicked shots after them, but am glad to say, "never touched." Dr. F. sent me a note that he had been in the yard and saw one, causing me to drag her hind part into a few paces, but then she righted up and went like the wind. We now gave three cheers and started for the struggling, bleeding victim. Found a terrible rent through the shoulder, completely severing the spinal column. Had my aim been two inches higher I doubt whether we would have got any meat. The drive now came up when we loaded and started for Laku, arriving late in the evening.

On the 7th day of October, 1879, Dr. P. and myself left this place for a two weeks' hunt in the heart of the Great American Desert. We expected to give our attention to buffalo principally, as we had been vaguely informed that from two to five hundred were leisurely roaming about on the plains, somewhere between the Kansas Pacific and the Atchison, Topeka and Santa Fe Railroad, on the head of White Woman. When we arrived at Lakin, Kan., we found our guide absent, and having nothing better to do we concluded to make a tour twenty-four miles south on the headwaters of the North Canadian. Having secured the services of about as vulgar a specimen of humanity as ever hailed from York State, we started in a little spring wagon over the Arkansas River and adjacent sand hills. When about fifteen miles out we saw our first antelope of the season. Reaching our camping ground two hours by sun, we con-

My quondam friend, Dr. P., who is an old timer in camp and field, but new in life, and who had been snoring away all the forepart of the night, now woke up and commenced to meditate. The little dog brought along by our driver, because he could whip his weight in wild cats or coyotes, kept up a continuous barking. Soon the coyotes set up a howl, and the Doctor thought that they were the sheep, but the distant howl came nearer and nearer, and the sound of bearing down to the shepherd camp. It evidently was a long and weary retreat. There is nothing very pleasant in contemplating the forward march of a pack of hungry wolves, especially where they are mixed up with an occasional gray wolf, one of which had been seen just before sundown. Our fighting dog ceased to bark, which was remarkable, as the Doctor said he could plainly hear the rustle of the grass as the pack seemed to be gradually closing in upon us. We all probably think that we would do so and so under certain circumstances, but the only excuse for my silence arises there is no accounting for the freaks of human nature. Instead of arousing the whole camp, and giving us some show of self-defense, the Doctor simply pulled the blankets tightly over his head, regardless of a pair of No. 10 boots firmly attached to his distal extremities. What his idea was, or what particular train of meditation his mind had taken, no one but himself knows to this day. Probably something like this—for the mind, when thoroughbred and trained, travels with incalculable speed, as we, in our dreams, could travel with the same swiftness, and review the history of ages in a moment of time, and even cover up my head. This is my only secure defense. Nature has so taught the ostrich in the perils of his desert home. Besides, our little fighting dog had become paralyzed with fear, not unlike the tiny warbler, fluttering with intoxicated brain into the very jaws of death, or the innocent kid, helpless and hopeless under the somnific breath of the king of beasts. So, too, our little dog, who had been so certain of destruction, now awaited him, had felt the palsy of death, and even trembled, and had gently turned over on his back, tucked his tail securely for the last time, folded his paws across his breast, extended his head and ears upon the grass, shut his eyes and opened his mouth. But then, should the vicarious sacrifice of our noble dog fail to satisfy the rapacity of the oncoming pack, in all probability, in obedience to the law of 'natural selection,' these fiendish creatures might pounce upon that vulgar New Yorker, and finish him off as a matter of course. I could not see a delightful morsel. At all events, I cannot think for the moment that my tried and true friend—one who had shared with me the joys and sorrows of camp and field for a series of years—should for a moment think of leaving me a prey to the gormandizing instincts of a pack of "low down coyotes." But be this as it may, the sequel was at hand; the tread of distant feet had now become a mass of discordant sounds. The breath of the adventurer had been taken, and the faint kind of tremor that had taken hold of my blanket and pillow, and my clothes gradually began to move, and in spite of the death-like grip of my friend, the covering was jerked from over, and the sack of oats from under, our heads with a frenzy that suggested desperation. This brought the Doctor to a sitting posture, and with clenched fists, hair on end and teeth set, he uttered a prayer—a prayer, O Lordy!—while the cooling breeze of the night nerved him for the conflict; and with a momentary calm subsided, the Doctor appeared as dead as day. The stealthy tread of carnivorous brutes had now fully become metamorphosed into the tread of the old gray wolf, which heaved to bring us hither, and no doubt got a sniff of the sack of oats, and hastened for them as fast as his

Not hearing anything from our guide, and it being late in the week, I concluded to take a run up to Colorado Springs, some one hundred and fifty miles further west. As these springs have so elaborately written up by the versatile pen of "Grace Greenwood," it would be useless for me to attempt to add anything thereto. In fact, I think that everything has been said in their praise that is possible to say, with any regard for truth. We found the springs in a manner deserted, that is, about Manitou. Noticing some bills tucked up on one of the awnings over the spring, I pulled one down and read where to go to hear the truth proclaimed. An angel hovering in the air had made known a new and Divine revelation to the sons of men. This fact was to be announced and amply verified by some one claiming to be a "latter day saint." I didn't go. I wanted to see the Garden of the Gods.

I left my antelope head at the Springs to be mounted and hastened back to Lakin. Dr. P. had received a letter stating that our mutual friend, Frank H., would join us on Monday morning. This was good news, for we wanted Frank to accompany us at the start. Frank is one of those polished gentlemen who exhibits good manners at home and abroad—something not always adhered to when the restraints of society are removed. Bright and early Monday morning we were up trying to get a shot at some coyotes, but failed to bring any to bag. The day arrived at 9 o'clock, and sure enough there was Frank, bag and baggage, with a brand-new gun, with double, open and peep sight behind. Now was hurry and bustle. We could hardly wait for breakfast and team. But with all our efforts it was near noon before we started. Our objective point was south of the Arkansas, on the flats, this field giving us plenty of sport at long range, and Frank was over anxious to try his new gun, saying that he "just knew he would bring some down." We did not come far after crossing the river before we discovered antelope, some feeding and some lying down. They permitted the wagon to come up to within two hundred yards, and Frank got out. As a matter of courtesy we granted him first shot. He took a shell out of the case and passed it into the breach of the gun, and finding that the breech-block did not readily close he used some force and wedged the shell in, and fired. The next instant the smoke cleared, and the shell was gone. We did not remove it. Dr. P. now became nervous and wanted to shoot, but Frank asked him to wait, showing considerable excitement and working hard at the huge shell. "Bexar" never had a worse case of expanded shell than this seemed to be. Frank worked manfully and finally succeeded in pulling out the shell and leaving the ball fast in the gun barrel, while our friend fussed and fumed until the antelope were miles away. Soon we saw a solitary one, and as it crossed us about a half-mile away I shot in advance of it, the ball raising quite a fog of dust. This frightened the animal so that it wheeled and bore down directly upon us, coming to within a few hundred yards before turning. I gave it another shot, cutting through the brisket, and one of the other guns broke a hind leg, but not having any way to follow it up failed to get it. Late in the evening I broke the shoulder of another, but failed to get it.

On Tuesday morning we learned that our guide had arrived from the buffalo range, bringing in five horses. Everything was now making ready for a regular caribou hunt, our guide assuring us that he would show us buffalo. We packed our traps into two wagons, and went some fifteen miles that evening. Just before sun down we stopped for camp, and I assisted in pitching our tent—the first field tent that I had slept under since the "late unpleasantness." Next day was rather lazy, and turned colder. At 10 o'clock we saw a solitary bull, evidently a wanderer. We all gave him a few shots and he ran to no purpose. We stopped for dinner near the head of White Woman, having traveled near fifty miles since leaving the station. The wind was blowing almost a tornado, the sky was dark and lowering, with occasional claps of thunder. We crept in the crevices of the rocks, which make a solid wall for some distance. We discovered where a temporary fort had been made out of loose rocks by piling them up over the heads of the last of the rock. Some party had certainly been besieged here, as we could see a great many empty brass shells of the old Springfield 54 and 53 caliber strewn about on the ground. We also found a steel arrow-head.

The clouds parted and the sun came out, but the wind continued to blow. We hitched up our teams and moved on down the river. Some distance from camp we discovered a solitary antelope feeding near a lake, and thinking it a good chance to stalk, Frank and I went down in the bed of the stream, leaving the teams, and by stooping and crawling along until almost worn out and getting our boots full of gravel, we finally got up within a hundred yards, and as we peeped over the hill our little antelope was leisurely grazing, and not aware of any danger. I suggested to Frank that he give the command to fire. We were both puffing and blowing, and Frank wanted to "wait a minute," but I told him that we might lose our chance. We both slipped our guns upon the bank and took deliberate aim. After waiting for some time I whispered to Frank, "Why don't you count?" Frank was evidently excited, but he began: "One-e, two-o-o, three-e-e" bang went both guns; and to our surprise away went our antelope. We now jumped up on the bank, and as I threw my gun to my face for another shot, Frank called to wait. I found him found him squatting down, trying to get another shell out of his gun that he failed to get in. As I glanced back to the antelope I noticed it turn half quivering, throw its head back and fall. We gave the usual cheers, and started to bag our game. As we were going along Frank said, "Where did you aim?" I told him I aimed at the center of the shoulder—always do; "where did you aim?" "Well, I aimed," Frank said, "at the center of the hind leg." When we got up and turned the deer over we found that there was a bullet hole near the middle of one shoulder, and another about two inches behind the other shoulder. So this was conceded Frank's game.

We proceeded down the creek for a few miles and went into camp. Had a nice fry of antelope liver for supper. The night was dark and cold, so much so that we could not sleep with any comfort. About 3 o'clock the Doctor and I got up and gathered what fuel we could find and made a fire. About 4 o'clock we ate breakfast and set out on our trip, and started. The sun came up bright and nice and the wind had calmed down during the night.

After traveling four or five miles our guide stopped and called our attention to some fresh buffalo sign. There were the beds and fresh titter. I got up on top of the wagon seat and discovered six large buffalo lying down. Our guide told us to get ready, and we all felt sure of getting a prize. When everything was ready our guide formed us abreast, locking each other's arms, and told us to march straight up without stopping. We found this hard to do, as no two stopped alike, but all evidently bent on first shot. Just as we came in view, and while yet a long way off, our friends concluded to leave, and they did not stop the run as far as we could see. There was nothing left for us to do but leisurely follow up the trail with the hope of overtaking them. Two or three o'clock in the afternoon we came in sight again. It was cloudy and a fierce northwest wind blowing. I thought we would all chafe to death. We could see that the animals were tired, as they would often stop to look at us and then turn and walk away. We concluded to try a shot at three hundred yards, but failed to do any damage. Soon after the herd separated and we gave them up finally. But while they were still in sight we discovered a sucking calf approaching, whose mother had been killed, no doubt, but a short time. Seeing us the calf started for the teams; our guide told us to go out a hundred or so yards and lay flat down and that it would come up to us. Sure enough, the dumb brute came to within fifty or sixty yards, and Dr. P. said that it was a pity to kill the innocent thing. I told him that I believed that I wouldn't shoot. Frank said, "Well, he had come out to kill buffalo and was going to shoot." The Doctor thought that if Frank shot that we had as well all shot. So we all fired and made a clear miss, when Dr. P. gave it a second shot on the wing, breaking its neck.

We spent another night on the high plain—the coldest, most disagreeable night that I ever spent in camp or field. This determined us to start for home, leaving our guide still in pursuit of buffalo. We made the station about 9 o'clock that night without any loss and packed up for home next day.

The plains are almost destitute of fuel and water. The supply of buffalo chips had disappeared. There does not seem to be much trouble in getting water by digging a few feet anywhere near these depressions that are called crocks. What a great benefactor must be he who would have a few thousand bored wells scattered about over the plains! And then if the Government would only cause a few electric lights to be placed along the railroad every few hundred miles, many lives would be saved.

Schultz, Mo.

OCCIDENT.

Natural History.

SPRING NOTES FROM MINNEAPOLIS, MINN.

MARCH, 1880.

FROM the 23d to the 27th of February was mild and pleasant, and it seemed as though we were again to have an unusually early spring. The shore larks had appeared about the middle of the month; a red-winged blackbird was seen on the 26th. The snow buntings and Lapland longspurs were in their usual early spring abundance, and the snow had entirely disappeared from the ground. But on the 25th snow fell all day, and March came in with a moderate amount of snow on the ground and the thermometer on the morning of the 1st 2deg. above zero. On the 2d and 3d it was again mild, the thermometer being 53deg. at noon on the 2d. The snow all melted and a bluebird was reported on the 3d. From the 3d until the 21st it was continuously cold, with much changeable and disagreeable weather, and occasional light snow-falls. On the morning of the 14th it was 8deg. below zero, and on the 16th 7deg. below; with frequent readings, morning, noon and night, between 0deg. and 20deg. On the 16th a male long-eared owl (*Otus longicornis*) was shot in a piece of woods where one appears regularly every spring, and the same day I heard the longspur (*P. lapponicus*) singing for the first time this year. In an old field grown up in grass and bushes I found a large flock of the *P. lapponicus*. Some of them were feeding upon the ground, while others were sitting in the low bushes uttering their spring song, which improves much as the season advances. Upon starting the whole flock into the air it circled around for a time in the usual erratic manner, and then alighted in the tops of some small oak trees. No sooner were the birds settled than they all started to sing, and although the individual effort is, at this season, neither very full nor continuous, yet the effect of the general chorus was musical and pleasing. A flock of blackbirds often act in a very similar manner. This "congregational singing" of the longspurs is their common spring habit, and is as often indulged in while they are sitting upon the ground as elsewhere.

The 21st another bluebird was seen, and on the 22d marsh hawks, a red-tailed hawk, a flock of mallard ducks and a great abundance of longspurs.

From this time the spring birds began to arrive almost daily, and it will be better to give the record in diary form. The readings of the thermometer were taken three times a day—morning, noon and evening.

March 21th, 30deg., 41deg., 81deg.—The first robin. Male ring-neck and hooded merganser ducks shot. Wood ducks.

March 23th, 30deg., 41deg., 37deg.—About five inches of snow on the ground, which fell last evening. Three wild pigeons seen.

March 23th, 36deg., 43deg., 44deg.—A kingfisher, robins, wood, ringneck and mallard ducks shot. Wild geese. Snow melted rapidly.

March 27th, 43deg., 38deg., 30deg.—Rained all day; the first time for many weeks. Another kingfisher.

March 28th, 36deg., 49deg., 37deg.—Clear and pleasant. March 29th, 30deg., 51deg., 36deg.—Clear. Saw a sand-hill crane flying over. Although at a great height, its loud notes were distinctly audible. Noticed a small flock of cross blackbirds. This bird is occasionally found here in the middle of winter (Jan. 7th, 1870), but cannot be regarded as a resident. Waxwings (*A. garrulus*), bluebirds and robins. Suckers and pickers are running in some of the streams.

March 30th, 40deg., 59deg., 48deg.—Clear and warm; windy. Two white-bellied swallows, ruby-crowned and golden-crowned, fox-colored sparrows, meadow lark, house pewee, song sparrow and brown creepers. The last species is of accidental occurrence during some winters—(Dec. 10th, 1874; Jan. 10th, 1877)—but it comes in numbers with the early spring arrivals and is then more noticeable than at any other time. Pintail and spoonbill ducks are here. The snowbirds (*Junco*) have appeared abundantly in the hedges and bush plots. A large flock of thistle birds (*C. tristis*). Downy woodpeckers mating. The ice went quietly out of the Mississippi River at this point to-day. Previous to 1878 it was not usual for the river to open here before from the 7th to the 13th of April. Winter held on firmly until the last days of March, when there was a general breaking up—melting of snow and ice, and arrival of spring birds. But during the last three years it has been very different. The break-up has been much earlier, and instead of abrupt has been gradual and interrupted by many brief returns of cold weather. In 1875 and 1876 the ice disappeared from the river April 12th, and in 1877, April 7; while in the early spring of 1878 it went out gradually between the 5th and 7th of March; in 1877 on March 29th, and this year March 28th. The river is clear at St. Paul, ten miles below, some days earlier.

March 31st, 42deg., 40deg., 34deg.—The first thunder-storm of the season this morning. It always seems spring-like to hear the roll of the thunder after the long silence of winter. Rained, and at times snowed, most of the day. Several golden-crowned kinglets, meadow larks in song and a large company of brown creepers. While standing watching the creepers as they passed from tree to tree through the woods two of them came and lit on my clothing, and after a short examination flew to a tree about two feet distant. One of them passed in succession up each of my arms and shoulders, and then, as I looked on, they concluded that they arrived at its beyond conjecture; but they must have been somewhat astonished at the character of the trees in that grove. Fortunately for the writer's feelings the trees at this season of the year show no signs of greenness.

The spring this year is slightly less advanced with the close of March than at the end of the same month in 1879, much behind what it was in 1878, and considerably in advance of the average for a number of years previous to 1875.

THOS. S. ROBERTS.

[To be continued.]

UNUSUAL NESTING PLACES.—Cleveland, O.—While out collecting last year, I noticed a pair of robins building a nest in the wall of a building, and in the case of the rook's leading from this place, the nest being situated on one of the timbers, about eight or ten inches below the rail, over which each day ten or twelve trains passed. Here the robins reared their young.

A pair of chipping sparrows built a nest in a hanging basket which was filled with plants, and had to be watered every day. When the lady came to water it the bird would leave its nest, and return as soon as she left. The sparrows finished their nest and reared their young in this situation.

SEYM. INGERSOLL.

SPRING NOTES.—Our correspondent, "Webb," who writes from Nashua, N. H., under date of March 15th, says: The spring-like weather of the month has been succeeded by cold stormy blasts which have driven the "early bird" back to winter quarters. Bluebirds were with us on the 22d of February; a wood pigeon was shot on the 23d—they are generally among the last to arrive; Phillips mounted a cedar bird which was killed on the 20th, and they are generally among our late arrivals. Robins were singing in the orchard on the 28th, and I saw crow blackbirds and chipping sparrows the same day. Four larks! I have not seen them since. The streams are all open, and a few ducks have put in an appearance. A flock of geese passed over on the first of the month; it is early for them, but a friend living in Central Vermont tells me he saw a flock of geese flying north the last of January.

Mr. Seym. Ingersoll, of Cleveland, O., contributes the following observations. He writes: I think we may say that spring is fairly open here, as the birds have begun to arrive. The following is a list of the arrivals that I have noted up to April 2d—

Feb. 10th. Saw two white-bellied nuthatch, one red-headed woodpecker and two yellow-hammers.

Feb. 16th. Saw several more red-headed woodpeckers.

Feb. 21st. Saw a robin to-day.

Feb. 22d. Saw a number of bluebirds and robins.

Feb. 24th. Saw a single flock of crows.

Feb. 26th. I noticed an albino robin, but could not get him.

Feb. 27th. Saw first meadow larks to-day.

March 18th. Saw a large flock of ducks fly over.

March 19th. Noticed a killdeer plover to-day; also several more meadow larks.

March 21st. Noticed crow-blackbirds, cowbirds, song-sparrows and Carolina doves to-day, for the first time this spring.

March 23th. Saw a flock of Carolina waxwings to-day. March 31st. Saw a wood pewee this morning, also a kingfisher, some redwing blackbirds, a chevron and a logger-head shrike; also found a nest of the logger-head shrike, which was just finished.

April 1st. Saw several snipe.

April 3d. Saw a few cliff swallows, and noticed a pair of robins nesting.

PARASITES IN THE MALLARD.—Bellefonte, Ill., March, 1880.—I have just read with a great deal of interest the description of the parasite found in a mallard duck. I had the wing and a part of the breast of a mallard duck, shown me several weeks ago, infested with the

same parasite. The duck was shot near here about four weeks ago, and had the same appearance precisely as described by "Mic Mac."

DODGE.

RAVEN NEAR KINGSTON, ONT.—Our correspondent "Al," who writes from Kingston, Ont., notifies us of the recent capture of a raven near that city. He says:—

A friend of mine, Mr. W. Craig, living a short distance from the city, not long since shot and secured, on or near his farm, a splendid specimen of the raven. He has had it mounted by Mr. Stratford, our city taxidermist, at whose shop it is on exhibition.

NOTE ON THE BREEDING OF THE BLACK BEAR.—*Boston, Feb. 17th.*—The black bear (*Ursus americanus*) brings forth her young in the Northern States and Canada in February. The period of gestation is eight months. At two years of age the female usually produces one at a birth, and in other years. The second litter consists of two, and when of mature growth sometimes three, and in one instance—well authenticated by the writer—four at a birth. When born the cubs are naked and very diminutive. About the tenth week their fur is grown and their eyes open. It is not unusual for the dam to leave her young for a brief time when the weather is very mild. On the approach of warm weather, in May, they leave the den in search of food, the dam placing her cubs on her back, where they cling and nestle in the long thick fur. After this the cubs develop more rapidly in size and soon ramble by the side of the dam. When pressed by the hunter, or in danger she keeps her young in front, herself between them and danger, and when suddenly started sends them to tree and takes herself off at a distance, especially if the hunter is on their trail.

CORLE, LOT WARFIELD.

WHITE JACK-RABBITS.—*Carson, Nev., March, 10th.*—*Editor Forest and Stream.*—Your correspondent, A. Lakes, writing from Como, Wyo., who is certainly an intelligent observer, makes a grave error, and one which is apt to mislead Eastern sportsmen, when he speaks of snow-white jack-rabbits. Now a white jack-rabbit does not exist, the jacks retaining the same color winter and summer. There is a species of rabbit in the Western country, however, much larger than the jack, which does become white during the winter months. This rabbit weighs from eight to ten pounds when full grown, and in this section is known as the mountain hare, from the fact that it is to be found only on the mountain sides, or now and then in the foot-hills. There is as much distinction between this rabbit and the jack as there is between the cotton-tail and the jack; and, I repeat, there is no white jack-rabbit at any season of the year in any Western State or Territory, and such statements as Mr. L. makes, appearing in a reliable paper like the *FOREST AND STREAM*, are calculated to lead many into grievous error, especially so when they originate from one who can use all the scientific names so readily. *SIVAD.*

We regret to be forced to differ with a correspondent who make such positive assertions as the above. Nevertheless we are obliged to take issue with him on the facts. The so-called jack-rabbit of the plains and the Rocky Mountains (*Lepus campestris*) does certainly turn white in winter; "Sivad's" statement to the contrary notwithstanding. See Coues & Allen, *Monograph of North American Rodentia*.

The large hare referred to by our correspondent is very probably the pine or snow-shoe rabbit (*L. americanus*, var. *Bairdi*).

A TAME RUFFED GROUSE.—*Worcester, Mass., March 15th.*—As it is generally conceded that the ruffed grouse cannot be tamed, I will give some facts concerning a bird of this kind. Near the village of Coldbrook Springs, Mass., are the mills and box-wood of Mr. D. M. Parker, and near the mills is a tract of sprout land extending almost to the mill-yard. In the fall of 1878 Mr. Parker first noticed a partridge (or ruffed grouse) about the premises. The bird appeared remarkably tame and therefore attracted his attention. He began feeding it, and it grew more familiar, until it would eat from his hand, and finally grew so tame as to perch on his shoulder. He can call it as readily as a quail, and Mr. Parker has, in fact, culls it in the same manner. Mr. Parker has never deprived the bird of its liberty, except on one occasion, when he kept it in the basement of his house for a short time, but it did not relish confinement, and he let it go. It has, however, continued to stay about the mill. Many persons have visited his place to see this remarkable bird, and Mr. Parker is always ready to leave his business to show off his pet. Any one who is at all skeptical as to the truth of the above statement can call at the mills and see the bird take a piece of apple from between Mr. Parker's teeth.

Sportsmen generally pronounce it a female bird. It is, and always has been so far as known, a perfectly strong, sound and healthy bird. Can it not be fairly claimed that this comes very near being a tame ruffed grouse?

E. S. K.

A very interesting case.

SNAKE EATING FISH.—For a number of years past it has been my custom, because unable to find any better way to dispose of my summer leisure, to do a good deal of fishing in the Potomac River, sometimes in the immediate front of the city, sometimes at the Little and Big Falls above, and sometimes at the Four Mile Run below. I have generally used live-bait, there being minnows in any quantity along the edges of the river. Three or four summers ago I went to catch minnows at the mouth of a small run called Gravelly Creek, situated on the west bank of the river, just at the foot of the Arlington estate. A short distance north of the run is the once quite celebrated Arlington Springs, which is still a place of resort for large numbers of Sunday visitors from the city. I have generally used live-bait, it is necessary to cross Gravelly Creek near its mouth, or go quite a long distance around the creek. To enable parties to cross the creek here is some forty feet wide, but at full tide it is fully sixty feet and four or five feet deep. The loose stones form quite an impediment

to the tide, so that, when the tide is rising, the water on the river side of the dam is several inches higher than the water on the other side, and flows through and over the loose stones quite rapidly, and the reverse is the case when the tide is falling. Vast numbers of minnows are to be found at all times in the marsh along the river banks, and as the tide rises they seek the runs to be found here and there to avoid the white and yellow perch which prey upon them, and it is while they are making up the creek that I catch the quantity I want. One day, while catching minnows as usual, I noticed a number of snakes, the common water-moccasin, approaching the dam or footway of stones. The water yet lacked several inches of reaching the top of the stone-way, although it was rushing in quite rapidly and carrying with it many bull-minnows and small white perch that were unable to resist. Watching the snakes, I saw one after another reach the dam and take their station upon it, submerging themselves all but their heads, which were raised about an inch above the water and pointed in the direction of the incoming tide. In this position I counted seventeen snakes, arranged at uneven intervals, in a space of less than sixty feet. I came to the conclusion at once they were fishing, and watched them with a good deal of interest. Pretty soon I saw one head strike forward, going under the water, reappearing in a moment with a very large bull-minnow in its mouth. The snake immediately loosened its hold upon the rocks and swam for the shore, reaching which it disappeared in the bushes; and this was repeated at intervals by each of the seventeen snakes. When they returned from the bushes, having made short work of their "catch," each snake sought his own particular location on the rocks, there being no clashing of interests there.

Now, how is this for reason or instinct? How do these snakes know where to locate themselves, and the particular stage of the tide at which to start on their fishing excursion? How do they know that a number of minnows will be swept over the miniature falls made by the rocks? These are questions that go beyond my comprehension, and I leave them for others to answer. But the facts remain, and any one who will take the trouble may verify them at any time during the summer by a visit to Gravelly Creek.

HAIR-TRIGGER.

Fish Culture.

THE BERLIN EXPOSITION.

ACROSS THE ATLANTIC.

[From our Staff Correspondent.]

AS school-boys we learn that three-fourths of this globe which we inhabit is water; the fact is stored away in memory's garret with other waste bits of intellectual lumber without a reference being made to it, or anything to recall it in a manner to bring it to the surface as an actual fact, until one sails for days and weeks without seeing anything else. An ocean trip has been written up so often and so well that any attempt to add much to it or to depict its vastness must result in failure; still, the experiences of each one show that there are many things which cause trips to be remembered as distinct from each other—the ship, the fellow-voyagers, the cuisine, and, above all, the weather.

It was the writer's fortune to cross to England recently in the North German Lloyd steamer *Neckar*, which left New York on March 20th, with part of the goods to be exhibited by the United States at the International Fishery Exhibition, to be held in Berlin, and also with the delegation which was selected to represent our country at that Ichthyic congress, and from whom much information was derived by inquiring passengers concerning the importance of our fisheries, the extent of their operations, value, the culture of the food fishes, methods of capture, and much other valuable knowledge which, to one who had only considered fishes from the angler's point of view, was a series of surprises as to the vastness of the field and the thoroughness with which it has been worked by Prof. Baird and his assistants. The catalogue of exhibits, proofs of which were to be seen, will be a large one, and covers what appears to the visitor everything which could by any possibility be made from a fish or could in any way be connected with it—from the boats and implements of the angler and the fisherman to the literature of fishes and their culture—an exhibit which cannot fail to be both a credit and an advantage to our country.

The other passengers were an exceptionally good lot, as passengers go, in both cabins, not a man being seen drunk on the voyage, a thing which old sea travelers will regard as a strange occurrence; it being the rule that a party of several men will get drunk when the ship leaves the wharf and remain so until they go on shore, making the smoking-room a place to be avoided by decent people. The differences in the cabins as to rooms is not great, the location of the second cabin being amidships, making it more desirable and more than compensating for the difference in the upholstery, while the cuisine is good, but not so varied and elaborate as in the first; the differences between them which the old traveler cares most about being in the passengers and their manners, especially at table, there always being many in the second who perform feats of knife-swallowing only equaled by the jugglers, and who not being used to be waited upon will request service of their neighbors while the waiters are standing idle. Having crossed in both cabins and studied the habits of the animal man, I have developed the following theory: The reason why the second-cabin passenger can reach so far across your plate to reach the pepper

without dipping more than a small portion of his coat-sleeve in your soup is, without doubt, an inherited peculiarity to be accounted for by the fact that the longest-armed second-class passenger in the Ark got the most pepper, and his descendants waxed long of limb and far of reach, crowding out and displacing their shorter-armed fellows, and so have developed a race which when in want of pepper are capable of entirely depending upon their own resources.

The monotony of the trip was broken on the third day out by the discovery of the cabin of a vessel, which told of a wreck, and two hours later we picked up a small boat containing eleven men and a dog, who were the entire crew of the wrecked bark *Ophir*, of Miramichi, N. B., with grain, from Philadelphia to Belfast, which went down in a gale on the 21st. Two nights in an open boat, with the spray soaking their clothing, had chilled them until they had not strength sufficient to enable them to climb the ladder without the assistance of a rope under their arms; and on gaining the deck but few could walk, while on reaching Southampton a week later the colored cook and another were left in the hospital.

The weather was very pleasant throughout the voyage, and for the five days before reaching Southampton the great ship moved as steadily as a river steamer, so evenly that the water in a tank belonging to the Fish Commission, which was designed to be a sort of self-aerating arrangement, by means of the rolling of the ship causing certain sponges to be first under and then out of water, declined to act at all, and a mere trembling of the surface of the water in it was the only sign of its being in motion. This tank contained some curious creatures, besides many fish, which although our own countrymen (?), we passengers are not at all familiar with, nor is their appearance such as to make one desirous of further acquaintance. The Professors have names for them, which may be correct for all that I can say to the contrary, but such names! There is no need to try and give them, for a slip of the pen would betray my ignorance of scientific nomenclature, always supposing that my memory had firmly grasped them. These beasts are to be shown in the class of "Enemies of Fish and Fish Culture"—a fact which serves to illustrate the assertion made before, that there was a complete collection of everything relating to piscine life, growth and development, whether it may be beneficial or hurtful; the *Neckar* having thirty tons of material on board for the exhibition, with more to follow from New York, which was only a shipping point for a small portion of the goods, the most of them having been taken by ships of this line from Baltimore. These so-called tons are computed by measurement, however, much of the exhibit being in the form of large and light articles, which are boxed, the boats being especially large in proportion to their weight.

This exhibit seems to thoroughly awaken the interest of every one who hears of its extent and character; it is the most novel of all exhibitions, that of the fishery industries of the world—certainly one that is of the greatest importance to our people, but which has been ignored or slighted for so long a time that few persons have an idea of its value beyond the fact that we paid five and a half million dollars last year for the privilege of fishing on a small portion of the North American Coast.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout, *Salvelinus fontinalis*; Land-locked Salmon *Salmo gairdneri*; Suckers.

GAME AND FISH DIRECTORY.

In sending reports for the *FOREST AND STREAM* Directory of Game and Fish Reports, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; Means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

"THE NIPISIGUIT AND METAPEDIA."

Editor Forest and Stream.—In the issue of April 8th of the *FOREST AND STREAM* a criticism appears upon an article of mine under date of March 11th.

Having been there, and also having seen the woods several times in the last twenty years, and having invariably kept a diary and a record of every penny of expense, I thought I knew whereof I wrote. I am, at all events, glad the reason of my faith and regarding the question of expense.

"Manhattan" says the streams are leased in part, and the residue is open to "a great crowd of anglers, good and bad, and no sport nor pleasure to anyone." My article did not refer to sections of rivers "open to all," but otherwise, as I wrote, "Permits necessary; charges usually one dollar per day per rod." Rice fishing is usually not worth the waste of time, while all good fishing is under lease; hence, as the Restigouche Division to which I referred is under lease, it is on an equality with all salmon fishing in Canada, and as good as any, and better than many, and is not more crowded, though fishing may not be had.

In the summer of 1877 I had the pleasure of conducting a small party to the Restigouche. We arrived June 1st

and spent just one week there. We, however, devoted but a portion of two days of that time to salmon, and although none of the party had ever captured a salmon before, we bore away seven nice salmon. The largest weighed thirty-five pounds, three weighed thirty pounds, two weighed twenty-five pounds each, and one fifteen pounds. During that time only two other salmon fishermen put in an appearance (and they old *habitués* of the place), and they captured more than a dozen each while we remained. Mr. Fraser, of the hotel, has a lease of six miles of the best part of the river and keeps it exclusively for his guests, and "crows" do not spoil the fishing here.

Now regarding expenses. I wish it borne in mind that I am talking of estimated necessary expenses for two weeks' trip from Boston to Restigouche, as per my previous article. In this I do not include rods, etc. Nor, from my own experience in the woods, do I suppose that one will fish all the time for salmon. There is good trout fishing, with sight-seeing to be done, which cost less than salmon fishing, which is itemized in my first, and costs \$6.50 per day.

Now, as to expenses, give just what our party paid in fact, and all statements are based upon experience.—

From Boston to Restigouche and return same way, or via Quebec	\$31.50
Sleeper, Boston to Bangor	2.00
Two meals first day	2.50
Supper, lodging and breakfast at St. John	2.50
Three meals and lodging second day	2.50
Six days' salmon fishing	2.50
Two Sundays (making ten days)	4.00
Four days more, at \$2 (board)	8.00
Sleeper, two nights returning	4.00
	\$55.00

Now, I know—whereof I affirm when I say one can make a comfortable trip to Restigouche from Boston for \$100 even money; but as I know how prone one is to spend money when the "goes a-fishing," I put the estimate at \$150, so that a little indulgence in cigars, etc., might be allowed. The train leaving Boston at 7 P.M. is the one to take; you then reach St. John next night about 6, and resume the following morning at 8 A.M., and stopping over at some convenient place for the night, reach Metapedia at 9 A.M. the next morning. There are no expenses of note except as given, but for incidentals one is to go to the coast. If you stop off at Nipisiguit or Miramichi, and go up river, you will have carriage hire to pay, but if you have a party of four an item of \$2 per day is ample to cover it. My estimate of \$150 leaves a margin broad enough for anyone to go into the woods with, who is not, or ought not to be, under a guardian.

I can now give an estimate for a trip almost in this country. I have noted it carefully for twenty years, and been surprised at its accuracy. "Drummers" will agree with me generally, i. e., \$7 per day from time of leaving home till you return will almost invariably cover necessary expenses of a two to four weeks' trip, or longer. I tested it among the White Mountains, among the Catskills, in Canada, at Niagara Falls and elsewhere. It's much better than guess work and "doubling."

GEORGE A. FAY.

West Meriden, Conn., April 13th.

Our correspondent's practice of keeping an itemized record of routes, fares and expenses is an admirable one, and at once stamps his information as reliable and practically useful. A former paper by Mr. Fay, giving the itinerary of the Rangeley Circuit has been highly commended by those who are familiar with that country. We need hardly suggest that this plan of a daily record is worth adopting by others, nor to hint to our friends that the *FOREST AND STREAM* is always glad to get hold of just such records for the benefit of its readers.

NEW BRUNSWICK.—*Milford, Fort Stevens.*—I am afraid you may think it a repetition to say anything in your "Fishing Directory" about our little salmon at Grand Lake stream, as most all your experienced fishermen know all about it. The best way to get there is by the International Steamship Co., from Boston or Portland, now running twice a week; in summer three times. Very fine boat, go near the land, so you have a good view of the coast. Fare from Boston to Calais, about \$5; from Portland, about \$1; state-rooms, extra, which should be engaged ahead. Connect at Eastport with river boat for Calais; then cars to Princeton, twenty miles, and little steamer to stream. Or can come to Calais by cars, paying twice as much money, and having twice as much discomfort; time, about the same from Portland. Write to W. O. Rose, Lake House at Princeton, Me., or Mr. David Dresser, who engage Indians and canoes if they are wanted. Good accommodations at the stream, or can live in tents. G. A. BOARDMAN.

NEW YORK.—Fine trout fishing can be had at Delhi, Delaware County, N. Y. Delhi is reached from New York City by the New York and Oswego Midland Railroad. It is a seven-hours' ride. Good ruffed grouse and squirrel shooting can be had in the autumn. There are also a few woodcock and lots of foxes. Good board can be had at very reasonable rates at the Edgerton House, C. B. Griffin, proprietor.

THE ADIRONDACKS.—*Saranac, Region, April 16th.*—The weather continues still very cold for the season. In the woods the snow is still quite deep. The lakes are still covered with ice, and the prospect is that it will not disappear until about the first or second week in May. I will inform you when it does, that those very anxious ones may appear here armed and equipped for trolling. The prospect for good trout fishing is highly favorable, as but few trout have been taken during the past winter, owing to the increasing regard for the law—and I might add fear lest justice should proclaim its power.

I understand that several of the old sportsmen who have visited here for many years have engaged their guides, viz.: Messrs. M. & T., Col. H., Dr. K., Rev. W. L. B., Mr. H., of New Jersey, and party, and others. The *FOREST AND STREAM* is always a very welcome visitor, every issue overflowing with interest. S. S. N.

WESTCHESTER TROUT FISHING.—There is good trout fishing in some of the streams about Bedford, Croton, Lake and Mount Kisco, in Westchester County. B.

writing to Mr. I. Flowellin, Croton Lake, New York, parties can secure all desired information, or, by going directly there, will be well entertained and guided to the fishing grounds.

VIRGINIA.—*Norfolk, April 16th.*—Two men who were engaged in fishing on Dumpling Island, in Nansemond River, caught a rock-fish last Thursday five feet long, sixteen inches in diameter, and weighing seventy-five pounds. In going in the fike he got half-way in the mouth of the net, and could not get in or out. They had to run a rope through his gills and mouth, and then it took two men to manage him.

MINNESOTA.—*Owatonna.*—I caught my first black bass of the season yesterday, April 14th; very high wind; fished about one hour; took four, the largest weighing four pounds, twelve ounces, the smallest, one and three-quarter pounds. No pickerel biting as yet. The bass pay no attention to minnows. Caught them with a Conroy spinner at head of mill-pond on Straight River. Have caught perch sixteen inches long in same water. Fish plenty. P. P. W.

INDIANA BLACK BASS FISHING.—*Warsaw, Ind., April 14th.*—To those desirous of finding black bass in abundance, and who wish to try their skill in Indiana waters, the beautiful little city of Warsaw offers many attractions. It is on the Pittsburg, Fort Wayne and Chicago Railroad (Pennsylvania line), 108 miles east of Chicago, and 350 miles west from Pittsburg. There are four very pretty lakes within fifteen minutes' walk from the hotel, and one, Center Lake, bordering on the limits of the town. Eagle Lake, one-half mile from the city, teems with pike and black bass, and of such large size as to quicken the beatings of a true piscator's heart. Mr. Geo. Greene, proprietor of the Kirtley House, will take special pains to provide all parties with necessary boats and guides, and minnows can be obtained at reasonable rates. The bass season opens May 1st. H. Z.

The Kennel.

THE NEW YORK DOG SHOW.

THE ENTRIES CLOSE WITH 1,108 DOGS IN THE REGULAR COMPETING CLASSES, EXCLUSIVE OF ENTRIES FOR PUPPIES IN LITTERS.

THE fourth annual dog show of the Westminster Kennel Club, to be held at Madison Square Garden (late Gilmore's) on Tuesday, Wednesday and Thursday, April 27th, 28th and 29th, will surpass in point of number and excellence of stock anything ever before held in this country. The entry books, which closed on the evening of the 12th inst., show that 1,108 dogs have been entered for competition, not including between one and two hundred puppies in litters, which will be shown with their mothers, and nine pointers of the Westminster Kennel Club, not for competition.

Although the total number does not reach the predictions of Mr. Lincoln, yet it is so far in advance of all previous exhibitions of the kind that the result must be highly gratifying to the managers, who have left no stone unturned to make it a success in every way.

To enable our readers to see at a glance the increase and falling off of entries in the separate classes between this show and its predecessors, we annex a classified table of the comparative entries for 1877-78-79 and 80. Before drawing our own deductions, however, it will perhaps be best to give a brief recapitulation of the number of classes with actual entries and total number of dogs included in them of each year; these have been compiled from the official bench show catalogues, checked at the shows of each year, and also from the files of the *FOREST AND STREAM*—

First show, 1877—Seventy classes, embracing 864 dogs.
Second show, 1878—Eighty classes, embracing 834 dogs.
Third show, 1879—Eighty classes, embracing 943 dogs.
Fourth show, 1880—Seventy-four classes, embracing 1,108 dogs.

In 1877 we find from the entry books that there were six classes for Gordon setters and two for native black and tans, or black, white and tan setters. As the subsequent shows only classify black-and-tan setters, we have pooled the two above-named classes under the one heading—"Gordon or Black-and-Tan Setters." The Blenheim, King Charles or Japanese classes we have as far as possible separated, and omitted in all the years mention of all classes in which there were no entries; these were as follows: In 1877 the Black-and-Tan Terrier (exceeding eleven pounds weight) Class, in 1878 the Bloodhound and Field Spaniel Bitch classes, in 1879 the pointer puppy bitch (under six months), champion red and white setter bitch, Chesapeake Bay dog and bitch, and Blenheim spaniel, dog and bitch classes, and in 1880 the Blenheim, or King Charles dog and bitch class. But the present year includes the silk-haired terrier, excepting Yorkshire class, which was added to the premium list after the printing of the distributing books, the prizes being for best dog or bitch \$10, and for second best a silver medal. This class has never been opened before. We also have not included in the table the pointers of the Westminster Kennel Club, as they have been entered "not for competition." For 1878 the catalogues show nineteen entries, for 1879 nine, and the same number for this year.

COMPARATIVE TABLE OF ENTRIES, 1877-78-79-80.

The first year of the show was the only one in which there were imported English setter puppy classes for both dogs and bitches, and imported and native red Irish setters, dog, bitch and puppy; staghound, poodle and trick dog classes.

In 1878 the S. L. Bernards were divided into two classes, rough and smooth coated, and the imported and native English setters were judged under one heading, as were also the red Irish setters. The spaniels were separated into classes of the different breeds, and many classes were opened for both dogs and bitches under their respective headings.

In 1879 the red Irish setters were divided into two classes, namely, red Irish setters and red and white setters, and the imported and native English setters still remained under one heading.

We now come to the present year, which we consider has the simplest classification yet arrived at. The English setters have again been divided into imported and native classes; the red dogs of the previous year are to be found bunched together.

Referring to the account of the first show, given in the FOREST AND STREAM of May 17th, 1877, we see that "the actual entries, including specials, were 1,195, and allowing for puppies and collections covered by single entries, there were probably 1,200 animals on exhibition." In the next year, as shown, there was a falling off in the entries, but the interest revived again during last year, as there was a large increase in the total list, and particularly in the sporting class, which is shown in a carefully prepared table further on. The decrease in entries for the year 1878 was mainly due to the number of diseased dogs exhibited in the initial show, and this would point to the necessity of not only a thorough but a competent examination of every animal that is sent to the Garden of this year, as the dog-owning public cannot be expected to enter its valuable stock if it is not to be in every way protected. Last year the managers having found this out, took every precaution against the entrance of animals suffering from either mange or distemper, and we have reason to believe that the same systematized precautions will be doubly in force this year.

The FOREST AND STREAM of April 3d, 1879, in its concluding remarks regarding the last exhibition, says that "it was an unprecedented success in the annals of the dog shows in this country, and as far as the sporting classes were concerned the number was believed to be greater than had ever been shown in England."

The following is a recapitulation of sporting dogs entered in this and in previous shows:—

	1877.	1878.	1879.	1880.
Pointers.....	120	83	123	135
Setters.....	150	122	157	234
English.....	27	27	27	27
Black and tan.....	84	64	73	71
Irish and white.....	145	390	294	358—443
Chesapeake Bay dogs.....	2			
Irish water spaniels.....	4	4	5	7
Spaniels other than Irish.....	27	27	27	27
Greyhounds.....	18	23	15	15
Doer-hounds.....	0	4	5	7
Stag-hounds.....	0	4	5	7
Beagles.....	14	45	9	9
Harehounds.....	6	5	15	13
Harehounds.....	2			
Doehounds.....	16	11	8	9
Total.....	614	604	608	680

We believe that the above needs no comment, the only item really calling for particular attention being the entries in the English setter class; this is found to be a large increase on previous years, which is mainly due to the opening of a separate class for native dogs.

As we propose giving a full description of this interesting exhibition in subsequent issues, we have decided not to allude further at this time to the individual entries, until we can speak of them as something we have seen. It may, however, be interesting to our readers to state that the entries are from almost every State in the Union, including New York, New Jersey, Massachusetts, Maine, California, Missouri, Illinois, Ohio, Indiana, Kentucky, Maryland, Pennsylvania, Virginia, North and South Carolina, Delaware, Rhode Island, Connecticut, Michigan, Wisconsin, District of Columbia, from England and Ireland, and from the following points in Canada: London, Toronto, Montreal and Chatham.

The two foremost competitors for the following points are for the largest and best collection of animals owned and exhibited by one person or club, are Mr. A. E. Godeffroy,

of Guyard, N. Y., who sends twenty-six, and Mr. A. H. Moore, of Philadelphia, whose contribution aggregates twenty.

The arrangement of the Garden will be entirely different from that of former years. There will be no stalls around the outer edge of the floor. Six double rows will be run the entire length of the building, beginning at the rows of pillars at either side, except that space enough will be left at the Madison avenue side for a large oval ring, in which the sporting classes are to be judged, and a broad aisle through the center from Twenty-sixth to the Twenty-seventh street side. The aisles between the stalls will be ten feet wide, and that around the ellipse thirteen feet wide, which will give ample room for spectators, and at the same time enable the managers to provide for all the dogs on the floor. A platform for the judging of the non-sporting classes will be erected in the recess formerly occupied by the cascade. Where the soda water stand formerly stood Mr. A. E. Godeffroy will have a house twelve feet square, containing stuffed specimens of all the game birds and fur-bearing animals of America. In it will also be exhibited four other-hounds now on the way from England, and the first ever imported to this country. The wants of the dogs will be looked after by forty-three attendants, who will be uniformed in white caps and brown hunting coats. Many of the exhibitors have announced their intention of draping their stalls handsomely. The Garden will otherwise be decorated with flowers and pictures, and will present an attractive appearance. An entirely new set of stalls has been contracted for. They are now being constructed. The carpenters will begin putting them up at 11 o'clock on next Saturday night, and the work is to be completed at midnight on Sunday. By Monday night all the dogs from a distance will be housed within the building.

POINTS IN JUDGING.

FOLLOWING are the scales of points for judging each class. We republish them for the convenience of visitors at the show, who may wish to judge for themselves the comparative merits of the dogs on exhibition next week:—

MASTIFF.—Head, 20; eyes, 5; ears, 5; muzzle, 5; neck, 5; shoulders, 5; loin, 5; chest, 7; legs, 6; feet, 5; color, 5; coat, 5; symmetry, 10; stern, 5; size, 5. Total, 100.

SKYE TERRIER (Drop and Prick-Eared).—Length, 15; texture, 10; color, 20; head, 10; ears, 10; length of body, 20; carriage of tail, 10; symmetry, 15. Total, 100.

BLACK AND TAN TERRIER.—Head, 5; jaws and teeth, 6; eyes, 6; ears, 5; neck and shoulders, 10; chest, 10; loin, 10; legs and feet, 10; color, 5; coat, 5; tail, 5; symmetry, 5. Total, 100.

"DALMATIAN," OR COACH DOG.—Head, 10; neck, 6; body, 5; legs and feet, 10; tail, 5; symmetry, 10; coat, 5; color, 10; markings, 40. Total, 100.

BULL DOG.—Skull, 20; stop, 5; eyes, 5; ears, 5; face, upper jaw and nostrils, 5; chop, 5; mouth and lower jaw, 5; neck, 5; shoulders and chest, 10; back, 5; tail, 5; fore legs and feet, 5; hind legs and feet, 5; size, 5; coat and color, 5; symmetry and action, 5. Total, 100.

BASSET HOUND.—Skull, 10; jaw, 10; ears, eyes and lips, 10; length of body, including neck, 15; legs, 15; feet, 7; stern, 10; coat, 5; color, 7; size, symmetry and quality, 10. Total, 100.

BEGGIE.—Head, 15; neck, 5; shoulders, 10; chest and back ribs, 10; back and loin, 10; hind quarters, 10; elbows, 5; legs and feet, 20; color and coat, 5; stern, 5; symmetry, 5. Total, 100.

IRISH SETTER.—Skull, 10; nose, 10; ears, lips and eyes, 4; neck, 6; shoulders and chest, 15; back, quarters and stifles, 15; legs, elbows and hocks, 12; feet, 8; flag, 5; symmetry and quality, 5; texture of coat and feather, 5; color, 5. Total, 100.

IRISH WATER SPANIEL.—Head, 10; face and eyes, 10; topknot, 10; ears, 10; chest and shoulders, 7; back and quarters, 7; legs and feet, 10; tail, 10; coat, 10; color, 10; symmetry, 5. Total, 100.

GORDON SETTER.—Skull, 10; nose, 10; ears, lips and eyes, 4; shoulders and chest, 15; back quarters and stifles, 15; legs, elbows and hocks, 12; neck, 6; feet, 8; flag, 5; symmetry and quality, 5; texture of coat and feather, 5; color, 5. Total, 100.

YORKSHIRE TERRIER.—Head, 15; clearness of blue, 15; distinctness and richness of tan, 15; length of coat, 10; texture of coat, 10; straightness of coat, 10; ears, 10; tail, 5; condition in which shown, 10. Total, 100.

PUG.—Head, 10; ears, 5; eyes, 5; molas, 5; mask, vent and wrinkles, 10; trace, 5; color, 10; coat, 10; neck, 5; body, 10; legs and feet, 10; tail, 10; symmetry and size, 5. Total, 100.

BULL TERRIER.—Skull, 15; face and teeth, 10; ears, 5; neck, 5; shoulders and chest, 15; back, 10; legs, 10; feet, 5; coat, 5; color, 5; tail, 5; symmetry, 10. Total, 100.

EXETER SETTER.—Skull, 10; nose, 10; ears, lips and eyes, 4; neck, 6; shoulders and chest, 15; back, quarters and stifles, 15; legs, elbows and hocks, 12; feet, 8; flag, 5; symmetry and quality, 5; texture of coat and feather, 5; color, 5. Total, 100.

FIELD SPANIEL AND MODERN COCKER.—Head, 15; ears, 5; neck, 5; chest, back and loins, 20; length, 5; legs, 10; feet, 10; color, 5; coat, 10; tail, 10; symmetry, 5. Total, 100.

CLUMBER SPANIEL.—Head, 20; ears, 10; neck, 5; length, 15; shoulders and chest, 10; back, 10; legs and feet, 15; color, 5; coat, 5; stern, 5. Total, 100.

POINTER.—Skull, 10; nose, 10; ears, eyes and lips, 4; neck, 6; shoulders and chest, 15; back, quarters and stifles, 15; legs, elbows and hocks, 12; feet, 8; stern, 5; symmetry and quality, 7; texture of coat, 3; color, 5. Total, 100.

ST. BERNARD.—Head, 20; line of poll, 10; shape of body and neck, 10; size and symmetry, 20; legs and feet, 10; dew claws, 5; temperament, 5; color, 5; coat, 5. Total, 100.

NEWFOUNDLAND.—Head, 20; ears and eyes, 6; neck, 10; chest, 5; back, 10; legs and feet, 5; size, 10; symmetry, 10; color, 5; coat, 5; tail, 5. Total, 100.

BLOODHOUND.—Head, 15; ears and eyes, 10; jaws, 5; neck, 5; shoulders and chest, 10; back and back ribs, 10; legs and feet, 20; color and coat, 10; stern, 5; symmetry, 10. Total, 100.

GREYHOUND.—Head, 10; neck, 10; chest and fore quarters, 20; loin and back ribs, 15; hind quarters, 20; feet, 15; tail, 5; color and coat, 5. Total, 100.

DEER-HOUND.—Skull, 10; nose and jaws, 5; ears and eyes, 5; neck, 10; chest, 10; shoulders, 10; hind and back ribs, 10; elbows and stifles, 10; symmetry and quality, 10; legs and quarters, 7; feet, 7; color and coat, 10; tail, 5. Total, 100.

FOX-HOUND.—Head, 15; neck, 5; shoulders, 10; chest and back ribs, 10; back and loin, 10; hind quarters, 10; elbows, 5; legs and feet, 20; color and coat, 5; stern, 5; symmetry, 5. Total, 100.

FOX TERRIER.—Head, 15; neck, 5; shoulder and chest, 15; back and loin, 10; hind quarters, 5; stern, 5; legs, 10; feet, 10; coat, 5; color, 5; size and symmetry, 15. Total, 100.

COLLEY (Rough as well as Smooth).—Head, 10; muzzle, 5; ears and eyes, 5; shoulders, 7; chest, 7; loin, 10; legs, 10; feet, 10; coat, 15; color, 10; tail, 5; symmetry, 5. Total, 100.

DANDIE DINMONT AND SCOTCH TERRIER.—Head, 10; eyes, 5; ears, 5; neck, 5; body, 20; tail, 5; legs and feet, 10; coat, 15; color 5; size and weight, 10; general appearance, 10. Total, 100.

ITALIAN GREYHOUND.—Head, 5; neck, 5; ears and eyes, 5; legs and feet, 10; fore quarters, 10; hind quarters, 10; tail, 5; coat, 5; color, 15; symmetry, 15; size, 15. Total, 100.

MARYLAND FOX HUNTING.

CLARKSBURG, Md., April 18th.

IN no State in the Union is fox hunting enjoyed to such a degree as in Maryland. A number of clubs have been formed and are steadily on the increase. Especially are the Baltimore, Howard and Anna Arundel clubs popular, their meets being looked forward to with great interest, especially by the ladies, who take great delight in following the hounds. The first regular meet of the Montgomery Club since the receipt of their club uniforms, which by the way are quite handsome, consisting of red coats, white pants and top boots and blue riding-cap, came off last Saturday in Pleasant Valley, midway between Clarksburg and Damascus.

By 10 o'clock over forty members of the club had arrived on the grounds, accompanied by ladies, who desired to participate in the chase, which has been the theme of conversation for the past week. Several hundred spectators were present by invitation of the club.

The pack of dogs amounted to about forty; the most of them had arrived the day before and were confined in a large tobacco house, presenting a lively and attractive appearance. Some splendid specimens of the Irish hound were noticeable, especially Hot and Buck, owned respectively by S. T. and J. F. Williams. These dogs are veterans in the chase, and are well known to the lovers of this sport as reliable and faithful followers.

The Burdette introduced a splendid pack of twelve, including Speed and Annie, by Carl Burdette; Scot and Bell, by Thos. A. Burdette; Charmer and House Carroll, by Basil Burdette; Bell and Forman, by Morton Burdette; separately by John Ed. Burdette, Dr. Burdette and Dick Austin, showing some fine specimens of the English fox hound, and exhibiting in the run fine points during the day.

Mr. George Pope's entry of four, were noticeable for their clean and shapely appearance and staying qualities; also James King's and Clem, Barbour's pack of five, that gave evidence of being thoroughly acquainted with the requirements of the occasion.

The fox was a splendid specimen of the red Reynard family, which was captured about ten days previous by Carl Burdette on Ten Mile Creek, near Boyd's Station, Baltimore and Ohio Railroad, and preserved for this occasion.

When the horn was sounded and the hunters assembled on the open plateau, facing "Parr's Ridge," and enabling all to see the start, the fox was given his freedom in the open meadow, and soon gave evidence that his late captivity had not caused him to forget his usual cunning and adroitness.

After running a short distance he crossed the stream of water that forms the head of Big Seneca and moved up the slope of the hill leading through the orchard, and finding that he was not pursued, he stopped and took a long survey of the surroundings. The outlook proving satisfactory, he indulged in a good roll and then started for cover in the direction of Clarksburg. It had been decided to give him a half hour start before turning the dogs loose, allowing him time to recover from his late confinement and get a good start.

The riders mounted and the dogs were released from their confinement, and immediately took the trail, filling the air with their musical notes as they bounded along over hedge and fence.

The members of the club and invited guests and horsemen joined in hot pursuit; owing to a break in the dogs, the company parted, and some of the chase from Shaw's place, for false dog, and were thrown entirely out of the run. But to those who had horses equal to the task and took the low scrub oak on the north side of the ridge and rode close up with the leaders, the run was a fine one.

The fox made directly for his old haunts on Ten Mile Creek, crossing the Frederick road, just below Clarksburg, and giving a fine view of the chase from Shaw's place.

Sir Guyard seemed to realize the grandeur of the occasion, and although closely followed by the dogs he succeeded in doubling on them and took the back track, when Boozie, owned by Col. Boyd, and a recent importation from the kennel of Lord Bateman, of the Royal Huntsman Club, "took the foot" and opened on the back track, where he was met by the return of the dogs on the false scent. Those who had followed the foxer sounded their horns and gave their misguided friends the genuine start.

He was so closely pursued by the dogs that he doubled by Gus well, and crossed above Clarksburg on the Frederick road, through the grounds of Tom Anderson's machine shop and through John Lewis' farm, closely followed by the dogs through Mr. Edward Waters' farm two miles below Clarksburg on the road to Boyd's, when he was compelled to take refuge in a hollow tree on the place of Mr. Edward Waters. Here the services of Tom Snowden, the champion colored fox hunter and keeper of the hounds, was brought into requisition with his axe. Tom delights to follow the hounds and be in at the death. Tom soon brought down the tree, and Sir Reynard was again transferred to the lock. So hard was he pushed by the dogs that he had no choice upon the rights of the foxer, which was confiscated and added to the spoils. After a run of thirty miles, in which were many who started in the morning fresh and eager for the sport, but who had found many a mishap on the way, they assembled at the residence of Col. Boyd, where the foils and excitements were remembered in a social banquet provided for the occasion.

COL. J. H. S. BOYD.

HALLOCK'S DOG FANCIERS' DIRECTORY AND MEDICAL GUIDE.—Mr. Chas. Hallock has prepared a timely little book of the above title, designed for the convenience of dog owners. It comprises, first, an extended list of the principal owners of dogs throughout the country, with

compact descriptive notes on the various breeds. The Medical Guide, which forms the second part of the book, is a model of conciseness and clearness. It aims to treat every ill that dog flesh is heir to, and is evidently written by one who has had practical experience in the treatment of ailing dogs. The chronological table of American bench shows is especially timely, and will be found of interest by all who visit the New York Dog Show. New York: Orange Judd & Co. Price \$1.

—The Orange Judd Company publish a new and enlarged edition of their book, "The Dogs of Great Britain and America." Every dog owner should have a copy.

DOUBLED SWIVEL DOG CHAIN FOR THE DOG SHOW.—We have just been shown by Henry C. Squires, No. 1 Cortlandt street, an excellent chain which he had manufactured expressly for the Dog Show. It has not two swivels, but a spring-hook at each end, and three rings in the chain, so that it can be shortened to any suitable length. This chain is a vast improvement over the ordinary bar-chain, which is liable to kink and become unfastenable. It tells us that the dog show is becoming a great deal of trouble on account of dogs working themselves loose, and would be pleased if all exhibitors would use something of this kind.

PENNSYLVANIA FIELD TRIALS.—Wilkesbarre, Pa., April 15th.—Editor *Forest and Stream*.—At the instance of the Advisory Committee on Pennsylvania State Field Trials, I would give notice to all Pennsylvania sportsmen, readers of your paper, that at the next meeting of the Pennsylvania State Association for the Protection of Game and Fish, to be held at New Brighton, Pa., in June, the subject of having a field trial exclusively for dogs owned in Pennsylvania will be taken up, and all sportsmen having an interest in the matter are requested to be present, and those clubs sending delegates to the meeting of the State Association are requested to instruct their delegates as to the action they desire in the matter of a State field trial. B. F. DORRANCE, Chairman.

CRUDE PETROLEUM FOR MANGE.—Missouri Valley, Iowa, March 20th.—In your issue of March 15th, I received a communication from "Hemlock" of St. Leonard, P. Q., in which he states his experience of applying crude petroleum for mange. I being the first one who advised the use of this oil, will tell how I came to find it out. Nearly four years ago, while hunting in the woods surrounding Titusville, Pa., I was accompanied by my cocker spaniel, who at that time was troubled with the mange; his whole back was one sore, minus hair. In my travels I came to an oil well—one of the many which can be seen near Titusville. My dog kept his back sore by constantly rubbing on the ground against a tree. I cannot tell what induced me to do it, but I went to the oil-tank, and with a broad chip I saturated my dog's back with the oil, and am happy to say that inside of ten days the sore back was healed, and the hair came out thicker than ever. Do not use kerosene, as it contains an acid, but use the oil just as it comes from the wells. I would be glad to hear the experience of others. G. H. W.

CURE FOR "SALMONED" DOGS.—Dayton, W. T., March 3d.—Editor *Forest and Stream*.—I have lived on the North Pacific Coast over twenty-five years, and have lost several valuable dogs by their eating salmon. As to the reason why, I offer no theory; but I do know that a small piece of healthy salmon will kill a dog as sure as a dose of strychnine, if nothing is done for him. The Indians accustom their dogs to it by feeding it in small pieces when they are young. I have tried almost everything for a cure, but never found anything that would do any good until about a year ago, when my setter got "salmoned," and a friend told me to give him cod oil. I gave him an ounce to begin with, and gave him about half a dozen doses. I could see a change for the better from the first dose. In a few days he was all right. I have seen it tried several times since, and never knew it to fail. Any one having a dog "salmoned" would do well to try this. I believe it to be almost a sure cure. F. M. P.

A SACRIFICIOUS TERRIER.—Pittsburg, Pa., March 28th.—Editor *Forest and Stream*.—The story, in a late issue, as cited by John Quincy Adams, about Whitcomb and his dog Pincher, finding his way home from Leipzig to Berlin, brings to mind a very similar case, to wit:—Some years ago a widow lady living in our city owned a store, and among the effects was a Scotch terrier; she concluded to sell out and move to the country, some forty miles from the city. In moving her household goods, she took the dog with her, first traveling thirty miles by railroad, then in a wagon some twelve miles. After her arrival, for the first few days, the little dog was about as lively as usual, but after a week or so began to mope around, refuse to eat, and had all the appearance of disappointment and home-sickness. Finally he disappeared. Of course no one knew where he had gone, and he was given up for lost or dead; but lo, and behold, some two weeks after his disappearance, "Little Scotchie" turns up one morning, stiff and care-worn, at the store. In a few days he regained his strength and vivacity, and seemed perfectly delighted to get back to his home, where he remained until his death.

Now it has always been a mystery to me how the little fellow found his way back. It could not have been by scent, for he was carried all the way, and from his care-worn and starved appearance must have certainly walked the entire distance. A CONSTANT READER.

IMPORTING DOGS.—Editor *Forest and Stream*.—By the misplacement of a period in a recent letter your types have made me say, "I do not advise anyone to import." The sentence should have stood thus: "Pointers and setters I do not advise anyone to import," and my reason for making the remark was that, in my opinion, your American sporting dogs are just as good as our English, with the exception of hounds of any and all varieties. Any information regarding the importation of dogs I will be glad to give while in New York, and I dare say I shall be heard of at your office. GORDON STABLES.

KENNEL NOTES.

SALES.—Lottie.—Mr. J. J. Jordan, Winchester, Va., has purchased from Mr. Henry W. Livingston, New York, the famous Lottie Ellwells setter bitch puppy Lottie, by Lofly, out of Maid Muller.

NAMES CLAIMED.—Rake.—Mr. P. C. Plaisted, of Lincoln, Mo., claims the name of Rake for his black, white and tan dog puppy whelped Jan. 27th, 1880, by Lelaps (No. 150, N. K. C. Stud-Book), out of Starlight (No. 519).

Lark, Jr.—Mr. Joseph Parker, of Forked River, N. J., claims the name of Lark, Jr., for his white and lemon native English setter dog, by champion Lark, out of Belle.

Busy.—Mr. D. Southard, of Peckskill, N. Y., claims the name of Busy for his cocker spaniel dog puppy whelped Feb. 6th, 1880, by Con, out of Floss.

BRED.—Gipsy Queen-Bragg.—Dr. Henshall's setter bitch Gipsy Queen (Royal Duke-Queen) to Col. W. C. Howard's Irish setter Bragg (champion Bob-champion Duck).

Queen-Faust.—Mr. J. C. Van Brunt's Queen to the St. Louis Kennel Club's Faust.

Grace-Gay.—Mr. N. Elmore's (Granby, Conn.) pointer bitch Grace, Sensation-Juno, to Gay, Snapshot-Fanny II.

WHITES.—Grave.—Mr. E. F. Marcell's champion English setter bitch Grace whelped, on April 11th, seven puppies—four dogs and three bitches—by Mr. P. H. Morris' champion, Ark.

Bridge Plunket.—Mr. R. Robbins, of Wethersfield, Conn., Irish setter bitch Bridge Plunket whelped, on April 11th, thirteen puppies—seven dogs and six bitches—by owner's Dick Hattacker, who by champion Elcho, out of Nell. Bridge has had fifty-three puppies in four litters.

Comets.—Mr. L. Yensley, Jr.'s, of Coatesville, Pa., Countess (Leicester-Pocahontas) whelped, on April 12th, five dog puppies by Mr. A. H. Moore's Roderick, brother to Ellwells's Count Wind 'Em.

Fanny.—Mr. B. R. Buffham's (manager Houston Kennels, Texas) English setter bitch Fanny (France-Zita) whelped, on March 30th, nine puppies—four dogs and five bitches—by Bridge-Brussels-Sally. Bridge was V. H. C. at St. Louis, 1879. All the puppies are orange and white.

Mattie.—Mr. P. Mcaley's white setter bitch Mattie Lyle whelped on April 17th twelve puppies, seven dogs and five bitches, by Mr. W. D. Winsor's Bob II. All are large healthy pups.

Archery.

PACIFIC COAST ARCHERY.

OUR friends west of the Rockies are doing some very fine work at the ranges of the American Round, and so soon as they earnestly attack the York we shall expect to chronicle some feats which will open the eyes of the bowmen of the Eastern States. Already the best record ever made at the American Round has been made by a Californian, Mr. Frank C. Havens, sufficiently high to make them dangerous fellows to challenge at their favorite ranges. As a sample of their skill, we give the record of a match shot Feb. 23th, between Major E. K. Otis and J. O. Cadman, Esq., of the Pacific Archery Club, of San Francisco.

AMERICAN ROUND.

	40 Yards.	50 Yards.	60 Yards.	Total.
Mr. E. K. Otis.	39-218	25-170	25-147	89-535
J. O. Cadman.	39-208	28-148	29-124	96-480

Among other fine scoring the following "best record" of each shooter will show how perfectly they have mastered the American Round.

	Hits.	Scores.	Hits.	Scores.	
Frank C. Havens.....	59	439	Daniel O'Connell.....	79	439
E. K. Otis.....	59	439	A. W. Havens.....	80	439
J. O. Cadman.....	56	423	A. J. Wells.....	79	427
R. J. Bush.....	56	404	J. E. Connelburn.....	81	425
H. J. Strickland.....	56	406	J. E. Connelburn.....	82	416
C. C. Cadman.....	53	411	H. Darnall.....	80	406
P. M. Ward.....	48	404	D. H. Adamsworth.....	73	404
George W. Kinney.....	50	444			

A team composed of Havens, Otis, Cadman and Bush would give our crack clubs some trouble at the National Meeting. Hope they will come.

THE LITERATURE OF ARCHERY.

NO pastime is so difficult to learn as archery. To attain to any degree of proficiency with the bow requires not only much practice with the archer's weapons, but much study of archery as a science. There is a great deal of archery literature, however, which is not only useless to the earnest student, but positively injurious. Hansard's "Book of Archery" contains a vast mass of legendary trash, but not one word which will assist an archer toward the mastery of his refractory gear. So with the treatises of Mr. Roberts and Mr. Worring. In truth, about the only books which contain any really valuable hints to the beginner are Mr. Post's "Theory and Practice of Archery," Mr. James Sharpe's "Our Modern Archers," Mr. Maurice Thompson's "Witchery of Archery," and the work entitled, "How to Train in Archery," by Messrs. Maurice and Will H. Thompson. If the beginner will supply himself with these works, and carefully attend his practice to the rules therein laid down, he need not remain a season after season at a stand-still, happy at the achievement of some accidentally acquired scores of mediocre merit, but may confidently expect to advance to the front rank of archers with rapid strides. Of course, there can be no great advance without patient practice, but practice only is slow way of working out a knowledge of a craft so difficult as archery. In any art or craft it is always infinitely more difficult to achieve success by blindly groping in the dark, feeling the way by experiment, than to follow the clear pathway blazed by the veteran guides who have thoroughly explored its every mystery.

Mr. Ford's book has been out of print for many years, and he has persistently refused to reprint it, and thus it has been practically unavailable by American Toxophilites; but Mr. Dean V. B. Mauley and Mr. Ruff of Toledo, Ohio, have determined to issue a reprint of the edition of 1859, which is the last and fullest edition issued in England, containing not only the full text of Mr. Ford's book, but also exact copies of all the illustrations and an appendix of American notes. We understand the reprint will be sold for \$1.50, and every American Toxophilist should have the book. Mr. Horsman, who issued the work of the Messrs. Thompson, "How to Train in Archery," will issue in a few weeks a second edition of the work greatly enlarged by the addition of two chapters on "The Bow," and the other, a most valuable one, giving all the scores by which the National Records of Great Britain have been won since the foundation of the National

Archery Society in 1814, up to and including the year 1879, to gether with the names of the ladies and gentlemen winners, and the places where the meetings were held. Also a list of all the scores of 1,000 and over ever made at a public meeting in Great Britain, by gentlemen shooting the double York Round, and all at any public meeting. And to these are added a large number of the best practice scores ever made by archers of Great Britain and America in private shooting, at all the ranges from thirty to one hundred yards, including the best private practice score of Ford, Bramhall, Moore, Fisher, Rimington, Paisley, A. Le Clare, G. E. S. Fryer and others of the best shots among the gentlemen of Great Britain, and practice scores of Mrs. Horne blow, Mrs. Bitt, Miss Betham and other notable lady shots. Among American scores are given the best records at all ranges of the two Thompsons, Frank C. Havens, L. L. Piddington, G. W. Kyle, Ford, P. Hall, H. C. Carver, Edwin Deyol, Dr. Weston and many other leading Toxophilites. Such a chapter is very valuable to every studious Toxophilite, and it certainly should add much to the already large sales of the book. Mr. Sharpe's book, "Our Modern Archers," is a very valuable one, giving the archer a good idea of the style and accuracy of all the more illustrious bowmen of Great Britain. The more such literature is studied, the greater will be the skill of our archers.

HIGHLAND PARK ARCHERS.—Highland Park, Ill., April 10th.—The Highland Park Archers recently held their annual business meeting, adopted a new constitution, elected officers for the ensuing year, and transacted considerable important business; so the archery season has fairly opened. The following officers were elected: President, Dr. L. B. Weston; Vice-Presidents, Mrs. H. C. Carver, Mr. R. J. Street, Mr. G. D. Boulton; Corresponding Secretary, Mr. H. B. Swartwout; Treasurer, Mrs. W. S. Leander; Field Captain, Mr. H. C. Carver; Executive Committee, Dr. L. B. Weston, Mr. William M. Goodridge, Mr. O. W. Kyle.

The society will hold its first target day April 27th, when members will compete for prizes at the club rounds. These rounds are: For ladies, 24 arrows at 40 yards, and 48 arrows at 50 yards; and for gentlemen, 24 arrows at 60 yards and 48 at 80 yards. This field on Target Day promises to be a very successful one, and a full report of it will be sent to the *FOREST AND STREAM*.

EASTERN ARCHERY ASSOCIATION.—The annual meeting of the Eastern Archery Association will be held at the Rovers House, Boston, Wednesday, April 28th, at 12 o'clock.

Cricket.

THE CANADIAN ENGLISH CRICKET TEAM.—Just as we are going to press, we have received a letter from Mr. H. Miller, secretary of the Northwestern Cricket Team, giving us the names of the fifteen players who are going to England on the cricketing tour; they are as follows: Messrs. F. W. Armstrong, J. L. Hardman, J. L. Gillean, J. Howard, Rev. J. D. Phillips, B. W. Hibbard, E. Kearney, J. Dewherst, G. F. Hall, T. Dale, J. Smith (Ottawa). T. Jordan, W. Pinkney, C. J. Logan and A. L. Treloar, with Mr. Miller as secretary and umpire. Another match has been arranged, namely, with "Lord Harris' Team," on the 16th, 17th and 18th of August.

REVOLVING IN CRICKET.

New York, April 9th.

I FIND "A Member of Many Clubs" again appears in your issue of April 8th. It doesn't much matter whether "Cricket" is an individual or an association. But to satisfy him on that point, I will inform him that it is an individual. I never supposed he was the author of the remark "this reform was much needed to protect one or two kindred organizations in this city," and I nowhere in my last communication say that I did; I defy him to point out any such sentence.

The Staten Island Club, in passing their late amendment, considered it was adopting a course for the future which would be a benefit to cricket, for the reason that its amendment prohibited revolving.

You, Mr. Editor, spoke of it as a "reform" in your editorial of Feb. 4th, that "it much needed not only to stamp the club's individuality, but also to protect one or two kindred organizations in this vicinity."

"A Member of Many Clubs" then comes out in your next issue with the statement that he very much doubts if the amendment can be termed a reform, and fails to see what protection it affords other organizations—"or how it will benefit the game of cricket."

Now, sir, if the practice of revolving is injurious to cricket; if it be your opinion that a club loses independence and interest, and becomes demoralized by continually making up its eleven from among the strong players of other clubs, then it is very easy to see how you consider the rule prohibiting revolving will benefit the game of cricket. So, too, for the same reasons it benefits "kindred organizations" by protecting them against their own injurious acts and practices—protecting them by throwing each club upon its own resources, and not permitting them to elude out a half-dead-and-alive existence under the conviction that whenever it wishes a few laurels or a little glory it can attain them by simply calling in the services of other clubs' best men on match days.

It is true the Staten Island Club has permitted revolving in the past. It is true, too, that the club itself was organized or started by two or three revolvers. This sort of thing may still go on, so far as the amendment in question is concerned. That only prevents its members from playing against itself in matches.

The members of the Staten Island club can join as many clubs as they choose. If they wish to give a young club the benefit of their pecuniary support or experience and knowledge of the game, they can do so. Only, they must not play against their own club in matches. But while the amendment does not in terms prohibit in members from playing in matches between third parties—in matches where the Staten Island Club is not a contestant—the spirit of the amendment would prevent even this, except in favor of young clubs who needed a helping hand. The amendment should not be carried so far as to destroy club individuality. It should not be relaxed in favor of such organizations who are abundantly able to take care of themselves, but are unwilling to do so from lack of interest and club pride on the part of its members.

This rule is intended to apply to the damaging system that a number of strong clubs have gotten into—of getting somebody else to fight their battles for them.

In matches between thoroughly revolving clubs there is as little interest taken as there is in matches between the classical and modern sides of an English public school. It amounts to a pick up of sides and no more.

Now I ask if it is not a matter beyond dispute that in matches between strictly non-revolving clubs—as the Harrow and Eton match and the Oxford and Cambridge match—there is not ten times more interest taken than in any contest between revolvers? People, it is true, rise to Lord's to see the batting of a Grace or the bowling of a Shaw, and unless there is some club individually represented in the match, come away caring very little which side wins. But on Eton and Harrow days the sympathies of the crowd are with one club or the other. If you have ever had the opportunity to notice the crowd of old Eton and Harrow non-club gentlemen who attend the Eton and Harrow contests, and see the interest they take in the terms of their respective schools, you will understand what club pride is.

This is one of the benefits of the non-revolving system. What interest, think you, would have been taken in the late English-Australian contests had revolving been allowed and the English boys had the benefit of Spottisforth's or Allen's bowling? The result is a very real result. By such a course all the spice of the match would have been taken away. Put spice into your contests, and you'll get all the cricket and cricket clubs you can wish for, and there is no reasoning for your battles between clubs which compares with the seasoning the non-revolving system gives.

CRICKET.

—George Wright has been engaged by the Grounds Park Association of Boston as superintendent of the baseball and cricket professional. It is a wise appointment, and one that will be indorsed by his large number of cricketing friends. The Longwood Cricket Club has secured a "tough one" in George to pit against those clubs that insist on playing professionals; but at the same time the Longwood gentlemen will continue their preference for amateur contests as heretofore. With Wright and the new ground, cricket should "boom" in Boston.

CRICKETER'S ASSOCIATION OF THE UNITED STATES.—The following is the list of fifteen clubs belonging to the association: St. Georges, of Staten Island; Manhattan, of New York; the Summit, of New Jersey; the Philadelphia, Germantown, Young America, Merion, Belmont, Glenhurst, Hill, Oxford, Frankford and Girard, of Philadelphia; the Baltimore, of Baltimore; the Peninsula, of Detroit. At the recent meeting the old officers were re-elected with the exception that Mr. H. W. Brown, of the Germantown, was elected corresponding secretary in place of Mr. Castle, of same club, whose business will prevent him this year from attending to the duties. The following were the officers elected for the ensuing year: President, A. A. Outerbidge, Philadelphia; First Vice-President, J. T. Soutter, St. Georges, of New York; Second Vice-President, J. Harry Lee, Baltimore; Secretary and Treasurer, John P. Green, Belmont; Corresponding Secretary, J. H. Brown, 413 Walnut street, Philadelphia; Germantown Club; Executive Committee, D. S. Newlin, Young America; J. Ridgway Moore, Staten Island, L. Haines, Merion.

AN ENGLISH TEAM FOR AUSTRALIA.—Alfred Shaw, who, as usual, has been professionally engaged for the season by the Marylebone Club, writes us under date of April 7th that he has received an offer to take out a team to Australia at the end of the English season. We have already arranged with him to have the names of the players and full particulars at the earliest possible date, and besides all the most interesting and important cricket news of the other side, which his position with the M. C. C. will enable him to give.

—A new cricket club has been organized at Paterson, N. J.

—The Trenton (N. J.) Cricket Club proposes to have a very busy season, as the secretary, Mr. Richard P. Stevens, Jr., is already arranging his fixtures.

—The managers of the Philadelphia cricket clubs met on April 16th, and arranged twenty fixtures for the early part of the season.

—The Young American Cricket Club's opening day will be April 24th.

—The Manhattan Cricket Club opens at Prospect Park on April 27th.

—We are pleased to notify all cricketers that, since the visit of the English team to our shores, two of the members comprising that team, Alfred Shaw and Arthur Shrewsbury, have opened a very extensive establishment at Nottingham, England, for the sale of every class of cricket materials and all other articles necessary for athletes. Alfred Shaw will be remembered for his fine display of bowling, and Arthur Shrewsbury for his batting capabilities. We understand that every article has been selected with the greatest care, and that the new emporium is one of the foremost of its character on the other side.

The advertisement which we have the pleasure to introduce here, will give our readers an idea of the capabilities of the establishment, and Geo. Lane, the well-known professional of the Staten Island Cricket Club, will be happy to supply price lists free, or any other information on application.

Answers to Correspondents.

C. T. B., Whitehall, N. Y.—An advertisement in our columns will probably secure for you what you wish.

Florida.—We know of parties who will buy your gun, and when you send us your address, shall be pleased to direct you to the same.

E. H. W., Orange, N. J.—Your dog will have to be operated upon by a veterinary surgeon. Apply to John H. Dancer, 119 Main street, East Orange.

J. N. S., Bridgeport, Conn.—The best cleansing soap for a daily wash for dogs is Sprat's soap, which you can procure from De Luzo, 18 South William street.

W. H. T., Staunton, Va.—Bathe the sealed parts with glycerine several times a day. No doubt the hair-balls are destroyed, in which case the hair will not grow again.

Squire, Dedham, Mass.—Address Mr. Chas. De Hong, No. 31 Broad street, New York, Secretary of the National American Kennel Club. He will probably be able to give information required.

AMATEUR, Port Jervis.—We refer you to the articles on dog-breaking now being published in FOREST AND STREAM. Issue of March 18th contains the first paper; April 8th and 15th the second and third.

E. B., Boston, Mass.—My Irish setter bitch, five years old, is very stale—her dogs are not as good as they were. Ans. Give dose of castor oil; follow with five-grain doses of nitrate of potash two or three times a day in table-spoonful of water.

G. H.—The writer no doubt meant braces, or stays, to keep the hoops forming the keel, stern and post in proper position for the

rest of the work. The canvas will not sustain your weight. Put light strips or laths in the bottom fore and aft, and upon them a small board to stand on and to place stove for seat.

N. Y. O. B., Adirondack Club House, Newcomb, N. Y.—I. How old must mosses be before they have young? I have one three years old—no call this year. 2. I wish to get a good bear dog; one that will keep the bear at bay until the hunter comes up. Ans. 1. Moose usually breed at two years. 2. Get a cur dog. See back numbers.

P. S., Tamaqua, Pa.—I have a Skye terrier bitch that is one year and nine months old; she has been in heat twice, although I did not breed to her. It is not seven months since she was in heat; can anything be done for her? Ans. Do not pen her up, but let her run with the dog. Feed liberally. Bitches will often pass one turn, and sometimes run nine or ten months.

O. STRAUB, Indian Lake, Hamilton Co., N. Y.—Last fall, while out hunting, my cocker flushed a cove of beautiful birds about the size of a red grouse, black except for a few white feathers on the breast, some red over the eyes; very tame. A friend of mine shot seven of the same kind afterward. Will you be so kind as to tell me what they are? Ans. They were undoubtedly spruce or Canada grouse (*Tetra canadensis*), a species common in Adirondack and Maine woods.

G. J., Sagetown.—My setter puppy has had distemper, and although recovered, he has a jerking of his body. Ans. Your puppy has chorea, one of the common results of distemper. As you hesitated to state it, it is impossible to specify exact treatment. If the dog is six months old or over, give five drops of tincture of nuxvomica in half ounce of water twice a day; increase the dose to fifteen drops by adding two drops every other day. Give desert spoonful of codliver oil twice a day. Feed liberally.

A. R., Auzenta, Ga.—I have a bull-bitch that has raised a litter of puppies, now ten weeks old, and she seemed all right until a week or two since, when her body became greatly swollen, and she showed a disposition to bury her food. She is lively enough, but has a poor appetite. Ans. You neglect to locate the part swollen, or whether the whole dog is involved. Your dog has probably a tendency to dropsy, in which case twenty drops of spirits of nitre twice a day in water will suffice until you write more definitely.

CRUISER.—It is a question whether there is any advantage in using narrow cloths. Laphroth, who canvasses a hundred yachts a year, thinks the usual width of 23 inches as good as any other. Weatherliness implies capacity to go to windward, and has no connection with ability to face windward or a heavy sea. The latter are expressed in the terms seaworthy, or seagoing, and able. We think 40ft. w. 12ft. beam, and 6ft. hold very good dimensions for your purpose, but much depends upon your model. Adopt the keel.

C. A. B., St. Cloud, Minn.—I have an Irish setter puppy six months old that has the distemper very badly, and has been neglected too long. He is very weak, particularly in small of the back. Have given him nuxvomica and Fowler's solution of arsenic in small doses. He had one dose of five grains of calomel when first taken sick. His appetite is poor. What shall I do for him? Ans. You have given entirely too much physic. Allow dog plenty of water, clean dry kennel, and pure water. Good food and half a teaspoonful of sulphur twice a week.

J. L., New York City.—From the condition in which you describe your dogs, as having little pustules on the skin and running sores which they scratch and bite a good deal, they are evidently afflicted with mange. We presume from what you say and your desire to have them "cured within a week," that they have been entered for the coming bench show, and that you propose to exhibit them. You will be unable to do this, as the disease is contagious, and no cure can be effected within so short a time. Muzzle your dogs and adopt a treatment similar to that recommended.

C. R. C., Stamford, Conn.—You are correct in your theory; your dog is afflicted with internal cancer. Cleanse the ears thoroughly with Castile soap and lukewarm water. After carefully drying them with a piece of soft sponge, all each ear twice a day with the following lotion: Diluted lead water, one ounce; sulphate of zinc, one drachm; water, twelve ounces. Put a cap on the dog. You may occasionally sit equal parts of flower of sulphur and pulverized charcoal in the ears. Give half an ounce of Epsom salts in water, twice a week for several weeks. Low diet, no meat. Write again, if dog is no better.

E. B. R., Meadville, Pa.—My spaniel has been bitten by a large Newfoundland dog, and has lost a large part of the ribs, the three inches in length. I had it sewed up immediately. When I removed the bandage the next morning the cut was spread open three-quarters of an inch; it seemed to be very tender, and it shortly afterward began to swell badly, and since then it has shown no inclination to heal. What shall I do to effect a cure? Ans. It is seldom well to sew up such wounds. Wash with a weak lotion of carbolic acid, one part nial to fifty of water, twice a day; leave the wound open, it will heal up; a bandage may be applied.

C. A. P., Boston.—The position of your center-board will be governed by the sail plan of your canoe. Generally speaking, place its center a little forward of the center of your sails. Area of board about 150 sq. ft. immersed. Attach as follows: On the rail of the canoe screw angle-iron, say 2ft. long, 1in. high, made of stout sheet iron. To the board screw a strap of 1in. iron, 1/16 in. wide, forked to take good hold of board. The upper end of this strap is turned over, so as to clamp the vertical flange of the angle-iron on the rail. With a thumb-screw the board can be held in any place along the angle-iron. When not in use, everything can be unscrewed and stowed.

W. R. P., Brooklyn, N. Y.—I. Your dog is afflicted with pinworms; injections of salt will rid him of them. 2. The sore places, which you describe the dog has continually biting, are caused by mange; try Glover's mange cure, advertised in another column. Fowler's solution of arsenic should also be administered internally; but as you neglect to state age of animal, it is impossible for us to prescribe quantity; you may, however, give an aperient of Epsom salts once a week. Your dog is evidently in a very bad condition, resulting from lack of exercise, and want of proper food and care. Mix sulphur and magnesia in food, from which there should be an absence of all meat.

R. P. W., Jersey City, N. J.—I. What are the peculiar excellences of the fox terrier? 2. Has he any merit as a rabbit dog? Ans. 1. The fox terrier was originally bred in England as an all-round dog, every part of his body, hands, so that if the fox ran into a hole, or "went to earth or ran to ground," as it is called in the parlance of the hunting field, the terrier would be on hand to bay the fox and draw him or drive him from his retreat. He will earn his living as a destroyer of vermin, and as a "ratter" has no superior. 2. Of course he can be broken to poke about in the bushes and start out the hares, but for American hare shooting a beagle is the thing. There are no wild rabbits in this country to the manor born.

J. L. H., Milwaukee, Wis.—My Skye terrier dog, four months old, though usually lively, is somewhat weak at times. Has occasional feelings of muscles and staggers when starting to run. Nose is hot and dry and runs a little apoplectic; good sleeps in milk bucket on clean straw; has been fed on bread and crackers, gaily beef-tea and now and then a little meat bone. I think the disease is distemper in a mild form as yet. Will you kindly prescribe for him? Ans. The symptoms, as you describe them, do not point to distemper, as it does not generally appear in puppies of that age. Your puppy may be afflicted with worms; give a vermifuge after twelve hours' fasting, followed by castor-oil. Write again if no better.

L. E. W.—I. Can I procure a revolving breech rifle? 2. Do the Messrs. Smith & Wesson manufacture any rifles on the same system as their latest model revolver? 3. Why do they call them Russian models? 4. Did they originate in Russia? 5. Have the Winchester Arms Co. given up their 73 and 75 models, and only making the late Hough's? 6. Is not the "75" model a better rifle for hunting both large and small game and target practice, etc.? 7. Would you prefer a good muzzle-loader for accuracy etc.? Ans. 1. The Remington breech action is a falling block; it has not the revolver action. 2. No. 3. Because made for the Russian Government contract. 4. No. 5. No. 6. So regarded by many hunters. 7. No.

A. SUBSCRIBER, Catawissa, Pa.—We require the name and address of all correspondents, not only as a guarantee of good faith but as a matter of common courtesy. Therefore, your anonymous communication would not be regarded, were it not for its length and the excellent manner in which you review the history of your dog's case. That your letter should have been struck by a locomotive and live to wag his tail is certainly remarkable. You seem to have pretty thoroughly exhausted the medical treatises in your course of treatment, and we cannot suggest anything further in this direction. As to diagnosis, your familiarity with the case is likely to render your opinion far more reliable than under the circumstances, ours could possibly be.

H., Cambridge, Mass.—My pointer, eleven months old, is illing. His appetite is irregular. He is feverish occasionally, but most of the time his nose is cold and damp. He has a cough, particularly in the morning, and with considerable effort coughs up some thin slimy white liquid. His eyes are generally bright, but run much of the time. With regard to his bowels there is no constipation, but a continual straining accompanied by some distress, and now and then by the passage of a little blood. Most of what he passes, however, would indicate a good condition of the bowels. Ans. You have not stated the length of time the dog has been sick. We would suggest, however, that you give full dose of castor-oil, combining with which twenty drops of the oil of male fern; this to be administered in the morning on empty stomach.

G. E., Lake Village, N. H.—I have an Irish setter nine years old, that has not been shot over for two years. He now weighs ninety pounds, an increase of twenty-three pounds since time of being worked. He has a bad humor on his body, and his ears are affected with something that gives out a bad odor, and causes him to shake his head continually. Ans. Over feeding and lack of exercise are the principal causes of the trouble of your very fat dog. He is afflicted with both mange and cancer. For the former, rub the dog all over with the following dressing: Two oz. of oil of turpentine, four oz. of sweet oil, and one ounce of olive oil; apply with a brush. Give with food twice a day six drops of Fowler's solution of arsenic, feed sparingly, and mix vegetables with ordinary diet. You do not state whether the cancer is internal or external. Write again.

PISCATOR, Princeton College, N. J.—The only book covering the whole field of fly tying and fly fishing is Hallock's "Sportsman's Gazetteer," although the space devoted to these subjects is necessarily limited. 2. The best books on fly making are Ronald's "Fly Fishers' Entomology" and Blacker's "Art of Fly Making," both English. 3. Francis Francis is the best writer on tackle making. 4. For general fishing subjects read Frank Forester's "Fish and Fishing." 5. The best authority on fishing in this country is the Forester's "Fly Fishing and Game Fishing," which gives made up of brilliant colors more effective than artificial flies. The latter must be used like flies, or if used like bait, must be trolled or skittered in rapid water. 7. For April trout fishing go to Long Island, south side. 8. The best English journal devoted to piscatorial pursuits is *Land and Water*, but you must remember that it is English. 9. Yes; stories, anecdotes and information about fishing are always acceptable.

B. S., Chattanooga, Tenn.—My Newfoundland, fifteen months old, two feet, four inches in height, weight thirty-five to forty pounds, is very sick. Last summer he had what I presume was the distemper, he would have fits, froth at the mouth and snap at everybody. I gave him castor oil and coppers; he seemed to get over the fits, but became very weak. He has retained a peculiar twitching of the limbs, which caused him to suffer very much. He has since lost a little of the twitching, and does not seem to be troubled as much. I have tried thoroughly for worms without success. I administered quinine, four grains a day, for a week, but it apparently did him no good. What shall I do for him? Ans. The twitching shows what poor condition your dog must be in. Give mild aperient, say two compound rhubarb pills every second or third day, and administer eight grains of quinine once a day, for two weeks, after which time, give table-spoonful of cod-liver oil each day. Feed liberally, and after giving above treatment a thorough trial, write result.

RUSSIAN, New York.—The Russian method of manufacturing caviare is given as follows: "The eggs of the sturgeon are thrown upon a very fine sieve and lightly washed. The eggs are liberally sprinkled with salt and carefully turned over with a fork. The caviare is known to be ready for packing when upon being stirred the grains begin to emit a slight metallic or glassy sound, which never occurs till the whole mass has been sufficiently impregnated with salt. In preparing the pressed caviare the grains are squeezed through a net or sieve into a tub of brine of a greater or lesser strength, according to the season. The whole mass is continuing stirred with a wooden fork, always turning the same way, till the roe is thoroughly and evenly impregnated with brine, after which the stuff is taken out with the sieves, from which the brine is allowed to drip. The roe is then packed in putting it up in rough sacks made from the hidden tree bark. These bags, when filled, are placed under a press, in order that all the brine may be thoroughly squeezed out and the roe crushed into a solid mass. The caviare is now ready for packing, and is taken from the sacks and packed in large cases containing as much as 1,000 pounds. This kind of caviare is called *caviare de la mer*. Caviare de saie is composed of the finest of the pressed stuff, and comes to market in long linen bags and sometimes in tins." We may add that it takes a Russian to appreciate the delicacy.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AS-

NO. 111 FULTON STREET, NEW YORK.

[Post Office Box 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 40 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 23, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

REMOVAL.—The next number of the FOREST AND STREAM will be issued from its new offices in the Times building, Nos. 39 and 40 Park row.

NOTES.—Protect the nesting birds. Thousands of eggs are stolen every year by nest-robbing urchins, who are responsible in a large measure for the scarcity of the birds. We have before called attention to the bird-eating habits of the domestic cat. It ought to be understood that a single cat will destroy more birds on a farm than all the other kinds of vermin together. If you care anything for the song bird, make way with the preying cat.

There is reason to believe that the supply of wild rice gathered next fall will be a large one. We have received from Mr. R. Valentine, Janesville, Wis., a fine sample of the seed gathered by him, and we are told that he has made provision for securing a large harvest. Not a week passes in which we do not receive letters of inquiry about the seed.

The potato sent by "Piseco" came to us in good condition, and has been submitted by us to the inspection of Mr. Peter Henderson, the well-known dealer in seeds, and probably the best authority on the subject in the United States. He pronounces it a fine, well-developed specimen, and gives it as his opinion that if planted it will grow.

The letter on gold mining is at hand and will be published at once. It represents a vast deal of labor, and evinces the painstaking, careful manner in which "Piseco" conducts his investigations. We may safely affirm that our correspondent's letters contain the most authentic and thoroughly reliable information about Alaska ever published. "Piseco" is admirably fitted to arrive at the true merits of the case, and he has entered upon the task with the determination to put matters in their true light.

We publish to-day the first of a series of letters from our Staff Correspondent at the Berlin Fishery Exposition. We shall give, in the FOREST AND STREAM, the most complete and intelligent account of this Exposition published in America.

A telegram announces the lower Saranac free from ice.

THE TEAM FOR IRELAND.

THE call which will be found in our Rifle Columns or such as wish to go to Europe as members of the American team, has the merit of being a prompt and ready way of getting at the best men to send. Only seven shooters are needed, but they must be of the best, and willing to be molded into a company of coordinators or factors to one grand result. The team will not do credit to itself if it should win the match on a score under 1,200, and the further above that figure it finds itself forced the more creditable will be its victory. The plan of selection is a mixture of the competitive with the method of arbitrary appointment. It will be seen that the choice in the first place rests with the clubs over the country. They may sort out their best timber and send it forward for a final sorting over at Creedmoor. If there be more than the number of men required to go, a sharp, decisive, winnowing process will leave only the proper men on the team. There should be no complaint at the method of the team selection. It cannot be unfair to a really good shot, and the right to reject a member of the team, if it be felt that by some lucky mishap the wrong man has put himself on the team, still rests with the other team men. If in any of the out-of-town clubs any man feels that he has not had fair treatment, or has been in very bad luck, there is a chance open for one of the three places which are to be competed for at Creedmoor, and then in the final sorting on the 19th and 21st of May he must show his ability to hold his own. The selection of the captain is reserved by the National Rifle Association, and while it is not certain at this writing whether or not Col. Bodine can accept the position, the tender to him shows that the committee, who have only the interest of the team at heart, are bound to have a shooting man at the head of the visiting body.

With regard to the financial support of the team, the \$5,000 required to see the team through its journey ought to be forthcoming at once. The National Rifle Association Directors raised in the dull times of 1875 over \$6,000 for the team of that year, and there should be no trouble at all in raising the smaller sum at this time of business "booms" and reviving prosperity. While the committee particularly desire to have the team members drawn from a wide radius, and have all sections of the country represented, they wish also to give opportunity for contribution of money support from riflemen and friends of riflemen in all parts of the country. This is as it should be, and while no rifleman need be deterred from competing for a place on any money considerations, it is expected that associations able so to do will do their share in the support. We will publish, from time to time, names of contributors to the fund, and all moneys may be sent to the office of the National Rifle Association, 23 Park Row, New York.

One thing is certain, that the team will find its visit to Ireland a memory long to be preserved. The team of 1875 yet keep a vivid remembrance of the overwhelming Irish hospitality which they enjoyed, and it is assured in advance that the visitors of the coming summer will receive an equally warm welcome.

—Lord Dufferin contributes a pleasant paper entitled "Days in the Woods," to the April number of the *Nineteenth Century*. Canada's late Governor-General entered into the spirit of woodland adventure, and this spirit he has always happily communicated to his descriptions of sporting expeditions. The present paper describes moose hunting in the New Brunswick wilds.

—We publish elsewhere an opinion on the trap shooting of pigeons. Without now at all discussing the merits of the case, we may remark that there is a wide difference of sentiment upon the subject, due partly to the nonsensical attitude assumed by the Society for the Prevention of Cruelty to Animals—a society which has accomplished a most admirable work, and which yet has not escaped the tendency manifested by all similar institutions to belittle and demean itself by officious and meddlesome interference in matters wholly outside of its legitimate field.

—Thousands of acres of wild and cultivated lands have been devastated the past week by extensive forest fires in New Jersey, Pennsylvania and Virginia. The country about Tuckerton and Tom's River and Forked River, New Jersey, has been swept over by the flames, and cranberry bogs, strawberry farms, timber, dwellings, barns, and live stock destroyed. The well-known shooting grounds in that region have been utterly destroyed. The singed bodies of thousands of quail and other game birds, and rabbits, have been found on the outskirts of the burned districts. Immense quantities of game have also been destroyed in Monroe and Pike counties, in Pennsylvania. Warm, dry and windy weather has prevailed in Virginia for several weeks past, and these forest fires there are reported unprecedented in extent and damage. The fires in the Dismal Swamp have been raging for more than a week. They envelop the whole of Lake Drummond. The cultivated sections of the adjoining country are overrun with bears, panthers, deer and smaller game.

THE RESOURCES OF ALASKA.

SITKA, Alaska, Jan. 27th, 1880.

THE periodical disturber of our serene and tranquil existence in Sitka, which twice each month gladdens our eyes, once as her smoke is discerned on the horizon—for we know at once it is the *California*, as nothing else comes here—and again as she dips her flag in a parting salute, paid us but a brief visit this time; only one day, and in that short compass the correspondence and business of the month passed, and the one yet to be passed had to be concentrated. Usually we have three days, but a detention by a dangerous bar of six days in the Columbia River deprived us of two of them.

When, after over twenty hours continuous work, I dropped my last letter into an extra bag that just caught the steamer, I felt that I had accomplished a great deal of work; but now that it is too late to remedy I find that "I have left undone many things which I ought to have done," and I fear it will be judged that "there's no good in me." My next mail will be largely composed of apologies. We have in Sitka many days which, gauged by our feelings, are very long ones, but steamer day is not one of them. Impressions formed by transient visitors as to the normal condition of Sitka on that day are very apt to prove erroneous. Everything is in a turmoil, and we find that several days of subsequent rest are necessary to enable us to settle down into our usual lethargic condition. We have learned to appreciate the feelings of Diogenes when he only asked that people would not obstruct his sunshine. It takes several days to re-acquire the lost habit of reading newspapers, and before attacking a formidable pile of dailies I usually take a few easy lessons with FOREST AND STREAM.

Following up this custom, I was enjoying myself and at peace with the world, when in your issue of Dec. 18th I came across the somewhat patronizing and slightly free and easy—for at times it runs into personalities—letter of Prof. Elliott, in which he apparently brushes away the various facts which I presented in my letter published Dec. 4th, claiming, however, to simply show my inferences wrong, while "cheerfully bearing witness to the facts."

Mr. Editor, those facts still stand. They have not been squarely met, and until they are, I shall press them. Against them he has opposed a series of theories and prophecies, hypotheses, opinions and badinage, but not a fact! And he skillfully begs the question at issue, and running off upon a new tack avoids obstacles which he himself places in his path. Mine remain to be confuted.

I am fully aware that in reopening this controversy I run great risks. I am not an expert in the handling of that mighty weapon of which the Professor in many a hard-fought battle, when much ink was shed, has proved himself a master, and so skillfully has he cut in quarter and tierce that you, a bystander, have fancied that he has punted me, for you say editorially that "he has made good" the previous opinions advanced. Apparently he did, but I think I can show that he failed to touch. Allow me to place in contrast the opinions first advanced by him, and which I undertook to show were erroneous, and those which in his last letter he endeavors to sustain.

First set: "The agricultural possibilities of Alaska are null and void," and he challenges the citation "of a single instance where an acre of ground has ever been or can be successfully planted annually with a crop of either corn, wheat, barley or potatoes." In his last he seeks to prove the truth of the above position by arguments which are based entirely upon a forced construction of the one word which will admit of an argument, "successfully," and sums up: "Therefore I say, and I think with entire truth, that you cannot raise potatoes successfully in a region where they will not sustain themselves from year to year." And this in spite of the evidence I presented by the citing of many instances where for many years annual crops of excellent potatoes had been obtained from many plots, some of which were of more than a single acre in extent; of my own assertion that I had seen such plots under cultivation, and that at the time I wrote I was enjoying their produce. I also asserted that during my stay of, at that time, nearly four months (the Professor was here but two days), we had been bountifully supplied with excellent vegetables, twelve species of which I enumerated.

I think that had the Professor prolonged his stay, and been forced, as we have been, to depend upon those "little plots" of which he speaks with such contempt, his opinion would have been more correct, hence more valuable. I will refer again to that large potato which the Professor disposes of so summarily by the facetious title of "Giant Alaskan Murphy." He indulges in prophecy in regard to it and states "that in from six weeks to four months it would have become a mass of decay" if I had not eaten it then. I will not follow his example and treat an hypothesis as a proved fact. All that I can say positively about that particular potato is, that it was not kept long enough to prove or disprove his assertion. I am able, however, to say positively that many other large potatoes raised in the same plot, but gathered a little later, are at this moment in excellent order, although his longest period, "four months," has elapsed.

I will, by the steamer that carries this, send to him and to you also, a fair specimen of said potatoes, and it strikes me that the Professor will be compelled to admit that it is his prophecy and not the "fondest hopes of 'Piscico'" which "come to naught." I must confess that when I read in his first paper the remark about "the watery walnuts, dubbed potatoes," I had no idea that he had, as he admits in his last, "witnessed, tasted and handled" himself, at Sitka, just such potatoes, weighing nearly a pound each, and good. However I will send him another, and I feel very confident that he will have some difficulty in brushing aside, as an "erroneous inference," so substantial an argument—one I run some risk in advancing at this time, as nearly two months must elapse and a long journey be taken before the potatoes can reach their destination, and they may come to grief. Before dropping this potato, which has proved a hot one, I will say that if most or many of the Professor's statements in regard to Alaska affairs are to be taken with so many grains of salt, as in this case, I cannot wonder that every well-informed person with whom I come in contact here differs with him so radically upon so many points. In his next paragraph Prof. E. makes it perfectly clear to "Piscico" "that potatoes cannot be successfully raised in Alaska," by argument based upon experiments in cotton raising in Ohio, and warning with his subject, pronounces the attempt "an utter failure," simply because he finds that he can't raise in Ohio as good cotton as can be raised in Georgia. "Piscico" utterly fails to trace the connection, and remains of the opinion that the cotton experiment has very little, if any, bearing upon the question, and having seen many and eaten some very excellent potatoes raised in Alaska, is not prepared to admit that the crop of 1879 was "an utter failure."

Very few practical gardeners would be willing to admit that their gardens were failures simply because each season they found themselves compelled to resort to professional seedsmen for fresh supplies of seeds and cuttings.

Things which are equal to each other, we are taught, are equal to the same thing. Let us apply the axiom: Ohio cotton not as good as Georgia cotton; Connecticut tobacco not as good as Virginia ditto; therefore, the first crop being an utter failure, so is the second.

By mutual consent the stock-raising question is left out of the discussion. All that either of us know about it is what other people have told us, and judging by the weather we are having this winter, I rather believe that his informant judged more correctly than mine; but one reason that the Professor gave in his first paper, to show that it could not be done, will not stand against facts. He says squarely: "Hay cannot be cured in this country." I say just as positively that it can, and has been for many seasons.

I will first prove my assertion by matching direct information from the parties who have cured it, against his opinion. Doyle, the man who planted or sowed the first seed in Katliansky Bay, assures me that he has year after year obtained good crops of cured hay. And there has been, this last season, to my certain knowledge, for I have seen it brought in, and know that it is now being fed daily to cows and mules, a crop of eighty or a hundred tons—don't know exactly how much—of excellent hay, composed of timothy and clover.

Can the Professor controvert this statement, and prove conclusively that it is an "erroneous inference," by asserting that we have only got to keep it long enough, and it will get musty?

The following, which is written by a man who is up in Alaska matters, is worth reproduction in this connection:—

NOT QUITE CORRECT.

A recent number of the San Francisco *Alta* contained a letter from a "special correspondent" on the subject of Alaska, which displays much carelessness, if not absolute ignorance, on the part of the writer. After enlarging upon the manner of killing seals under contract on the Pribiloff Islands, the correspondent enters into details concerning other parts of the Territory too palpably false to be allowed to pass without refutation.

With reference to the island of Kodiak, he states that the only seal sent to St. Paul Harbor, and that only twelve acres are under cultivation in that most favored spot of the Territory, producing "a few potatoes and some grass." The statistics in another column of this number of the *Appeal* inform our readers of the number of settlements and inhabitants of Kodiak and vicinity. The acreage under potatoes and turnips on Kodiak and Adognak alone, amounts into the hundreds, and as for the "cultivation of grass," the *Alta's* correspondent has evidently never seen the luxuriant growth of timothy and other grasses of that region, completely hiding a man of common stature. Thousands of people make a living on those islands, raising potatoes enough for home consumption and export to less favored sections of the Territory. Cord wood and rough lumber is also shipped from here to treeless Aleutian Islands, and the southern portion of the Alaska Peninsula.

Of the numerous quartz ledges of Sitka, the correspondent mentions but "one recently discovered mine," and then goes on to state that "industrial enterprises have failed, because the country refused to work"—a very unjust accusation of a whole class of people. The ample facilities for vegetable gardening at Sitka, Wrangell and on Prince of Wales Island, the writer passes over in silence, as well as the fisheries; his whole communication follows in the footsteps of many other similar productions of men who set out to write about Alaska with a firm determination to see nothing that is good or even promising for the future, in any part of the neglected Territory.—*Alaska Appeal*, Dec. 30th.

In some respects I agree with Prof. Elliott. He is undoubtedly correct in the assumption that if "three thousand misguided mortals" should come suddenly into Sitka, they would be compelled to send below for many necessities. We three hundred who are here now have to do that or become impoverished; the store-keepers are merciless, and charge such exorbitant prices for everything, that most of us who have to spend a dollar save the half of one by so sending.

But Sitka is not peculiar in that respect. I fancy that the inhabitants of Virginia City, and Leadville, and Deadwood have to send somewhere for a great many things; and even those of New York who want first-class beef send West, and for early vegetables, South. But I do believe that if such an influx were preceded by that of a few competent and industrious farmers, Sitka and vicinity could adapt itself to the situation, and I so expressed myself in this connection—a point which Prof. E. apparently overlooked.

And now about "those mines near Sitka." In his first paper, Prof. E. says: "If the gold mines are so rich, why are they not worked?" In his last, he completely overlooks my direct assertion that certain of the ledges are being worked and sending bullion away monthly, and various other well-founded statements, and gives this enigmatical reply:—

"As for those mines near Sitka, that is a long story, and dates back prior to the transfer; and when 'Piscico' gets away next year (I hope he's right, then) he will substantially agree with me in regard to them, if the owners of those mines have a valuable vein (valuable veins?), then they are in full sympathy with me, because they do not want it (them?) puffed outside of their own knowledge; but if they are simply doing what thousands of such people are daily doing, floating worthless stock, then of course I shall merit their hostility."

"Piscico" gives it up; and will here only repeat his statement, that he has good reason to believe that, whatever may have been the state of affairs at the date of the Professor's visit, there have since been discovered by miners who have flocked here, a great many ledges of quartz, many of which have been proved by assay to be auriferous, and which are owned in two cases only by incorporated companies; that most of them are owned by the miners who discovered them, and that most of said miners are poor men, who are not in sympathy with the Professor, although "they believe their ledges valuable," because they feel that it is partially due to his persistent assertions to the contrary, that capitalists refrain from investigating and developing the mineral resources of Alaska.

A 10-stamp mill, run by steam, is at work upon one of these mines, and producing such returns as justify its owners, who are among the most respectable business men of Portland, and United States officers—army and navy—in the belief that they have a good thing. I shall send to the Smithsonian, also to you, Mr. Editor, some specimens of Alaska quartz; and if Prof. Elliott will but ask of the mineralogist of the Smithsonian, and you, of any expert among your acquaintances, their character, I think that you, at least, will be satisfied that, if there is plenty of it, the ledges from which it was obtained must have value.

In stating that the knowledge of auriferous quartz ledges existing in the vicinity of Sitka dates prior to the transfer, the Professor is again mistaken. The transfer took place in 1868; the first discovery of a quartz ledge took place in 1871. The history of the successive steps through which this mining region has advanced to its present condition, is, as he says, a long story, and no one man knows it; but there are at Sitka, and at the mines, all of the men who have from time to time discovered these ledges, and each has his quota of personal knowledge. I will make it my business to interview all of these men, and getting their stories, compare and sift them, examine records and papers, and in my next furnish you with the first and only authentic and connected history of mining developments in this country. From my present knowledge, I am convinced that while there has been more or less "wildcatting" of certain of these ledges, which I am in accord with the Professor in condemning, yet there is also perfectly legitimate mining now being prosecuted in this vicinity.

February 18th.—Please see that the above date is inserted, Mr. Editor, for it bears on the great potato question. Five months and one day have elapsed since I helped eat that "giant Murphy," which in four months, at the outside, was doomed by the Professor to decay and corruption. Yet to-day I have seen quite a quantity of its mates and have had some for my dinner, and they were very good potatoes. (I have used great care in the construction of the above assertion. The last time I referred to a dinner in which an Alaska potato figured, I incautiously admitted that it was not "quite ripe," and thereby furnished proof positive that Alaska potatoes never do get ripe.)

In anticipation of the possible arrival to-morrow of the steamer, I went for the potatoes which I have promised to send, obtained them and found them in excellent preservation. A rather amusing conversation took place. The seller apologized for the small size of the "tubers"

(they weigh about six ounces on an average) and explained that he had sold all of his crop except these three barrels, which were small ones he was keeping for seed." This rather staggered me. I hated to see the man make such a dead waste of such a fine lot of potatoes, and said to him:—

"I wouldn't undertake to save them for seed, they won't grow if you do plant them."

"Won't grow, is it, and why not, I'd like to know?"

"Why, Alaska potatoes don't get ripe, and are of no use for seed."

"Won't they? Ain't they? Well then, who's been telling you that?"

"Why, Prof. Elliott says!"—

"Prof. Elliott, what does he know about it?"

I answered truly that I didn't know, and then my friend explained to me that he and Smeig, and others whom he mentioned, had for several years raised their potatoes from the small ones saved from the year before! Mr. Editor, I felt a good deal, I have no doubt

John Phoenix did, when the native assured him that the distance to the next rancho was but a mile, while the assistant with the pedometer had made it twenty. "The dicta of science is not to be disputed," but I have since questioned several who don't raise, but have bought potatoes here for many years, and they all back the native, and convince me beyond a doubt the agricultural possibilities, etc., were very limited. I should have agreed with him, but to "take away from him who hath not, even that which he hath," may be scriptural, but it is not fair worldly policy.

March 26th.—That potato ought to have been with you ere this, but a failure of the steamer to make her usual trips has kept our mails waiting. It starts from here in excellent condition—as does a mate, to the Professor—and my dinner to-day was partially composed of some from the same lot.

PISCICO.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

NESTING PIGEONS.

Late advices from Shelby, Mich., announce the arrival of the wild pigeons. The trappers, or netters, are also there to the number of about eighty. It is expected that in a few days the pigeons will begin their preparations for nesting, when they will be settled for about a month, and the pigeon-catchers' harvest will begin. A few seasons ago your correspondent spent two weeks in the same locality, and saw one of the largest roosts and the business of pigeoning in full blast. The netters, buyers and pigeons generally arrive on the ground at one and the same time, the course of the birds being found out by use of the telegraph. The netters at once proceed to secure a good place to set their nets, often paying as high as \$50 for a favored spot where the flight is good, or for some drinking place or salt marsh, where the birds are in the habit of going. The buyers erect their traps for holding live birds, or get together their stock of barrels and ice for shipping dead birds, though a good proportion of the trappers ship their own birds alive or dead to New York and Chicago. I saw dead birds sold at Shelby for fifteen cents, and live for thirty cents per dozen, though the average prices are higher. The morning and evening hours are best for catching, as then the flights are on. I saw 287 taken on one spring of a single net, over a bed of muck to which the birds had been baited for some days by sprinkling salt over the mud. On these beds no decoys are used, the baiting being sufficient. The pigeons would eat greedily of the salted muck.

On the occasion I speak of we arrived at the bower just before dark. The birds were well baited, and I expected to see a fine catch, as no net had as yet been sprung over that bed. With the first streaks of light we could hear the flutter of wings as they lit in the trees about the bed. As the light increased they came faster and thicker, until soon the trees were alive with them, and the woods were filled with their calls. Soon a single pigeon dropped upon the bed, and had hardly folded its wings before others began to pour from the trees in a stream. When they seemed to be about to alight on each other's backs and you could see nothing but pointed tails sticking up, and while they were still flying thickly down on to the bed, we both jerked the line with all our might. There was a loud swish as the net sprang over, the lead line knocking feathers from those still in the air and in the way of the net. We rushed from our cover, and while I stood in amazement at the boiling mass under the meshes, the netter proceeded to fasten down the corners of the net and remove the birds to the coops.

It requires the most skill to trap pigeons as they are flying over a net. A flyer (a pigeon with its eyes sewed shut and a light weight fastened to its legs) being first thrown in the air to attract the attention of a passing flock, and a stool (a pigeon trained to act as if alighting flock, and a stool) worked to induce the flight to strike upon the bed when the net is sprung. The catch per day per man ranges from nothing to fifty or sixty dozen. No shooting is allowed within five miles of the roost proper. Good shooting (for those who wish to shoot nesting birds) can be had outside these limits, as

the birds fly several miles for food, passing some points continuously at some hours of the day.

This roost was thirty miles long, varying in width from one to five miles. There were 300 men engaged in the business at one time that season, and as a result of their work I saw one hundred and fifty plovers alone shipped in one day from the little village of Shelby.

I did not think then that there would be a pigeon left to lead the way to the woods of Shelby at some future season, but it seems there was, and their enemies are on hand to wage the war of extermination. How long can it last?

Chicago, Ill., April 9th.

MASSACHUSETTS—Lynn, April 17th.—After scientifically crawling and creeping some quarter of a mile, one of our local sports recently succeeded in obtaining a fine shot at two wooden ducks. Five live ones that were a short distance off, and making up to the wooden birds, thought they would get up and dust about that time. "Such is life." A few snipe have been brought to bag in this vicinity lately. There are rumors of certain parties shooting woodcock, but I hope this is not so.

BLUE CROW.

NEW YORK—Poughkeepsie, April 15th.—Messrs. Frank B. Johnson and Fred Utting, of Poughkeepsie, N. Y., succeeded in bringing to bag on April 2d and 3d twenty-nine Canada wild geese and seventy-two wild ducks, most being black, golden eye and whistlers.

BLUNDERBUSES.

NEW JERSEY—Newark.—On Friday night the honking of wild geese was heard for three or four hours, evidently lost in the gale.

Snipe shooting at Pine Brook, N. J., was good on Saturday and Monday last. Messrs. Hinds and Tappan moved a number of birds, of which they killed twelve. We saw the birds. The meadows are in fine condition, particularly the Big and Little Piece. Mr. Scott Kodman and party also got good shooting. On Sunday, April 19th, this week's paper your Ocean County, N. J., correspondent says the best bag heard of, of Wilson snipe, is seven. John W. Bunell, of Forked River, killed on Thursday, 8th inst., nine snipe. Birds wild; weather cold; wind high.

NORTH CAROLINA GAME AND HOSPITALITY.—Davidson College, N. C., March 29th.—North Carolina is a nonpareil hunting resort for those of your Northern sportsmen who are signing for new worlds to conquer. The quail is found in abundance all over the State, and it would be hard to say where they are most plentiful. In sight of Salisbury, N. C., coveys are quite numerous; some gentlemen there often make bags of fifty or sixty a day, and I have no doubt that in some of the less-thickly inhabited and poorer parts of the State they have never been disturbed at all, except by the harmless traps of the young sons of our colored brethren; traps for which the average quail has a profound contempt. Near Davidson College the writer found two large coveys in a pine thicket of about half an acre in area. Don't you wish you had been there?

Our numerous rivers duck and geese are found, and the swamps and mill-pools often contain snipe and duck *ad infinitum*. In the western part of the State, among the mountains, there are deer, pheasant and wild turkeys in sufficient numbers to justify a visit to those regions; not to mention the grand and beautiful scenery which meets your eye at every step.

Good accommodations can be found anywhere. And the little urchin, black or white, whom you meet on the road or in the cotton field will always be willing and happy to show you where the "patridges" stay; and will often wonder why you "don't kill 'em on de ground," unless he has received some instructions in the art of hunting. He is often indispensable to aid in marking down the birds, especially in the pine woods, where the sportsman has enough to do to get his bag of the swiftly flying, dodging, vanishing bunches of feathers.

As a North Carolinian, it ill becomes me to say anything about the hospitality and courtesy of the people; but if any of our Northern friends who entertain any doubts on that score will only come and see for themselves they will never doubt again. The "patridges" are in places "post" their land, there is, for a while, no hunting; but a courteous request for permission to kill some quail is seldom refused, and never, without good and sufficient reasons, and the practice only serves to make the game more plentiful. Often the farmer himself is an ardent sportsman, and then you are sure of a welcome which every true gentleman and sportsman knows how to give.

II.

THE GUNNERS OF CURRIBERT.—Poplar Branch, N. C., April 12th.—Our attention having been called to an article in your paper, headed: "A Dismal Story of Curriebert, N. C.," we, the gunners referred to in that article, beg leave to have a hearing in your valuable columns, in order that we may vindicate ourselves.

In the first place we venture to assert that he is no true sportsman. We will omit his exaggerations in regard to the ungrammatical language of the captain of the steamer *Cypnet*, and will come to his landing at this place where congregate "quite a number of inhabitants." We beg leave to ask Mr. "Ezzykill" whether he is a pocket or those of his friend Jenkins were tampered with by any one in that large crowd? We say, candidly, no sir; such an act has never been known to be perpetrated in this half-civilized country of ours. And yet the gentleman charges us with the crime of being heathens!

After reaching the landing he says he was asked to step into a two-wheel cart, which, together with the horse that pulled it, this "Ezzykill" hurled to his horse's content. Now he is most ungrateful to the owner of the badly caparisoned horse and tied-up vehicle, because he and his friend Jenkins and their traps were hauled up from the landing to the hotel, and the poor man did not even charge a cent for the services of him—himself, quadruped and two-wheeled cart. Now, if we were, in fact, quadruped and two-wheeled cart, now, if we were, in fact, your good city we would not be kindly asked to "step into" any vehicle and take a gratis ride to the hotel; but, on the contrary, would have our ears almost deafened by cries of "Cab, sir? Cab, sir? any points of the city," etc., etc. And when the hotel was reached we would have our pocket-books relieved of about \$4 by

the polite request of "One dollar each, gentlemen, one dollar apiece is all I'll charge you." How strikingly the contrast between riding in a civilized country and one where dwell less intelligent heathen! Cannot "Ezzykill" send a nice horse-collar to the owner of that poor quadruped, in question, to say for his free ride? Now we come to the point wherein we are directly concerned. Mr. E. says that his guides selected a point for shooting, and put out the decoys. Then he says: "Soon, what do we have but four of those gentlemen of that honorable and liberal minded place come out with two batteries and plant them within three hundred yards of us." This we pronounce literally false. We had our batteries planted, decoys out, and two of us were ensconced in the bushes, when Mr. E., with his friend Jenkins and guides sailed by us on their way to the selected point. To corroborate our own statement we have to say that we questioned both of Mr. E.'s guides and they acknowledged that we were out a long time before they started from the wharf.

In regard to the mortgaging of boats, batteries and decoys by the professional gunners, to sustain them through the summer, we have to say that your informant was very much mistaken. We are quite well posted in regard to who have and who have not mortgaged their property, and we can safely say that we do not know of a single instance (much less the majority of gunners) where a gunner has had to mortgage his boat, battery or decoys for his sustenance during the summer. Sorry that one of our citizens should "get up" such a misrepresentation of the gunners, and his fishermen, something mortgage their boats, but the gunners, never, or hardly ever.

Without using any fictitious names we respectfully subscribe ourselves as the four gunners referred to by Mr. "Ezzykill," A. B. WILLIAMS, S. D. DUNTON, W. H. WALKER, J. T. O'NEAL.

ARKANSAS NOTES.—Pittsburg, Pa., March 23d.—I have read with much interest the letter of "Yell" in one of your late issues on the "Attractions of Arkansas." I had taken copious notes on the arrival and departure of our different birds of passage, but being unfortunately wrecked on the Iron Mountain Road on the edge of Black River at midnight, I lost my book and all my traps. These notes I find in other papers.

Saw the first meadow lark on Oct. 20th, 1879; the first flock of wild pigeons on the 22d. Saw ten or twelve meadow larks on the 28th; shot one for examination; found its crop full of persimmons. Saw the first robins Nov. 1st; shot one; found its crop full of dogwood berries and some small weed I could not name. Same day saw a woodcock, but failed to kill. Nov. 5th saw the first flight of wild ducks, flying south. Nov. 10th saw the first flight of wild geese, course southeast. Red and gray squirrels plenty; raccoons and opossums plenty; hares in fair proportion; turkeys fairly abundant, but hard to get at; deer in fair proportion; but the little Bob White is plentiful everywhere. He is a very poor sportsman who cannot fill his bag in half a day. I never saw them so thick in my life, but they have a bad habit of taking to the water. Then the trouble begins; if you do not kill your bird instantly, you are apt to lose him.

Now for the non-attractions: First, chills and fever plenty; malarial fever, bilious fever; pneumonia in the fall, and very fatal; sore eyes; plenty of snakes; plenty of every description of ticks; mosquitos few or none; hawks plenty. What they call the sickly season lasts from the 1st of June until the first frost.

There is one Yell County, but that matter the whole of the State; but the place I mean to particularize is Yell County. I was located three miles from Dardanelle, on the military road to Fort Smith. This is in Yell County. And especially do I mean along the Arkansas bottoms and along the Petit Jean and the Fourche La Pave rivers. I have traveled mostly the whole country over on horseback. There are no pleasures there as we call them here, but private pleasures are plentiful. I have seen their eggs sold in Dardanelle for a "bit" a dozen. There are no game laws in that part of the State. Dardanelle is about midway between Little Rock and Fort Smith.

MINNESOTA—Long Prairie, April 12th.—Ducks made their appearance here about the 1st of this month, and have been more numerous than for many years. I have bagged quite a number at odd times, but have no time to hunt, except an hour or so mornings and evenings. But few are bagged, as most of our sportsmen are not provided with decoys and boats to hunt them properly. Mallards and canvas-backs make up a large number of the ducks, but a good many sea ducks are seen also.

N. W.

IOWA—Creston, April 9th.—There are lots of ducks, geese and sand-hill cranes flying north, and into a number of them light around here. Yesterday I drove over to a small pond in the open prairie, not a quarter of a mile from my house, and got one duck, four grouse and one snipe in an hour—all flying shots and no miss. Shooting from a wagon is now much better than on foot, for birds are not frightened by it so much. The spring is very dry, and I think game will be plenty next year. Old cock grouse are "booming" loudly every morning around my house, and beat even canvas-backs for noise.

N. D. MERRILL.

INDIANA—Indianapolis, April 18th.—Snipe here in abundance, and many have been bagged. A splendid outlet to the fishing season. Bass are taken kindly to the hook; several good sized ones have been taken. Ducking has been fair, but no good bag has yet reached your correspondent's ears from around here, but many are being or have been killed in the Kankakee Marshes, about 100 miles north of here.

FRITZ.

NOVEL SHOOTING STANDS.—Indianapolis, Ind., March 30th.—The secluded habits of the woodcock, leading him to blink away the long days of summer and early autumn in damp and impenetrable thickets, have made him the most difficult of our game birds to bag. With your permission, I will tell how some people in this section overcome most of the difficulty, and brush away the safeguards which nature has thrown around him. At Thornton, Ind., lives Capt. P. A. Huffman, a clever gentleman and true sportsman, and withal one of the best field shots in the State. This last assertion needs no other proof than his record of sixty-seven Jackson snipe without a miss, which is a sample of his everyday work.

Being visited by some friends from this city, intent on a day's cock shooting, disappointment seemed in store for them, as the birds were in a willow thicket so dense as to preclude all hope of doing any execution. A happy idea struck the Captain, and he proceeded to cut down a bevy of step-ladders, which were placed at favorable points around the thicket. Taking their positions on these, the gentlemen had excellent sport when the birds, being flushed, took flight above the willows. It was a novel idea, and illustrates how the ingenuity of man will be successfully exercised against the obstacles with which nature sometimes surrounds him.

HOOSIER.

THREAD-WOUND CARTRIDGES.—Dover, Del., March 29th.—Some months ago we sent for samples of the thread-wound cartridge cases, not having a great deal of faith in their usefulness, nor believing the high price asked for them would warrant their use. The first one we tried was marked for 90 yards range. Used 3drs. Orange rifle powder under two wads, in a 12-bore; 1oz. No. 5 shot; case held in brass shell, with thin court-plaster, greasing it when dry. The day was cloudy, with a steady east wind blowing lightly, the water tolerably calm. Paddling up the mouth of Scott's Run, we sighted two black ducks 300 yards ahead. Wishing to get the result as accurately as possible, we advanced swiftly and made the shot.

As we advanced we could then judge of 90 yards, and, sighting on the nearest duck, fired. It never moved. Sticking a pole into the bottom where we shot, we rowed at once to the spot where the dead duck lay, and drove another stake—the water averaging about six feet in depth—then running a line from pole to pole, we found the distance, by actual measurement, 110 yards. We found the marks of but four shots in the bird, two near the eye and two near the wing. The other duck flew off, apparently unhurt. There being no further use for them on that day, they were put aside and forgotten until this morning, when we took them out for a conclusion of the trial. With the 70 yards' cartridge, loaded as above, we killed a "dipper" duck in the stream back of our kennels, and tying one end of a cord to the dog's collar, sent him for the duck and ascertained that the distance was 73½ yards. The duck's neck was broken and he fell dead.

Having a curiosity to know the effect of a shot at 40 yards, with a 50 yards' cartridge, we sharpened the end of a piece of shingle, 4½ inches, and drove it into the top of a stump. The wind was blowing hard from the north, and the target was standing east from us. After shooting, we found the thread thrown neatly across the stump, not a shot in the target, and the ground torn by the whole discharge in the side of a slight hill 10 yards ahead of the stump, and on a line six inches to the right of it—a natural result.

We are fully convinced that these cartridges, when properly used according to manufacturer's directions, are a perfect success, and a decided acquisition to the sportsman's outfit. True, the price is rather steep; but a few of them must find their way into every shooter's ammunition case when their value is fully known. We find no trouble with these shells used as above stated—have they ever shot them from paper shells. Would like to hear from others on the subject, having noted but two communications in recent volume of FOREST AND STREAM.

For the benefit of strangers, would say that we have no acquaintance with Messrs. Schleicher & Co., and no further interest than every sportsman should have in a really good and useful invention so clearly associated with their pleasure.

E. C. VOR CULIN.

ANOTHER COMPLAINT OF CHEAT GUNS.—Brooklyn, April 17th.—Editor Forest and Stream.—As a sufferer has started the ball rolling in your last issue in reference to gun selling, I will add my experience, and say it is about time that something was done for retail dealers by our manufacturers and wholesale houses, who now sell one gun with a discount off to any one who comes along, as cheap as to a tradesman who has devoted his lifetime to the business. This is not only so as to guns, but also with shells, wads, powder, shot, etc. Allowing the right of all men to do as they please, and to sell their wares at prices to suit themselves, I question much if there is a correct way of business. But "Sufferer" must come to the conclusion, as I have done long ago, that brains, energy and skill without plenty of cash do not always succeed.

STAVATION.

SHOOTING MATCHES.

MAINE—Auburn, April 10th.—Scores of glass-ball matches shot on the grounds of the Androsquign Sporting Club, East Day, April 10th:—

CONNECTION.—New Haven, April 14th.—The New Haven Gun Club held its regular meet shoot to-day. Owing to the cold few were out. Friend Merwin played just long enough to win the badge the second time. He wishes to inform his friends that he killed five blue glass balls, they can see the gold badge they

gettle the question in your next issue, and oblige myself and friends? H. B. HARRIS.

In long range breech-loading rifles, where loading from the muzzle is employed, the patched bullets would drop down the barrel, and in the old muzzle-loaders a gentle pressure with a rod was sufficient to ram them down on the powder. There is no advantage gained in having a conical bullet so tight-fitting that it must be driven through the barrel by mallet blows, and there is the disadvantage of increasing the liability to loading.

EXPRESS BULLETS.

INDIANAPOLIS, IND., March 31st.

Editor Forest and Stream:—

Having noticed for some time discussions in your valuable paper on the destructive effect of express bullets, I desire to add my mite. Leaving out the question of accuracy of hollow-pointed bullets, I feel confident the shock produced in a living body by impact of elongated bullets moving with the same velocities, would be decidedly in favor of the hollow-pointed projectile, provided both were moving with very high velocity. I inclose a sample of hollow-pointed bullet that has been fired into a block of wood, and you will notice the resemblance to a button-shaped mushroom. In order to ascertain the action of hollow-pointed bullets when striking bodies of low or slight resistance, I took several 45cal. cartridges (bullets weighing 40grs.; charge powder, 70grs.) and bored a hole in the points of the bullets about one-eighth of an inch in diameter, continuing in the direction, or rather prolongation of the longer axis nearly seven-eighths of an inch; these holes were then filled with melted beeswax. I then filled a packing-box, about eight feet long by three feet wide and three feet high, with loose sawdust. Standing about twenty feet from an open end of the box, fired into the sawdust. Found, upon examination, the penetration in all cases was between five and six feet, and the bullets took the shape of the inclosed sample (button mushroom). The service bullet fired into sawdust, at same distance with same charge of powder, had the same penetration, but the bullets were very little disfigured, showing plainly the mark of the rifling. I also obtained the same results by firing into this box filled with snow. Found very little difference between the penetration in this and in the sawdust. The hollow-pointed bullet penetrated and expanded in the snow—same as in sawdust. These materials offer much less resistance to the penetration than the bodies of large animals, consequently the displacement or change of form of the hollow-pointed bullet would be much greater when striking them. When exceedingly high velocities are obtained, this change of form would be complete, the expanded disc formed by bullet spreading out from the point remaining in the body of the animal, and the base of the bullet passing on beyond, possibly through the body, producing all the effects of an explosive bullet; for this bullet, from the time of impact, continues to penetrate and expand at the point, until the expanded portion, from loss of velocity due to the increased surface of resistance, comes to a state of rest, or nearly so, and is itself penetrated by the solid base. At the time of impact, the beeswax becomes melted from heat generated by the resistance of the air and the body struck, and we then have a column of fluid confined in a cylindrical space subject to great pressure. This pressure, being equal in all directions, causes the bullet to expand in direction of line of least resistance of the material from which the bullet is made, viz., out in the plane perpendicular to the longer axis. By this expansion continuing, the cylindrical hole in the bullet becomes cone-shaped, with the base of the cone at point of bullet. The enlargement at the point of the bullet increases the surface of resistance, and owing to the non-elastic quality of lead, the particles in expanded portion move velocity faster than the particles in the base. The base pressing more and more upon the expanded portion as the difference in the velocities becomes greater, changes the cone-shaped expanded point, first a plane, then a convex surface, and this change of form continues until the difference in velocities of the particles in the expanded portion and particles of solid base becomes sufficiently great, when the base will penetrate the expanded portion and pass on. By using a bank of sawdust as a butt, and successively reducing the charge of powder for same weight of hollow bullet, a point will be reached at which there will be no change of form in the bullet. If, now, the charges of powder are regularly increased, it will be found the change of form becomes greater and greater, until, at last, the expansion, until maximum is reached, which, as indicated, will be a cone-shaped of the bullets into two parts, a circular disk, and the solid base, the latter penetrating beyond the disk. Parties desiring to investigate, will find other material (sawdust or snow) suitable. They can be packed in sections of stove-pipe two or three feet in length. A sheet of this packing-paper placed between each section will assist wonderfully in finding the bullets (by indicating which section contains the bullets) after they have been fired. Those desiring to ascertain the effect or action of different forms of bullets, and to ascertain the accuracy of the different forms of bullets for this purpose. The penetration in all cases will not be great, and all of the bullets can be recovered in the perfect form they left the muzzle of the gun. GREGORY.

NON-STICKING SHELLS.—San Dimas Durango, Mexico, Feb. 26th.

Editor Forest and Stream:—I have been much interested in the discussion going on through your columns in regard to "everlasting shells." Possibly my experiences may be of benefit to these unfortunate gentlemen from Texas, who have suffered from sticking shells in the Ballard and other rifles. My brother and I each own a Ballard; one (mine) using the Berdan shell, 44-77, the other, overloading, 44-100. Wonderful to state, with proper care in loading, the shells never stick in either rifle—without said care they will stick every time. The rule to be observed in loading are simple and easily carried out. 1st. Before reloading, clean each shell carefully with a dry and out, until it is bright and free from all signs of burnt powder or verdigris. 2d. Mold the bullets with the utmost care, seeing that the bullet mold is shut tight every time a slug is run. 3d. Load the shell so that the ball does not crowd the powder, but barely rests on it, when set at the proper depth in the shell. Don't use bullets that enter the shells with difficulty. If the molds will make no other kind, fire them out and buy others of the proper size. This, by the way, is a very common fault in factory-made bullet molds, as I have seen from unfortunate experiences. 4th. Clean the chamber of the rifle carefully, if the cartridges are for hunting, dip them in some very hot lubricant, so that shell and bullet will have a very thin coating of grease, extending back say half an inch on the shell. If (for all this the shells still persist in sticking, why, for my part, give it up. They have some kink in them that has not yet come to light in our experience. Possibly too quick powder will make the shells expand, *quien sabe?* We always use Hazard's JG or FG when attainable. I have owned and used several different ones during the past year, including Sharps, Remington, Winchester, Springfield, imported Stevens, etc., and for a sportsman who can only afford one weapon I consider the Ballard shield

of them all. Since the fall of 1876 my Ballard has been my companion from the dripping pine forests of Puget Sound, to the cool and cactus-covered *concheros* of the Mexican cordilleras. In canoe or saddle—wherever there was a show to get met, in short—I've always packed her; and whether shooting at a buck's big as a barn, a blue grouse in the top of an Oregon pine, or a Mexican fox-squirrel curiously peering from some lofty perch at the "Gringo" interloper on his domains, I've hit or missed with the comfortable feeling that whatever happened the rifle was all right in every particular. And I've not yet found game so big or so little that she could not stand to her case, and give fair satisfaction of herself. I've accomplished one feat with this rifle lately, that I had considered heretofore as a hunter's yarn, viz., "larking a squirrel." A jackknife, with a screw-driver blade, is amply sufficient to do all the adjusting necessary during a three-months' hunt, and—but I'll stop, for fear the censorious gentleman, who objects to "this kind of thing, you know," will set after me. EL AMERICANO.

Yachting and Yimoeing.

- Oct. 9—Washington Village Y. C. Fall Regatta.

THE NATIONAL YACHTING ASSOCIATION.

At the meeting of the convention, held April 14th at the St. Denis Hotel, this city, the minutes of the previous meeting were read and approved. The following clubs had at that time adopted the constitution: Salem Bay Y. C., Yonkers, National, Chikosa, Quaker City, Buffalo, New Jersey, Hudson River, Oshkosh, Columbia City and Pavana.

Upon motion of Mr. Rice the Newburyport Y. C. and Lynn Y. C. were also to be considered admitted, they having appointed delegates and signified their intention of joining. A committee of five was selected to consider and report upon the receipt of all four acceding clubs, and to have the time of meeting had not yet enabled them to communicate their adoption of the constitution. The committee is composed as follows: David Hall, Rice, S. B. Y. C.; Henry Woods, N. Y. C.; A. J. Brush, Empire Y. C.; C. P. Kunhardt, Buffalo Y. C.; R. B. Freeman, Hudson River Y. C., and the President, Com. Dilworth, and Secretary John Frick, of the convention.

A resolution was passed instructing the Executive Committee of twelve to take steps, when appointed, looking toward a full and creditable display of the yachting interests at the coming World's Fair in 1883. Yacht builders and others are to be requested to contribute specimens of their work in the way of actual yachts, models, etc., so that the attention of the general public may be drawn to the sport. Votes of thanks were tendered to Rear-Com. Sumner, Royal Nova Scotia Y. S., for the useful and interesting data furnished the convention; to Mr. John Frick for the effective manner in which he carried out the arduous duties of Secretary, and to the proprietors of the St. Denis Hotel for the use of the building. The association, having been established permanently and all provisions for its future continuance having been made, the convention was adjourned *sine die*. The Executive Committee of twelve, as soon as balloted for, will now take charge of the affairs of the Association in accord with the provisions of the constitution.

EASTERN BRANCH N. Y. A.

At the meeting held in Boston, April 16th, with a view to perfecting a local organization, five clubs were represented by delegates: Lynn Y. C., Newburyport Y. C., Salem Bay Y. C., Haverhill Y. C. and Washington Village Y. C. In regard to some of them joining the N. Y. A. it was determined to refer the question back to the clubs for definite action. As the meeting was only an initial one it is thought other Eastern clubs may join, as it is granted on all sides that the formation of an Eastern branch to supersede racing from Cape Cod to Eastport is a necessity of the times. The meeting was much better attended than the previous call of a similar nature, and in the end we trust all interests will pull together for united action. A committee on rules and by-laws was appointed, composed of Messrs. J. F. Allen, Newburyport Y. C.; E. F. Brown, Haverhill Y. C.; Howard Dennis, Lynn Y. C.; E. Lanning, W. V. Y. C., and David Hall, Rice, Salem Bay Y. C. Also a committee on union or local regattas, as follows: W. P. Parker, Vice-Com. Salem Bay Y. C.; W. C. Thompson, Com. Newburyport Y. C.; Howard Dennis, Fleet Captain Lynn Y. C.; F. A. Daniels, Vice-Com. W. V. Y. C., and W. M. Dresser, Haverhill Y. C. These committees will meet at Young's Hotel, April 21st, at 4 p.m. for deliberation. The meeting was then adjourned subject to the call of the President.

NEW SCHOONER.—Decker, of South Brooklyn, has finished a handsome schooner for ex-Commander Munsell, Atlantic Y. C. The model is by Decker. Her dimensions are: Length, 73ft. over all, 33ft. keel, 8ft. beam; depth of hold, 1ft.; draught, 4ft. 6in. The dimensions of her spars are: Mainmast, 33ft.; foremast, 33ft.; bowsprit, 33ft.; mainboom, 33ft.; foreboom, 22ft.; foregaff, 21ft.; maingaff, 22ft.; foremast, 23ft.; and maintopmast, 31ft. Bowsprit outboard, 33ft.; foremast, set up 4ft. out on the bowsprit. This to the jibstay is 14ft.; from jib to flying jibstay, 11ft., and 3ft. pole. The craft has a flush deck, with the exception of the cabin house, 15in. high. She will be placed in racing trim about the middle of May, and will go to Newport on her trial trip.

YACHTING NEWS.

SOUTHERN YACHT CLUB.—Officers for the year: Commodore, E. J. O'Brien; First Vice-Commodore, A. A. Magrines; Second Vice-Commodore, E. Harris; Treasurer, J. B. McConnell; Secretary, A. H. Harris. The club has now 477 members, and will give four regattas this season.

SAN FRANCISCO YACHT CLUB.—Officers for the year: Commodore, C. H. Harrison; Vice-Commodore, J. D. Sprockels; Secretary, C. G. Yale; Treasurer, T. Guntie; Measurer, M. Turner; Trustees, Howes, Weiner, and Hamilton.

Racing model yachts are rapidly increasing in this club, many experiments being tried with the hope of drawing lessons therefrom, to be applied on a larger scale. Dr. Morrill proposes to cruise among the South Sea Islands, this year, in his schooner *Casco*. His cruise down the coast last season was a great success.

NEW YORK YACHT CLUB.—The club has adopted a new pattern for their cap, similar to that of the midshipmen of the Royal Navy, with an ancient marine cavalry officer. The following new members have been elected: W. L. Scott, Erie, Pa.; E. Robert, J. W. Blatchford, D. Hall, G. P. Randolph, F. Penhoy, H. E. Packer, H. H. Hathorne, G. E. Flint, J. P. Earle, and P. Hathaway.

QUAKER CITY YACHT CLUB.—The entries for the spring races consist of the following: First class cabin-yachts, from 30 to 33ft. w. l.: *Columbia*, Albert Wood; *Conquette*, John Vanderspiller; *Clara*, C. Verga; *Comet*, Joseph Kennedy; *Geo. W. Fairman*, John Pomeroy; *Kingston Goddard*, John Mintz; *Mineura*, Wm. Klotz; *Speering*, James Campbell; *White Wing* (of Chester), Paul Klotz. Second class, sloops under 30ft. w. l.: *Chris Gallagher*, Robert White; *Edith*, Henry Stark; *Lillie*, —, Godfrey Crouse; *Stella*, —, Charles Magee; *M. H. Thomas*, James Bradshaw; *Quay*, —, Wm. S. Douglass. Third class, open boats between 20 and 30ft.: *Adelphia*, George Campbell; *Blanca*, George Hillman; *Canden*, Wm. Middleton; *Eddie*, James Collins; *Post*, Henry Willard; *Sappho*, Painter. Regatta Committee: Commodore A. F. Bancroft, Chairman; Vice-Commodore, Charles B. Magee; Rear-Commodore, Robert Riddle, Jr.; Lawrence Coleman, Robert Baird, John McCormick, and Robert P. Thompson, Secretary.

BERKEA YACHT CLUB.—The E. Y. C. of San Francisco has elected the following officers: President, Harry D. Neal; Vice-President, Louis Moran; Treasurer, Frederick Wallace; Financial Secretary, James D. Smith; Recording Secretary, John M. Malcolm; Sergeant-at-Arms, Harry D. Jenner; Commander, William D. Kramer.

NAHASSET YACHT CLUB.—This club, formerly with headquarters at Nahant and Cohasset, has voted to disband.

SOUTH BOSTON YACHT CLUB.—Officers for the year: Commodore, John M. Chamrock; Vice-Commodore, Dr. R. H. Sprockel; Fleet Captain, Alexander Kidd; Secretary, William Morris; Treasurer, Thomas Christian; Measurer, John Winslitt; Trustees, A. K. Roberts, David Winless, William Thompson; Regatta Committee, James Donovan, William Morris, James Bertram, George F. Kenney, Alexander Kidd, George Martin, M. J. Driscoll. The damage done to the club-house by fire is being repaired.

QUINCY YACHT CLUB.—Officers for the year: Commodore, John Q. Adams; Vice-Commodore, A. J. Clark; Fleet Captain, Joshua Binney; Secretary and Treasurer, George W. Morton; Measurer, Peter B. Turner; Regatta Committee, the Commodore, James T. Adams, John M. Chamrock, Vice-Commodore W. Morton and H. F. Bass. A number of new boats have been added to the fleet, a schooner by Wm. Amory, one by Mr. Cunningham, both built by Maybury. Mr. H. H. Faxon is having a cat built by Abraham Lelofs and Mr. Chas. F. Adams, Jr., has bought the *Walf* from Messrs. King and Clark. The minimum limit for a yacht's length is to be 15ft., and all yachts of 30ft. and above in length constitute a special class; and all yachts are allowed to carry gaff topsails in races.

DORCHESTER YACHT CLUB.—Officers for the year: Commodore, F. E. Peabody; Vice-Commodore, S. G. King; Secretary, L. M. Clark; Treasurer, A. J. Clark; Fleet Captain, G. S. Rice; Measurer, H. Davenport; Trustees, C. E. Folson, W. H. L. Smith, C. H. Nute; Regatta Committee, C. Barnard, C. H. Whiting, R. F. Bolles. The club now has eighty-five members, and the following craft have been added to the fleet: *Undine*, center-board sloop, Benjamin Dean; *Daby*, center-board cat, H. K. Norman; *Bob White*, keel sloop, A. A. Nickerson; *Nattie*, center-board cat, W. H. Nicholson; *C. J. Wells*, steamer, Thomas Manning; *Adrienne*, keel schooner, C. Platt; *Siren*, center-board sloop, H. S. Keith; *Viking*, keel sloop, S. P. Freeman; *Penny*, center-board sloop, H. S. Keith; *Sappho*, steamer, George H. Brooks; *Shadow*, center-board cat, F. Tachellier; *Albatross*, keel sloop, Keith; *Amie*, center-board cat, C. Parker; *Vinnie*, center-board sloop, King and Clark; *Pima*, center-board sloop, William Gray; *Bristol*, center-board cat, J. Sever; *Elf*, center-board cat, W. P. Barker; *Dream*, center-board cat, A. W. Dowsy.

NEWPORT YACHT CLUB.—The club-house will be renovated—something much needed—and the usual programme of races is promised.

BUFFALO YACHT CLUB.—Editor Forest and Stream.—This club has been incorporated. Certificates of stock have been issued for the construction of a club-house, and a fair sun has already been secured. Plans are now in the hands of an architect. The house is to be built on a spit just inside the stone breakwater. The membership is increasing rapidly, eight new applications having been made. Three new yachts, two sloops and one schooner, are now building for the club. C.

SOUTH CAMDEN YACHT CLUB.—Officers for the year: Commodore, Win. Harper; Vice-Commodore, Joseph Wright; Rear-Commodore, John R. Conklin; Secretary, Win. Davis; Treasurer Jacob Ghang.

"ATLANTIC COAST PILOT."—The second edition of this valuable work has been issued from the United States Coast and Geodetic Survey, Carlisle P. Patterson, U. S. N., Superintendent. The coast line included in the charts and sailing directions stretches from Eastport, Me., to Houston. Fog signals, tides, currents, variations, life-saving stations, etc., make the volume a necessary part of a yacht's library, especially for those cruising East. The price is low, \$2.50, and it is a wonder how anything so complete and finished can be offered at these figures. To be had of all dealers in nautical instruments.

THE TOPPHONE.—The topophone is a new instrument, designed to be used on shipboard, by which the exact direction of sounds emitted by fog horns or fog bells may be determined. It was found, in actual experiments made for the Light-house Board, that the pointer of the instrument could be easily brought to within ten degrees, or less than one point of the true direction of the sound, which is sufficiently accurate in the practical use of the apparatus.

GOOD FOR THE LIGHT DRAYS.—The construction of a canal across the narrow neck of land separating the waters of Nantuxet Sound from Massachusetts Bay, which has just been com-

The Kennel.

NOW IN COURSE OF PUBLICATION.

AN ENTIRELY NEW AND

COMPREHENSIVE WORK ON THE DOG.

(demy 4to size), under the title of the

ILLUSTRATED

BOOK OF THE DOG.

YEARLY SUBSCRIPTION, \$4.50.

In 30 Monthly Parts, 40 cents each.

BY VERO SHAW,

Assisted by many of the most eminent authorities of the day.

With THIRTY FAC-SIMILE COLORED PLATES (drawn from life expressly for the work) of typical specimens of the various Breeds of Dogs now in existence, and with numerous Wood Engravings. Embracing a full description of EVERY KNOWN BREED OF DOG, with the standard by which he can be judged.

Subscriptions received for all or part of this Work, and Sample Part sent post-paid on receipt of price.

The Practical Kennel Guide,

with plain instructions how to Rear and Breed Dogs for Pleasure, Show and Profit. By GORDON STABLES, M.D., C.M., R.N. Illustrated. 192 pages. 12mo, cloth, \$1.50.

Americans who are fond of a good dog can from this book secure important information, as no book ever published embraces such a wide range of study.—*Spirit of the Times*.

Dr. Stables is one of the spiciest, brightest, and most intelligent writers about dogs. This little manual from his sterling pen is all good.—*Read and Gain*.

We can recommend this book as a most valuable and interesting one to the breeder and exhibitor.—*Luree and Stream*.

THE DOG. By INSTONE. With twelve full page engravings from life, by GEO. EARL. New and cheaper edition. Cloth, \$1.25.

The directions for the treatment of dogs are good, clearly given, and evidently the result of considerable experience, backed by sound common sense.—*Sporting Gazette*.

This remarkable medicine will cure Spermia, Splint,
Curb, Callous, &c., or any enlargement, and
will remove the Bunch without
distressing or causing a sore. No remedy
ever discovered equals it for certainty of action
in stopping the lameness, and removing the
bunch. Price \$1. Sent for circular giving
positive proof, and your nearest
agent's address. It is truly wonderful what
remarkable success thousands have had
with Kendall's Spavin Cure
in treating all lamenesses on horses and
every kind of lameness from whatever
cause. It has also been used with
perfect success in deep-seated pains
of long standing origin. One case
we have in mind was hip-joint
lameness of 15 years duration,
and the horse walked but
could not stand on his own
feet. He was treated with
Kendall's Spavin Cure, and was
entirely cured in two years.
Kendall's Spavin Cure is
made of the finest
medicines, and is
entirely safe, and
will cure every
case of lameness
on horses, and
every kind of
lameness from
whatever cause.

Old Judge Smoking Tobacco.
The Only Tobacco Ever Manufactured that does not Bite the Tongue.
"Old Judge" Cigarettes.
MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878,
by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious
effects of the OIL OF CIGARETTES thrown off when burning is completely neutralized or destroyed,
and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage
and importance of this invention will at once be recognized by all smokers, and its truth demon-
strated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed
certificate from any eminent Professor of Chemistry to convince them they have heretofore, in
smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

Cricket Goods.

Alfred Shaw & Arthur Shrewsbury

(Members of the Anglo-American Team and All-England Eleven.)
 HAVE pleasure in informing their American friends that they have opened the Midland Cricket, Lawn Tennis, Football and General Athletic Sports Warehouse,
 CARRINGTON STREET BRIDGE,
 NOTTINGHAM, ENGLAND.

The most unique and comprehensive establishment of its kind in England. Their stock comprises well-seasoned Cricket Bats, Balls, Boots, Shoes, Leg Guards, Stumps, Bags, Lawn Tennis Sets, Rackets, Footballs, Jerseys, Shirts, silk or woolen (as worn by the team in America), and every article in great variety suitable to athletes. S. & A. being members of the late American Team, know the requirements of their trans-Atlantic friends, and if favored with an order may be relied upon to send goods of first-class quality only. Clubs, colleges and schools provided with professional bowlers. First class men, personally known to S. & A., well bred and of high character, only sent out. Price lists, with batting averages and bowling analysis of the American Team, may be had on application to **GEORGE LANE**, Professional Cricketer, Station Island Cricket Club.

Rifles, Shot Guns, Revolvers, sent a. o. d. for examination.

Guns, Ammunition, Etc.

The 'STANDARD TARGET'—For Rifle Practice. Size 6 inches. Bulls-eyes 14 in. 100 feet, off-hand. The zones rise by area instead of diameter.

Marksmen will appreciate the new departure which this target has inaugurated. The accurate rifleman now gets the true value of his shots, while on old-style targets the record was so tainted by the element of chance as to give but a vague idea of the shooter's skill. For instance, on a 200 yard Creedmoor "center" scoring 4 has ten times the area of a "bull" scoring 6. Every rifleman knows that no degree of skill or care will give immunity from occasional misses, and under the old system it was almost the rule for good marksmen to be beaten by bad ones. One man would pile up eight snug bulls out of ten, but lose the other two, while his competitor, "shooting for fours," would scatter his strays all over the board center, blunder one shot into the edge of the bull, and win! Now in deer stalking and shooting at 80 yards, the winner would have wounded and lost one deer, while the loser would have struck down eight, all shot through the heart. Of course there are people who still contend that under the old method "all had an equal chance," which is very true, but it is also true that their equality of chance would have been in no wise impaired if they should have sat down and thrown dice to determine who was the better shot. In contests of skill every element of chance should be eliminated.

Arrangements have been made for supplying these targets at a merely nominal price, and it is now an easy matter to gauge relative skill by uniform practice, and to communicate definite results without obscuring them by explanatory details. The targets are mailed, post-paid to any address in the United States at fifty cents per hundred, and quite a liberal discount is made to retailers and dealers. Send orders to CUSSENS, MAY & SHEPARD, Glen Allen, Virginia.

USE THE BOGARDUS PATENT

Rough Glass Ball

AND HIS PATENT

GLASS BALL TRAP

For Wing practice. They can be used by all gun dealers. Headquarters for Glass Balls and Traps, and the only place to get them. C. H. BOGARDUS, No. 158 South Clark street, Chicago. Send for Price List For Traps—Hart & Sloan, Newark, N. J. "Field Cover and Trap Shooting," the only book ever published by a perfect hunter, can be had at the above address. Price \$2.

Eaton's Rust Preventer.

FOR GUNS, CUTLERY, AND SURGICAL INSTRUMENTS. It is made to handle, WILL NOT GUM, and will keep in any climate. Sportsmen everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes, of Bay City, Mich., writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns." The trade supplied by sole manufacturer, GEO. B. EATON, 60 Parson Avenue, Jersey City, N. J. Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; R. Kittredge & Co., Cincinnati, O.; E. E. Faxon, Chicago, Ill.; Browne & Hilder, St. Louis, Mo.; Thos. W. Parr, Cleveland, O.; Trimble & Kleibacker, Baltimore, Md.; Cropley & Sons, Georgetown, D. C.; Jos. C. Grubb & Co., Philadelphia. Sportsmen's Boutes.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries.

FAMOUS SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed.

If equaled, in the abundance and great variety of

fish contained.

BROOK TROUT abound in the streams, and

the famous AMERICAN GRAYLING is found

only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends

Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCA-

LONGS, also abound in large numbers in the

many lakes and lakelets of this territory.

The sportsman can readily send trophies of his

skill to his friends or "club" at home, as ice for

packing fish can be had at many points.

MAKE YOUR FAMILY WITH YOU. The scenery

of the North Woods and Lakes is very beau-

tiful; the air is pure, dry and bracing. The cli-

mate is peculiarly beneficial to those suffering

from

Hay Fever and Asthma Affections.

The hotel accommodations are good, far sur-

passing the average in countries new enough to

afford the finest of fishing. Many

During the season Round Trip Excursion Tick-

ets will be sold at low rates, and attractive train

facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free of

owner's risk.

If you intend to take sportsmen food "athome"

in this route, F. F. Tourist's Guide (an attractive

illustrated book of 80 pages), containing full in-

formation as to routes, maps of the Fishing

Grounds and other details, address A. B. LEIST,

Gen'l. Pass. Agent, Grand Rapids, Mich.

Old Dominion Line.

THE STEAMERS of this Line reach

some of the finest waterway and inland

direct for Chicago, St. Louis, and points

on the Peninsula. City Point, James River, Cur-

rituck, Florida is pure the spontaneous country of

Virginia, Tennessee, etc. Norfolk leaves Sat-

urday, Thursday, and Saturday. Leaves Del.

Monday and Thursday at 2 P.M. Full infor-

mation given at office, 197 Greenwich Street, New

York.

Sept 15

Sportsmen's Boutes.

To Hunting and Fishing Parties.

The Pullman Car Company

IS PREPARED TO CHARTER THE
new cars "Davy Crockett" and "Isaac Walton,"
which are fitted up with dining room and kitchen,
sleeping apartments, lavatories, etc., also pro-
vided with racks and closets for guns and fishing
tackle, and kennels for dogs.
Diagrams, rates and other desired information
furnished on application to Gen'l Supt. P. P. C.
Co., Chicago. 1620 Sines.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,
Nos. 1 (coarse) to 4 (fine), unequalled in strength, cleanliness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"
FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning clean and moist.

SPORTING, MINING, SHIPPING, AND BLAST-
ING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any regular grade or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

E. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square Canisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland and rifle shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 5 lb. kegs. Burns slowly and with great penetration. For field, forest, or water shooting. It ranks any other brand, and it is equally serviceable for musket or breech-loaders.

Hazard's "Kentucky Rifle."
FFG, FFGG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFGG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Shot Gun and Rifle Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle
POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Western Montana.

I HAVE seen nothing concerning Western Montana in FOREST AND STREAM, and only lately any notes from "the other side of the range." Perhaps a little information, derived from personal observation and the experiences of others, may not be without interest, as Missoula, being one of the smaller towns, and not on a main line of travel, is seldom visited except on business.

It is situated at the head of a valley, or gulch, some twenty-five miles long by from six to eight wide, surrounded by mountains and traversed at the upper part by the Hell Gate and Bitter Root rivers, which, soon uniting, form the Missoula, the waters of which reach the Columbia. The soil of the valley is fertile, although needing irrigation on the higher levels.

The town boasts a bank, several mercantile houses, a flouring mill, half a dozen "saloons," a cleverly edited newspaper, a church, a school-house, and is the county seat. Three and a half miles distant is the military post of Fort Missoula, garrisoned by four companies of infantry. The mode of access is from Ogden, by the Utah and Northern Railroad, thence via Deer Lodge by Gilmer and Salisbury's stages. The "palace jerries," run by the company on this end of the line, are much admired by all who have experienced their comforts.

The Indian inhabitants of this section—Flatheads and Pen d'Oreilles, both of which names have no proper significance—are peaceful. Numbers of them, not living at the agency, are engaged in farming and stock-raising. They became partly civilized, in the very early days, through the labors of the Catholic missionaries. The last disturbances were from the Nez Percé invasion in 1877, and from a small marauding party of the same tribe a year later. Practically there is little or no danger to be anticipated from this source.

This region, as a whole, presents many attractions for the sportsman. In endeavoring to convey a fair idea of the extent of our hunting and fishing, there is, perhaps, no better way than by referring to the scores which at various times have come under my cognizance. The chief game-bird is the sharp-tail grouse, which, in favorable years is found in abundance in the brush about the

small water-courses in the early season, and later in the grain fields. Occasionally, as last year, a cold and wet spring greatly reduces their number. Within a few miles, an hour's shooting will ordinarily bring to bag a dozen or more birds. Eighty-two, in a half day's shooting to two guns, has been the largest score.

In the timber, pines and cottonwoods are a reasonable number of ruffed grouse, and on the higher ridges the blue grouse are found. The latter, however, are not sufficiently abundant to pay for the labor of climbing to their resorts. No ptarmigan have, to my knowledge, been shot, but they doubtless exist about many of the higher peaks, several of which in sight are snow-clothed the year round. There are no quail in this vicinity, although, from the fact that the Territorial law forbids their destruction for six years from 1879, it is presumable that their introduction has been attempted or contemplated in other sections. Curlew are tolerably abundant in early summer, nesting on the prairie, but except at the time when rearing their young are lost from the absence of cover, almost unapproachable. Snipe and plover are not abundant. Woodcock are unknown. The wild fowl shooting is not particularly good and does not compare with that on the other side of the range, the great flights passing far to the east and west of us. A dozen or fifteen ducks to one gun, in a day's shooting in our immediate vicinity, would be beyond the average bag, although much better sport is obtainable at Flathead Lake and up the Bitter Root. A few ducks and geese breed here.

The unparalleled abundance of large game during the past season has been due to the unusual depth of snow forcing the deer to seek lower levels, so that in localities where ordinarily but two or three could be expected, a dozen would be found. Hunting without snow-shoes was exceedingly laborious, and the kind in favor here is not like the Canadian, finely netted and running over point at the heel. It is, on the contrary, very coarsely worked, with green circles, so that, except where the foot rests, the clenched fist can be passed through the meshes. The general shape is oval, and the maximum width from eighteen to twenty inches. No doubt the longer and narrower shoe would be preferable on level ground, but for hill-climbing there is nothing like the "bear paw."

To give some idea of the numbers in which deer have been found, a party of three, shooting on what is known as the "big grade," on the old muleen weed, some forty miles from here, killed over sixty deer, chiefly black-tail, and eleven mountain sheep. There was hardly a limit to the number of white-tails that might have been slaughtered, but attention after the first few days was elevated to black-tails and sheep. Deer were not killed if canons or hills made it too difficult to drag out the carcasses. The party had about ten days of hunting. Another expedition of three, on a three days' hunt, seldom going out before 9 o'clock and generally returning by 1, killed twenty white-tail. All of the four companies at the Post had as much venison as they desired. Notwithstanding all this abundance, I do not know of but one instance where deer were slaughtered for their hides alone, or where the products of the hunt were not used to good advantage. These figures are not given to illustrate the skill of the hunters, but to show the plentifulness of the game.

Elk and moose are occasionally shot, but as in winter the depth of snow makes the carrying of supplies a terrible labor, even with snowshoes, and in autumn the fallen timber and general ruggedness of the country present great obstacles, it is difficult to penetrate to their ranges. Perhaps a light toboggan that could, loaded, be easily pulled by one man, offers the best solution of the problem.

Mountain sheep are tolerably plentiful, but the amount of wind and muscle required for their successful pursuit is appalling to any but an old mountaineer.

One mountain goat was sent from here in the early winter to the Smithsonian Institution. They are less abundant than the sheep, and even harder to secure. They must be rather rare in Eastern collections, for the Smithsonian offered a very handsome price for half a dozen skins and skeletons. Bears are not common, nor are lynx or mountain lions often seen. The buffalo range is reported to have once extended to this region, but since 1893 none have been seen. The visitor of that year was an old bull, and although hailed by the Flatheads as the approaching fulfillment of a prophecy that the buffalo would return, seems to have been simply an estray from the main herds. They could never have been very abundant.

Our fishing is excellent, except in the Hell Gate, where it is spoiled by mining operations above. The best is in the So-So, a tributary of the Bitter Root, where the trout run from a half pound up to two and a half pounds. Some trout have been caught there with a fly five hours fishing, whose total weight was not far from fifty pounds. The length of river fished over did not exceed two miles. The largest trout caught in the Bitter Root weighed about nine pounds, and was landed with a light fly-rod and tackle. Fish of this size are rare, not more than three or four having been caught in this stream in the last two years. The Bitter Root trout take a fly all winter, a black or gray hackle being the most killing. In

Flathead Lake trout have been caught through the ice weighing as high as thirty-five pounds. Ten and twelve pounders are not uncommon. Fish of this size are also found at the mouth of the St. Regis Borgia. Brook trout are abundant in a small stream some ten miles from town.

The Legislature of Montana, at the last session, appropriated a thousand dollars for removing obstructions at the Great Falls of the Upper Columbia, to permit the running up of salmon into Montana waters. These falls are in Washington Territory, about ninety miles from Fort Colville, and as they are far from any road or trail, it is difficult to obtain exact information concerning them. In addition to the problem of rendering these falls passable, comes the question as to whether salmon will traverse some two hundred miles of more or less muddy water that intervenes between Lake Pen d'Oreille and the Bitter Root. Local opinion, based on experiences in the Salmon River country, favors the belief that they will. The nearest waters in which they are now found are those of the Clearwater, over one hundred and twenty-five miles at the least estimate. At Moose Creek, one of its tributaries, five Kanakas stored over a thousand pounds of dried salmon for winter consumption and caught them at odd times, while not engaged in mining.

On the North Fork of the Clearwater, a scouting party, short of food, killed a twenty-five pound salmon with rocks, and they are not infrequently, in the mining country of that region, thrown out and killed with sluice-forks.

Sportsmen's clubs have been recently formed in Missoula and Dell Lodge, for the better enforcement of the game laws, and also for the purpose of procuring such definite information as may be necessary to gain practical good from the above-mentioned appropriation.

Missoula, Montana.

NOTES FROM THE CONNECTICUT LAKES

THE region of the Connecticut Lakes presents to sportsmen certain features of attraction which will, I think, warrant a few notes additional to those already published.

There are three lakes in the chain. First Lake contains large lakers and some speckled trout, is surrounded by woods, except along the southwest shore, and there is a hotel at the outlet. Eastward the Magalloway Mountains lift their magnificent timbered slopes. Last fall the lumber company built a road four miles north to Second Lake—the terminus of the chain—doing some lumbering along the outlet, below the lake. The axe must reach its shores in a few years, but for the present season they are safe, and the land-owners say they shall remain intact as long as possible.

Third Lake, five miles beyond, is within the limits of the wilderness, but is too near the French settlements over the line to be a retreat for much large game. Still it is a beautiful piece of trout-haunted water, lying at the very height of land, with the mountains rising abruptly from its clear depths. The Frenchmen fish it, but I doubt if a fly has ever been cast on its surface, and if another summer shall yield the opportunities of the last three, I promise myself to make test for what the clumsy tackle of the Kanucks may have left. This lake is only a mile and a half long, and its principal inlet, the source of the Connecticut River, is a mere rill, tumbling from the spruce-darkened heights to the west.

But Second Lake—a name unsuggestive in itself, yet with it come back in memory the scenes of four delightful months of long summer days—days filled with an unforbidden and unmixed pleasure, which in after-thought inspires regret only that it had an end. To us who, nearly four years ago, first pitched our camps by the untamed and trout-filled streams, it is known as "The Lake." So to remain, with a memory of days spent in a spot perfect in its wildness. "The Lake" and inseparable from it in thought is Thomas Chester and his log-camp facing the lake, and the limitless forest eastward. I always rather envied friend C., of Concord, his being the first to stop at the fresh, new camp, but as our trout-seeking trip came only two days later, it was ample compensation to be able to stay a longer time than he. It was then only a year since Uncle Tom had come over from Katahdin, and begun his raid on the beaver. From that time—and at first thought it may seem remarkable—the game, instead of diminishing, has increased. This is partly owing to the fact that the natives from the near settlements keep away, in the knowledge that it is useless to trap where Chester does, for there is not another such trapper in the State. Then his camp has in summer been occupied by a few gentlemen who have hunted deer chiefly by the not very destructive method of night floating. The natives, with their nets and other implements infernal, keep aloof to the extent that true sportsmen are present, and together with two or three favorable winters, this has contributed to the increase of large game. No dogs are used about the lake—except that Chester has control outside his own camp—but

however it may be, the neighborhood has proved itself extremely unhealthy for all yelping dogs—so much so that I shouldn't advise one to try the experiment of giving long treks thereabouts for any length of time. Caribou and moose are sometimes driven away for weeks by a short chase from a hound, or even its passage through their "beat." Deer seem less easily frightened away.

As elsewhere, the chances of the weather are those chiefly involved in the question of success in hunting and fishing at the lower lakes, but the very location which gives these lakes their peculiar beauty, renders them liable to a large rainfall. Lying as they do among the mountains of the water-shed dividing the St. Lawrence waters from those flowing south, they receive a rainy rain when, thirty miles away, the country is parched.

Deer seldom feed in the lake when the woods are dripping, and I doubt not that many a buck owes his continued existence, as an exterminator of lily-pads and bunch-grass, to the shower which gave him a supper on the hillside, by providing the moisture he demands with his browse. Like another and more frequently met with species of "buck," he has a great distaste for anything like a "dry feed," that being apparent in the reason why he resorts to the lakes and swamps to feed. Only an afternoon shower is needed to content him with what the woods afford, while in dry weather, as surely as nightfall comes, he makes his way straight past the running brooks to the lake or some sluggish stream, where grows the favorite bunch-grass; even in winter a mouthful of snow goes with each one of browse. There are several beaver-dams not far away to which the deer resort more or less according to season and weather, as well as when much hunted at the lake.

About one of the more remote of these I found the tracks everywhere and numerous last August. For a time the weather had been favorable for floating, and night after night Norton had floated up to the deer. They were shot over and under, before and behind, till the month was nearly gone, and but three deer and a moose had been brought to the river late in the month. I could not dispute the testimony of several shot-scared trees as to the recent presence of the cause of buck fever, nor could I doubt that the steaks Uncle Tom set before us were genuine moose meat; but whether had disappeared the nightly visitants which unfailing left their tracks about the shores in former seasons, I was puzzled to tell. There were only two or three shy fellows watering at all. The fishing took a poorer street too, and the chief, coming from a long and rough cruise on the Upper Saguenay, in the land of the big trout and land-locked salmon, I cared for little but rest and walks about the noble woods, it was annoying to have one's favorite lake act so shabbily toward those who did wish to make a bag. It was only after the four or five gentlemen had completed their short stay and left, probably with the impression that the place was more or less of a fraud as a game region, that I happened one day upon the beaver pond referred to. The tracks were then more numerous than I have seen elsewhere, while on another branch of the stream two or three more deer were feeding regularly. One or two moose appeared to be summing about the larger dam, but most of them were upon their favorite beat in another direction.

One afternoon, just before leaving the woods, I went to this dam for a last night out, having at the time taken an ore for the very good chance of getting a deer to take home. My way of going for a night is to roll up a blanket in a little canvas or duck hammock, weighing but a few ounces, sling it like a game-bag or fishing-basket, and, when night comes, hang up anywhere to a couple of convenient trees. The strong duck, besides keeping the blanket from being torn while traveling, insures a dry, comfortable bed in a few seconds—no unimportant matter if the ground is swampy or wet from rains. A good spruce bed is a luxury demanding a fairly suitable situation as well as some time in preparation, so especially where alone the use of a hammock brings independence of location and economy of time.

On this occasion I reached the little pond before sunset, and, slinging the hammock between two spruces, took a position on the opposite bank of the pond, in easy rifle shot of some well-tracked feeding ground just across, with the last rays of the sun reddening the tops of the great trees on the birch and spruce grown hillside beyond.

It was almost September. The hum of mosquitoes was already gone at this elevation of two thousand feet. Above the murmuring flow of the stream, at the beaver dam near by, came at intervals the croak of a frog, its sharpened noise breaking the approaching frog chorus, its long plumes gilded in the western light, sailed unsuspectingly by, alighting with a harsh cry up the stream, whence soon came a sudden "chuck" as the unerring bill fixed some helpless trout or frog.

Presently, as the sun touched the hill, the trout began to rise. There was in sight two and a half acres of still water shining with the reflected sunset glow, and not till darkness settled down after the long twilight, not a ripple died away before another broke the gleaming surface. There was none of the splash and eagerness seen in fly-fishing, but as each tiny insect settled upon the water he was taken with a plash scarcely audible at the few yards distance; it was only occasionally that a fluttering moth tempted a leap, or a hump-backed beetle betrayed his presence by a ripple larger than the rest. Each fish appeared to hold his own position, confining himself within his proper limits, unless perchance a particularly attractive prize happened within reach.

A few minutes after sunset, a robin—unlooked for visitor in these parts—came near, and without noticing me, flew down and hopped about not a yard from my feet. At that moment, a stick cracked in the woods behind, and I knew that my deer was coming. For the wrong direction, though there was still a good chance for a shot and plenty of light. Just then that wretched robin died, and, flying to a branch overhead sent forth cries that made the woods ring. The deer looked about for the cause of the outcry, and found it, as he evidently supposed, in the hammock twenty yards back among the trees. Without coming in sight, he surveyed the strange monster at length, then stamped and whistled till the woods echoed again, and bounded away. Knowing that all game within a half mile must have caught the alarm, I looked with ready rifle for the robin, but he

had prudently disappeared during the excitement, and till darkness stole over the pool I sat watching the trout-ripples with no further interruption.

I was dropping asleep in the deer-alarmed canvas, when not thirty yards away the spiteful thump of a hoof on the ground, told that the buck had come back to satisfy his curiosity. He must have been standing there quite a while before he stamped. It was too dark to shoot, so I made no move till he caught the scent, delivered another series of angry whistles, and took himself off with leaps that led me to hope he would break his neck against a tree in the dark.

About midnight I woke; the beaver were splashing in the water, and up stream something sounded like a deer. A little chilled, I built a wisp of a fire, thereby silencing the beaver, and toasted a bit of pork, as well as my shins, with a sociable owl for company. Later, I had a vague idea of something heavy moving about across the stream, but sleepily decided it was out of reach and entered dreamland again. In the morning the track of a two-year-old moose established the identity of the night traveler.

I had intended to hunt a mile or two up the stream in the early morning, but a marauding and deer-scaring old heron tempted the settlement of old scores and caught a bullet at eighty yards; after which piece of bloodshed, I struck for Chester's.

So passed my last night alone at Second Lake. In view of the considerable amount of game in these back places, it is remarkable how little they have been disturbed by sportsmen, and even by hunters. Tom Chester on his snowshoes goes about gathering in his crop of beaver and otter, but at that time the other game has left the streams for the hillsides. For fishing, in the absence of his favorite red squirrel or moose-bird, he may at most catch a trout or two for mink bait. It is only near and on the lake that systematic hunting and fishing have been done at all. About the heads of the streams, however, the trout of course run small, save in the little ponds.

From Second Lake to Parmachenee is a fair path on the old supply road for the lumberer or hunter on the Magalloway. One can now drive from Colabaok to the foot of Second Lake in a day, spend the night at Chester's, and by next noon cross the ten-mile carry, and find himself at Danforth's camp on Parmachenee, whence he can go down the Magalloway to the Capusque River and Rangeley chain. Chester can find guides to "tote" baggage. Here let me add my testimony as to Danforth's pluck and energy in overcoming difficulties and opposition as detailed in a recent admirable article on the "Rangeley Circuit." I should advise any one intending to visit Second Lake for the first time to write concerning the state of the hunting and fishing, to Thomas Chester, Pittsburg, Coos County, N. H. His statements may be relied upon to the last particular.

The summer season has its uncertainties for the sportsman. To the new comer I would say, do not expect too much. He whose only means of enjoyment in the wilderness are the rifle and rod must take the chances of being disappointed or delighted. Yet, for myself, I ask no higher enjoyment of a few days or weeks vacation than to have contact with Nature at the old lake, going forth day by day from the log camp by the icy spring, and listening by night to the loons and the forest wind.

RANOFER.

Natural History.

THE FOOD OF OUR THRUSHES.

THE value of birds to the agriculturist, though often descanted on, is not yet fully appreciated. The theme is a favorite one with ornithologists, but is usually treated in such a general way that its importance is likely to be under-rated by the reader.

In a recent paper by Prof. S. A. Forbes, whose name is not unfamiliar to the readers of FOREST AND STREAM, this subject is handled soundly, and with such careful attention to detail as to claim for the essay the widest circulation, both among those who are interested in birds and among horticulturists. It has been made Prof. Forbes' duty to investigate the food of birds, and the present paper, which is a partial report to the Illinois State Horticultural Society, and is published in volume XIII. of its Transactions, has to do with the thrush family (*Turdidae*). The question raised is, are our thrushes a benefit or an injury to the farmer and gardener?

But before this question is answered Prof. Forbes proceeds to reply to another, and one which is often asked about scientific work, namely: Does the investigation which he has been carrying on pay? We cannot do better than to give his reply in his own words. He says:—

The careful estimates of three ornithologists and experienced collectors give, as an average of the whole bird-life of Illinois, three birds per acre during the six summer months. That is to say, if all the birds of the year, except the swimmers, were concentrated in the six months equally distributed throughout them, and equally scattered over the State, we would have three birds on every acre of land. It is my own opinion that at least two-thirds of the food of birds consists of insects, and that this insect food will average, at the lowest reasonable estimate, twenty insects or insects' eggs per day for each individual of these two-thirds, giving a total for the year of seven thousand two hundred per acre, or two hundred and fifty billions for the State—a number which, placed one to each square inch of surface, would cover an area of forty thousand acres.

Careful estimates of the average number of insects per square yard in this State give us, at the furthest, ten thousand per acre for the whole area. On this basis, if the operations of the birds were to be suspended, the rate of increase of these insect hosts would be accelerated about seventy per cent., and their numbers, instead of remaining year by year at the present average figure, would be

increased over two-thirds each year. Anyone familiar with geometrical ratios will understand the inevitable result. In the second year we should find these pests nearly three times as numerous as now, and, with that astounding acceleration of increase characteristic of geometrical progression, they would multiply until in about twelve years we should have the entire State covered with insects—one to the square inch over our whole territory. I have so arranged this computation as to exclude the insoluble question of the relative values of birds and predaceous or parasitic insects, unless we suppose that birds eat an undue proportion of beneficial species.

Or the question may be looked at in another way. It has been computed that the average damage done by insects in Illinois amounts to twenty million dollars annually—a large sum, but representing, after all, not about fifty-six cents per acre. If, in consequence of Prof. Forbes' investigations, the efficiency of the birds as a check on insect life can be increased only one per cent., the saving to the State would amount to sixty-six thousand dollars, or an addition to the permanent wealth of the State of one million five hundred thousand dollars. The figures given in these computations, as Prof. Forbes himself says, are absurdly low, but he prefers to base his estimates on figures that will command universal assent, especially since the importance of the subject does not require an exaggeration. The proverbial young robin of Prof. Treadwell required sixty earth-worms daily, and a mocking-bird reared by Mr. Robert Forbes ate two hundred and forty red-legged grasshoppers each day. Any one who has watched the movements of a pair of old birds with a brood of young, has, we are sure, been astonished by the amount of food required by the insatiable nestlings.

An interesting feature of the present paper is the temperateness with which the questions with which it deals are discussed. It has been much the habit to take it for granted, that all insects are noxious; and, therefore, that anything that tends to the destruction of insect life is, in so far, a benefit to the agriculturist; but we know that there is a very large class of predatory and parasitic insects which, by preying on others of their class, perform great services for the cultivator. The exact relation of these beneficial to the hurtful insects are not yet clearly known; and this question becomes, as Prof. Forbes suggests, a purely entomological one.

In estimating the services of our insectivorous birds, we must credit them with the noxious insects they destroy, and charge them with the useful ones, and also with whatever fruit they may purloin from the gardener. A balance can then be struck between the two sides of the account, and from this a fair reference as to the benefit or injury done by the birds can be drawn.

The species of the *Turdidae* examined by Prof. Forbes are *Turdus migratorius*, *T. mustelinus*, *T. pallasi*, *T. swainsoni* and *var. alcticus*, *T. fuscescens*, *Mimus polyglottus* and *M. carolinensis*, and *Harpophylax rufus*. We have space only for the conclusions which he draws from his examination of the stomachs of each species. In the robin for the six months, from April to August inclusive, "seventy-eight per cent. of the food was insects, and twenty-eight per cent. fruit, spiders and myriapods making up the other two per cent." The evident misprint in these figures we cannot locate; but wherever it occurs, the preponderance of insect over vegetable food is not materially altered; and when we note that of the insect food six and one-half per cent. were injurious beetles, eight per cent. *Othoptera* (grasshoppers, etc.), and one and one-half per cent. injurious myriapods, we cannot but acknowledge the vast benefit of the robin's service.

The cat-bird, too, devours, as shown by the present report, a very large number of noxious insects, but it is also true that during June and July he plunders the berry vines most shockingly. But in taking into account his depredations on the garden, it must be remembered that every insect which he takes would, if allowed to propagate its kind, produce a horde of young which would do far more injury than a cat-bird would in a whole season. The injury that the bird does stops at the end of the fruit season; that of the insect would increase enormously with each succeeding year.

Of the brown thrasher, Prof. Forbes says its ordinary services do not entitle it to any special protection. The wood thrush is decidedly useful, destroying great quantities of wire worms and myriapods. It has, according to the writer, about twenty-five cent. to its credit. Of the other species, which occur as migrants, the investigation has perhaps scarcely gone far enough to make it safe to draw any very definite conclusions. Prof. Forbes regards the hermit thrush as a public enemy, because he devours large quantities of useful beetles. But his specimens were shot in May, and an investigation later in the season might have developed facts to offset those now alleged against this bird.

Altogether it appears that further research is necessary before deciding absolutely either in favor of or against the thrush family, in their relations with the farmer. It is evident that they do great good; but is this good overbalanced by the harm which they accomplish? We think not; and we shall await with the greatest anxiety the further results of Prof. Forbes' studies.

It may perhaps seem ungracious to call attention to defects in a paper so generally excellent and valuable as the one in question, but we cannot help remarking on the careless proof-reading and the numerous typographical errors by which it is marred.

THE DIARY OF A BIRD.—Under this title Mr. H. D. Minot has given us what purports to be a translation of the diary of one of our smaller birds, and the production is not only interesting, but has a real *raison d'être*. Its author is evidently an ardent lover of Nature and an earnest student, and his description of the creation of the little black-throated green warbler "from his winter to his summer home, and of his thoughts and comments on the way, is very entertaining. His conversations with his companions, and the birds whom he meets during his peregrinations, are graphic and amusing. But we are especially interested in the mass meeting for the discussion of "The Destruction and Extirpation of Birds, How Caused, and How to be Prevented."

For some years the marked decrease in the number of birds of every kind has been a source of deep anxiety to all true lovers of Nature, and Mr. Minot has given forcible utterance to this feeling. Surely hereafter, the hitherto ruthless hand of the "collector" will hesitate before bringing to the ground, simply as an ornament for "her hat," one of the little warblers who has so fondly clung his appeal to mankind in behalf of himself and his friends. So much unnecessary destruction of our common birds is going on all the time, that we shudder at the thought. The absolute slaughter of game birds need not be mentioned; that, unfortunately, is too well known. Mr. Minot's work is worthy of high praise, as having brought this subject before the public in a novel and interesting form. The law which he suggests may appear somewhat too stringent, but it is apparent that some great effort must soon be made, or we shall lose all our birds. We venture to predict that at no very distant day, some measure like that advocated by this writer will be put in force. The figures which Mr. Minot gives of the number of birds killed annually in a single State are absolutely startling. We can only hope that this little book may perform its mission of calling general attention to this subject.

HABITS OF THE CROW.—*Phoenixville, Penn., March 1st.*—*Editor Forest and Stream.*—The articles on "Ravens and Crows," in the issues of the FOREST AND STREAM of February 19th and 26th, have attracted my attention also. While I neither condemn nor approve the habits of the crow—having substantial reasons for knowing his true nature—my views do not altogether harmonize with "J. C. B." He is often called "the farmer's friend"—and with good reason. As the result of a cruel, severe winter, running late in spring, and making food scarce, he gives the farmer trouble by unhulling and taking the corn instead of the cut-worm; also when the corn in the ear is young he is known to strip the husk and eat the milky corn at the point of the ear. Where this is done the ear never develops and matures, as the open husk admits water which moulds the ear, and it dies. Crows undoubtedly take eggs from nests of wood and field birds, as projected by the parent bird. Naturally the crow is cowardly. That he should come so near the premises and perch himself on a near tree to await the laying of an egg of a turkey or chicken, and as soon as vacated deliberately approach the nest and "bill" the egg, and "triumphantly" fly away with it, is a circumstance as rare as black snakes laying about waters catching fish. To compare the crow with a chicken-hawk I have yet to see the crow take a young or old domestic fowl, and he has been under my eye all my life time. "J. C. B." says, "These ugly birds have a bad habit of finding unprotected lambs on the loosely managed farms in Maryland and Virginia, and pecking the eyes out of them." Astonishing! Dead lambs, I presume. Have any of the numberless readers of the FOREST AND STREAM before heard tell of such wicked crows? If the crows come within gunshot of a deer, and a thousand and one other no detectable remnants of Baltimore sewers" (or any other slaughter-houses) "cast up from the deep," he has earned a position in the front rank of beneficent scavengers. WILD OATS.

TAILING SKUNKS.—*Lebanon, N. H., March 22d.*—*Editor Forest and Stream.*—Reading in your last week's issue of "Awahsoose's" narrow escape, reminded me of an instance much the same, only more so, that happened within my present acquaintance of ten years. I was at the house of my aunt, a maiden lady strong of mind and strong of nerve. There was a skunk in the cellar which I had caught in a steel trap, but what puzzled me now was, how to get him out of the cellar. My aunt, however, stopped up, seized him by the tail and commenced ascending the cellar stairs, I following about six stairs behind and wondering how my aunt dared to do it, with a skunk so near her. There was a time when I would have sworn was a streak of lightning, only I never had seen any lightning that smelled as that did; but it struck all the same everything within reach, myself included. Eyes, face and mouth—which latter was, of course, open—all of which I did not recover from for some days; but my aunt held fast and carried him out of the house and dropped him into a barrel. Now, I think this story shows two things: first, what kind of a woman my aunt was, second, that it is not *always* safe to carry skunks by the tail. MUGGINS.

CARNIVOROUS MICE.—In order to get rid of a large progeny of mice, which had established quite a colony in my room, I employed an ingenious trap, which closes the moment any mouse enters its fatal environment. The bewildered animal then seeks for an outlet, which is afforded by a second adjoining apparently open chamber trapped upon the same plan. Thus there is a pantry into which the bait leads, and a second, the next apartment from which there is no escape. Rapid extermination of the nuisance was in the nature of things its legitimate result; and it happened occasionally that two, or even three, victims found themselves entrapped within the course of a few hours. In one instance, to which I wish to draw attention, two were caught, an old one and another two-thirds grown. They were allowed to remain for some time in the trap, and then I went to examine I discovered only one half of the young animal. The mis-

ing part had been literally devoured by the stronger partner of its misfortunes. Whether this had been under the impulse of rage, or the cravings of hunger, I am unable to say; but if due to the latter cause, it would not seem for certain limitations upon the increase of this pest, which would augment otherwise in view of the proliousness of the species to sufficient numbers to render them even more obnoxious than they really are. Thus far such carnivorous diet has been relegated to the large congener to eat, but it seems to be a typical trait of all *Alutidae* as well. CHAS. LINDEN.

That many of our rodents are more or less carnivorous in habit is well known. Coues and others have observed that many of the small rodents of the West feed at certain seasons of the year almost exclusively on grasshoppers, and we have recorded an instance of a *Tamias* partially devouring a dead *Hesperomys*.

HABITS OF THE BEAVER.—*Belford, O., March 30th.*—I am well acquainted with the habits of the northern beaver. Several years ago I bought up several hundred acres of mining lands near the south shore of Lake Superior, in Ontonagon County, Mich. On Carp River, a small stream that crossed a part of my lands, the beavers had built several dams, and formed extensive ponds, in which they built their houses, or lodges, as the Indians call them. These lodges are built in water several feet in depth, and the entrance is several feet under water, but the floor of the lodge is built at least two feet above high-water mark. The floor is built solid from the bottom of the pond, except the entrance. Although the beaver is warmly clad with long fine fur, he is very sensitive to the cold, and rarely, if ever, leaves the pond or lodge during cold weather. He lays in his winter supply of food, which mainly consists of the bark of a species of poplar. He cuts down small trees and cuts them into short pieces of one foot, or a little over in length, and takes them into the pond, and fastens one end of these pieces securely in the mud at the bottom of the pond. These pieces of wood are dragged up into the lodge, as often as food is needed, and the bark gnawed off; and after being devoured of the bark, they are by no means thrown away as useless, but are taken under the ice, and carefully placed in the dam, to strengthen it. They built one dam a little below the foot of Carp Lake, which raised the lake thirty inches. The lake is a small one—about one mile long and a fourth of a mile wide. I measured the stump of a maple tree that they had cut down, and it measured fourteen inches in diameter. There were no less than eleven dams on the stream, all in sight of our buildings, where we were mining for copper. The beaver possesses great engineering skill. The dam built one dam in the form of an arch, the crown of the arch being invariably up stream, giving it strength to resist the pressure of the water. The Indians used to tell me many singular traits of character that this animal possesses. They build their dams and lodges of mud, sticks and stones, compactly and very strong. I once saw an albino beaver skin. I thought, and still think, that it was the purest white I ever saw. T. GARLICK.

Fish Culture.

RAPID GROWTH OF BROOK TROUT.

MANCHESTER, Iowa, April 16th.
Editor Forest and Stream.—

In your issue of Sept. 25th, 1879, I called the attention of the fish culturists to the great growth of brook trout in the spring streams of Delaware County, Iowa. I desire to inform you of our further success. It seems to me to be extraordinary.

In June, 1877, the Fish Commissioner, Hon. B. F. Shaw, placed in "Spring Branch," in this county, five thousand brook trout. In March, 1879, the same trout were caught, weighing one and one-quarter pounds, and in August of that year they were caught weighing one and three-quarters pounds. They spawned in November, 1879, and now the stream, which is almost three miles in length, seems to be teeming with young trout. You can catch from twenty to one hundred with your hat in the spring. The most of the trout caught now weigh one and a half pounds, and some two pounds.

In March (27), 1879, the Commissioner placed in the hands of the "Delaware County Association for the Protection of Fish and Game," five thousand more, and they are being caught eight inches long. Is this not an extraordinary growth? There seems to be millions of trout, large and small, there now, and it seems as though it would be their home for long years. I am of the opinion this healthy condition is caused by the food. The banks and bottom of the stream is lined with English water-cress, which they eat and are very fond of; and it has the same effect on the flavor of the fish as does the weed celery on the cannae backed duck.

On the 14th inst. Commissioner Shaw, turned over to the association fifteen thousand brook trout, which were placed in the head waters of the Magnakota River, the source of which is on the northern line of the county. It is the most perfect trout country I ever saw anywhere. Springs discharging twenty barrels of water in a moment, meandering among rocks and pine timber with pools every few rods, from three to ten feet deep, water as cold as ice, this forms the source of the Magnakota River, which flows southward through the county, and is filled, five miles from the Springs to the Mississippi River, with black bass frequently weighing from five to seven pounds. The club planted the watercress in the streams and springs, and should we meet with such success in the head waters of the Magnakota as we have in Spring Branch and other streams in the State of the same character, we would have, in four years, the finest trout-fishing in the West.

The commission has placed in our county in the past three years fifty thousand trout, and thirty-five thousand salmon. The salmon last year were about seven inches long, and we had sport taking them with a fly; but this spring they have all departed. We can't cultivate them here.

The commission obtains from the shores of the Mississippi in the fall millions of young black bass, wall-eyed pike, crappies, and other native fish, and distributes three

millions a year, which greatly increases our supply. The Fish and Game Association consists of most of the generous, game-loving men of the county. The President, S. A. Vananda; Secretary, Ed. F. Seddes, and Treasurer, N. W. Clark, are enforcing the close season in all the streams and ponds, and our dams on the Magnakota alone consist of more than a hundred acres, filled with black bass, weighing from one to sixty pounds.

Our Legislature, last session, made a fishery law similar to the fish law of Virginia, only more severe. Some of the provisions are:—That all who obstruct any stream or lake shall erect a fishway, to be in accordance with the instructions of the Fish Commission; the Board of Supervisors are to see it enforced, and failing so to do, shall be liable to a fine of fifty dollars each; the property to pay all expenses of the fishway, and double damages if not built; no person allowed to catch or kill a fish within one hundred yards of a dam, under heavy penalties and imprisonment.

The fishermen and game protectionists here never had so fine a show before, and if we do not succeed here it is our own fault. S. G. VANANDA.

—Latest advices from Berlin report the American representatives very busy getting their exhibit into shape. The trout eggs sent by James Annin, Jr., of Caledonia, N. Y., in care of Mr. Fred Mather, arrived in excellent condition. Three thousand of these go as a present to the Deutsche Fischerei Verein.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Speckled Trout, *Salvelinus fontinalis*; Land-locked Salmon, *Salmo gairdneri*; Smelts.

—Now that the fishing season has fairly opened, we invite correspondence from the great body of anglers throughout the country. Fresh, crisp items of angling news, notes of fishing excursions, and extended accounts of angling trips are all in order. We mean to make this column a live one, and to that end invite the cooperation of our friends and correspondents. Variety is the spice of a newspaper's life; the more the merrier. In addition to notes of personal experience, we are always glad to receive such information as is indicated by the following hints. We, in turn, by publishing here, benefit the whole fraternity of sportsmen:—

What kind of game-fish is found in your own or adjacent neighborhood? Average size and weight? Heartiest weights this season? Ordinary mode of capture, and kind of bait used?

Any improvements made in stocking ponds and streams, building fish-ways, or dams, or establishing hatcheries—houses? Increase or decrease of fish over previous years, in neighborhood?

Any local laws governing trespass? Mention good fishing localities, if not conflicting with private interests? How accessible from nearest railway station? Any hotel accommodations? How many anglers on lake or stream this season? Notable persons, if any?

CANADA.—*Buckingham, Quebec, April 21st.*—The ice will soon be out of the lakes back of here; then the sport can begin, for the brook trout are ever on the feed where they are seldom disturbed. Sportsmen who wish to get back away from civilization would do well to come here, as this is one of the best entrances into the great untracked northern wilderness. Mine host, Mr. Lynch, of the Montreal House here, is well posted and charges light. Hotel Fare \$1.00 per day, other charges in proportion. Fare from Montreal here via Q. M. & O. R., return ticket, \$5.10, and 25 cents stage-fare from station to village. STANSTED.

MASSACHUSETTS.—*New Bedford, April 22d.*—During the past week large quantities of herring, shad, scup, tautog and striped bass have been taken at the wharves in this vicinity; in fact, the fishing, which usually commences the 10th of May, is this year two weeks earlier. A large part of the herring are used by the fishing smacks as bait for cod and halibut. A few mackerel have also been taken. The trout fishermen have not met with much success, as the brooks are very low. The large ponds between here and Fall River are nearly three feet lower than ever known at this time of year. CONCHA.

OHIO.—*Oxford, April 22d.*—Black bass in Four Mile are not as plenty as they were last year at this time. M. S. I.

COLORS OF PERCH AND HABITS OF BASS.—*Savannah, Tenn., April 13th.*—I wish to communicate to your columns a few facts that have come under my observation, and have puzzled me somewhat to account for. The first of these are some things I have noticed about the colors of fish. I have caught several fish of the perch species, of a variety known throughout the South as black perch, or goggle-eye, which when first taken from the water were almost entirely yellow, showing only a few black spots near and upon the dorsal fin. After these fish had been strung for a few moments, the black stripes, as prominent in this variety, would appear strongly marked. At first sight, this would appear to be due to bringing the fish more directly under the influence of the sun's rays, but as if in disproof of this theory comes another fact. In fishing under a mill-dam near this place I have taken perch and bass abnormally dark colored, but when these have been on the string a short time they fade, and soon become but little darker than their neighbors. These two contradictory effects can hardly be attributed to the action of the sun's rays. I have met others who have observed the same things, but none of them could give any explanation of the phenomenon.

Another matter, of which I wish to speak, relates to the habits of bass in ponds. We have here many ponds left by the streams changing their beds. These are generally in a horse-shoe form, and in many instances are at the foot of the hills, where they are well fed by springs. Most of these ponds are very small, and the original teams during high water, and are well-stocked with bass

and perch. In the parent streams these fish are bold biters, but in the ponds they never take a hook. I have tried them with all kinds of bait, and with the fly, but to no purpose. They do not seem wild, simply indifferent. These same ponds contain a worthless variety of catfish, which at times will bite ravenously at any bait. I have known of repeated and strenuous efforts having been made by others beside myself to induce the bass and perch of these ponds to take the hook, but altogether without success.

These are the facts in the case. Cannot some follower of the angle give us a solution of the difficulties they present? WILL.

FLASHING FLY-RODS.—We notice that **FOREST AND STREAM**, of New York, has taken up this flashing subject, and thinks it deserves attention. One correspondent of that capital paper says his experience is, that if the angler keeps out of sight, no amount of flashing will scare the fish, and we incline to agree with him, for this reason: We have repeatedly caught trout, chub and grayling during a thunderstorm, and when flashes of lightning have been vivid and frequent; in fact, we remember once fishing in the Rye, above Hawby, during one of the most terrific thunderstorms we have ever seen either in this country or abroad, the flashes of lightning, frequently forked, were almost incessant, and we several times struck fish, the rise of which a flash had enabled us to detect, for the stream was so shaded by trees in many places, and the black clouds overhead made things so dark, it was a difficult matter to detect a rise. Now, if trout are not frightened by such terrific lightning, to say nothing of the thunder, which seemed to shake the hills, is it likely the flash of a fly-rod will scare them? The flashing of a light at night attracts fish, as salmon poachers well know.—*Fishing Gazette.*

FISHING AND THE SUN-SPOTS.—In the last number of *Nordiske Tidsskrift for Fiskeri*, the Swedish ichthyologist, Dr. Ljungman, gives an interesting account of the connection which exists between the wanderings of the herring and the recurrence of the sun-spots. To the Scandinavian people, the herring fishery in the fjords and along the coast is a principal source of wealth, and as this industry formerly was a royal monopoly, and often played a prominent part in the foreign policy of the Kings, the State archives contain very minute statistics of its yield, as far back as the beginning of the fourteenth century. An examination of these statistics shows that there rules a certain periodicity in the herring harvest, and Dr. Ljungman has now demonstrated that the regular decrease and increase correspond exactly to the periods of the sun-spots: not only to the great period of fifty-five and a half years, but also to the minor ones of eleven years. The herrings go and come with the sun-spots. The explanation which the Doctor offers, of the connection between these two so different phenomena is as yet a mere hypothesis, but it sounds quite probable. On the one hand, scientists have established beyond doubt that there is a connection between the sun-spots and certain terrestrial agencies, as for instance, the magnetic currents. On the other hand, fishermen know that there is a connection between certain meteorological phenomena and the success or failure of their craft. Thus, when the mackerel cloud appears above, the mackerel fish is sure to be forthcoming. Dr. Ljungman's hypothesis now is that the sun-spots cause a change in the currents of the sea, by which the food on which the herring feeds is carried now to this place, and now to that.—*New York Times.*

LOOK SHARP.

BEAVERKILL CLUB, April 27th.

Editor Forest and Stream:—

Now that the effort of our friend Hallowell's mischievous baseball joke about not knocking flies out their mouths with their tails, has somewhat worn off, let me ask fly-fishermen to observe during the present season that trout often (not always) strike at the fly with their tails. Close observers will occasionally see a trout come out of the water, and hit with its tail a natural fly, striking it down to the surface; the trout will then drop into the water head first, turn, come up and eat the fly. Probably bait-fishermen will laugh at this; that is where most of the laughter came from before when the subject of tails was discussed. But then bait-fishermen now is a sea trout issue. I believe there was one gentleman who claimed to be a fly-fisherman, who said that trout move so fast that he could not see quickly enough to see one of them come out of the water, turn over and go back. Probably that gentleman is a novice, or else "gun-sly" with his trout-rod, i. e., shuts his eyes and gives a jerk at the rod when his fly touches the water, just as a woman does when she pulls the trigger of a gun. After a man has used his eyes for twenty years, or even less, in the wild woods, and on mountain streams, his eyes get so that they see distinctly many things, paths without a trace, shadows, motions.

"With here a blossom sailing,
And here and there a lusty trout,
And here and there a grayling,
And here and there a foamy taker

With many a silvery waterbreak
[?] Above the golden gravel."

to all of which he was blind when he first began to hold communion with nature. A number of fly-fishermen have agreed with me as to having seen trout strike with their tails at dries out of the water, and I hope to have many gentlemen confirm our experience, in your columns, this year.

Happy the man who is so familiar with nature that he can say, with the old Massachusetts poet, Jones Very:—

"The bubbling brook doth leap when I come by,
Because my tread measures with its call;
The flower that on the lonely hillside grows
Expects me there, when spring its bloom hath given;
And many a tree and bush my wandering knows,
And e'en the clouds and silent stars of heaven."

Geo. W. VAN SICKLEN.

TROUT BROOKS.—*Wassfeld flats, Sullivan Co., N. Y.*—The best wild trout fishing for months of April, May and June in the State—Beaverkill, Willowenock, Stewart's, Russell and Spring brooks, within an hour's drive.

The Kennel.

SOMETHING ABOUT BREAKERS AND DOG BREAKING

FOURTH PAPER.

THERE is an old saying that "you may take a horse to water, but you cannot make him drink," and it can equally well be said that you may take your dog to a snipe meadow, but you cannot make him hunt. Should it be your misfortune to have selected such a one, and at the outset of your practical tuition find that you have been mistaken in your preliminary tests—discard the dog at once, for he is unworthy of your time and trouble. It is usually only in the field, and in front of the gun, that the dog's "true inwardness" can be ciphered out, as oftentimes all previous calculations go for naught. He must have snap and bottom, pluck and go, no fear to face the briars or wet his feet—no shirker of his duty or waster of your time; for even if you perambulate on crutches, as pictured by John Leach, avoid a pottering dog. As young dogs, however, are liable to tire out, particularly when first handled on rough or miry ground with which they are unaccustomed, common sense would teach us that the youngster should be in the best of trim when first brought face to face with the fortunes of the field and flood. It is necessary that his first acquaintance with game should leave a pleasant remembrance; therefore, beware in the excitement of the glorious sport, of overtaxing the strength of your puppy by shooting over too long a beat, or by working him all day, as if he were an old field dog. Remember, he really must not be taken home tired, so that he is unfit to take the field on the succeeding day; but rather call him in to heel after a few hours of successful work. Constant fatigue will take the snap out of any young dog, and he will in time fall into a listless and careless way of doing his work. It is overwork, when a dog comes out to see so many "one-hour dogs" in the field at the present time.

Of the many ways to condition a dog, the best, perhaps, is the daily exercise which can be given him on a smooth hill-side, in making-him retrieve a ball which is rolled swiftly towards the bottom. It was partly with this exercise in view that we argued in a previous paper that all young dogs should be taught to retrieve. In an hour or two of the plain every day will harden like iron the muscles of any dog, give spring to his legs and strength to his back, expand his chest, and give him plenty of wind—a very essential requisite—the cultivation of which does not receive the proper attention. We do not believe in exercising a sporting dog by making him jump for a ball suspended out of reach, as it is a performance that may perhaps in the field lead to attempts to catch at low-flying game.

Another method which is commonly used to keep a dog in trim is to allow him to run with a wagon. When this is done he should in all cases be trained to run on well ahead, and not behind, as the dust and dirt stirred up will choke him and frequently injure his eyes. We do not altogether believe in this practice, for in a long drive a dog has hard work to keep up with a fast horse, and should he, when tired, be lifted into the wagon in an overexcited state, he is almost sure to catch cold. No dog should ever be allowed to jump into a wagon, for fear of a strain. But as any exercise is better than none at all, be careful to let your dog run on in front; he will then be in continual sight, and you can see in time to protect him from the attacks of way-side dogs. No dog-owner can be too observant of the actions of his animal at all times, as when tired he is liable to the worst, and broken and well behaved dog depend upon the master's intelligence and constant care.

It has been our experience to find that the best dogs are broken upon English snipe, which we would not have too tame or lazy. The snipe meadow is in our opinion the very place to give them the benefit of your own experience and that of a good steady dog, with whom you should, if possible, work them in company. But remember, at the same time, that they had much better be worked alone than to be subjected to an evil example. Old dogs are up to every artful maneuver. Game cannot beat them in cunning, and they are more than a match for it. Therefore, let their labor at first be shared with a steady companion, for there is nothing better for a young dog than being worked with a first-class old one. Continued work will bring down their too ardent spirits; and, for animals of this kind, nothing else will prove really beneficial. Be sure and pick out a warm spring day—the ice should be gone, and the wind blowing gently from the south. Endeavor to begin your beat on ground that is entirely free from bunches of willows, high reeds or patches of brush and briars, as it is not only necessary that your pupil should never be out of your sight, but he must be able to see you at all times, and you must be able to see him at all times, so that he will at once become his model. This plan adopted, the attention of your young novice will be distracted from his work in constant attempts to hunt you up, for all young dogs when lost become more or less bewildered and nervous, and in racing wildly about endeavoring to find their master, are apt to flush birds, which tends to destroy the necessary discipline, and is liable to make them unsteady before they know what work really is.

The approach to many shooting-grounds, and particularly to snipe meadows, is often over strips of water, bridged only by fallen trees or slippery fence-rails. Across these logs never allow your dog to pass, but train him from the first to wade or swim. We have seen many a dog seriously injured by falling straddle of a rail, and many more rendered useless for the season from similar received in slipping off. Teach him also to be careful how he crosses his denials these dog-traps are a bane to a sportsman's holiday. A dog should be taught to pass between the rails that are widest apart, but he should not be forced to squeeze himself through, as the result is sometimes serious. If there should be no opening, have him climb up at the same time and panel that you

cross yourself, that you may be at hand to assist him should he chance to catch. In many sections of our western country the post and rail fences are built six or seven feet in height, so that a dog in attempting to jump them frequently has a rough fall backwards, or is occasionally left hanging by the legs. Let, therefore, your dog accustom himself not to rush at the fences, but to take them quietly, and you will have more go left in him at the end of a week than the one who has no regard for these precautions.

The frequent difficulty to get on the snipe meadows, as the sportsmen are fond of saying, and the constant shifting of the wind during many of our spring days, does not warrant the loss of time and trouble to go far out of one's way to get to the extreme leeward side of the tract. But despite of the theory of beating for snipe "down wind," originally advanced by Herbert, and now carried out by many of his disciples, we most earnestly advocate beating for all game, when it is possible, exactly the other way—that is, "up wind." True it is that snipe, and, in fact, all water fowl, rise to the wind, yet it is absurd to expect dogs to do other than flush the game if they bear down on it with the breeze, and alarm the birds by their splashing away to windward. If your dog has a fair nose he will soon be brought to stop at a distance that will not flush the birds, and you can either pass him and move the game yourself, or by making a slight detour soon locate the birds between yourself and the dog. This is an excellent plan when they lay badly, as it usually affords a reasonably fair shot. On the principle that paper kites are used on the Scotch moors to make the grouse lay, we have heard from good authority that a light-colored felt hat sent skimming through the air would make wild snipe lay. We do not, however, place any particular faith in the performance, and have thus far preferred to keep our hat dry and upon our head. One thing, however, is certain, that the best find on a snipe meadow is on the windward side, particularly if the wind has been blowing steadily for a day or two from one quarter. Almost every bird that has moved or been flushed has gone that way, and often the birds congregate in large numbers in little sheltered nooks along the extreme windward edge, when birds can be found in no other parts of the meadows. The very reason that snipe move to windward is because the sportsman who is upwindward to continue right on in his beat, while should he start from the windward he will constantly be obliged to retrace his steps as the birds are flushed and light behind him.

Should your beat lead you among briars, through which your puppy is at first unwilling to crawl, toss a biscuit well in, and point out to him the thinnest opening to the water. Encourage him freely, but do not on account push him in. If hungry he will find a way to reach it. This will be his reward for the few scratches, which you would have him at once forget. Neither push nor throw him into the water, should he show a dislike to enter. Rather, on a warm day throw some biscuit that will float close to the edge of the bank, where it is so shallow as merely to require his wading. Chances next place is a fair catch, and by degrees increase the distance until he gets beyond his depth, and finds that nature has given him useful swimming powers. On no occasion will the example of another dog more assist you. Shun any that may induce the youngster to dive; it can never be of service, besides it is apt to cause premature deafness.

Having thus summed up how to ward against several of the most common errors incident to the field, and also told you how to get your dog into condition for it, we consider that if you follow out the following systematic programme of instruction, which covers four important points, it will be all that is absolutely necessary:—

To beat, that is, to have the dog range properly and methodically beat out the ground, so as to avoid leaving birds behind unnoticed.

To locate, that is, the dog feels a scent, to at once proceed in the direction in which he may believe the game to lie, and in so careful a manner locate the game as to direct the sportsman to it without disturbing it.

To point, that is, for your dog to stand immovably the instant that the scent of the game is felt with certainty.

To back, that is, to have your dog stop the moment he sees a dog, or a point or back.

From what we have already written, it will be surmised that we advocate the breaking of puppies to game with the gun; although this is a desperate point, we believe that they should be rewarded for their exertions by having it killed over them. The shooter, however, should kill nothing but game birds over any pointer or setter, or the dog will never learn his business. He should avoid, above all things, shooting at rabbits, rail, larks and all small birds. The man whose pleasure it is to shoot at small birds, is a walking satire on the sportsman. True, he generally has his "hunting-cap" decked out with chippy-bird or blue-jay feathers; but aside from this, he can always be distinguished from the action of his dog, for should a crow come flying across the meadow the dog will stand excitedly watching him until he is out of sight—making an interesting picture, these three, save the crow, the gun bird, in our mind, has rather the best of it. When the gunner is in the habit of killing small birds, and at other times correcting him for pointing them, is it astonishing that the dog becomes confused and is puzzled when he comes to a snipe whether to point it or not? We have read a great deal that has been written by those who have never seen a dog in the field, and simply wondered at the ridiculous suggestions that have been submitted to an intelligent sportsman. The laughable theories of hiding quail under little baskets, rather reminds one of the East Indian juggling trick of "Now you see it, and now you don't." Also permitting the birds to fly a few yards by having strings tied to their legs, and other pantomimic tricks, is impressive no doubt, but not apt to bring a dog to the proper standard of what a pointer or setter should be. Of course, by such a system of training, the dog's mind, his natural spirit will be broken, and he will do his mechanical work with no enjoyment or zest for the sport, without which he is not worth a rap.

At first your puppy will run about in a meaningless way, and will stand at times looking at you. He has been taught to run ahead at the word "On;" it now is time that he is broken to work to hand in the field. During

the lesson in retrieving he has learned to connect the motion of your hand, when tossing the ball or glove, with the direction in which he is to search. You will therefore have but little difficulty in making him understand that a wave of the right arm and hand to the right, is for him to hunt to the right; and that a corresponding wave of the left arm and hand to the left, will explain to him that he is to hunt to the left. Should he at first be unwilling to do as you command, unless he sees something thrown, you can occasionally toss a piece of bread into the grass in the direction in which he is to search. You will find your hand at the same time useful in making him comprehend the signal. Your aim is that no part of your body shall remain unhunted, and that no part once commanded by his nose should again be worked over. As the greater part of the best American shooting is done in large tracts of prairie and in uninclosed country, it will be well at first to teach your dog at no time to range over a wide space from you. To accomplish this, begin by waving him off to the right hand, and when the proper distance is reached, call his attention with the low whistle you have adopted, and at once wave him to the left hand, regulating your position so as to have him cross about twenty yards in front of you, so that he may understand from the beginning that he is not to cross behind you, out of your sight. When he has proceeded about sixty yards away on the extreme left, again call his attention and wave him back to the right. Continue his zig-zag system of having him beat diagonally across you with great exactness, and it will not be long before your dog will turn his head at the limit of his range without waiting for the expected whistle; and later on, he will fall into the habit of ranging across you without your having to give the arm signals. Should your dog, at any time, have no inclination to beat out as far as you wish, you may follow him a short distance every time that he crosses to the right and left sides, and soon he will correctly gauge the extreme limits of his range. Avoid whistling as much as possible during his early days in the field, and he will then learn to keep one eye on your movements for the rest of his life.

MR. TILDEN'S PETS.—To the Editor of the Sun.—Sir: The passer-by in East Nineteenth street, near Irving place, can see, in the handsome rear of ex-Gov. Tilden's house, two noble dogs—a large true-blooded St. Bernard, and a state-maid English mastiff, with a head of rare beauty. The English mastiff, in purity, are very scarce. They resemble the bull-dog in courage and strength, but are more faithful and affectionate. They tolerate no undue familiarity, and are dangerous enemies. If appearances are indicative, Mr. Tilden must be very fond of his dogs, for he is often seen sitting them down in his lawn, and showing them to his friends. The affection is reciprocal. "Leo," the St. Bernard, is overwhelming in his affection, and "Bunch," the mastiff, receives advances with satisfaction, and a most becoming gravity. They are a source of interest to the neighborhood and the passing public, who have earned their names and peer at them through the slight railing that separates the Governor's beautiful country from the city street. It is no uncommon sight to see Mr. Tilden standing in his large bay window of his library (from which all occupants are visible), surrounded by lady guests, to whom he is introducing his giant pet, while his niece, the youth and light of his bachelor home—cousins in her arms her only dog, a tiny but peculiarly beautiful Japanese spaniel. If doubts are entertained as to the health of Mr. Tilden's lungs and throat, or fears that his low voice has become chronic, and his right arm has lost its strength, and his lungs would be spelled on hearing his loud call to the dogs, and seeing the rough and tumble of their frolics with their master, is characteristic of scholarly men and able statesmen in the fond of animals, and the ex-Governor is no exception to the general rule.—NEIGHBOR, in New York Sun.

THE NEW YORK DOG SHOW.—The falling of the new edition of the Madison Square Garden, on the evening of April 21st, whereby Mr. Wm. M. Tilden, late Kennel Club of FOREST AND STREAM, and chairman of the committee of arrangements, lost his life, caused the show, which was to be held under the auspices of the Westminster Kennel Club, on the 27th, 28th and 29th, to be unavoidably postponed, as has been already noticed by the press of the country, until the 11th, 12th and 13th of May. It is even now impossible to state, until after the owner's inquest, which is now being held, whether thehibition will be held in the Garden, or at some other convenient place. If, however, it is deemed prudent and advised by the Westminster Club to make no change in the location, the space to be occupied by stalls for dogs will be within the main building, and entirely removed from the section where the sad calamity occurred, as the responsibility of this shocking affair is shared between the owners of the building and the officers of the Hiding Department of this city, no further dependence can be placed on any subsequent report of inspection or security made by these incompetent and criminally negligent persons. It therefore behooves the managers to see for themselves that the proper precautions are taken to guard the community from further accident, as London Field, who are to act as judges at the coming show in this city, arrived on the City of Brussels Saturday morning, and called at this office in the afternoon. Although at first expressing some doubt as to whether their engagements in England would allow them to remain in this country long enough to be present at the bench show, which has been postponed, they have now decided to remain as guests of the Westminster Kennel Club.

Stables cleared out most of his dogs before starting, and was unable from the press of emigration to ship his dogs. He has still on hand, however, in England, champion colley pups, beagles, dachshunds, mastiffs,

setters, and other sporting and non-sporting dogs, and will be happy to give any information regarding importation of dogs to any one interested. He may be addressed at this office.

AN ABUSE AT DOG SHOWS.—London, Ont., April 16th.—Now that dog shows are all the rage, I wish to bring before the public a danger that is run by owners of valuable breeding stock. I dare say my experience may not be singular, but as it has not been brought out in any of the journals devoted to the kennel, I take the liberty of writing you on the subject.

I sent my Gordon setter, Blossom, to the late Montreal show, by express, and was awarded two prizes on him. Of course I was flattered, as were all exhibitors who take firsts or specials, but my joy was turned into (what the proper word is I can't just express), when a month or two afterward I am informed, from several reliable sources, that my dog's services were used, without my consent, by a Montreal gentleman, also an exhibitor and prize taker, and that he is now trying to sell pups by my dog.

It seems strange that a gentleman would do such a thing, but that he should openly advertise that he had done so is stranger still. As it stands now it is impossible to bring him to justice for the theft of the service, yet I wish to caution managers of bench shows that if such things happen, their shows will not be attended by breeders at a distance, whose stock is valuable. They ought to be most careful in the selection of their caretakers, and take none but those on whom they can rely for honesty, but to themselves and exhibitors who use property they guard. That brother sportsmen and breeders should take such advantages is to be condemned, and brings dog-breeding into disgrace.

J. S. NEVIN.

MR. A. H. MOORE'S KENNELS.

PHILADELPHIA, April 8th.—On Monday, the 5th inst., we took the 6:30 train for the Pennsylvania Railroad, and in fifteen minutes were at Elm Station, about six miles from town. A pleasant walk of a mile or so along a country road brought us to Moorefield, the kennels of Mr. A. H. Moore, of this City. We were unfortunate in selecting the day, as neither Mr. Moore, nor his genial assistant, Captain Blake, were at the kennels. However, one of the kennelmen (who, by-the-way, only arrived from the kennels of Mr. Lowell on last Friday), kindly volunteered to show us through. We were first shown through the kitchen where all the food is prepared for the dogs. It is truly a model of neatness and order, with "a place for everything, and everything in its place." We then passed into the kennels, which are built in the form of a hollow square, enclosing about an acre of level turf. On two sides of this enclosure the kennels are built, and on the other two sides are the dog runs. Each dog has a separate stall. They have about fifteen feet in length by six in breadth, and are divided into two compartments, a sleeping room and a small yard, which contains a small trough of fresh water.

The first dog shown us was Belle, with a fine litter of puppies, whelped on board the Steamship Indiana. They are all very handsome and very evenly marked. Belle is a very fine liver-and-white pointer bitch, born to Master Bow Belle, with one of the grandest heads we have ever seen. Since we saw her, we have had no other puppies. Next to Belle is Ruby (Flake-Lily) with a litter of puppies by Mr. Orgill's Rome. There were some fifteen or twenty pointers and setters loose in the exercising ground. Among them we noticed Champion Duck, Loo 11, and Mona, a thoroughbred imported Gordon bitch. She was a companion of Mr. Moore's ill-fated dog, Duke, who died on the 2nd of March. We also saw a few others, the finest Gordon dog that has ever been exhibited.

We were then shown the division of the kennels in which the stud dogs are quartered, the first we saw being the red Irish setter Raleigh (Elcho-Rose) winner of the 2d prize in free-for-all stakes, when only eighteen months old, at the Eastern Field Trials, run at Long Island last year. Raleigh reminds us very strongly of his famous sire, Elcho-Rose, and is equally as good in every particular. Then comes Berkley, who is our old celebrity, the finest Irish setter we have ever seen. He is a deep red, and, as I understand, he is thoroughly broken, (winner of Puppy Stakes in 1878). We think he is one of the finest dogs for stud purposes in this country. Count Fred (Count Wind'em-Norma) was the next shown us. He is a very beautiful black-and-white ticked dog with a fine head and excellent qualities as a show and family dog. This magnificent dog won the Puppy Stakes, and ran second to Lincoln in the Brace Stakes, at Patoka, Ill., last fall. The party that showed us through told us that Count Fred is almost the counterpart in markings of his sire, Count Wind'em, the dog that Mr. Moore is now negotiating for. We hope it will be with success, as he is unquestionably the finest Llewellyn setter now living.

The next was Royal Ben, a fine orange and white Laverack by Carlowitz; his performances on the bench speak for themselves. Next to Royal Ben are Bang and Sancho, a brace of superb liver and white pointers that just arrived from England. They are of fine size and excellent form. I believe Mr. Moore intends exhibiting them at your show, where they will no doubt attract a good deal of attention. Next to these is a very old celebrity, Leicester, with whose record every reader of your valuable paper is already familiar. Count Dan (Dan-Countess) is a beautiful black, white and tan ticked dog, whose fine form and excellent head cannot fail to attract attention wherever he is shown. Rodrick, the last dog shown is black, white and tan ticked. He is litter brother to Leicester's great son, Count Dan, and is a very fine animal, but in our judgment he is rather too heavily marked with black to be a typical Llewellyn. Most gentlemen, however, prefer him to Count Dan for breeding purposes. Perhaps his pups show less black; if they do we should prefer him ourselves. Mr. Moore, we understand, intends making his kennel one of the best in this country, and we hope his expectations may be fully realized.

H. M. H.

Although we take pleasure in publishing the above communication, which is good as far as it goes, yet its failure to mention many of the crack dogs of Mr. Moore's kennels, will lead us, later on, to give a complete description of what is now regarded as one of the most remarkably fine and interesting collections of stock in America.

KENNEL NOTES.

NAMES CLAIMED.—Tipperary Girl and Lady—Mr. Max Wenzel, of Hoboken, N. J., claims the names of Tipperary Girl and Lady for his two red Irish setter puppies, eight months old, by Lincoln & Hellyar's Arlington, out of owner's dog.

Damur.—Dr. C. E. Wing, of Boston, Mass., claims the name of Damur for his liver and white pointer bitch by Samurail, Glen-Blossom, out of Fannie, Sport-Lady.

CHANGE OF NAME.—Victoria Victim—Peelskill, N. Y., April 26th.—Owing to priority of claims in favor of Messrs. Cummings & Son, I desire to change the name of my black and tan Burdett cocker spaniel Victoria, whelped Nov. 23d, 1878, to that of Victim, Miss JULIA WYANT.

PRESENTATION.—Phunket—I am pleased to acknowledge a present of the red Irish setter pup Plunket from Dr. Judkins, of Highland County, Ohio. The puppy is the finest dog we have here, and his name shows what stock he is from. The Doctor has the thanks of myself and of the sportsmen here. M. S. IRELAND.

SALES.—Mr. N. Elmore, of Granby, Conn., has just purchased from Mr. J. N. Dodge, of Detroit, Mich., a beagle dog puppy, Ratler-True, three months old.

DEATH OF MR. HUYLER'S PINTO.—Tenday, N. J., April 22d.—Doubtless many New York readers of FOREST AND STREAM will be sorry to hear of the death of Mr. A. J. Huyler's setter dog Pinto. He was bitten by a rabid dog on the 13th inst., and Mr. Huyler had him killed on the 17th. Pinto as a field dog had few if any superiors. He was the pet of all the children. I do not believe there was a person in this place who was not grieved to hear he had met with such a sad fate, and except Mr. Huyler and family, none more so than the writer. HIGHLAND.

Oct. 9—Washington Village Y. C. Fall Regatta.

SALON BAY YACHT CLUB.—Mr. David Hall Rice will offer a fine silver cup as a prize for the winner of the race, the conditions of which will be published in due time. The schooner *Thalys* is following the fashion, and will have seven tons of iron bolted to her keel, giving the latter more rocker without increasing her draft. A larger amount of ballast will be removed from inside, so as to lighten her up without sacrificing any of her stability. The value of weight on the keel, and the great influence it exercises upon stability, is rapidly becoming recognized in the East.

YACHT-BUILDING AT BRISTOL.

THE pretty little town of Bristol, R. I., was all expectation over the launch of a fine new yacht from the yard of the Herreshoff Manufacturing Co., Wednesday, April 21, and from the pretty New England "Miss" down to the dust-begrimed mechanic, the inhabitants of the town and surrounding country wended their way towards the scene of the approaching launch. The new steamer is a fine specimen of the genus "high-speed," and was built to the order of Mr. Graham, of Baltimore, being the fourth vessel of the kind the same builders have turned out for him—perfectly strong endorsement of their work from the standpoint of practical experience. Promptly at the hour assigned the wedges were knocked up, and with the aid of a jack the steamer was started. As she slid off the ways, little Miss Kitty Herreshoff dashed the proverbial bottle against the bows, and in a happy manner christened the new-born *Glean*.

It is unnecessary here to expatiate upon the steamer's model. The capacity of the Herreshoffs in this direction is too well-known. They copy no one, take nothing as a sample, but glide in their own ability to produce just what they want. The *Glean*, as its dimensions will show, is intended for use on the great stretches of sheltered waters and reaches of the sea which indent the Atlantic coast. Her lines are, of course, as fine, easy and graceful as it is possible to combine with reasonable accommodation and almost railroad speed. She has U frames throughout, very slight hollow fore and aft, midship body, with some flare to her sides and an exceedingly fine run. Those, with just the right amount of sheer, stiffering line, and an English cutter stern—each part fitting the other—a smart looking schooner rig and fasty looking hull, all go to produce a vessel which is a pleasing sight to the eye and a serviceable and well arranged design for practical use.

The launch was most successful, and was accomplished with as little fuss and noise as though it were child's play. A pleasant company afterwards took part in a collation served at the builder's home. As steam yachts seem to be very popular just now, the following items concerning the *Glean* will be of interest:—Length, 40 ft.; beam, 12 ft.; draft, 4 ft. The *Glean* will, however, be of interest. Her interior arrangements are admirably contrived and elegantly finished in oak and maple. From the main saloon, 20 feet long, opens a pantry and state-room, and from the companion-way aft of the saloon a fine double state-

room, occupying the whole width of the vessel; abaft of this again is a bath and toilet room, with every convenience for comfort. In the saloon the main pieces of furniture, consisting of dining-table and buffet, are of solid mahogany. The upholstery and tapestry will be of the richest description. Between the saloon and the part of the vessel allotted to machinery is an iron bulkhead, extending from the keel to the upper deck, through which there is no communication whatever. The importance of this barrier to dust and odor from the machinery department, as well as its use in giving strength and stability to the hull cannot be over-estimated. This is one of four complete iron bulkheads in the vessel, all of which are alike, that is to say, there are no openings in them at all. These divide the vessel into five compartments, adding greatly to strength and safety; for in the event of a collision or otherwise, one compartment only could be filled with water, the others being amply sufficient to float the vessel. The machinery occupies a space of about 19 feet. The engines are of the compound condensed type, with cylinders 10 and 18 in. diameter and 18 in. stroke. The engine is fitted with improved cut-off valves, and has feed and air pumps attached. The boiler is one of the Herreshoff Coil system, which day by day is growing in popular favor. It has a grate of 5 ft. 5 in. in diameter. She will burn 200 lbs. of coal an hour when running at the rate of 16 miles, under which condition natural draft only is used. To reach her maximum sustained speed of 20 miles, a power fan is used to force combustion.

In the issue of *FOREST AND STREAM*, of March 11th, may be found a description of the Herreshoff safety-coil boiler to which we refer in this connection. Forward of the machinery, and separated from it by one of the bulkheads, is the galley, commodious and well furnished, and next, the pantry, ice-chest, water-closets and large and well-ventilated accommodations for the crew. Her pilot-house is a sample of comfort and elegance, finished in panels of cherry. An elevated seat permits an uninterrupted view of the horizon. The *Glean* is the first of several large steam yachts which are to be added to our fleet this season, and although she does not rival some of the yachts of the past for speed and general excellence in hull and machinery she will not be second to others.

The Herreshoff Manufacturing Company have also in hand a small steamer for the Johns Hopkins University, of Baltimore. She is to be used by Prof. Brooks, in and about the Chesapeake Bay, in his scientific researches in marine, animal and vegetable life. Her interior is to be finely finished in oak and cherry, and will be furnished with one of the new swinging "tent-awnings," which were described in one of our previous issues. The Company have just completed a coaching steamer for the Howard College rowing club. This steamer, presented by the nating graduates of '80 to the college rowing association, possesses many points of peculiar interest. Length, 40 ft.; beam, 5 ft. Her machinery will consist of a Herreshoff boiler and compound condensing engine of 25-horse power. Maximum speed, fourteen miles an hour. Her screw is to be placed amidships, similar to the famous torpedo boats built by this Company. She is thus enabled to go as fast astern as ahead, and steer equally well in either direction, and to turn in a circle whose diameter is three times her length. She can also be brought to a full stop from her highest speed in a space not exceeding half her length. Her interior will be handsomely finished in oak, mahogany and cherry. We shall look forward with great pleasure to the performances of this boat, for the many new features of such craft ought to produce, when desired, higher speed at a less outlay than ever yet accomplished. Engines have been brought to such a high pitch of perfection that it is difficult to see room for much more improvement. The system of steam is so simple and so powerful, rotary engines have not given that satisfaction in practice which their theoretical points seemed to warrant. One thing is against them, and probably always will be. They use steam at a terrific rate, and this leads us back again to the boiler. The main stumbling block to higher speeds, twenty-five to thirty miles, lies in the difficulty of supplying sufficient steam without increase in weight of boiler; in other words, more power for a given displacement. Engines can be built sufficiently light and strong by using the best of steel; they may be turned up to any speed, and a 2 ft. and boiler of any section or pipe type can be made to withstand any amount of pressure, but when it comes to furnishing a great quantity of high steam, then they all fail, and with them our visions of thirty miles an hour through the water vanish. From what we have seen of the Herreshoff coil, however, there is a possibility of the enticing dream of railroad time in a steam yacht being realized at last, and we only hope some one will give them *carte blanche* to do their level best. If they cannot succeed in getting beyond the conventional fifteen, the very best they can do is to get as near as possible to the fastest of the fast ones, then it might as well be given up at once as an impossibility there can be no use straining after any longer. We are aware that *Lightning*, *Giltair*, *Afranda*, and a few more, have churned their twenty-one, twenty-three, and even twenty-four, over the measured mile; and *Giltair*, it must be acknowledged, kept up the pace for a full hour or more; but alas, these were builders' trials, flying light, professional stokers, picked coal, smooth sea, no wind, and no expense spared! As an index of every day performance the measured mile, or builders' trial, is a pleasant piece of deception. A deduction of 35 per cent. from such figures brings us nearer the truth, or rather the capacity of the high flyers under normal circumstances. It is under such that the speed of *Glean* has been set down as eighteen miles, and the near future will show how near the builders have come to their mark. But will it long before we are to see some one the possessor of a product of American skill which will reel off twenty-four miles any day in the year, and go higher still when pressed? It may not be so impossible as it appears, for we know little of resistance at excessive speeds. It is only that its ratio of augmentation sensibly decreases after twenty miles has been reached. There is room for reasonable experiment and expectation, even far beyond. Why let England take the lead, when we have the talent at our doors?

YACHTING NEWS.

CURVES OF STABILITY.—In an exceedingly interesting and able paper on the "Stability of yachts," read by Mr. Dixon Kemp before the Institution of Naval Architects, March 8th, we are supplied with much more definite information as to the value of lead on the keel in augmenting a vessel's stability. It appears that displacement would have over 35 per cent. less stability than if supplied with 40 tons lead on the keel up to about twenty degrees of heel. Beyond that point the increase in stability is shown to be in favor of the lower position of the ballast. In the first case, the yawl, although quite beamy, will reach her maximum static stability at 38 degrees, and in the other not until beyond 70 degrees. In other words, *Florida*, with inside iron, would be an unsafe vessel, and might follow the example of the *Mohawk*, while with a goodly portion of her ballast (she carries 54 tons in all) on the keel, she can be made practically unscapable.

FLAT-IRONS AT SEA.—In describing the recent racing at Nice, France, a writer says, incidentally, of the second day: "As for the shallow, beamy boats, the first puff of wind overpowered them and they were glad enough to run back to harbor for shelter." The English yachts were the only ones that could face the sea, for even the mark boats hove up and cut and ran as fast as they knew how. This left the yachts to guess at the course, and *Gertrude*, failing to find any mark, gave up, very properly, entering a protest against any prizes being awarded. But so little did the committee in charge seem to know of their business that they refused to entertain her protest. We suggest that instead of appointing the Prince of Wales, or any other similar "card" to the nominal management of affairs next year, a live member of the Y. R. A. be intrusted with the duties. Some such guarantee is necessary, if the presence of English yachts is desired; without it they will hardly put in an appearance after their recent experience of the ludicrous ways prevailing at the *Fête de Nice*. The Italians tried their hand at yacht building in the schooner *Ambrone*, which is described as an odd attempt. She could not be put about without sternboard, and could not haul her wind. She was ballasted with marble and slid to leeward at a great rate. She was intended as a sort of copy of *Sappho*, but evidently is a most woeful libel upon that schooner. The *Anglo-American* announces that a movement is on foot for a race from Gibraltar to Nice next year, for the net prize of \$20,000. The English press, however, demands something else than big prizes. They would prefer smaller prizes and a little better management. They would prefer *Cassius M. Colburn*.—A correspondent sends us the following charges in the club burgee and flag officers' swallow-tails of the Buffalo Yacht Club: The former is pointed, blue field, white star in center; width, two-thirds of length. For the Commodore, swallow-tail, blue field, red star in center; Vice-Commodore, red field and blue star; Rear-Commodore, plain blue field. The private signals are square, width, two-thirds of length. Sizes of the above to be one inch in length for each foot of yacht's length on deck. We are glad to find this club has adopted square flags for the private signals of its yachts. Others, when making changes, should follow the example set.

THE OCEAN PEARL.—A vessel has been recently launched at Essex to be called the *Ocean Pearl*. She is 115 ft. over all, 112 ft. on the line, 12 ft. beam, and 9 ft. hold, with about 11 ft. draught. She will be half birch rigged, and will make a cruise about the world to demonstrate the value of Norton's patent ship ventilator.

BUFFALO YACHT CLUB.—Sixty new members have lately been added to the club. A club-house is in prospect. All the Lake clubs are pulling together in a most commendable way for the common good. Mr. G. B. Edwards, of the *Pomona* and *Stratford*, has been appointed delegate to the N. Y. A., in place of Mr. E. E. Benedict. The constitution of the N. Y. A. has been adopted by the club, and steps are now being taken to have the club incorporated.

OUR NEW SANCTUM.—Through the kindness of the Herreshoff Manufacturing Company, we have received a handsome line of photos displaying to advantage their engines, yachts and launches, and will go to enrich our collection of yachting exhibits displayed in our new drawing office.

BOUND ABOARD.—The well-known catboat *Georgie*, which figured prominently in Newport racing last year, has been shipped to England by Messrs. Anchorless per Anchor Line steamer *Dennia*, last Saturday. The *Georgie* is sent out by Mr. James Costa, Jr., now of New York, Eng., and will be substituted by the *Clyde* catboat, which has been better than they are to-day, for the *Clyde* clubs have recently adopted the Y. R. A. rule of measurement, which would heavily handicap the beamy catboat, and under which some powerful deep bodied yachts have been launched this spring. In moderate weather the *Georgie* may give a good account of herself, as she is a deep, able boat for her kind, but in a choppy sea she will be all lost, and the deep fellows will leave her to leeward pounding away while they soak out to sea. If she is sent out in length, however, the Newport reduction will out-run her rivals, especially if matched against the old light displacement *Clyde* lug-sail boats.

FITTING OUT.—E. B. Kingsbury, 154 South Street, carries a large stock of oars, handspikes, hooks, hanks and ship-chandlery generally, and is prepared to furnish yachts at short notice. His card will be found among our advertisements.

DESIGNING IN THE EAST.—Mr. D. J. Lawlor is by long odds the recognized leader in modeling and designing in the East, and receives the lion's share of the work being done in Boston. From personal inspection, we are able to assure our readers of his goodness and strength of his job. There is not another yacht architect which has the materials or fastenings in her "house," that Mr. Lawlor has recently put into the "old Julia." He is also building a fine cruising yawl for Boston owners, after the English model, and before described in these columns. The yawl will be a roomy, able craft, but is perhaps a little straight on her side. This is the consequence of pressure exerted by the English rule of measurement, her lines having been furnished by Latsey, of Cowes. She is now being planked. The handsome little steam yacht *Adeline*, belonging to Mr. T. W. T. is now being refitted. Her sides are to be increased to 12 ft. in her gunways. Beside this, Mr. Lawlor has furnished models and plans for several other yachts building in the neighborhood, of which more anon. What we find to admire in the work of Mr. Lawlor is the versatility and the success which he meets in designing vessels of all kinds and classes; yachts, pilot-boats, steamers or freighters. This is to be attributed, we think, to an investigation of naval architecture from a scientific point of view, placing the student beyond the narrow views and coarser deduction of mere practice, and enlarging correspondingly the scope of usefulness and the probabilities of success in what he undertakes.

OSHKOSH YACHT CLUB.—The Commodore writes us: "Somebody has defined fame as getting shot in battle, and having your name spelt wrong in the *Gazette*. I want to stand right with posterity. To vindicate the truth of history, please spell my name Geo. W. Burnell." The next time a compositor trifles with the well-known signature of the Commodore of the Oshkosh Y. C., there will be a collision between the pavement and a typo's cranium.

TIM ORRION.—This well-known sloop will be put in commission this year, with no less a person than the Mayor of New York as skipper. The sloop is not to be sold, but to be kept in the Company's fair and harbor.

AN EASTERN YACHTING ASSOCIATION.—We learn that the following clubs have decided to attend the meeting in response to a call issued recently by the Dorchester Y. C.: The Boston Y. C.; Quincy; Jetties; Bunker Hill; Duxbury; South Boston; Dorchester and Beverly. A set of rules has been decided upon for submission to the clubs, and it is hoped that other clubs in the neighborhood will join. We are anxious to know how some of the clubs mentioned can affiliate with the shifting ballast clubs

on the question of sailing rules. If Boston can reconcile such opposing interests, we would like to learn how it can be done. It is a case of playing with fire, and yet not getting burnt.

SLOW DOWNS.—The following from the pen of a correspondent appears in *Pacific Life*:

A desperate effort is being made to introduce the English cutter and the FOREST AND STREAM man has gone daft on the question.

Never mind the "FOREST AND STREAM man" he can work his own ship. But isn't this just a little odd coming from a worthy friend who erstwhile had gone "daft" on the sloop, and who, nevertheless, "swung around the circle," and now chants praises to the yawl? Come, now, in time good friend; when you have seen the "compromise cutter" aloft this year, even the double head rig will no longer rig; you will swing around a little more, and when that new *Perlees* is launched in San Francisco Bay (may the day soon come), you will work for it, she will have a double head rig. What the "FOREST AND STREAM man" has gone "daft" on, and what he proposes to remain "daft" on, is the displacement of the shallow, dangerous unhandy frying-pans by deep-bodied, able, safe and handy vessels, and if the whilom skipper of the *Perlees* (peace be to her soul!) will keep his eyes abroad, he will note the changes going on, in concert with the tenor of these columns, much faster than he seems to think. If success is the criterion of success, we owe to the influence of a liberal education, Yachtmen starting on a cruise want every one to be as happy as they are, and the club and waiters reap the benefit of it on that day. As I have said before, the day was extremely warm, so, tumbling into the boat without waiting for the rest of the cruisers, the order is given, "shove off," and boat laden with our traps and also sundry stowage boxes, ends of which show strange devices such as flaps' painter—St. Jul—, the rest of the mark being hidden by another towed parcel, these being a few last things which are to be taken on board. Climbing on board, "Gauk!" and the "Captain" (below and are soon deep in the mysteries of bonded turkey, beer, and jam, washed down with cool ale, together with various appetizing condiments, which are spread out for lunch. Our steven is one of the first water, and the "Captain" being something of a gourmand, the cabin passengers gave very well on the D—, to the man who has any qualms of mal-de-mer, sad for him to look upon the tempting display and not be able to partake. Every one now has come on board, and "Jersey" and "New Jersey" are now on board, and the place is all over, and the cruiser to undergo the change from butchery to grub, thereby reversing the order of nature. At about 2 p. m. we hoist the gig, get up anchor, and with a light air from the southwest run smoothly down to Deer Island, anchoring at Shirley Gut, close by Tat's famous hostelry where the Naba Club dinner is to take place. It is just as well we anchored there for in half an hour the breeze dies away almost entirely and *Addie Vothrie* just gets her anchor down when it falls astern and a "dead calm" rests upon the bay. The sky is overcast, and no breeze but a breeze is forthcoming, and it is not until an hour and a half after midnight that we up anchor and proceed on our way, before a very light southwest breeze. The cabin was shrouded in silence and somnolence about 3 o'clock, and it is not till about 8.30 the next morning that they begin to show above deck. We found ourselves about six miles to the northeast of Thatcher's Island in a flat calm. No more was made to dress, and the costumes, though comfortable to the extreme, would hardly wash, wash! On shore, the day is great and glorious, and the man who has the luck to be caught to have a monument erected to him. One fact that the one is not dressed, still he is at least clad, and that is enough. Ship-board or yacht-board. At about 9.30 the *Amelia* is sighted in the distance of Squam (sweet name!) in the pleasing predicament as ourselves. But see! down to the west is a dark blue line which certainly betokens a breeze. We come rapidly towards us, we speculate as to the hour of its probable arrival in Bath, or where we shall be at such time. The conjecture is, "Squid" from the Bay of Fundy, and the *Amelia* is sighted on sight, on sight, on sight, on sight, on sight, on sight. As there is a difference of thirty miles between these two points somebody has got to be wrong. The rest we cannot remember exactly "which is which," but the exception of these two, the former being the *Amelia*, master's, and the latter the "Captain's." A quarter of nine, extensive stakes, is put up, and we begin to work the light sail in readiness for the coming breeze. Here it is, and away we go before it drives us far from the shore, and every stitch in, including the tail and the man who laved the opposite side to the forestal, and holds a good capital of its swelling folds. With all these rigs on her the old *Amelia* surely knows she must put her best foot forward, and she does. The wind freshens, and the speed increases, and by patent log, having worked up from five. Pretty good for a forty! Past the Shoals we run, and leaving them to sight, Portland, in a shape of Cape Elizabeth, seems to be

A TEN DAYS' CRUISE IN '70, RECORDED BY THE "CAPTAIN."

WHO is there who ever did anything worth speaking of upon the day when he was bound on a cruise? That is, if he could help it. Certainly very few indeed is their number, and but one of the five born companions who were to sail on the *Perlees* yacht B—, 40 tons net, did anything at all on the nineteenth day of last July. We had all come on board the night before, and therefore breakfasted together preparatory to separating for half the day, two to go to business, one of whom did so, and who had been acted upon and accepted so extensively as ours, and that in one short year, in the face of blind prejudice and narrow national vanity. But patience, friend! Rome was not built in a day.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NOS. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK.

[POST OFFICE BOX 932.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparol type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible. All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, APRIL 29, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

*We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

NOTE THE CHANGE.

THE FOREST AND STREAM is now in possession of a spacious suite of rooms in the Times building, Nos 39 and 40 Park Row. The new offices have been specially fitted up for its occupancy, and nothing has been neglected which experience could suggest to secure for its editors and publishers the very best facilities of the day for newspaper work.

We are now in a central location, easy of access, and our door is wide open to receive all our friends. We had thought to celebrate the occasion by an old-fashioned "house-warming," to which should be gathered a goodly assemblage of our contributors and readers; but deterred by the impracticability of such a sportsman's convention, we are content to extend to each and all who shall read these lines, severally and collectively, a hearty invitation to call on us and inspect the new premises. Congratulations by letter and in person are in order.

With new and better arrangements for work, the FOREST AND STREAM is prepared to add to its excellence and usefulness, and to keep pace with the participation in healthy and manly sport which is so rapidly increasing throughout the country.

We must again caution our correspondents to direct all communications of every nature relating to this journal to the Forest and Stream Publishing Company, and not to any individual. This is an imperative rule to prevent the miscarriage of letters, and to insure their receipt by ourselves.

A COMMENDABLE ACTION.—The Long Island Railroad has issued an order (General Order No. 61) to the effect that "game, fish, dogs, and hunting and fishing tackle, when in charge of the owners traveling as passengers, will be carried as baggage, free of charge." This remedies an abuse frequently complained of by sportsmen who have been subjected to the extortions and incivilities of employees. The new rule will serve to make this favorite road still more popular with the sporting fraternity.

—We again invite attention to the value and benefit of our Game and Fish Directory, of which the plan is set forth in another column.

WILLIAM M. TILESTON.

TO chronicle the death of one with whom we have been long and pleasantly associated were at best but the performance of a melancholy duty, which in the present instance is rendered doubly painful because of the sad attendant circumstances under which our friend, William M. Tileston, lost his life.

Upon the evening of the 21st inst., while the Madison Square Garden, of this city, was thronged with visitors to the Hahnemann Hospital Fair, suddenly and without warning, a portion of the building crashed to the earth, crushing in its fall human limbs and destroying human lives. Mr. Tileston had been present, attending to business connected with the coming bench show, and having left the building, had stopped on the sidewalk to talk a few moments—the fatal moments that cost him his life. With his companion he was just turning to go, when the wall above them was heard to crack, and before he could obey his companion's startled exclamation to jump from the sidewalk, he was caught in the falling ruins and buried beneath a mass of mortar, bricks and timber. Ready help was at hand; he was extricated while still conscious, and borne, at his own request, to St. Luke's Hospital, where, at 4 o'clock the following morning, surrounded by the members of his family and a few intimate friends, he expired.

Mr. Tileston was born at New Rochelle, N. Y., in 1838, and came of a family prominent in mercantile life, being a nephew of the well-known Thomas Tileston. Having received a college education, he entered business life and went to China as the representative of Oliphant & Co. There he remained several years, one of the leading spirits of the English and American residents, and true to his tastes taking a lively interest in the field sports of the country. Many of his novel experiences here were afterward embodied in entertaining sketches of sport in China, contributed to the American magazines and sporting journals. Returning to California, Mr. Tileston purchased a rancho at Los Angeles, where he married. Some of our readers may recollect the capably written sketches entitled "Santa Monica," written by him and published in the FOREST AND STREAM (Vol. III., Nos. 11, 12 and 13), in which were recounted the romantic circumstances of his courtship and marriage. These sketches, with numerous others which he wrote from time to time, attracted considerable attention, and subsequently led to his assuming the position of editor of the Kennel department of this journal, a position which he filled with mutual satisfaction to himself and the friends of the paper, until he left the FOREST AND STREAM in June, 1877, to establish the Country. In October of the following year, when the latter journal suspended publication, he returned to his old position on the FOREST AND STREAM, where he remained until last November, when he left the journalist's profession to engage in business life, and established the firm of Nixon & Tileston, mining brokers, at No. 61 Broadway.

Mr. Tileston was all his life a genuine and enthusiastic sportsman. He was passionately fond of the dog, always owning several valuable animals himself, and being regarded as an excellent authority on the subject. It was to his energetic labors and executive ability that the Westminster Kennel Club, of this city, was established, and its annual bench shows of dogs conducted with such success. Indeed, Mr. Tileston was the life of the Club, and certainly to him belongs the credit of its exhibitions.

In person he was tall, standing over six feet in height and being well proportioned; he was forty-two years of age, and at the time of his death was in the best of health and spirits. In social and business life an agreeable companion, he had a large circle of friends and acquaintances, who highly esteemed him for his many gentlemanly qualities. He leaves a widow and four young children. To his family we extend not only our own sincerest sympathy, but that, as well, of those who knew Mr. Tileston through his connection with this journal.

LYCOMING SPORTSMEN'S CLUB.—The first year of the Lymcoming Sportsmen's Club of Williamsport, Pa., has been marked by eminently successful labors toward promoting the best interests of game protection. It has pursued its work so energetically and so efficiently as to render its name a terror to the law-breaker, and the pronounced evils which prompted its organization have become almost wholly suppressed. The club now numbers fifty members, many of whom are experts with rod and gun; is free from debt, and occupies a handsomely furnished room. At the annual meeting, April 13th, the following officers were elected for the coming year: President, Hugh L. White; Vice-President, Ed. G. Koch; Secretary, James Armstrong, and Treasurer, August Koch. The following Executive Committee was also elected to act with the *ex-officio* members thereof: Messrs. G. Kent, D. P. Hobart, J. B. Emery, E. B. Taylor and Alex. Davidson. A series of highly complimentary resolutions were passed, appreciative of the efficient labors of the retiring officers—Messrs. H. S. Lucas (President), H. Tallman (Vice-President), J. W. P. Parsons (Secretary) and August Koch (Treasurer), and of the Executive Committee.

AN UNJUST INSINUATION.

IN a recent issue of one of our contemporaries we find a most surprising editorial effusion on the subject of field trials in general, the Eastern Field Trial Club in particular, and the breeders of dog-flesh at large. This remarkable production—remarkable on account of its extreme narrow mindedness and inconsistency—should not be allowed to pass unnoticed. The paragraph which is most fallacious in its reasoning and most unjust in its insinuations is as follows:—

One thing to be commented upon regarding the late trials of the club, was the fact that the dogs entered and ran were, with one exception, the dogs hunted and owned by gentlemen sportsmen—men identified with the love of a hunting dog, and not looking upon a setter or a pointer as a thing, a machine, from which money may be coined by cash sales. We find that the dogs ran for the amusement, the pleasure, the delight, if you will, of their owners, and not to gain *felix* in victory to be then used as an advertisement for future emolument. The entries already received for the coming trials of 1880, to be run at Klobbi's Island, and commencing Monday, Nov. 29th, show the feature we allude to in a remarkable degree. In the list of entries we give below, our readers will find no long lot of entries from the various noted kennels of the land, identified with dog-breeding as a business, but instead, a dog or two from men who intend to run their dogs at the trials in good faith, and with the hope of winning there. In making these remarks, we have no intention of reflecting upon the National American Kennel Club in any way. We are desirous of seeing the two clubs work harmoniously together for the common good, and we feel assured that the Eastern Field Trials Club would be the last to interfere with the National in the slightest degree, unless aggression comes from the latter. There is room enough for both.

If there had been one particle of manly or honest sentiment in the above, we should not have deemed it worth our trouble to go out of our way to expose the absurdities which it contains, for we feel that the direct slurs at kennel clubs and dog-breeders will fall as harmlessly as the proverbial drops on a duck's back, but we consider that it is in extremely bad taste, since nearly every man now-a-days, who owns a really good animal, sells either pups or stud services. The expressions in the article alluded to are inconsistent. Why does not our contemporary find fault with the horse-breeders of the country for standing their stallions or selling colts, or with other stock-breeders for making a business of breeding? It is just as legitimate and just as honorable to sell dogs as to sell horses.

Again, these slurs are in bad taste, because the men by whom their author is most intimately surrounded have for years traded in dogs, and the bad feature of it is that they have been able to give very little for the money; and as he himself has probably realized something for dogs and the breeding of chickens, he is evidently not exactly in the position to throw the first stone. Although we have been extremely gratified and encouraged at seeing, of late, the gentleman sportsman take the breaking-whip in his own hands, and make such excellent records in handling as have been made at the late field trials, yet we would be equally gratified to see the sporting press of the country, which should be looked upon as a sound and healthy authority, preach less cant, and practice what is considered to be the standard precept of the sporting man—all that is honest, manly, open and fair.

If there is one class above another in this or any other country fitted to breed stock for an emolument, it is that composed of individuals who have other collateral than buncombe to fall back upon. It is only the well-filled purse, in the first place, that procures the best and finest stock, and that can afford the means of so keeping it that its future offspring may be healthy and sound. To the class of men who, for their pleasure, or for their profit, have carried out this course, the sporting community here is immeasurably indebted, and especially to this generation of shooting men, and those that are to come, has the introduction of breeding-kennels in America been an endless boon, for it has given many a man the whereby for enjoying his favorite sport to the utmost, to which his limited means would otherwise have kept him a stranger.

From the whole tone of the article it is evident that a sly cut is intended for the National American Kennel Club, for the writer referred to disclaims any such reflection before he is accused. Why he should do this, when it is admitted that "there is room enough for both clubs," is an enigma, and when taken into account that the officers of the N. A. K. C. are this year all from the East, there certainly can be no just ground for jealousy. We shall make it our pleasure to aid in every way the success of the Eastern Field Trials Club, but none the less will our endeavors be directed in assisting the N. A. K. C., in becoming what it should be—a national association. As for field trial clubs, the more the merrier.

But even were the ground taken by our contemporary a just one, the list of owners submitted as being made up of men who are not interested in dog breeding as a business is not what it pretends to be, but on the contrary, it includes several names which have before now been signed to receipts for money for dog flesh or dog breaking. Here it is: our readers may judge for themselves:—

J. B. Goodwin, Norwich, Conn.; J. G. Heckscher, Union Club, N. Y. City; Lincoln and Hellyar, Warren, Mass.; J. Otto Donner, 117, Wall Street, N. Y. City;

T. Gladstone, Bonton, N. J.; J. N. Lewis, Clarksburg, N. Y.; Charles Heath, Newark, N. J.; S. Dillon Ripley, N. W. 37th street, N. Y. City; C. Sterling, 44 Warren street, N. Y. City; A. Belmont, Jr., Union Club, N. Y. City; James Benkart, Union Club, N. Y. City; St. Louis Kennel Club, St. Louis, Mo.; Fred. Herzman, Greenport, N. Y.; H. F. Aten, M. D., Brooklyn, N. Y.; L. H. Billings, 29 Broadway, N. Y.; W. H. Holmes, Orange, N. J.; T. Forman Taylor, Colt's Neck, N. J.; G. T. Leach, Thurber & Co's., N. Y. City; W. J. Belden, Riverhead, L. I., N. Y.; William Stanley, Broadway, N. Y. City; Andrew J. Bache, Morristown, N. J.; Jacob Pentz, W. Buckingham, Norwich, Conn.; J. B. Dilley, Lake City, Minn.; W. A. Coster, Flatbush, L. I.; H. Hall, Marlboro, N. Y.

NOTES.—We need not add anything to the communication of the Secretary of the Long Island Sportsmen's Association. He has presented the claims of this part of the State so conclusively that we shall confidently look for the Convention here next year. We heartily second the views of our correspondent, and commend them to the favorable consideration of the clubs throughout the State.

The articles on Dog-Breaking, published in our Kennel columns, are plain, practical and to the point. So say our readers, and the numerous compliments given to them prove that a good thing is appreciated.

The Connecticut Lakes country is becoming more popular as its attractions are becoming better known. The writer of the article in our issue of to-day is well-informed, and the hints he gives should be followed by visitors to that region.

The article, "Lost in the Maine Woods," published in these columns some weeks ago, has been extensively copied by the press of the country. One reason of its taking so well is that this losing one's way in the forest is not an unusual experience, and the relation of our correspondent's adventures recalls to mind other mishaps of a like nature.

We publish to-day other expressions of opinion about the trap-shooting of pigeons. While holding very strong convictions on the subject ourselves, and which we shall not hesitate to fully express, we prefer at present to hold our columns open for the fullest and most free expression of the views of interested correspondents. We invite terse, concise expressions from our readers.

A London angling society has just celebrated the anniversary of the death of Julius Cesar. Just what that worthy did, that his death should be remembered by fishermen in this Nineteenth Century, is quite beyond our comprehension, unless our English brothers of the rod bear in mind the days of their youth, when sunshine and zephyrs invited them to the trout streams, while inexorable fate and an unrelenting tutor confined them to "Cesar's Commentaries" and the intricacies of bridge building in the time of the Gallic Wars.

A sportsman is not necessarily a "Nimrod," although a certain class of writers affect the word, probably with the idea that it adds dignity to their books. This use of strained language is offensive to one who finds genuine enjoyment in field sports. A "Nimrod," to our mind, is a blustering young fellow, trapped out in all the toggery of a sportsman's furnishing store, who acts in the field very much like an Indian in a war-dance. The epithet is a derogatory one. Sick to "Sportsman," a term which has of late years acquired new credit and dignity.

Our rifle-shooting record in this number gives Mr. Lauritzen, of the Washington Club, a fine record of 219 at the long ranges, and strengthens his position on the flattering list of American marksmen who are safe for the high teens, with good prospect of reaching the twenties, as he did last year with his unequalled 232 in a match. It is matter of a pity that the harsh native-American rule should bar so reliable a man from international contests, for although a Dane by birth, Mr. Lauritzen has long been naturalized. Custom unhappily joins with law, and puts the Presidency and a place on a national rifle team as about the only discriminations against a foreign-born citizen as regards eligibility.

Much of the matter published by the FOREST AND STREAM is well worth reproduction elsewhere. We are gratified and complimented every week in the year by such appreciative copying in other papers. This is editorial courtesy which we always appreciate. Sometimes, too, it happens that we unexpectedly find ourselves in high places. An instance of this occurred the other day. We were looking over the April number of *Scribner's*, and became interested in an article describing the mules of the Rocky Mountains, an interest, however, which straightway abated when we found that the paper was substantially one published months before in the FOREST AND STREAM. The trappings were somewhat altered, and the animal was bedecked with sundry new accoutrements. But it was our mule, after all, and eminently

worthy of his new place, too, we thought. It is needless to say that the editor of *Scribner's* was as much astonished to see in the FOREST AND STREAM the original article as we had been to see its reproduction in the pages of his magazine. The Rocky Mountain mule is a deceptive creature. One knows not what to count on when dealing with him.

Civilized nations have passed and left no sign; but the Indian will be remembered by two things at least—the birch bark canoe, which no production of the white can equal for strength, lightness, gracefulness, sea-going qualities, and carrying capacity, and the snow-shoe, which appears to be perfect in its form, and like a violin, incapable of development or improvement. There are three inventions which the ingenuity of man seems to be unable to improve upon, and two of them are the works of savages, namely, the violin, snow-shoes, and birch-bark canoes.

In this, Lord Dufferin is certainly not very complimentary to the mechanical genius of the century, and we would suggest as one reason why civilization has not improved on snow-shoes and birch-barks to any great extent, the fact that there is very little to improve upon. But for all that, it will hardly do to assert that the snow-shoes manufactured in civilized parts are not in point of strength, durability, pattern and finish far ahead of what the aborigines turn out. Similarly, the birch-bark is an excellent creation for the woods; but the very fact that the civilized sportsman takes more kindly to a Rushton canoe, whenever he can get one, must be accepted as the evidence of hard facts in its favor. As a makeshift, give us a birch-bark, and light the camp fire by the friction of kindlings; but as a matter of choice, send us a civilized canoe and a box of matches.

HIGHLY IMPORTANT IF TRUE.—We understand that the celebrated Sibau Mobung, chief of the Treng Dyaks, recently informed Herr Carl Bock, whom he encountered during the latter's explorations in Borneo, that he frequently cut off the heads of human beings of both sexes, for the purpose of feasting on the brains, which, he affirmed, were most excellent good eating. The palms of the hands too, he stated to be toothsome morsels, while the shoulders, on the contrary, he pronounced to be bitter. An authoritative statement like this, of the relative value of different portions of the human body as food, is certainly not without interest; but we could wish that the information were more extended and detailed. We presume that it is hopeless to call on any of our readers for information on such a topic, but we have two or three friends who could, if they would, present to us their experience. Old Bears' Ears, the Ree, for example, if his hair still adorns his venerable head, and has not become, since we last saw him, the ornament of some Sioux lodge, could inform us as to the excellence of the Sioux heart as a *bonne bouche*; and Liver Eating Johnson, if he still lives and moves and has his being on the plains and among the mountains of Montana, could furnish valuable statistics as to the flavor of certain parts of the freshly-killed Red man. It is sad to think how fast the men who could have told us what we want to know on the subject, are passing away. Bloody Knife went down, with many another good man, in the fearful fight of the Little Bighorn, and Tuckee-tee-lous, the Pawnee, has for years been killing the fat cows in the happy hunting-ground of his own people, that lies far beyond the shining western ocean. Our civilization—God save the mark—has cut down the Red man to the ground.

FOR THE BENEFIT OF WHOM IT MAY CONCERN.—Fish ponds and newspapers are alike in that it is an exceedingly easy matter to sink a fortune in either, but quite a different task to get anything substantial back again. We cannot number on our fingers the experimentalists who have found their trout-ponds only expensive luxuries; the number of newspaper amateurs is equally great. The success of one journal always invites a crowd of emulous imitators, who think that an investment in printers' ink must be a sure and speedy way to fortune. It has been the lot of the FOREST AND STREAM, since its beginning, seven years ago, to note from time to time the birth, life and death of numerous sporting weeklies, whose projectors have found only after dearly bought experience, that their sheets would not pass current for bank-notes.

We have watched each of these ventures with more or less interest, and from the fitful vicissitudes of their vexed existence, have not failed to draw the patent moral. Among other principles in the philosophy of the newspaper world we have noted this, and we here set it forth for the benefit of some of our friends: A publication which is made up principally of pickings and stealings—mostly stealings—from leading journals in its field, has an exceedingly uncertain tenure of life. Its limited constituency of readers will inevitably in time come to find out the source whence it draws its good things, and following the rule in such matters, will prefer the original to the weak imitation. The sheets which batten on the FOREST AND STREAM, stealing whole columns bodily, are annoying for the time being, but, like the pestiferous gnats and flies of summer, are sure to disappear when the frosts come. There is some consolation in that.

Some of our correspondents now and then write complaints of these papers, which not only quote their ar-

ticles from the FOREST AND STREAM without credit, but affix the writers' signatures as well, thereby making it appear that the writers themselves are playing double with us by writing the same thing for two papers. This is of little importance to us, and we only mention the circumstance at the suggestion of our aggrieved contributors. We can hardly hope to remedy the annoyance, for such an undertaking as that would involve the task of instilling into the befogged minds of these editors a code of ethics entirely above their character and appreciation.

So much for so much.

AGRICULTURE IN ALASKA.

SMITHSONIAN INSTITUTION, WASHINGTON, }
April 24th, 1890, }

Editor Forest and Stream:—

"Piseco" was right in the statements of fact which he made before, and as I declared; why does he simply repeat those statements, and then leave the question exactly where we left it—a difference of judgment, based upon a mutual recognition of the same facts? I admit the potato now, as I did then, but I do not "acknowledge the corn!"

"Piseco" has passed just one season in Alaska. He has arrived at his honest self-opinion in regard to the agricultural capacities of Alaska; he agrees with me in the main, but he says I am in error over the potatoes. Well, here is the opinion of an honored, cultivated officer, Capt. George W. Bailey, United States Revenue Marine, who has passed four seasons in Alaska, closing with October, 1879. I select Bailey's name out of twenty on my files, because he was just such a man as "Piseco"—a "Captain in the Navee," an honorable, elegant gentleman:—

Regarding the resources of Alaska, and it being able to give support to a large population, I have only to say that, so far as a settler's opinion goes, it is folly to talk of such a thing in connection with Alaska north and west of Sitka. Instances have been cited where people have lived in part from the production of the soil in more northern latitudes. In some parts of this territory, the southeastern, no doubt the hardy vegetables could be raised, but hardly in sufficient quantities to support a large population.

Here I am sustained exactly in the broad, liberal view which Capt. Bailey gives of the subject. I have not said anywhere that potatoes could not be raised in Alaska, but I do say that this individual raising of a potato at Sitka "seven inches long," etc., proves nothing in a practical way. I said in 1874 that Alaska could not encourage agricultural settlement because she did not hold out a single sign of encouragement. Why, these little patches of potatoes at Sitka and at Kodiak in Alaska are precisely, in their application as illustrations of agricultural progress and capacity in Alaska, like the appearance of a stray hair here and there on the top of a shining bald head! Yet "Piseco" sees the hair aforesaid, and thereupon declares that more will come if they are cultivated!

Let me call "Piseco" to a moment of reflection over these facts. First: Alaska is not a new country; it has been thoroughly looked over and tried by Russians for at least seventy years prior to our acquisition of it. These Russians made energetic, intelligent and persistent trials of the resources of the soil everywhere throughout Alaska. It was to their direct self-interest to do so, for it was both a matter of necessity as well as that of luxury to have grain, beef and vegetables at their posts of duty. No more intelligent agriculturists than these Siberian farmers were (and are to-day) can be found in America. What was the result of this long, patient, interested attempt by the Russians to raise their own vegetables, grain and beef in Alaska? It resulted in failure, practically. They had to go down to California, and establish a settlement on the Russian River there for the end in view. Comment is unnecessary.

Second: The fact that the climate last season was such as to grow good potatoes must not be used to predicate success at Sitka this year. Indeed, if "Piseco" follows his potato through the coming season, he will bear us out in saying that no dependence can be placed upon the crop: the chances are nine to one against a good season this year, since it was favorable last. One successful planting in four years is about the rule at Sitka. Let me quote Captain Bailey once again to reinforce my argument:

There are, no doubt, people who, satisfied with a mere existence and willing to live upon the productions of the water and beaches, and what vegetables they could raise in this inhospitable climate, might elude out a more comfortable existence than they now do. Such might consider Alaska a paradise. But the representations of some persons, who have described Alaska in glowing terms, I consider to be wrong, as they might induce the immigration of settlers, who would not be satisfied after spending their all in getting here. The surplus population of our large cities can find better homes than can be found in Alaska. In some of our Western States and territories where a milder and more fruitful climate is to be found. Until the latter are crowded with settlers, it is unwise and unjustifiable, in my opinion, to try and induce immigration to Alaska. . . . Alaska has been claimed as a grazing country for sheep as well as cattle, but only by those who have seen the beautiful grass growing in summer, and without taking into account that during the greater part of the year this beautiful grass is covered with snow. It is only in the neighborhood of Kodiak that grass can be cut and cured in sufficient

quantity to keep what few cattle they have during the winter; indeed, hardly a winter goes by but some of these few die of starvation.

I like to put this opinion of one honest mariner against that of the other. "Piscico" and Captain Bailey stand each other off admirably, while I pursue the even tenor of my way. It requires a certain breadth of beam to carry sail well under the sudden puffs of violent criticism, as no one enjoys the capsizing of a self-constituted authority, who makes his professions of fact and result, based entirely upon his able imagination, better than I do. Cognizant of this danger, I, myself, have looked well to my stays in Alaska, and "Piscico," when he comes down from his warlike ark at Sitka Bay, exchanging the gloom of Alaska fog and rain for the glad sunshine of California, will say amen, amen to my sermon.

HENRY W. ELLIOTT.

GAME PROTECTION.

WISCONSIN.—The Black Hawk Club of Lake Koshkonong, Wis., have been successful in introducing into the game laws of that State an amendment prohibiting cover shooting of wild fowl from blinds, etc., a provision which most thoroughly protects the birds in their feeding grounds. The law now reads as follows:—

Any person who shall take, catch, kill, destroy or wound any woodcock, prairie hen or prairie chicken, partridge or ruffed grouse, sharp tailed grouse, or grouse of any variety, snipe, quail, mallard, wood or teal duck, or deer, by the use of any net, trap, gin or spring-gun, or who shall hunt, drive, chase, worry or kill any wild deer, by or with a dog or dogs, or who shall kill, destroy or wound any wild duck, brant or goose, by the use of any pivot or swivel gun, or any fire-arm other than a gun habitually used at arm's length and fired or discharged from the shoulder, or raised and held by the hand, or by any float, sneak boat, sail or steamboat, or floating box of similar device, or from any fixed or artificial blind or ambush located in open water outside or beyond the natural cover of reeds, cane flags, or wild rice, or any lake, river, bay or inlet, or attempt so to do, or who shall take, destroy, or have in his possession the eggs, or wantonly disturb or molest the nesting place of any prairie hen or prairie chicken, or grouse of any kind or variety, woodcock, quail, partridge, snipe, wild duck, brant, or who shall pursue, entrap, ensnare or kill any other, beaver, mink, muskrat, or other fur-bearing animals upon the lands or to the middle of any stream of water adjoining the lands of another engaged in the business on such lands of breeding or rearing such animals, shall be punished by fine not exceeding one hundred dollars, nor less than five dollars, for each offense. Such fine when collected shall be paid to the county treasurer, and by him to the school fund.

Game Bag and Gun.

GAME IN SEASON IN APRIL.

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County, means of access; Hotel and other accommodations; Game and its season; Fish and its season; Boats, Guides, etc.; Name of person to address.

ABOUT A RAMROD.—Extracted from the unpublished adventures of John Doe and Richard Roe, sportsmen:—

"It was early one morning that our friend John perched himself on a large muskrat house in the middle of the pond 'to look out for ducks.' There he stood teetering away, with the down off the cat-tails blowing down his gun's barrel, threatening to choke it. At last John spotted an old sheldrake swimming up. Now John was a 'mighty good gun to kick,' 'the best he'd ever seen,' and he was terribly afraid of pitching backward if he 'let go, standing up,' so he made up his mind to lean forward as he 'pulled,' knowing the recoil would set him up all right. It was a dreadful nice calculation. But you see the 'darned' old gun snapped, and away went John, head first, into the mud, gun and all, when Dick waded in and fished them out. In trying to scoop the mud out of the barrel the ramrod got stuck; so over to the beach they went, with five feet of ramrod sticking out, to challenge some mighty fishermen to a 'tug of war.' After our two friends had been 'drug' over two sand-hills and a pile of clam-shells it occurred to the contestants that the rod was in to stay. But said old Capt. John Ed., 'What cursed fools we've been, boys, a-sweatin' over that 'ere gun, when we can make fast a squid-line, shoot the ramrod up, and then haul the old she-rocket down.' No sooner said than done; the 'old she-rocket' did go up, but as no one thought of putting their foot on the other end of the line, she was soon 'lost to sight and memory dear'—*den* indeed, for as Capt. John Ed.'s weather eye dropped earthward, after following the comet's heavenly flight, he said 'Boys, I'll thank you for 67 cents for that line you've gone and lost.' This is not all, for the gun—so John Doc says—smells like that old sea-porgie Captain to this day, which scares away the big game."

NEW YORK.—Hayts Corners, Seneca County, March 30th.—Wild geese have stopped more frequently here than usual. M. L. Everett and his son were on their way to Waterloo (six miles north from here) on Saturday

last, and four miles this side they saw some forty or fifty wild geese within fifty yards of the main road, and they say they were in sight of several vehicles on their way to market, and that one man shook his hat and shouted to scare the geese, as they were busily engaged feeding on green wheat. They paid no attention, as their sentinel gander was on duty sharp, until a man was seen approaching across the adjacent field with a rifle in hand. Then at the signal all rose and were on their way toward Cayuga Lake, four miles east; therefore there were no shots fired at them.

L. E. W.

THE STATE CONVENTION.—Messrs. Parrish & Williams, of the Seneca Gun Club, Seneca Falls, have contracted with Frank Chaffey for the immediate delivery of 12,000 wild pigeons to be used at the coming tournament. One thousand birds have been shipped to the Monroe County Club, and will arrive this week, with a similar consignment to follow next week. The Rochester Gun Club and several clubs in that vicinity, have also ordered birds of Mr. Chaffey for practice.

Monday, May 24th, has been appointed as the date for the opening of the Convention.

Jornelleville, April 28th.—The first woodcock of the season was killed by a telegraph wire. No Wilsons snipe yet. A few ducks stop with us and get a warm reception. Tom Tennant killed thirteen one day last week.

J. O. F.

NEW JERSEY.—*Forked River, April 24th.*—The Wilson snipe shooting has been moderately good in this section for the last few weeks. The largest bag I have heard of, in one day, was thirteen, by a gentleman from New York, with one of our local gunners. Were it not for two or three parties here who make a business of bagging dogs, and scout the meadows at every opportunity, we would have fine shooting.

A.

Ocean County, N. J., April 24th.—For the past few days there have been plenty of snipe on certain meadows—others none at all. I find they are most likely to be found this spring on very treacherous places, near high banks, where small fresh water streams run through. I have shot them this week where I went knee-deep every step. They do not lie well, and give no scent, and the best quail dogs totally fail to find or point them. The principal destruction of game is caused by the set-back fires started by men to stop the snipe or the fire. The game is now closed in the State, the fire is surely destroyed. It is impossible to estimate the immense loss of all kinds of game by these terrible fires, and almost always caused by some careless person burning brush and clearing up land. In my opinion there should be a law to prevent any person burning brush, for any reason whatever, except it be raining or snow on the ground. Two winters will pass before those woods will be what they were. S. K., Jr.

PENNSYLVANIA.—*Harrisburg, April 25th.*—Duck hunters have had good success the past week at Green's Dam, McCormick's Island, Cox's Wharf above Independence Island, between the island and the mouth of Conodoguinet Creek, and elsewhere.

PENNSYLVANIA.—*Applebachsville, April 18th.*—I and a friend were out snipe shooting last week. We met with poor success, bagged eleven in half a day. I shot four ducks in the creek the other day, and saw several geese. I hear most every morning the quails whistling. I think we will have some fine shooting by next season. Phensants are very scarce in the mountain. DEAD SHOT.

GEORGIA.—*Americus, April 15th.*—Quail are whistling "Bob White" on the fences, and the turtle-doves have mated. Whip-poor-wills, martins and woodpeckers have arrived, and the freedman, or rather the freedwoman, is happy with her pole and cotton string catching "jolly-voogs" from branches and cracks. The sportsman's gun is laid away, and the fox is allowed to rest and muse. Only the wild-cat is relentlessly pursued to protect the lambs and the litter of pigs in the swamp. SHOT.

OHIO.—*Cadiz, April 20th.*—Around here game is rather thinned out. Quail are very scarce; I saw only one covey last winter. The severe weather of '78-'79 very nearly exterminated them. However, by the time the law is up I think they will be plentier, though if it hadn't been for that law I'm afraid there would not be many quail in the Buckeye State by this time. We have a few ruffed grouse here, though not many care to hunt them, because most of them have been killed that the wholesale slaughter of squirrels is "sport."

There are occasional snipe and woodcock found in this region, though extremely rare. I believe if the average Cadiz hunter would kill one of either of these birds, he would, through ignorance, leave it as unfit for eating, or have it mounted as a *rara avis*, though there are several genuine sportsmen here.

Squirrels are generally very plenty, rabbits the same, though this last winter they have been rather scarce; not so the year before, however, for then the woods were full, anywhere between twelve and twenty generally being the results of an afternoon's shooting. There is no wild fowl shooting at all within fifteen or twenty miles, as there are no bodies of water large enough. There are a good many foxes in this country, though few good fox-hounds.

Cadiz is a small village on a branch of the Pennsylvania Railroad. It has a good many stories of the early settlers around here. One is to the effect that an old hunter captured a wolf and skinned it alive, after which he set it loose. It is true, too. There were a she wolf and four whelps killed near here a few days ago. We have a sportsmen's club here, and some of the members are right good shots.

YOUNG SPORTSMAN.

INDIANA.—*Newport, April 17th.*—Snipe and plover shooting is very good on the marsh lands of the prairie west of this point. On last Tuesday afternoon my friend Ward and myself drove eight miles west of town to a point on the prairie known as Greasy Creek. We shot that evening and two hours next morning, bagging three blue-wing teal ducks and fifty-three Wilson snipe and plover.

R. E. S.

INDIANA.—*Cloverdale, Ind., April 5th.*—Was out the other day shooting with the snipe. They made their appearance about March 25th, with a storm of rain from the southwest, and are, as yet, very wild, and as a natural consequence, my bag was light. They are in good condition for the table, which I place to the credit of our mild winter. An examination of their feeding ground

disclosed plenty of grubs, snails and larvae. Spring is now surely upon us, if our numerous early-calling birds are taken as evidence.

LA BELLE.

SIDE SHOOT.—*Tuscola, Ill., April 22d.*—Following are the scores of a match shoot at Jack snipe yesterday:—A. M. Woody, 33; T. Smith, 31—Total, 64. Frank Wilson, 37; Armstrong, 17—Total, 54. Difference, 10. Snipe are plenty, but too many shooters.

T.

MINNESOTA.—*St. Paul, April 10th.*—Hon. Fred. von Baumbach, Secretary of State, and P. J. Giesen, Esq., returned yesterday from a hunting expedition of several days in the vicinity of Redwater Falls. The gentlemen brought with them several geese, a few ducks and badly a m-burned faces to show as the fruits of their trip.

WISCONSIN.—The famous "Fish Creek," one mile west of Ashland, Wis., is reported to yield from three to six thousand brook trout per annum, and has done so for the past ten years, and still it seems exhausted. Some of the finest trout that have been taken in that country have been brought in from its ice-cold pools and rapids. Last season several very large trout were caught, one weighing three and three-quarter pounds, and one four pounds two ounces, both taken by Adam Goeltz, the well-known guide.

DAKOTA TERRITORY.—*Deadwood, April 8th.*—We have plenty of most all kinds of game, such as elk, deer, antelope, bear, mountain sheep, wolf, fox, rabbit, hare, prairie chickens and grouse, but no quail. Our club have sent to Minnesota for several hundred, and will turn them out on the Redwater and Belle Fourche, so that in a short time we will have good shooting. Ducks and geese are very plentiful. One cinnamon teal was killed the other day that dressed 760 pounds. One party went out to the Belle Fourche last week and brought back a wagon load of deer, rabbits and ducks too numerous to mention, being absent only three days. Fish are plenty and of all sizes, also fine turtles. In fact we have one of the finest countries for a sportsman in the west; every year will add to its interest. The weather is beautiful and spring is in full bloom.

E. B.

PRACTICAL VALUE OF GUN TRIALS.—*Philadelphia, Miss., April 2d.*—I see many things in FOREST AND STREAM that please me, but what has pleased me most is the valuable gun trial for pattern and penetration, in its issue of March 4th. Now, I wish that more of the sports, men would give their experience in the same way, that their brothers who live in dark corners may have some light to guide them in selecting their game. S. P. N.

BUCKSHOT IN CHOKE-BORES.—*Houston, April 15th.*—Last week a member of the Houston Gun Club received a 10-gauge, W. W. Greener's hammerless gun. This is the first seen in this section. Members meet to see it targeted. After finding it made good targets with this small shot, ten shells were loaded with 100 buckshot, and chambered three at muzzle, nine shots in each shell. 50 lbs. of powder was the charge. After counting the ten targets made at forty yards, we were surprised to find that the new gun had put ninety shot inside the thirty-inch circle, or a loss of one per cent. for each load. A well-known deer-slayer remarked, "That gun will fetch melet every time, if you hold her straight." ALMO.

WHOLESALE AND RETAIL DEALERS.—*Portland, Me., April 24th.*—Editor *Forest and Stream*.—I am heartily glad that some one has had the courage to "speak out" about the practice of manufacturers and wholesalers in giving, to the sportsmen, goods in regard to the manner in which retailers are treated, and hope it will have the effect of bringing about a reform in this direction. As the business of many wholesale houses is now conducted, nearly every consumer knows the exact cost of this class of goods as well as the retail dealer. About every grocery-store keeper in the country, and others supposed to be in want of anything in this line are supplied with goods at a price that is not stated here, and some even go so far as to offer to send a single article on receipt of price named. This is manifestly unfair treatment of the retail dealer, giving him a chance only of picking up a customer now and then. I would suggest that the names of those who adopt this method be published, that the "trade" may know how to discriminate in giving orders, or that it might be changed, an advertisement for the wholesaler. However, if they read what has been, and may be, said upon the subject, they will learn that the retailers are after them with a sharp stick. I have noticed, in one instance, that in the case of a Ballard rifle, the statement is made that no discount will be given, except to the regular trade. There may be others of the same kind, and, if there are, they are the very parties we are waiting to hear from. Keep the ball rolling. DOWN EAST.

THE CONVENTION OF 1881.

BROOKLYN, N. Y., April, 1880.

Editor *Forest and Stream*:
At the Convention of the New York State Association for the Protection of Fish and Game, held at Rochester, July 7th, 1879, delegates from three of our local clubs united in an invitation to that body to visit Kings County.

It was apparently so well received that we are encouraged to renew it, sincerely believing that its acceptance at the approaching Convention will promote the interests of all sportsmen, and prove satisfactory and beneficial to the members who may partake of our hospitality. Many of the individual sportsmen of the State know, and probably all have heard of, what we can do in the way of entertainment.

We urge that the Convention of 1881 should be on Long Island for the following reasons:—

First. For sanitary reasons. The thermometer during the summer averages about 75 degrees. The cool sea breezes are peculiarly invigorating to visitors from the interior. Experience demonstrates that the change from inland to sea-shore, and vice versa, operates to improve the general health for a long time afterward. Substitution of entirely different food will contribute to this result. We claim that our sea food—oysters, clams, lobsters, crabs, bluefish, weakfish and other varieties—cannot be excelled, if indeed equaled, in the world.

Second. Amusement and pleasure at moderate cost. We propose to hold the contests at Coney Island, or in the immediate vicinity of this world-renowned pleasure resort. It can be reached from New York City by five distinct steam railroads, also by one horse railroad, and by a steamboat, which shall open our Bay and Narrows, passing our islands—me fortified—and by the

how quickly the owner of a lead or bad score finds out that his friends have noticed his name too much lately in the papers, and it will be advisable to have the bogus one inserted; and the honest shooter, who, with his proper name, may have been beaten in the previous records, finds out that now it is his turn, he only wins over some false names. This method had advanced to a high state of perfection last year, when, to the credit of the Massachusetts Life Association, they took the bull by the horns and made it a law that whatever name a person entered a match with should be applied through the same. Although this law has been broken a few times since its adoption, it has been the means of doing away with much of the previous injustice. The only alternative now to escape detection, is not to finish a single score throughout the day, which, before the last shot on the score is fired, does not give evidence of being a good one. The Haymond Sportsmen's Club snub this plan, by the publication of the best withdrawn score, which is doing justice to all the shooters. The two following rules are in the interests of all riflemen and glass-bull shooters:—

1. The name under which a competitor enters must be continued throughout the match.

2. In the event of unfinished score or scores, the best be reported.

The adoption of these rules by the Haymond Club has reduced the bogus-name business to the narrowest limits.

D. KIRKWOOD.

ORIGIN OF THE TERM "BULL'S-EYE."—The New York World, in its Notes and Queries of April 18th, asks: "What was the first form of the center of a target, and why was it called a bull's-eye?" "Libotta" responds: Authorities differ on this point. The older writers say that the target was originally a small shield. Concrete says it was square, while Worcester says it was large and round. One thing is certain, its use as a word in the sense of being anything but a shield is of very modern date. The word "bull's-eye" is equally modern. After a considerable comparison of authorities I have arrived at the following conclusion: That a target was so called from its resemblance to a shield; that the term "bull's-eye" was first applied in naval gunnery. It was already a naval term, being used as a name for a thick piece of glass inserted in the deck to give light, and which was generally of an oval form. The center of the target, as commonly used, being of the same size and shape, the same name was given to it.

"Uncle Toby" asserts: The Tartars, famous for their use of the bow, teach their youth to shoot at a mark made of hide, pierced in the middle. This is probably the oldest form of target. Such were in very early use among the Saxons, and afterward those painted with rings and a white spot. From the Saxons we have the term "bull's-eye," the word "bull" or "boil" being applied to anything circular. In Scott's description of the archery contest at Ivanhoe, "chap. xiii," the target is described as marked with rings and having a white spot in the center.

"Delta" is another one who has worked out a response as follows: The old name for the center of the target was the "clout," and it was always painted white. The piece of wood which held it on was called the "pin," and marked the exact center. The "clout" is supposed to have been so called from a piece of cloth having been at first used to mark the center of the target. "Clout" being the old name for patch or rag. Target was formerly the name for a shield, and it is probable that a shield used at first to be set up for a mark. Shakespeare speaks of "bitting the clout" in "Love's Labor Lost" and in "King Lear," and we have still the expression "to hit the white." The central mark of the target was probably always round or oval in form, and thus the name of bull's-eye was given to it, as it is applied for the same reason to many other things, among others, to the round, old-fashioned watches worn by our grandfathers, to the round windows put in the roof for ventilation (hence the name "oil de bowl" given to the oil used at Venetian blinds), and to the old-fashioned plate-glass from the round knob left in the middle by the end of the pipe through which it was blown.

A Creedmoorite puts the following explanation on it: Everybody knows that, sometime B. C., George Wood invented the target now known as "The Tramp" target. It differed, in those days, from the one now in use, in having a mammoth tooth of a bull, and his eye was the central point (metaphorically speaking) aimed at. No charge for information. H.

Archery.

MICHIGAN ARCHERY TOURNAMENT.—The first annual meeting of the Michigan Archery Association will be held at the Recreation Park in Detroit, June 23d and 24th next. Medals will be contested for at the Double Columbia and Single York rounds. Handicaps: Ladies, 30 yards; gentlemen, 40 yards. Team shooting at the Columbia and American rounds. Matches not confined to archers in the State, but open to all, will be shot at the English and York rounds. From pledges already made the committee feel safe in saying that prizes to the amount of over \$1,000 will be offered. Constitution and rules furnished on application to Dr. W. H. Durance, Jackson.

The success of the meeting is a matter of interest to every person interested in this elegant and invigorating pastime, and clubs intending to participate in the tournament should lose no time in joining the State Association. More than one hundred prizes will be offered, and it has been the aim of the committee to arrange that they may be evenly distributed, and not all carried off by a few superior bowmen.

The professional element will, as it has in all other American sports, detract from the amusement as a pastime, and should not be encouraged. No archer need fear to compete, for all Michigan clubs are young, only two of them having ever taken part in a tournament. Persons wishing to perfect their shooting will find this meeting a good place to get pointers. Assurances have been received that Will H. Thompson and other prominent archers will attend. The committee are desirous of putting programme and other matters in the hands of the hands of every club in the State, and to that end earnestly urge clubs not belonging to the Association to furnish the names and location at once whether they intend to join the State Association or not.

E. T. CURCHIE.

CHAIRMAN EXECUTIVE COMMITTEE M. A. A., Charlotte, Mich.
SHORT RANGE PRACTICE.—Galesburg, April 16th.—*Editor Forest and Stream.*—The communication from "L. W.," giving the effect of short-range practice upon long-range shooting, has led me to make a few remarks to our readers my experience of the effect of long-range practice upon short-range shooting would not be altogether uninteresting.

All my practice the past winter has been out of doors, and until Feb. 21st, at the York Round. Then, owing to the dilapidated condition of my arrows, I shot the American Round several times. My last record in 1879 at this round was 73-338, my best 73-263. My first in February was 83-111, my best 85-445.

Last Saturday I would not shoot at the long ranges, as a friend

had carried off my finger-tips; so I shot at the mode of New York, i. e., 90 arrows at 37 yards. My fingers burned before I had finished my score, but I persevered. My record is 90-616: first 24, 202; second 30, 263; third 30, 336. A moderate wind was blowing across the course. By the way, I find that the wind annoys me most by its effect not upon the arrow after it has been loosed, but upon my bow-arm before loosing.

I should like to ask the experts a question. Is a good bow for the long range sure to be a good one for the short? My own shooting at the long range is relatively better than at the short, and I am inclined to explain it by the construction of my bow. The lower arm is much stiffer than the upper, and it is to this I attributed—though I am quite likely to be all wrong—the necessity of aiming below the gold at 30 yards. There is a very perceptible rise of the arrow as it leaves my bow. This I do not notice at the longer ranges. Of course it occurs, but I think it escapes my notice in the necessary elevation.

My best 30 arrows at 30 yards scored 293; at 40 yards, 182; at 50 yards, 148; at 60 yards, 117; at 80 yards, 100; at 100 yards, 70. I should very much like to know whether I had better have the lower arm of my bow weakened a trifle. The bow is a strong one every way—44 pounds honest measure.

I am aching to write something further upon the plan of corrections to neutralize partially the element of chance at the longer ranges, which I proposed in a former communication, but courage fails me. When the present storm, which found vent in "T. A. L.'s" admonitions, has blown over, perhaps I shall venture it. T. R. W.

ORITANI ARCHERS.—First meeting in 1880, April 23d; 30 arrows each distance:—

NEW YORK ARCHERY CLUB.—The New York Archery Club will begin practice on its grounds in Central Park May 1st, and, we understand, will be in a condition to receive an increase of membership. The Secretary, Mr. James W. Aulen, Jr., was appointed a delegate to the meeting of the Eastern Archery Association. It is hoped that the next meeting of the Association may be held in this city.

Cricket.

—The Belleville, Ont., Cricket Club held a meeting on April 9th and resolved to put the old grounds on the bay shore in order again. The prospects for the coming season are unusually good.

—Philadelphia cricketers have been hard at work for three weeks past, and the Staten Islanders commenced their practice on Saturday last.

—A new cricket club has been formed in Brooklyn, and the Brooklyn Park Commissioners have granted the new organization which is called the Appleton C. C., permission to play at Prospect Park, and have also kindly promised to do all they can to advance their interests in cricket.

—William Brewster, for many years the excellent professional of the Staten Island C. C., is desirous of securing an engagement for the season. Communications can be had with him through this office.

AVERAGES FOR 1879.

TRINITY COLLEGE, OF TORONTO.

SUMMARY OF MATCHES.

Out of eight matches played by this University in 1879, two were won, three lost and three unfinished—two greatly in favor of Trinity.

May 17th, at Trinity | Carlton C. C., of Toronto..... 44
College..... Trinity..... 119

Stark's 25 was the only double figure for Carlton. On the part of the home side, H. T. Campbell played an excellent innings of 40, A. F. Campbell getting 24, and R. J. Moore, 21 (not out) by first rate hitting. D. Howard had 5 wickets for 24 runs, Campbell, 4 for 11.

May 24th, at Trinity | Toronto C. C..... 41 and 52
College (2 sides), Trinity..... 115

Won by an innings and 22 runs. Totten headed the losers with 15 and 17, Swinyard getting 2 and 10. Sproule (4 wickets for 10 runs) was their most successful bowler. For the winners, Campbell scored 30, A. Campbell, 20, and Moore, 23. D. Howard and Campbell bowled without a change, the former having 11 wickets for 54 runs, the latter 8 for 31.

On May 29th and succeeding afternoons a practice game was played with Upper Canada College, in which Trinity had the better of by 20 runs, mainly owing to the batting of Campbell, who scored 35 and 32 in capital form; J. S. Howard obtained 6 and 16; For Upper Canada College, W. S. Jackson made 1 and 42 (not out). E. R. Orden, 23 (not out) and 0.

May 30th, at Trinity | St. Catherine's C. C..... 41 and 31 for 1 wkts.
College..... Trinity..... 178

Drawn. Merrill was the visitors' best batsman, with 19 and 8. W. Murray got in 22 runs. For Trinity, Dr. Sprague hit brilliantly for 72, and Irving carried out his bats for an admirable innings of 72; D. Howard took 9 wickets, and Campbell in the unfinished innings bowled 13 balls for 1 run and 1 wicket.

May 31st, at New- | All North, of Toronto..... 13 and 61
market..... Trinity..... 44 and 29

Lost by 1 run. Logan (4 wickets for 7 runs) and D. Howard (4 for 24) disposed of the North in their first innings for a remarkably small total, notwithstanding which the latter's 22 were the leading scores of the victors, for whom Matheson, Laing and Trousdale did all the bowling. Logan was top scorer for Trinity (who played a very weak team) with 1 and 23 (not out); he also took 6 wickets for 42 runs, Campbell having 3 for 19.

June 26th, at Trinity | Trinity College School
College..... (Port Hope)..... 66 and 57
College..... Trinity..... 40 and 40 (for 2 wkts)

Drawn. Allen's brace of 133 and Allan's 19 (not out) in the second essay were the only double figures for Trinity. On the part of the School, Stennett scored 16 and 2; Billings, 2 (not out) and 43; Wood, 8 and 15; Roberts, 12 and 0; Jones, 9 and 4. Rob-

erts and Wood were their most successful bowlers. Crutenden, for the College, took 4 wickets for 12 runs.

June 27th, at Trinity | Trinity..... 31 and 50
College..... Hamilton..... 119

Lost by an innings and 38 runs. The hero of this match was H. C. Simonds, who scored 68 (not out) in first rate style, Robertson, 10, the last man, being the only other of the side to reach double figures. Fervio had 13 wickets at a cost of 30 runs. To an (5 wickets for 60 runs) bowled well for Trinity, for whom Spague scored 4 and 10; Irving, 5 and 12; D. Howard, 11 and 0.

ST. PAUL'S SCHOOL.

We are enabled to give below a summary of the principal matches played during the term of 1879 at St. Paul's School, Concord, N. H., together with the averages of the school eleven. The following averages were mailed to us in November last in a very incomplete state. We would remind the Cricket Secretary of the school that at some subsequent period these figures will be looked upon as the records of the school cricket, and that the compilation of the averages should be attended to with care.

Date.	Sides.	First Innings.	Second Innings.	Total.
Sept. 15.....	School.....	48	—	48
	Upper School won by 4 runs.	52	—	53
Sept. 17.....	School.....	63 (7 wkts)	—	63
	Upper School.....	45	—	53
	School won by 3 runs and 3 wickets.	—	—	—
Sept. 27.....	Old Hundred.....	57	33	69
	Isthmian.....	58	74	132
	Isthmian won by 63 runs and 3 wickets.	—	—	—
Oct. 5.....	Old Hundred.....	37	33	75
	Isthmian.....	94	—	94
	Isthmian won by an innings and 19 runs.	—	—	—
Oct. 23.....	Longwood.....	112	20	133
	St. Paul's School.....	18	51 (7 wkts)	131
	Longwood won by 42 runs.	—	—	—

LILLYWHITE'S CRICKETER'S COMPANION.—To sit down to review this wonderful compilation of last year's cricket is something like donning the flannels and going out to play in the field. We look around and there are all our heroes of bat and ball as lively as spring. For scorer no one could be more at fault than Mr. Lillywhite, who is quite as familiar with the cracks of the present as he made one of that class in the past. It is an excellent book, well edited and published by an old hand. The issue before us is the thirty-sixth edition of the Cricketer's Companion and Guide, is a proof of the value and popularity of this old cricket magazine. Open it where you will, there is something of interest, correctly given. Besides a review of the season of 1879 by the editor, there are leading articles on bowling, slow and fast, by Messrs. Buchanan and Freeman. The Hon. R. L. Lytton has a say at international cricket—American, Canadian, and Australian. Mr. Thornton does for the public schools, while Mr. Absolom describes the visit of his team (Lord Harris) to Australia. Nothing is forgotten—counties, universities and all; the close of the year bringing the two hundred and eight pages to a close. The little book can be had of John & James Lillywhite & Co., 10, Seymour street, Euston Square, N. W., London, England. Price one shilling.

—The St. Thomas Cricket Club, of Canada, have reorganized for the season, and at a recent meeting the following officers were elected for the coming season: Patron, Rev. G. L. Ballard, M. A.; Hon. President, D. Gustin; Hon. Vice-Presidents, B. W. Gossage and Jehiel Mann; President, C. O. Embling; Vice President, H. B. Wilson; Hon. Secretary, R. H. Smith; Treasurer, A. Jukes; Committee, C. H. C. Clarke, G. Hunt, R. G. Bowles, G. Scott,

PUBLISHERS' DEPARTMENT.

[From a prominent Drug House.]

H. H. WARNER & CO., ROCHESTER, N. Y.—DEAR SIR:—It is now only three months since we received your first shipment of Safe Remedies. We have sold drugs in this place for twenty years, and we have never sold a proprietary medicine that gives such universal satisfaction as yours, especially your Safe Kidney and Liver Cure and Safe Diabetes Cure.

We could mention many who have received great benefit in cases of Kidney difficulties, Asthma, Rheumatism, Diabetes, Bright's disease, etc.

Respectfully yours,

SISON & FOX,

Alexandria Bay, N. Y.—[Ld.]

—See advertisements of property for sale and to let, under heading Hotels and Resorts for Sportsmen.—[Ld.]

—See advertisement of H. W. Livingston's "Ray" in the stud.—[Ld.]

—Messrs. John H. Mann & Co., of Syracuse, writes that the demand for their Trolling Spoon (especially the Perfect Revolving) has been so large as to occasion a slight delay in filling orders, but that by the 15th of May they will be able to fill all orders as fast as received. See advertisement.—[Ld.]

—Edward P. Kremer, Lebanon, Pa., writes: "I like your explosive bullets very much. They can be carried to the field in a very small compass, indicate very quickly when they are hit, and, owing to their vibratory motion when in the air, become, in my opinion, more difficult to hit, and consequently better practice than either glass or other hard balls."—[Ld.]

James M. Green, Washington, D. C., writes:—"I like your explosive balls much better than glass. I will take great pleasure in recommending them to my friends. They fill the bill exactly."—[Ld.]

NEW OBSERVATORY.—The always reliable Rochester (N. Y.) Union and Advertiser gives the following news to the public:—

We state it with pleasure, as it is a matter our citizens cannot be otherwise than proud of, that the "Warner Observatory" is finally located; that the premises upon which it is to be erected are purchased, and that ere another month is past the buildings will be in course of construction. The ground selected and purchased is the property known as the Langworthy lot, corner of East avenue and Arnold Park.

A location handsome and more convenient of access could not have been selected. We learn that the apparatus needed for the observatory is now nearly completed and will be ready by the time the buildings are in condition to receive it. To one man and one alone is Rochester indebted for this grand institution. H. H. Warner, Esq., is the party who supplies every dollar of the money needed to organize and equip the enterprise spoken of. Mr. Warner is at the head of the firm of H. H. Warner and Co., who are the proprietors of the now world-famous Warner's Safe Kidney and Liver Cure, Warner's Safe Pills, Warner's Safe Bitters and others of Warner's Safe remedies. The plans and specifications for the buildings are now being drawn, and soon the contract will be awarded for the building.—[Ld.]

NOW IN COURSE OF PUBLICATION.

AN ENTIRELY NEW AND

COMPREHENSIVE WORK ON THE DOG.

(demy 4to size), under the title of the

ILLUSTRATED BOOK OF THE DOG.

YEARLY SUBSCRIPTION, \$4.50.

In 30 Monthly Parts, 40 cents each.

BY VERO SHAW,

Assisted by many of the most eminent authorities of the day.

WITH THIRTY FAC-SIMILE COLORED PLATES (drawn from Life expressly for the work) of typical specimens of the various Breeds of Dogs now in existence, and with numerous Wood Engravings. Embracing a full description of EVERY KNOWN BREED OF DOG, with the standard by which he can be judged.

Subscriptions received for all or part of this Work, and Sample Part sent post-paid on receipt of price.

The Practical Kennel Guide,

with plain instructions how to Rear and Breed Dogs for Pleasure, Show and Profit. By GORDON STABLES, M.D., C.M., R.N. Illustrated, 192 pages, 12mo, cloth, \$1.50.

Americans who are fond of a good dog can find in this book secure important information, as no book ever published embraces such a wide range of study.—*Spirit of the Times*.

Dr. Stables is one of the spiciest, brightest, and most intelligent writers about dogs. "This little manual, from his sterling pen is all good."—*Read and Gain*.

We can recommend this book as a most valuable and interesting one to the breeder and exhibitor.—*Forest and Stream*.

THE DOG. By ISTDONE. With twelve full page engravings from Life, by GEO. EARL. New and cheaper edition. Cloth, \$1.25.

The directions for the treatment of dogs are good, clearly given, and evidently the result of considerable experience, backed by sound common sense.—*Sporting Gazette*.

FLEAS!

USE DR. AL. WATTS' FLEA SOAP, a safe and efficacious remedy and preventive for fleas and all eruptions of the skin produced by them. It cleanses the hair of all impurities, purges it of all disagreeable odor, and possesses the most thorough disinfecting properties. It is impossible for fleas to live where it is used. Price, 25 cents per cake. For sale by all druggists and all eruptions of the skin produced by them. Dr. Watts offers for sale the largest assortment in America of dogs of all breeds. The careful treatment of canine diseases made a specialty. The fact that Dr. Watts has for four consecutive years had by appointment the position of Special Officer of the City of Boston to his charge of unlicensed dogs is sufficient guarantee of reliability. All communications and orders will receive prompt attention. Address, DR. AL. WATTS, Mar 25-17 164 Lincoln street, Boston, Mass.

IMPORTANT AND INTERESTING STATEMENTS.

Read, Mark and Inwardly Digest—Something for Everybody.

PURITY OF FAMILY MEDICINES.

THE writer in his visit to Rochester has had the pleasure of meeting with Hop Bitters, an entirely different compound from those alluded to. It is five years since their merits were brought before the public, and they have steadily increased in favor until they are, without question, the most popular and valuable medicine known. The excessive use of such a powerful leading component is in no way destroyed or lessened by the deleterious quality of any other ingredient. They contain, along with the purest hops, dandelion, mandrake and dandelion, other efficacious ingredients recognized as possessing the most effective curative properties. They are specially beneficial to clergymen, lawyers, literary men and all those subjected to the strain of mental labor. They cure almost every disease of the stomach, liver, kidneys and urinary organs. For nervousness and all its attendant infirmities they are a never-failing remedy. In fact, they are the organs where formerly there was feebleness and an all-prevailing feeling of weakness. They have attained to a immense sale, which is the surest proof of their successfully meeting the wants of the people.—N. Y. Mercantile Review.

A Voice from the Press.

I take this opportunity to bear testimony to the efficacy of your "Hop Bitters." Expecting to find them nauseous and bitter and composed of bad whisky, we were surprised to find, to our mild taste, just like a cup of tea. A Mrs. Cresswell and a Mrs. Connor, friends, have likewise tried and pronounced them the best of all the ones they have ever taken for building up strength and toning up the system. I was troubled with costiveness, headache and want of appetite. The two former ailments are gone, and the latter greatly improved. I have a yearly contract with a doctor to look after the health of myself and family, but I need him not now. S. GILLILAND, Peoples' Advocate, Pittsburg, Pa. July 25th, 1878.

Bay City, Mich., Feb. 3, 1880.

HOP BITTERS COMPANY.—I think it only fair to send you a recommendation for the benefit of any person wishing to know whether Hop Bitters are good or not. I know they are good for general debility and indigestion; strengthen the nervous system and make new life. I recommend my patients to use them. Dr. H. HART, Treator of Chronic Diseases.

Superior, Wis., Jan., 1880.

I heard in my neighborhood that your Hop Bitters were doing such a great deal of good among the sick and afflicted with most every kind of disease, and as I had been troubled for fifteen years with neuralgia and all kinds of rheumatic complaints and could not find relief in any one direction, I at once did me a great deal of good, and I used another bottle. I am an old man, but am now as well as a young man wish. LEONARD WHITECK.

Battle Creek, Mich., Jan. 31, 1879.

HOP BITTERS COMPANY.—Gentlemen.—Having been afflicted for a number of years with indigestion and general debility, by the advice of my doctor I used Hop Bitters, and must say they afforded me almost instant relief. I am glad to be able to testify in their behalf. THOS. G. KNOX.

Ludington, Mich., Feb. 2, 1880.

I have sold Hop Bitters for four years, and there is no medicine that surpasses them for all bilious attacks, kidney complaints and many diseases incident to this malarial climate. H. T. ALEXANDER.

Pauiding, O., Jan. 2, 1880.

HOP BITTERS COMPANY.—I have used your Bitters, and must say they helped me materially. JOHN FIELD, Infirmary Director.

Ashburham, Mass., Jan. 14, 1880.

I have been very sick over two years. They all gave me up as past cure. I tried the most skillful physicians but they did not reach the worst part. The lungs and heart would fill up every night and distress me, and my throat was very hard. I sold my children I never should die in peace until I had tried Hop Bitters. I have taken two bottles. They have helped me very much indeed. MRS. JULIA G. CUSHING.

Battle Creek, Mich., Jan. 31, 1880.

I have used seven bottles of Hop Bitters, which have cured me of a severe chronic difficulty of the kidneys and have had a pleasant effect on my system. HODNEY PEARSON.

Wahnet, Kan., Dec. 8, 1879.

I write to inform you what great relief I got from taking your Hop Bitters. I was suffering with neuralgia and dyspepsia, and a few bottles have entirely cured me, and I am truly thankful for so good a medicine. MRS. MATTIE COOPER.

Cedar Rapids, Tex., Oct. 28, 1879.

HOP BITTERS COMPANY.—I have heretofore been bitterly opposed to any medicine but I got cured by a physician of my choice. My wife, fifty-six years old, had come by degrees to a slow slow-down. Her health had been failing for years. I never should die in peace until I had tried Hop Bitters. My kidneys were badly affected, and I took Hop Bitters, and found it a great relief. I sent to Galveston for more, and word came back none in market, so great was the demand, but I got some elsewhere. It has restored all of us to good health, and we are duly grateful. J. P. MAGET.

New Bloomfield, Miss., Jan. 2, 1880.

HOP BITTERS COMPANY.—I wish to say that I have been suffering for the last six years with a severe itching all over. I have heard of Hop Bitters and have tried it. It has cured me. I have never felt better. I have more good than all the doctors and medicines that they could use on or with me. I am an old and poor man, and I feel that you have helped me. I have had fifteen doctors at me. One gave me seven ounces of a medicine of use, and the other took four quarts of blood from me. And they could tell me that it was skin sickness. Now, after using Hop Bitters, my skin is well, clean and smooth as ever. HENRY KNOX.

Forest and Stream and Rod and Gun.

AS WE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below:

Collect Subscription price, 3 months, \$1.00	6 months, \$2.00	1 year, \$4.00	2 years, \$7.00	3 years, \$10.00
Commission to be retained, 3 " .25	6 " .50	1 " 1.00	2 " 1.50	3 " 2.00
Amount to remit us, 3 " .75	6 " \$1.50	1 " \$3.00	2 " \$5.50	3 " \$8.00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1880,	\$100.00
To the one sending the next largest amount, in accordance with the above conditions,	75.00
To the third on the list,	50.00
And to the fourth,	25.00
Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application.	

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

New York, January 1st, 1880.

New York City, N. Y.

MANN'S

Trolling Spoons.

WE MANUFACTURE 50 different kinds of Trolling Spoons, adapted to the waters of every State and Territory. Our Perfect Revolving, has proved to be the best Trolling Bait ever manufactured. It is covered by two patents—Mann's patent, Nov. 21, 1871, No. 131,822, and Skinner's patent, August 4, 1874, No. 133,854. Beware of imitations. None genuine unless J. H. Mann's name stamped on every spoon.

Wholesale Agents.—Bradford & Anthony, 374 Washington Street, Boston, and William Mills & Son, 7 Warren Street, New York, and to be obtained through most of the other wholesale fishing-tackle dealers; or write direct to the manufacturers for catalogue and prices.

And Manufacturer of

Breech Loading Shot Guns

To Order.

AGENTS for the sale of the BALLARD RIFLES and of the DALY Breech-loading SHOT GUNS. A full line of the Clabworth Moore, Bonehill, and other makes of imported guns, always on hand. Particular attention paid to CHOKE-BORING GUNS to shoot close and hard. SPRATS DOG FOOD, etc., etc. Gun stocks bent, warrens, etc. All work executed in the most skillful manner.

THE NEW AMERICAN

Breech-Loading Shot-Gun.

SIMPLE AND DURABLE,

Rebounding Lock. For close, hard shooting excels all others. Extra heavy guns for quack's specialty. Send stamp for circular. C. S. SHATTUCK, Manufacturers, Hatfield, Mass.

Send stamp for Catalogue. Rifles, Shot Guns, Revolvers, sent c. o. d. for examination

Guns, Ammunition, Etc.

The 'STANDARD TARGET.'—For Rifle Practice. Size 6 inches. Bulls-eye 1/4 inches. Range 100 feet, off-hand. The zones rise by area instead of diameter.

Marksmen will appreciate the new departure which this target has inaugurated. The accurate rifleman now gets the true value of his shots, while on old-style targets the record was so influenced by the element of chance as to give but a vague idea of the shooter's skill. For instance, on a 20 yard Creedmoor a "center," scoring 4 has ten times the exact value of a "center," scoring 1. Rifleman knows that no degree of skill or care will give immunity from occasional misses, and under the old system it was not possible for good marksmen to be beaten by bad ones. One man would pile up eight snug bulls out of ten, but lose the other two, while his competitor, "shooting for fours," would scatter his shots all over the board center, blunder one shot into the edge of the bull, and win! Now in deer stalking, and shooting at 80 yards, the winner would have wounded and lost one deer, while the loser would have struck down eight, all shot from the heart. Of course there are people who still contend that under the old method "all had an equal chance," which is very true. But it is also true that their equality of chance would have been in no wise impaired if they should have sat down and thrown dice to determine who was the better shot. In contests of skill every element of chance should be eliminated.

Arrangements have been made for supplying these targets at a merely nominal price, and it is now an easy matter to gauge relative skill by uniform methods, and to communicate definite results without obscuring them by explanatory details. The targets are mailed, post-paid to any address in the United States, at the rate of one hundred, and quite a liberal discount is made to galleries and dealers. Send orders to CUSONS, MAY & SHEPARD, Glen Allen, Virginia.

USE THE BOGARDUS PATENT Rough Glass Ball

AND HIS PATENT

GLASS BALL TRAP

For Wing practice. They can be used for all gun dealers. Headquarters for Glass Balls and Traps. A. G. BOGARDUS, No. 123 South Clark street, Chicago, Ill. Send for Price List. For Traps—Hart & Sloan, Newark, N. J. "Field, Cover and Trap Shooting," the only book ever published by a practical hunter, can be had at the above address. Price \$2.

Eaton's Rust Preventer.

FOR GUNS, CUTLERY, AND SURGICAL INSTRUMENTS. Suits to hand, WILL NOT GUM, and will keep in any climate. SPORTSMEN everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes, Bay City, Mich., writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns." The trade supplied by sole manufacturer, GEO. B. EATON, 540 Pavonia Avenue, Jersey City Heights, N. J. Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; B. Kirtland & Co., Cincinnati, Ohio; J. E. B. & Co., New York; J. B. & Co., St. Louis, Mo.; Thos. W. Parr, Chicago, Ill.; O. S. Trimble & Kiebsacker, Baltimore, Md.; Copple & Sons, Georgetown, D. C.; J. C. & Co., Philadelphia. CANNOT BE SENT BY MAIL.

Grand Falls, New Brunswick.

AS you must have many readers who, deriving information and amusement weekly from your columns, overlook their obligation to contribute their quota to the general fund of information interesting to sportsmen and tourists, I desire (being myself an arch offender in this respect) to cast off my burden of ingratitude, which encumbers my soul, and gain absolution by offering some suggestions to my fellow readers, anent a corner of the earth which seems little known to the "Waltons" or "Cottons" of this continent, and also a *terra incognita* to the blasé children of fashion, who have long ago voted Niagara a bore, and Saratoga, Long Branch, etc., "played out."

To all such I would recommend a trip, this coming summer, to Grand Falls, New Brunswick. I fancy I hear scores of anxious voices asking "Where on earth is that, and how shall we get there?" so here goes to supply the information. From Boston, take the Eastern Railway to Portland, thence by Maine Central Railway to Bangor, there connecting with the E. and N. A. Railway for McAdam Junction, there taking the New Brunswick and Canada Railway to Woodstock, and thence by New Brunswick Railway to Grand Falls; the whole distance being about 400 miles. Baggage can be checked through from Boston. Should time not be an object, this route can be varied by taking steamer from Boston or Portland to St. John, N. B., from whence (after due admiration of the public buildings) let the tourist hic him away to Fredericton, where he will most likely have to stay over-night. The hotels are, however, good and reasonable, and the city, being the seat of laws and learning, and noted withal for the piety of its inhabitants, the brief sojourner will doubtless improve his moral and intellectual tone, especially if he should perchance hail from the wicked regions of Wall street, or some other shrine of Mammon.

Being now in proper trim to enjoy the beauties of nature, he will take the New Brunswick Railway for Grand Falls. This line has evidently been constructed with a prospective eye to the welfare of pleasure seekers, as it winds snake-like along the banks of the river, and in its

sinuous course enables the eager traveler to take in the beautiful woodland scenery to be found in so many places along the route. Arrived at the Falls, no vociferous and extortionate hackmen salute the ears of the weary traveler with their clamor, nor will he be torn limb from limb by energetic touts. A civil young gentleman may indeed proffer his services to take checks and escort one to the hotel bus, and there the trouble ends, for in five minutes we may be smoking a cigar with mine host Herbert, as genial a New Englander as ever it was my fortune to meet. A retired sea-captain, he possesses a fund of anecdote and a most refreshing flow of spirits; and, if one enjoys real hearty good-humored chaff, he may have his fill at the "Captain's" hands (or mouth) to the heart's content. The Grand Falls Hotel is amply furnished with the requisites for the comfort of the tourist and his family. Good rooms, a capital *cuisine*, and excellent attendance, are all to be found within its portals, and to crown all, you will never make a wry face when your bill is presented.

As for the falls, I must confess that my usually facile pen fails me in the attempt to describe them. Niagara, with its vast unbroken sheet of water falling from a stupendous height, impresses us with a sense of awful sublimity, increasing as we gaze upon its wonders; but for rare charm and exquisite beauty the St. John River cataract stands without a rival. The immense mass of water, pitching from a precipice eighty feet high, hurls itself into the boiling cauldron beneath, its bulk being broken in the descent by jutting rocks into a thousand fantastic shapes and feathery spray, which in the bright rays of the sun produce bows of surpassing brilliancy. Below its plunge the river (before a broad and smooth expanse) is confined in a narrow gorge, in places not more than thirty feet wide, hemmed in by huge and beetling cliffs over 300 feet high frowning on the water beneath, which, for three-quarters of a mile, rushes along in mad career, surging and boiling with frightful force and turbulence, till it reaches a spacious basin beneath. In this gorge are to be seen five large natural wells from thirty to forty feet deep, and fifteen feet in diameter, worn by the action of the water as smooth and symmetrical as if hewn and polished by the most skilled artificer; also, an enormous cavern hollowed out of the surface of the cliff. Still lower down the stream, the adding water forms a whirlpool called the "Coffee Mill," within whose gaping jaws logs of large size are drawn and gradually crushed to matchwood. A commodious stairway is provided to descend and view these wonders; descending which we reach the water's edge, and gaze upon the weird and uncouth forms assumed by the furious watery element, while above, the sky is seen only as a narrow strip of blue, the luxuriant foliage surrounding the wall-like cliffs, seeming almost to meet overhead. The view by moonlight, with the pallid rays feebly struggling to pierce the somber gloom which envelops river, rock and tree, is simply indescribable. The lumbering operations, carried on so extensively up the river, necessitate the logs being sent over the falls, they being afterward secured and rafted in the basin below. Standing by the fall, we can see immense trees take the plunge, often remaining clear the surface for a minute, when they shoot up suddenly, twenty or thirty feet above the water, like some great monolith reared on end, falling back with a tremendous splash into the water.

But I am forgetting, in my enthusiasm, all about the angling to be had in the neighborhood, and such angling! Ye gods and little fishes! No, not a life-like flies, but great lush, hard fighting trout abound in the numerous streams and lakes within an hour's drive from the village. To describe or locate all these would fill a book, and having, I fear, been already rather prolix, I will simply suggest to the lovers of the angle coming this way the necessity of filling their books with suitable lures for the unsophisticated piscines, and above all things not to forget their landing nets, or woe betide them when they get among the two or three pounders. For on days there are plenty of pleasant drives, notably to the Dominion Salmon Hatchery, about three miles down the river; the Danish settlement, about eight miles away on the banks of Salmon River; St. Basil's Nursery, up stream about eleven miles, and other places of interest reached by good roads, through wild mountain scenery.

For information as to facilities for fishing, gunning, etc., other than that now afforded, I would advise your readers to address F. W. Brown, Esq., the Collector of Customs at Grand Falls, who will, I doubt not, be happy to answer any inquiries.

I hope that my suggestions may prove the means of bringing many of my fellow sportsmen this next summer into these "fresh fields and pastures new."

Rapid-de-Femme, N. B.

SALMO FONTINALIS,

FISH AND GAME AT FORT CUSTER.

FORT CUSTER, Montana, is situated on the northern point of the Big Horn Plateau, near the confluence of the Big and Little Big Horn Rivers. On the west and north is the valley of the Big Horn; on the east the Little Big Horn valley, and on the south and southeast the plateau gradually rises until it culminates in the range known as the Big Horn Mountains.

These two rivers contain several varieties of fish, among which may be named piks, cat, sturgeon and buffalo, but no trout, the nearest trouting being about thirty-five miles distant.

Cañon Creek—so called because its bed is so much depressed from the level of the surrounding country—is claimed by local sportsmen to be the best trout stream in the vicinity. One party informed me that the trout they caught in this stream averaged three pounds each. On account of the depth and steepness of the walls of the cañons in which the stream has its bed, it is very difficult of access, the walls being about thirteen hundred feet in height and almost perpendicular, and the points at which the descent can be made are few. The stream is about fifty yards in width, although, gazing from the level, it appears to be about one yard. The fishing grounds are almost directly south of here.

About twenty-five miles beyond Cañon Creek we reach Pryor's Creek, and the point at which it leaves the Big Horn Mountain. This stream is also of good repute as a trout stream. Cañon Creek is a tributary of the Big Horn River, and Pryor's of the Yellowstone.

Leaving Custer on the Rock Creek and Fort Custer stage road, in a southeasterly direction, we find several more good camping grounds for the exercise of our skill as trouters. Grass Lodge Creek, a tributary of the Little Big Horn, is about thirty-five miles distant, the latter stream also containing trout ten or twelve miles further up. Tongue River and tributaries, at a distance of about a hundred miles from its mouth—it is a tributary of the Yellowstone—also shelters the much sought-for mountain trout.

The two first-mentioned streams are not accessible by any regular mode of travel, and a person visiting them would be compelled to camp out, although this would be an additional pleasure to a person who had been cooped up by four walls for any great length of time. But the other streams are of easy access, being all on or near the route of the Rock Creek and Fort Custer Stage Line, and accommodations can be secured at almost any of the points named. At a distance of about seventeen miles from Custer, on the same road, is the scene of Custer's last charge, another point of interest to the tourist. I understand that there is a movement under way to erect a monument on the battle-field to the memory of the fallen general.

Game of all description is very plentiful, but is fast being reduced. Bear, black, cinnamon and silver tip, the latter being called grizzly by some, are to be found in the Big Horn Mountains, at a distance of thirty-five or forty miles. There were about twenty-five killed by hunters from the post last fall. Buffalo may generally be found after a few hours' ride, unless driven away by the Indians who continually hunt them. Elk are to be found in the foot hills of the Big Horn Range, also white and black-tailed deer. One herd of elk, in the vicinity of Cañon Creek, was variously estimated to contain from one to two and one-half thousand. One hunter, alone, killed eighty-three in eight days. Antelope are encountered by a two or three hours' ride. One herd of them, numbering three or four hundred, had the temerity to enter the garrison, but remained a short time, although they continued in the vicinity for several days. Jack rabbits and cotton-tails run around loose almost everywhere.

Blue mountain, pinnated and pintail grouse, sage chicken, curlew, and upland plover, are plentiful in the timber on the banks of either of our rivers. Mallard, grayhead, redhead, canvas-back, black and gray, or pin-winged ducks, widgeon, blue and green-winged and pin-winged teal, and butter-ball, are to be obtained in the marshes of the Big or Little Big Horn Rivers, or any of the streams in the vicinity.

During the spring and summer, Fort Custer is easily reached. From Bismarck, D. T., boats run continually, during the navigable season, as far as Fort Keogh and Terry's Landing, the former 140, and the latter point 35 miles distant. During high water, a boat occasionally succeeds in ascending the Big Horn as far as this place; but that occurs but once or twice in a year. From Fort Keogh and Terry's Landing we have a daily coach. The Union Pacific Railway will probably be completed to Fort Keogh by next fall.

From Rock Creek, Wyoming, on the Union Pacific Railway, there is also a line of daily stages, which cross a number of the trout streams mentioned above.

Fort Custer, Montana, 1879,

C. S. PAGE,

HINTS FOR ADIRONDACK VISITORS.

THE plan I would suggest has already been tried by several I know, and is well liked by them, and will, I think, in time be favored by the majority of sportsmen. It is, in the first place, to procure a tent and full camping outfit; such as a sheet-iron stove, tin folding baker, and all articles required for cooking, and the table, made out of tin or sheet-iron, and all toilet articles required, also a cot or lounge, to sleep on. Be particular to have all things made so as to get them into as compact form as possible.

Coarse clothing for camping out is the best, and the less the better; although some warm woolen blankets will be needed for cool nights. Then have a good guide engaged beforehand; one living near the locality to be visited will be best. Have him purchase all the articles, in the provision line, wanted for the trip here; such as flour, tea, coffee, butter, lard, sugar and other groceries. If one wants canned fruit, or extras, they had better bring them. Have your guide meet you when you come, with a team at the depot, and at the end of your stage route, to take you directly to the pond or stream where you wish to camp. By this you save all hotel expenses, and your guide can get a team cheaper than for what the hotels would charge. Your guide, if he knows his business, will do all the cooking, and wash out your underclothing, if you should not have enough spare clean garments to last the whole trip.

As to the outfit, it will provide for the winter, you will sleeping apparatus and bed, but, of course, you will have to board him. He will furnish a boat, axe and such things as are required around camp. And here let me say that one had better pay a real good guide an extra price, than to get a poor one for nothing. By this you will save money in the end; and on a trip of this kind, your guide is your main dependence for a pleasant and enjoyable time while in the woods. One guide will answer for a party of two; but over that number, there would be two guides; besides, there would be too many to go in one boat, with any comfort. Two gentlemen from New York city, who were on the Sixteen-mile Level of the St. Regis River, while I was in camp there last season, in August and September, adopted the plan I have mentioned. They engaged Don S. Smith for guide, and he met them at St. Regis in the morning, and they started from there. He had everything ready for their coming, and took them to the Humphrey, or Lower Nine-mile Level of the St. Regis. They camped there a while, then moved up to the foot of the Sixteen, and camped a while in several places on that, between the foot and the head of that, then went over to Long Pond, three miles from the Level, to a carry starting from Buck Mountain, then returned to their starting point on the Humphrey, making a trip of about two months. Their board, while on the level, cost them only twenty-two cents per day. In comparison to this, a gentleman from Cleveland, Ohio, three years ago last July, told me that he went to one of the well-known hotels, or sporting establishments, and was fitted out with a tent and other utensils for camping, and with provisions for ten days' time, for himself and guide, for which he paid \$40, and the use of the tent, etc., as he did not intend to return to the hotel at the end of ten days; and to take another route out of the woods. When he came to pay his guide \$2.50 per day for himself and boat, his whole bill for the ten days, it amounted to \$65. They charged him fifty cents per day for the use of a bait fishing-rod, with line and hooks, that could not have cost over \$3 at the most. I don't wish to be understood as claiming that all, or the most of the sporting parties, make such outrageous charges as the above; but that some do is a well-known fact, and I advise all those who are not millionaires to keep clear of them.

For the benefit of those intending to visit the Blue Mountain, and St. Regis River District, I will mention a few guides, or those who will act in that capacity, for the rush of sportsmen and tourists has not been enough to this locality to cause guides to surround the foot of the mountains here, waiting for chances to go out with sporting parties.

The guides here are of those who reside in the vicinity, and have practised hunting and trapping winters, and go out with parties who write to them beforehand. D. L. Smith, Dickinson Center, Franklin County, is a splendid camper and a good cook, knows all kinds of hunting and fishing, has a good boat, and owns a team of his own, keeps a horse and trap line. He deer out of season, nor hunt or fish on Sundays. He has an aversion to his own. He is likely to be engaged until September. Bill Edwards is another good one, cannot be surpassed around a camp, and what he don't know about hunting, fishing, or anything connected with it is not worth knowing. He is poor, but strictly honest, rather old, but tougher and can do more work than many younger men. I would want no better guide. His address is William Edwards, St. Regis Falls. Cyrus Whitcomb is another capital hunter and fisherman, and knows every foot of the Adirondacks north of Hamilton County, and west of Mecum and Saranac lakes. He is a surveyor, and has frequented the mountains for years. I discovered the Whitney Pond, which is named after him, and assisted Dr. Eley in getting up his map of the Adirondacks, which was a long and tedious task. The three McNeal brothers, who with their father kept the hotel at St. Regis Falls, are good guides. The three killed fourteen deer and a bear in one week, on the east branch of the St. Regis River, still hunting in November. The same party I had reference to in my letter in the FOREST AND STREAM of March 11th. They are young men, but have always resided in a good locality for game and fishing. One of them, who I am personally acquainted with, and know to be a good guide. No doubt the others are fully as good as he is. They have the name, at least, of being so. They own several hounds. There are several others in the vicinity whom I am not personally acquainted with, and I do not remember their names in full at present. Several old hunters from St. Lawrence county come to the Sixteen-mile Level of the St. Regis every season, and when they can get a chance, will guide parties. They will let you well versed in camp life. They kill very little game when not engaged for others. I forgot to mention that tent poles and pins need not be brought when parties come here, as they can cut good ones at most any place where they camp. They can also store all their camping outfit here with their guide, to be ready for the next season. What one would pay at a hotel for a few

weeks' board one season will buy a good camping outfit that will last for years, when well taken care of. Some of the guides can furnish a considerable portion of the articles required for camping when wanted. Don Smith has nearly all, which he will furnish for a small party. The sheet iron stove can be dispensed with very well during the warm weather, but will be needed to warm the tent after the nights get frosty. It will be handy at any time to fry eggs or fish on, and for slacks, but is unhandy to transport.

Those who come to stop here for one or two weeks will find the plan I suggest much cheaper than to go to the hotels, where they will have to be fitted out in the same way and go to some locality at a distance from the most of them to find good hunting or fishing. Those who only come for a few days will do well enough by going to one of the hotels. There are some whose charges are reasonable; of course they cannot board as cheap as the hotels in the towns and villages. Their run of custom only lasts a small portion of the year, and it costs them considerable to get their provisions in from the railroads or towns. But some charge too much, and the proprietors of them have become independent in a few years' time. Those in the north-west portion of the Adirondacks have always been very reasonable in their charges, however.

ADRIAN OSBACE.

HOW IT STRIKES A STRANGER.

"HISTORIES make men wise," says the immortal Bacon, in one of his essays. They might have said this tendency were they always truthful; but where is a true history of any country or any people to be found? The historian, no matter how impartial he may try to be, in relating the story of some nation with which his own country may at one time have been at war, is certain to lean toward the fault of favoring and praising his native land. Charity toward our neighbors' faults and shortcomings is one of the rarest virtues coined. We like to view our own homes through rose-tinted spectacles, but when we go abroad we prefer to wear the green eye-glass of the cynic and snarler. And yet traveling never fails to open the eyes and enlarge the mind, and to convince us that there is no place like home, there are many places that come precious near to it; and the nations of the earth have only to know each other more thoroughly to love each other a vast deal more. If ever the millennium comes, if ever that promised lion-and-lamb business will be transacted, it is my impression that the happy result will have been brought about by the previous adoption of a universal language and common facilities for traveling. The mistakes we make about nations and peoples we have never met or mingled with are often ridiculous in the extreme, and the worst of it is we are almost unwilling to be put right.

There is, perhaps, no nation in the world so conservative in their ways and notions as the English. They are conservative even in their faults and in their ignorance. It is extremely convenient for an Englishman to believe in "fair play" to the greatest country under the sun, that that luminary never sets on the territory of the Queen; that she rules the waves, and that with the exception of Bannockburn and Bunker Hill—trifling accidental mishaps—his arms never suffered a reverse, and never can nor will. It is convenient for him, or he thinks so, to come abroad with notions like these in his head; and very much to his advantage to find that his opinions are always deferred to, and that the people exist who dare to think that one man is as good as another, and maybe a sight better.

As he comes to America, even so does the undiluted Englishman cross the borders into Scotland. He thinks he is stepping into a country which the prowess of his forefathers has conquered. He forgets, or he never has learned, the story of the union of the two countries; he is first in the land, and the rebellion of '45 was a war between south and north Britain, in which the latter came off second best. His eyes are soon opened, though. He expects to find Scotch hotels mere huts; to his surprise he finds them palaces. Scotch landlords extortionists; he finds them both honest and liberal. He gapes about for the rubbing post the Duke of Argyll built for the people; he finds they were raised for the same. Legitimacy he has been told is the rule; he finds himself among good men and loyal lasses. He finds, too, that brose and braxie are not the staple articles of diet, nor the selling of sulphur ointment a regular business. He finds, also, that hospitality is a portion of the national religion, and that he is everywhere surrounded with steady, plodding, industrious men and advanced thinkers. But I must tell you one thing that the Englishman does not find—no, not in all broad Scotland—and that is a man or boy who cannot read and write. School boards, though, will do a deal for England; Scotland need not them.

Well now, reader, as a fair confession is good for the soul, I ought to tell you that before arriving—as I have done for the first, and I sincerely trust not the last time—on these shores my ideas of America and Americans were of a kind of nature that they gathered gathered principally from the little-tattle of Englishmen at home, and from the writings of such men as the ever-to-be-remembered Oliver Holmes, the quizzical Josh Billings, Mark Twain the humorous, and the genial Bret Harte. I fully believed that America was a great country; that Americans never ceased saying so; that they were never tired drawing the long bow or throwing the hatchet; that the beau ideal of man was long and lean and lanky; that he wore a broad-brimmed hat, nose and a beard *a la* coat; that he spoke through his nose; that he always said "I guess" and "I calculate" and "No, sirree," that he was great in drinks; that he spent much time in loafing about bars; that he sometimes went roaring around (N. B.—I don't know what "roaring around" means; beloved Bret writes, "thou tell me"); that he spat copiously, sometimes in a coarse way; that he gaped with his eyes wide open; that he always carried a bowie-knife, that he often used it; that he never went abroad without a bowie knife, and that the bowie came in handy as a referee in quarrels, or an instrument to eat peas with.

American girls, I was given to understand, were all very well as to looks while still in their teens; that they faded at twenty-one, and were not in it at all at thirty. Well, I have been a week—not a long time, certainly, to study men and manners—nevertheless the

scales have already fallen from my eyes. I can already see men as trees walking.

I was certainly, however, not favorably impressed with the first appearance of New York, as I gazed upon it from the deck of the good ship *City of Brussels*. But then our voyage had been a stormy one, and the day was rainy, with a cold east wind blowing. Owing to the sad state of our poor friend Tilden, there was no one to meet us. We did not even hear of the event until we landed in the dock; then, indeed, our spirits sank below zero.

It struck me that the custom-house officers could not have done their duty in a more obliging or gentlemanly fashion; at the same time, I consider the restrictions against landing dogs in this country are calculated to do a deal more harm than good.

Landing in any part of England, you have only to hand your luggage to a porter, and whistle for a hansom. Here you might whistle the whites of your eyes out for any such useful conveyance, and all in vain. An old-fashioned two pair lumbering carriage, however, undertook for a trifle of \$4 to convey myself and friend to the Sturtevant House. The fare in England would have been nine shillings (45 cents). The mud on the streets, it struck me, was as thick as cream, and the sidewalks themselves most vilely paved. No doubt matters will be mended in this respect some day. I cannot forget that this Herculean republic is only in its infancy; but I rode in an omnibus from the ferry to Barnum's show, at Brooklyn, and I don't soon forget the jolting; verily, the road that leads to my father's peat moss is better far than this.

Ere I reached my hotel the sun shone forth, avenues and squares began to appear and New York rose degrees in my estimation; and it struck me we have nothing in England to compare in beauty with the streets of this city. I do not forget palatial Prince's street, of Edinburgh, nor the marble walls of Union street, Aberdeen. They each have their beauties; but the houses lack the airy grace of these. They are not bedraped with beautiful creepers, and the sidewalks are not shaded with oaks and elms. As to the squares, I never saw one so like them in the old country. Tall houses, grim and gaunt, frown over our London squares; trees and shrubs there are in abundance, and even grass and flowers, but there is no fresher nor beauty about them. You may pity, but you cannot admire them; besides, bloomed they ever so lovely, they are not free, for they are hemmed round by iron railings, with insupportable gates, the keys of which are held by the surmounting inhabitants, and no one dares enter save stammering nurse-maids, babies and lap dogs. But how different are your New York squares; how free and open, how green the grass, and sweet and healthful the breezes that blow through them. Why, it is quite a treat to come here with a book and while away a lazy hour. Yes, the square is an American institution; and the nurse-maid is another. Yonder one comes, smiling and inebriated, and her one of the strictest of "fair penitentiaries" and what a lovely child it contains, lounging at length with the grace of a youthful duchess, not cramped up as we cramp our children in a British barrow. I don't know which to admire the most, the maid or the child; the little white "mutch" on the latter's head is quite new to me now, and intensely interesting. I should like to kiss that baby.

On the elevated railway, I do not miss the English hansom. The tramway (street cars, you call them) is pretty near perfection, and goes very usefully if not quite as fast as the stuffy London four-wheeler. I know, too, what I have to pay, and that I will not have to fight about the fare at my journey's end. Besides, these train cars are roomy and clean, and I don't think there is the slightest chance of catching the smallpox in any one of them. I don't find a bug on my sleeve after my exit. It strikes me that the elevated railway doesn't improve the appearance of the streets, nor should I like to dwell in the houses adjoining. The feeling of privacy cannot be great in their rooms.

While traveling in the streets, badly paved though they be, I seldom see a dead or fallen horse. In London you cannot walk a dozen yards without seeing one. I never stop by a truly English institution, a block of a hotel, when going to catch a train, you generally allow yourself twenty minutes to spare. You enter your hansom, and off you fly, from Fleet street to Paddington, for instance. But woe is me; even should you emerge quickly and safely, without collision or other mishap from the Strand, if it be in the afternoon late to one you find yourself either in Oxford or Regent street hopelessly, helplessly, and in the middle of a perfect ocean of cabmen and carriages, and there you may stay chafing and fuming till all chance of catching your fast train is gone for that day. Your dinner will be spoiled, and your wife is sure to think that the flying Dutchman has come to grief, and at every knock that comes to the door she will imagine that your miserable remains have just been brought home in a carpet-bag. I have not seen a single crossing-sweeper. They do sweep the crossings here, or the body crosses, and nobody walks, so it seems to me, and thus the side paths in the upper-city are seldom overcrowded. How different it is at home!

By the way, another British institution which I miss is the rough; down town he may be, but here I do not see the man. And I miss, too, the working mechanic, or does he leave his tools and grime in the workshop, and sweeps the streets in his week-day livery. I wonder much to learn yet. However, I am coming on. I know now what "a boss shine for five cents" is. I know, too, the value of certain coins—a cent, a greenback, a dollar and dime. I'm no fault to find with the dollars and dimes, but the five cent bit is a duffer, and don't ring, and the greenback is greasy, and smells like a Hotentot.

GORDON STABLES, M.D., R.N.

TWO SNIPES AT ONE SHOT.—*Norwich, N.Y., April 30th.*—On the morning of the 29th of this month I was out with a friend of mine who was with me when he hunted them but little. Three birds rose, two of them flying quite close together. He killed both with one barrel. I never saw this done before. Have never heard of it being done except in the West, where at times they are very plenty. We got ten birds, seven by myself and three by my friend. We had a little spaniel, quite wild; had we had a staunch pointer I think our bag would have been larger.

Natural History.

—ADDRESS all communications "Forest and Stream Publishing Company, New York."

ARGYLE VERSUS AUDUBON.

THE Duke of Argyle in *Frazer's Magazine* gives his "First Impressions of the New World,"—and very pleasant reading they are, particularly the concluding chapter, which treats of American ornithology, which we learn is the favorite study of the writer. A charming paragraph is the description of his first and only sight of a humming bird. How an ornithologist could pass months in the forests and fields of Canada, and the States and see only a single specimen, it is difficult to understand, unless the Duke, as we suspect, is a short-sighted man.

Likewise most other Britons, however, he sees what he came to see. So, as in a few weeks spent in the Canadian woods, he has with few song-birds, he is confirmed in his previous opinion that the feathered songsters of America are inferior to those of Europe. The only song-bird he appears to have met with was the migratory thrush (robin), and "near Niagara one very broken and interrupted song of fine tone"—perhaps the bob-o-link. He never heard such vocalists as the brown thrush, hermit-thrush, song-sparrow, grosbeak, or oriole; and of course in Canada or New York he never heard the "wood thrush" and the "brook-side bird." So the Duke can hardly be called a competent witness. His Grace seems to have arrived at equally hasty conclusions, when he generalizes about the strange absence of fish-eating birds on American waters, asserting that the belted kingfisher is from the Delaware to Hudson's Bay the one solitary species specially adapted to the capture of fish. He might, on the Restigouche, have seen the muskangers, the grebes, the divers and the loon—all fish-eaters. In New York waters the herons and the bitterns also, and everywhere the osprey. Indeed, he mentions the loon and osprey as birds which he met with. All these on fresh water can be seen in any northern wilderness, while on the sea coast the species of fish-eating birds which this observer failed to observe may be counted by scores.

When the Duke did observe he is unfortunate in his conclusion. He thinks himself qualified to criticize Wilson and Audubon, as well as Dr. Franklin, as to their accounts of the predatory habits of the white-headed eagle, and proceeds to vindicate the character of the Bird of Freedom by relating an incident of the capture of a salmon on the Restigouche by the eagle. If it was really the eagle that he saw perform the feat, and not the osprey, all observers by lake or river in America would concur that it was an exceptional case. It might easily happen that a spectator unused to the sight of these birds might, at the distance of a thousand yards, even with the aid of a glass, mistake one species for the other. If it, we must believe that the eagle in Canada, like the Indian there, has been reclaimed by the influences of royalty and British institutions from his original savage and predatory habits, and turned to industrious pursuits. On the east coast of Florida the eagle and the osprey are so abundant that we have seen more of each species in one day there than in the Northern and Western States, or in Canada, in a season. Christopher North, in a charming paper on the Ornithology of Scotland, published in *Blackwood's Magazine*, remarked that it would be an absurd thing to see half a dozen eagles together. This absurdity may be seen any day almost on the Halifax River, in Florida, and doubted at all, and all engaged in pursuing and robbing the fish-hawks. The accounts of the matter by Wilson and Audubon may be verified at any time. We have never seen an eagle capture a fish for herself, though we have seen her pick up a dead cat-fish which was floating on the water. We have seen the osprey catch a fish which an eagle obliged him to drop. The eagle caught it before it reached the water, and was busy with it when the osprey attacked eagle No. 1, and robbed her. Old fishermen on this coast say that the eagle, as far as they know, never takes fish for herself, but lives entirely by robbery, usually of the osprey; but sometimes she will rob *them* of their fish, when exposed on the shore, always selecting the best kinds and the fattest specimens. S. C. C.

Halifax Inlet, Fla., April 4th.

AN INVITATION to "PEREGRINE."—Our friend, H. H. P., thus pleasantly writes to "Peregrine," saying:—

If "Peregrine," who chatted so overlastingly in your last issue about owls, "or any other man," will call at the Treasury Department of the N. Y. L. E. and W. R. R. Co., he will find the finest specimen of the American horned owl in this city—"Le Grand Duc" in person. Also, a pair of New Jersey "Bob Whites," that the subscriber has never seen the equal of in size, plumage and pose—the perfect work of John Akhurst, Brooklyn. Also a very fine painting, by A. Rockwell, Buffalo, of a string of speckled trout he caught in 1859, in the south inlet of Rappahannock Lake. The artist mentions these possessions because their daily sight has done him eyes a heap of good, and he would like to share his enjoyment with "Peregrine" and others.

New York, April 11th.

A PET SQUIRREL.—*Hay's Corners, N. Y.*—One year ago I caught a squirrel, and in a few days I discovered four young ones in the nest. Within a week or thereabouts two got smothered in the nest, but the other two grew finely, and when thirty-five days old their eyes opened, and they grew nicely. Strange to say, I could not find anyone able to tell how old a squirrel must be before it could see. I accordingly handled it almost every day, and would take one at a time some three or four rods from the house, and the little ones would run to me as fast as their legs would permit. Dick, when about three months old, was caught and killed by a cat, while out of his cage, playing on the ground. Dilly is yet living, and has been allowed liberty to go out each day, and has never been seen to leave the place, only as far as the yard until Wednesday last, when she disappeared, and was gone until this morning, when she was seen by a neighbor coming home from toward the woods, some eighty rods or more distant. I took her to her cage, and she is now safe and well. L. E. W.

PARASITES IN A DUCK'S FLESH.—*Lowville, N. Y., March 29th.*—Editor *Forest and Stream*.—I read with much interest the letters of "McClellan" and "Mr. Hagen" giving an account of the parasites found in wild ducks' flesh. I met with a similar instance during a trip to the Adirondacks a few years ago. My companion and myself in our light boat were exploring the unfrequented waters of a cluster of ponds, so remote in the deep wilderness that not even Verplanck Colvin himself has ever visited them. I was silently paddling the boat through the narrow channel between the ponds, when just as we came into the second pond a large black or dusky duck fluttered along the surface of the water ahead of the boat. My companion quickly raising his rifle, fired, and put a ball through its neck. Picking it up, we thought we would vary our venison diet with stewed duck. On returning to camp I thought that skinning it would be the quickest method of preparing it. When I did I found the breast completely filled with parasites of about the size of grains of wheat, or resembling in size and appearance ants' eggs. Seeing this, we concluded that, after all, venison was better than duck, and did not change our mind that season. H. W. HAYT.

SWALLOWS AND BED-BUGS.—Recently, while looking over some notes made in Fayette County, Iowa, during 1876, I came across some interesting items in regard to the barn-swallow (*Hirundo horreorum*). I was told that the swallows had been driven away in the early part of the season by a pair of purple martins (*Progne subis*), which refused to let them build. About the middle of June, however, the swallows returned, and, unmolested by the martins, plastered between fifty and sixty of their mud nests under the eaves of the barn.

July 4th I secured several specimens, together with the eggs. The birds were, of course, in wretched plumage. They were, however, remarkably clean and free from parasites. Some days later, bed-bugs (*Cimex lectularius*) were found on all the swallows taken; and the insides of the nests, and sides of barn down to the ground, literally swarmed with these animals.

I was told that the bugs never appear until the young birds are hatched. The bugs are found in the basswood trees of that locality, and I have often seen them in new boards. In fact, it is next to impossible to keep a newly built house free from the pests.

The question is, do the swallows get the bugs from the basswoods; and, if so, how does it happen that they are seen only after the young birds are hatched?

I can answer this only by supposing that the swallows repair to woods for insects to feed their young, and that while there they become infested with the parasite. I do not believe the bed-bugs are used by the swallows for food.

I have never found any explanation of this curious freak, if it can be so called, either in books, or from naturalists with whom I talk. "They exist, nevertheless," Dr. Packard, in his "Guide to the Study of Insects," speaks of a letter from a gentleman, in which he states "that he found a nest of swallows on a court-house in Iowa swarming with bed-bugs."

The bugs seen by appearance, color, bite and odor, to be identical with *C. lectularius*.

Dr. Packard speaks of a variety in Europe, *C. hirsutus*, which he says is common on swallows; but does not mention any variety peculiar to our birds. W. P. M.

Boston, Mass., April 18th.

SPRUCE PARTRIDGES.—The following appears in a recent issue of the *Glens Falls (N. Y.) Republican*:—"Did you ever kill a black partridge?" inquired a gentleman whose post-office address is Indian Lake. We pleaded guilty to having killed a few black squirrels, crows, and similar insects; but had never murdered, or seen, or even heard of a black partridge. "They exist, nevertheless," said he; "but in only one section of the woods that I know of. While hunting in the Moose River country, last fall, I shot two, and young Durant bagged a whole covey. They are a royal bird, black and glossy as a raven, with stripes of bright crimson feathers over each eye, and a narrow strip of pure white down the breast. Their size is that of a common partridge, and they are less wild than the partridges in the Moose River country for the past half a dozen years." Can the *FOREST AND STREAM*, or any other sporting authority, give us information concerning these ebony-colored strangers?

Oh, give us a hard one! They were spruce grouse (*Canace canadensis*).

WHEN DO BEARS HAVE YOUNG?—*Bethel, Maine, April 5th.*—I notice in *FOREST AND STREAM*, of 4th March last, an account of a bear killed the 18th January, and that the use was made in the den, three (3) feet from the ground, and very young. I account for this as a premature birth by certainly two months, or nearly that. The old bear being disturbed left the den, but not until she had cast her cubs. I have never heard an instance yet, where a bear was taken from the den, dead or alive, without first casting her cubs. The natural time for cubbing is the month of March, in this State. The time may differ in different latitudes. I have killed several of these black bears, *Ursus americanus*, under varied circumstances, and at all times of the year. A young *Homo*, at seven months, is likely to live, if tenderly cared for, and why not young *Ursus*? Find a bear's den in any month of the winter containing a size bear with cub, and you cannot take her from the den quick enough, but that she will have her young ones in the den. A fast cutting squirrel in her den, she will not go so far away from the den without them but that she can hear them; and the moment she leaves them, for whatever reason, they will set up such a squalling as to make the woods ring. J. G. RICU.

DO GRAY SQUIRRELS LAY UP A WINTER STORE OF FOOD? *Fairland, Ind.—April 15th.*—John Burroughs, in his "Notes of a Walker"—*Scribner's Monthly* for February—seems to convey, incidentally, the idea that our common gray squirrel lays up a store of nuts for winter use. Is he correct in this or not? I know Mr. Burroughs to be a careful observer, and I have always found his contributions to *Scribner's*, when treating on subjects in natural history which have come under my observation, to be remarkably

bly accurate, but it is true that the gray squirrel lays up a store of nuts for winter use, or does he trust to chance and his usual shrewdness in robbing the ground-squirrel or chipmunk for his food? The writer has always been led to believe the latter true, and years ago, when a boy, wandering in among the maple "sugar camps" on the banks of the beautiful Ohio river in Southern Indiana, he thought he had solved the question by cutting down the old stubs and trees that were known to be the winter den of a pair of gray squirrels, in none of which did he ever find so much as a single nut that was edible, although an abundance of shells and other refuse. SHARPEYES.

We have always supposed that the gray squirrels laid up some provision for the winter. Perhaps some of our readers can give us some facts bearing on this question.

TAXIDERMY WITHOUT A TEACHER.—Under this title Mr. Walter P. Manton has given us an interesting and practical little book of forty pages, which we can recommend to beginners. It is a cheap, and, we think, reliable handbook, treating of the preservation of birds, mammals, fishes and insects. This little volume does not aim to take the place of the larger and more expensive works in this line, but is intended for the beginner in taxidermy—it is intended as a primer, rather than a reader. Beside the chapters on taxidermy, is one devoted to hunting and hygiene. On the whole, the work is one which we can recommend with satisfaction.

GAME AND FISH DIRECTORY.

In sending reports for the *FOREST AND STREAM* Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; Means of access; Hotel and other accommodations; Game and its season; Fish and its season; Boats, Guides, etc.; Name of person to address.

FANCY FLY-RODS vs. WHITTLED POLES.—Some one has been writing from the Adirondacks to one of the New York dailies, and manages, in the course of his communication, to say some very sensible things about the superiority of the fish caught and eaten there, over the mushy specimens sometimes palmed off on city purchasers. We have a faint suspicion that the article was written in the wilds of that self-same daily's editorial rooms, and one thing inducing this belief is the following bit of wisdom about fly-rods:—

The elaborate joint rods which the city sportsmen bring into the wilderness with them had better be left at home. As a rule rods of a much better quality can be procured here for about one-half of the money. The guides themselves use a tamarack pole, which may be cut almost anywhere, and some very skillful fly-casting is done with these home-made rods. They have one strong point in their favor, and that is, when broken in amateur hands, it does not require \$25 to replace them. But while the fancy rods may profitably be forgotten, a well-stocked fly book and good assortment of lines should always be brought into the woods by the visiting fisherman. Adirondack trout, the guides themselves catch, and are, and they will snap weak lines without a twinge of conscience. One came very near snapping alive that was not weak a few days ago. It was held by Harry Thompson, the backwoods guide, who once read Sophocles in the shade of Oxford University. He saved both line and fish. The latter, a glorious speckled trout, weighed six pounds and two ounces. I have not been so lucky as that myself, but I took a string of four beauties last week, weighing in the aggregate seven pounds—took them at the price for which they were offered—five cents a pound.

Of course he did, and he'll wager the finest "fancy" rod in our outfit that he never took trout with anything else than this silver or shinplaster bait.

AN ACKNOWLEDGMENT.—*Bridgeport, Conn., April 27th.*—I inclose copy of an acknowledgment received yesterday from a friend to whom I sent a few trout. I think it worthy of your notice—do you? A. F. J. HOBBS.

Your gift—these beauties of the stream—Are the ideal of my dream; When as the gentle spring days come, And by dark Fate I'm kept at home, I picture all the angler feels, As mountain brook its durlins yields, In weight and markings, like an eagle, They please my fancy, charm my eyes, But how shall the delighted tongue, Tell how their favors to it clung—Refined, exalting, delicate, Sense-thrilling, luscious, exquisite, As, brown and fragrant from the pan, They vivified the inner man? Dear friend, sweet thanks! you send me more Than if you gave a golden store. The fields, the skies, the woods, the streams, The hopes of youth and childhood's dreams Are in the gift—here, too, I find Your heart, large, loyal, true and kind. H. N. P.

ADIRONDACKS.—*Moir, near the Adirondacks, May 1st.*—The ice is out of the lakes and ponds in this portion of the Adirondacks, and trout fishing has commenced. A man living near Branch Pond brought a fine lot down to Malone the first part of the week, that he caught in that pond. Thirty of them weighed something over twenty pounds. Branch Pond is only six or seven miles south of Malone. Several fine lots have also been caught in the brooks about here during the past two weeks. The pros-

pect for dear the coming season was never better for many years, and I have not known the partridges or ruffed grouse to be so numerous in the spring for a long time.

ADRIEN ONDACK.

CONNECTICUT LAKES.—We have an extended sketch from the writer of the following notes, which we will shortly publish:—

A party of three from Boston were the first visitors—getting two deer and plenty of fish. My friend and self followed; next a Syracuse, N. Y., party (Rev. Dr. Beard, Col. Chase and Mr. Bacon), stopping but a few days; after them, Fred W. Wheeler, of New Haven, and, lastly, a party of four from Bridgeport, Conn., all well armed, which fact may account for the scarcity of game for the next few weeks.

I floated with Norton twice only, shooting a buck the first night, and the last a moose (a two-year-old), which I left with Uncle Tom, and have since heard that it was the first fresh meat seen in camp during the season.

Prof. Wheeler wrote me that he floated East Inlet twice for moose, and did not catch a sound, and goes on to say, "The fact seems to be that all moose-land has heard of your exploit, and the wise moose have held a council, and decided to emigrate, for the time being, to unexplored feeding grounds."

I had the advantage of being the first one to try the new "ground," the aid of a full moon, and otherwise perfect night, and the luck of making a dead shot almost by guess.

Guests intend to improve upon his camp this season, and to get a man and wife to look after the cuisine, and to devote his time to guiding.

Second Lake is a charming spot, and is still fresh (First Lake is worn out). Deer are not as plenty as about some of the back ponds in the Adirondacks; but there is usually no trouble in supplying the wants of the camp. The fishing is not as good as in other lakes—the trout average smaller. It is a poor place for a person to go thinking to find use for a large amount of ammunition; but, to any one interested in natural history, and satisfied with a reasonable amount of sporting, the beaver works and caribou bogs will well repay a visit.

F. S. P.

ISLAND CAMP.—Island Camp is situated on an island in Pike Lake, Wis., a few miles from Ashland, and is the private property of a party of St. Louis sportsmen. The quarters consist of a fine center building, in rustic style, with a kitchen detached. The island itself is about two acres in extent; the lake surrounding is full of bass and pike, and the streams and creeks near by abound in trout. Deer are abundant in the adjacent forests.

PREPARING FOR THE BLACK BASS CAMPAIGN.—Willis, Texas, April 25th.—Last year, or the year before, some excellent articles came out in the FOREST AND STREAM in the interest of the black bass, but it seems of late that this famous fish is losing ground in the columns of the paper. That will not begin to do. This old soldier must be in his pension, or he will be forgotten in the oblivion. I never read with more interest anything than those lively essays upon the habits, characteristics and methods of capturing this wary fish. We, of the South, know nothing of the trout proper, but we have the black bass in all our waters, and, although we regard him *par excellence* the king of his tribe, yet we look upon him as the most cunning, arbitrary, tantalizing and uncompromising imp that sits upon his throne, and, between Maine and Mexico, can write out a campaign programme that will meet all the indications or requirements when one goes fishing for black bass, and that will bring luck to one's string, I, and the rest of us, will go out to him with our souls and regard him not only as a public benefactor, but a "mutual friend" to the whole body of bass fishermen. I only want suggestions how to get my hands on some four or six pounds of silk line, (cork reel never saw about two feet, and licking their chops at the bait hook for the last five years, and no argument that I can frame will move them one inch closer. I never used nor saw a fly used for bass. That kind of science has not been cast upon our waters yet. I shall try it on soon. I have a good outfit, now; my boats are all newly painted; I have rigged my rods (cork reels) with seventy-five feet of best old-brandy silk line, (cork reel never saw a reel before). I got Orvis to make me a fly, a "green" and gold. I then took that as a pattern, and read in Hallock's "Gazetteer" about colors, etc.; then got a lot of feathers from cranes, ibises, storks, herons, chicken-cocks, peacocks, wood-ducks, mallard, parrots and the like, and I have made some of the prettiest flies and bobs on earth. To get my hand in practice with this reel, I got a little nigger to hold the line and run, and, as he runs, I pull and manipulate; and when he has run off enough line to look well, I tell him to stop—the bass always stops on his own account, at intervals—and when he stops, I cause him to keep a taut line and turn the windlass and reel him up, and so on until my lesson is finished. I do this daily, and am becoming expert. As to casting and retrieving, I knew that before. And now, with this "equipment," if I don't fool these old chaps next week, during the last quarter of the present month, then "the books are wrong."

C. L. J.

TROLLING FOR SALMON TROUT.

HAVING often heard of the glorious sport to be had trolling for salmon in the summer months on Lake Superior, four of us, after mature consideration, concluded that we would find out for ourselves how much there was in the old stories. The party consisted of James McBean, Fred Jones, George Hatt and the writer. October 1st, 1879, the day on which we had decided to try our fortune, turned out dark and stormy, the wind blowing half a gale from the northeast, but nothing daunted by the inclemency of the weather, we put our tent and traps aboard of the boat which we had been cruising with for the summer (for want of a better), which is of a build monopolized by the fishermen of these northern lakes. They are clincher-built, about 25 ft. keel, 7 ft. beam, sharp stem and schooner-rigged. We thought a deck, but very staunch and seaworthy. We got under weigh about 11 o'clock A. M., the wind, as I said before, blowing half a gale from the northeast, cut before we had run five miles of the twenty-five we had to sail, it lulled, and a terrific thunder-storm, for which Thunders Bay, Lake Superior, is noted, came on, and there we lay rocking about without wind enough to keep our sails full, and the rain coming down in bucketsful. After about

two hours' drenching, the wind shifted to the northwest and we got along better, the weather still remaining a little moist; however, by four o'clock we were in Jarvis Bay, and after considerable trouble in getting our boat over the bar, were safely moored to the banks of the Jarvis River, a small river about sixty feet wide at the entrance. An hour was spent in getting our traps ashore and pitching our bell-tent to protect them, and while Jones and Mac were cutting wood for a fire, George and the writer concluded to try and catch a few salmon. After rowing for half a mile in the skiff which we had towed down, we reached the fishing ground. There, much to the writer's surprise, he immediately had a bite. It would take an abler pen than mine to portray the intense excitement of a tyro landing his first fifteen-pounder of this species; however, within fifteen minutes darkness compelled us to desist, and we rowed for the camp with four beauties lying in the bottom of the boat. When within halting distance, we joyfully shouted our success to Jones and Mac, who were the strongest skeptics on the subject. This was, of course, received with derisive and scornful shouts and laughter, which was not exactly turned to weeping on our landing; but they were there with excitement, and wanted to go trolling then and there, although it was by this time dark, so the reader may imagine their mental condition. George now turned cook, and in a very short time we were eating a meal consisting of boiled trout and potatoes stewed with pork gravy, the orthodox dish on these expeditions, and I might here add that the fish that are caught while trolling, and eaten fresh from the water, have a flavor equal to the finest brook trout, which no one who has ever eaten one in that way will dispute.

After supper, and while enjoying our pipes, the whole subject of course, was fish, and how many we were going to get on the morrow. In order to be early at the scene of action, I was unanimously resolved to follow the instructions of the old proverb, and go "early to bed," which we did with a good fire blazing in front of the tent. Now all was quietness excepting the crackling made by the fire, and each supposed the others in the land of nod, with dreams of salmon, but he forgot the snoring, snoring, snoring through their brains. After two hours of this, an impatient exclamation was heard from one of the party (his, too, hea), was unbearable, although memory says that the remark was not couched in as mild a form as I have written, when we all sat up and found that the same sentiments imbued the minds of the quartette. So the conclusion now came to was, that it would require some of Bass' bitter beer to counteract the effects of the heat, and that we would not go to bed at all, in order to be up with the morning. Scarcely had he come to this conclusion, when the spinning yarns of former adventures had with rod and gun, and many a midnight watch on deck, it was soon time for breakfast. At the first peep of dawn, we were all away to the ground, where, after three hours' continued excitement, the skiff was loaded down with twenty-two "whoppers." The *modus operandi* was this: one rowed, two sat in the stern, each with a trolling line—one running from each side of the boat—and the fourth man, next them, landed the fish and cleared the lines. In landing the fish, one has to be very careful and keep them clear of the sides of the boat, otherwise there would not be a hook left on the spoon every time you land a fish. Mac, who took the first turn at landing, distinguished himself by the very scientific manner in which he extracted the hooks (generally the whole three hooks on the spoon would be firmly imbedded in the upper jaw of the fish, and it required considerable labor to extract them).

The pangs of hunger, together with the necessity of discharging our cargo, which had brought the boat nearly to her gunwale, compelled us to land and enjoy another breakfast, of which we were still the victims. After an hour spent in the same part of the fish we had no ice with us, and were afraid to risk keeping them *all* fresh, we started out for a new place on the other side of the bay, which we had not previously explored, where our former good luck followed us, and the result was twenty-three more.

All through the day one of Lake Superior's densest fogs had been abroad. Often we were unable to see one hundred yards ahead. Nothing disturbed the stillness of nature, excepting the noise made by our oars, and the occasional cry of a Dufferin Mall steamer some four miles among the islands, bound for Duluth, the zenith of the unsalted seas. But now it lifted for a short time, and a light breeze springing up, we concluded to start for a bank where we were anxious to arrive some time through the night. After meal No. 3—which of course was in the natural order of events—we started, but the few cats-paws we previously had, died out as soon as we got under weigh, and George and Jones put off again in the skiff—this time on an exploratory tour, seeking whom they might devour on the lines. A few minutes later, however, they came back for a second time, with the trophies which they had on a tree near the beach. I forgot to say previously that Jones and Mac, while exploring the river before dinner, shot two of a covey of partridges which they had raised, and they thought with these two we would have a fine supper—this time fish varied with game. Months after, however, the joke came out: that what they had imagined to be partridges were two knolls on a dead tree, which the fog had made loom up when they had gone with the gun. The wind freshened up, and the fog cleared, and after two hours' searching we found that it was likely to be a wild night, and considering discretion and a camp preferable to a stormy night in an open boat, we headed for the skiff, pushed her up, and put for a harbor, the wind having increased to a gale, accompanied by a terrific rain storm, both of which lasted all night. A mile's sailing brought us to an excellent harbor, but a very bad camping ground, the point on which we had to pitch our tent having been devastated by a bush fire, leaving not only burnt the wood on it, but the grass and even, leaving nothing but a mass of mud and sand. There being no choice, we got everything under cover as quickly as possible, and started to cook supper—hard work with the wet roots and driftwood, which was all the fuel we had. For supper we had some *bouillon*, a dish worthy of a *Cordon bleu*. It consisted of the two partridges, some bacon and potatoes, flour and tomatoes, all boiled together; and, although to some of your readers such a mixture may seem unpalatable, it wants only to be eaten to be appreciated. Sleeplessness did not pervade the camp this night, notwithstanding the fact that the rain was so heavy, which were saturated with standing sundry waterproof coats—and almost before we had finished our after-dinner smoke, Morpheus had us all for his loyal subjects. Mac here again particularly distinguished himself. In spite of our assertions that it would be useless to attempt building a fire, as it would not burn, he succeeded in kindling one, had wood and all to the contrary, that would have roasted an ox whole; and it burned till it hardly left ainder.

Morning dawned bright and cheerful. For the first time since leaving home we saw the sun. After, of course, a hearty breakfast we started again for home. As the breeze was very light, and after being an hour sailing one mile, Mac and George concluded they would go ahead in the skiff, and try some unexplored ground for a last parting fish; and whether it was the improve-

ment or a better place, or both, that made the fish bite more readily, they succeeded in beating out best luck, and in eleven minutes landed sixteen fish. These, with eight caught in the morning while breakfast was being prepared, and one caught from the sailboat, brought our numbers up to exactly seventy-five, which weighed from nine to twenty-four pounds each—Mac having the honor of catching and landing the twenty-four pounder, and he felt justly proud of his luck.

Satisfied that we could now carry off the palm for a successful trip, and a favorable breeze striking us, we hoisted all our rugs, and were soon bounding merrily away, which we reached in good time, to greet those of our citizens who, like in most frontier towns, crowd around each returning sportsman, and had come down expecting to chaff us on the ducking we must have had during all the storms, and, as they supposed as a natural consequence of the trip, no fish; but their chaffing was turned into surprise when they saw our wonderful success, and fish stories became the popular excitement until the arrival of the next steamboat with the bi-weekly mail.

The following information may be of interest: Where we fished the shore is formed of perpendicular cliffs ranging from one to six hundred feet in height, and the beach is, in most cases, formed of pieces of rocks, which have been dropping from the sides since the days when Adam was a boy, making the beach run into the water at an angle of about forty-five degrees. Our experience was to row exactly over the spot where you could see the bottom (about sixteen feet down)—any divergence from this rule was sure to be attended with bad luck, and the main speed of rowing was to be attended with one and one-half miles per hour.

Although we continually had our lines out when sailing, we only caught one fish—which was when crossing a point, and with the shore as previously mentioned.

To a lover of the picturesque and grand, the route from here to James Bay would possess countless charms—those stupendous hills, Thunder Cape (1,500 ft.) to the right, Mackay's Mountain (1,500) to the left, and Pie Island (1,000 ft.), almost head, form truly noble sights, their perpendicular sides as changeable as a kaleidoscope, according to the different positions and lights thrown upon them; while further on, countless islands and headlands meet the delighted gaze, which could be contemplated day after day without any cessation of interest, as no two aspects are alike; one time mirrored in a sea of glass, again the angry tempest lashing their feet with spray, while spring, summer, autumn and winter each present such a contrast from the limpid waters of the lake in summer, to the eternal ice and snow of an almost arctic winter, while the rarity of the atmosphere makes the landscape, twenty miles distant, seem nearer than it would in an ordinary climate; and, to a lover of nature, the trip amply repays the time spent, about one never cast a line or land a fish.

Prince Arthur's Landing.

Trout fishing opened in Pike Co., Pa., last Saturday.

Fish Culture.

—ADDRESS all communications "Forest and Stream Publishing Company, New York."

✓ BROOK TROUT IN PONDS.—*Chrome Hill, Lisburn, Ireland, April 16th.*—Editor *Forest and Stream*.—Through the kindness of a friend I enjoy the valuable privilege of pursuing your interesting paper regularly; and many an hour of pleasant reading I have had, the only drawback being that so many miles of the "weary waste of waters" prevent me from enjoying in *propria persona* some of the many "pursuits of pleasure" offered by your splendid country. I notice in your issue of 25th March an article under "Fish Culture" by "A Practical Fish Culturist," in which he states that trout, as a general rule, will thrive in ponds. I cannot agree with him; but, on the contrary, after that trout will thrive better in ponds than in running water. In support of this statement, I will give two instances which have come under my immediate notice. A few years ago a new reservoir or dam was constructed to supply my neighboring town with water. It gets its water by drains from the adjacent fields; none of these drains are more than three feet wide, and, except in floods, they don't contain as much water as would cover a pound trout. I placed some brook trout in this pond, and another gentleman had a large lot put in, all small. It is now teeming with fish; and I know of them being caught up to nine pounds weight. Again, a friend of mine constructed a small dam, about one acre in extent, to supply his bleach green with pure water. It has no opening into a stream, but a spring feeds it, and it returns all as I said, from a spring. Well, three years ago I placed in this pond fifteen small trout caught in a mountain stream, none over four ounces weight. I heard nothing of them till last autumn, when I determined to try if they were living or not. So, taking advantage of a fishy-looking evening, I sauntered down duly prepared, and choosing a dark-looking spot shaded by some willow bushes, I tried with a "willow fly," and secured a brace, and the feathery deception dropped on the surface of the slightly ruffled water, when a swirl of the reel, and twenty yards of varnished silk spinning out, warned me that I had a "sockdologer" on. In five minutes I had a beauty on the sward that scaled four and three-quarters pounds. Another try, and a three-pounder joined his companion. These I killed. On the following evening I caught eight; one of them I showed my friend, pointing out the article as "Practical Fish Culture," writes might deter many from forming a fish pond; hence, I think it right to give my experience in the matter, trusting you will pardon me for taking up so much of your valuable space.

RICHARD NIVEN.

CONNECTICUT SALMON.—The Hartford Times says: "We will not, probably, get any Connecticut river salmon this year, as these fish are all caught at the mouth of the river and sent to the New York market—in violation of the law, too. On this account, we believe, the legislature refused an appropriation of \$2,500 to the fish commissioners in aid of the further propagation of the salmon."

The Kennel.

—ADDRESS all communications "Forest and Stream Publishing Company, New York."

THE NEW YORK DOG SHOW.—It has been decided to hold the bench show at Madison Square Garden on the 11th, 12th and 13th, as previously announced. This decision was arrived at by the managers of the show on Saturday last, after a thorough examination of the building by several eminent architects. The widespread interest in the show is shown by the great number of letters and telegrams received daily from all parts of the country, many of them regarding additional entries, which, however, cannot be made. Mr. Lincoln informs us that "it is an astonishing fact that out of the large number of entries made, only one has been withdrawn since the accident occurred." In the meantime, the two English judges have been filling up their time by visiting the dogs and kennels in the vicinity of New York. Mr. Hugh Dalziel, of the *Live Stock Journal*, has been with his friends in Boston; and Dr. Stables on Monday last paid Mr. Moore's kennels a visit at Philadelphia; he then went to Baltimore and Washington.

Champion Tarquin, Sir William Verner's bull terrier, has been relieving his mind and occupying his spare moments by chewing up all of the canine persuasion that came within his reach. He met a tough customer, however, in his son the other evening, and he has been in a dreadful humor ever since.

MADISON SQUARE GARDEN.—Examination and inspection by the managers of the bench show and their architects:—

The Madison Square Garden, where the bench show will be held on the 11th, 12th and 13th inst., has been thoroughly inspected and examined by Mr. John B. Snook and Mr. Robert H. Robertson, these gentlemen having been employed by the managers of the show. Mr. Snook is the oldest and one of the best known practical architects in the city, and probably has more thorough practical experience than any other man in the city, both as a builder and architect in all its branches. Mr. Robertson is one of the most prominent of the younger architects. He is a member of the firm of Porter & Robertson the senior member of which was for some time the United States government supervising architect.

Mr. Snook and Mr. Robertson spent Friday and Saturday afternoons in the Garden, making a most careful and thorough examination and inspection of the building, and report, "that in their opinion the building is amply safe and secure for the purposes to which the managers of the bench show propose to put it." The management has determined to dispense entirely with all that portion of the building fronting on Madison avenue; the entrance there will be entirely closed. The main building, where the show will be held, will thus be entirely separated from that portion of the structure where the accident occurred. The entrance will be on Fourth avenue, Twenty-sixth and Twenty-seventh streets.

CHAS. LINCOLN, Supt.

POINT JUDGING AT SHOWS.

THE complaint has been great that at the various bench shows, the dogs have not been judged by points, notwithstanding the clubs advertised that such should be the rule; let us, therefore, see if there has been any reason for this inconsistency.

Previous to the sale of points, as printed in the *Fancier's Gazette*, was the acknowledged authority, but with the advent of Stonehenge's last book, the kennel clubs adopted the scale of points there given. The rules for bench shows offered by the National American Kennel Club have the following:—

RULE 7.—Dogs to be judged by scale of points laid down in the third edition of Stonehenge's "Dogs of the British Islands."

If the trouble be taken to notice the number and variety of terms used to designate the anatomical parts, or collection of parts, in the various breeds for which a value has been given, one sufficient reason for not judging by points can be found.

The dog is not taken as an animal of a particular shape and form as is the horse or cow, and divided anatomically into different parts, for which a value is invariably given, the value only ranging with the breeds. For example: The Skye terrier has fifteen allowed for a perfect head, while for such an important part of his organization the Yorkshire is allowed nothing; the amount being distributed for excellence in other particulars. In this way there are fifty-four parts, or collections of parts, for which value is given in the sporting breeds, and sixty-four in the non-sporting, no one particular breed having more than sixteen.

On page 57 of his work, Stonehenge gives a plan for judging, based upon an anatomical division of the dog's body, and one obviously impossible to follow from the scales given throughout his book. Where the shows are for only one breed, like the bull-dog shows held in England, judging by points can easily be, and has been, accomplished; but in a show with ten to twenty-five different breeds, to expect that any judge, however good he may be, can remember without any aid to his memory the particular twelve or sixteen kinds of points out of the fifty-four or sixty-four given, is simply absurd.

The rules under which the coming New York show will be held say that Stonehenge's points will be used when necessary—a proviso which relieves the judges from using them unless they so desire.

The Secretary of the Massachusetts Kennel Club has prepared a table of points of all the sporting and non-sporting dogs, as given by Stonehenge, showing at a glance the value of each point in judging any particular breed. The table is printed on both sides of a stiff card, and with each is furnished a package of scoring cards, by which the work of judging by points is reduced to its

minimum. These cards will each give the score of ten dogs, and are very easy to understand and use.

The different points on the table with their values are numbered from 1 to 118 inclusive. The first column of the table is a card for the judges as given in the table of the points of the particular breed to be judged. The second column is for the maximum value of the points when perfect. This is filled in simply to aid the memory. The other columns are for the points given the dogs judged. By holding the table and score-card back to back in the left hand when judging and marking, ready reference can be had to the table for information as to the points to be considered in regard to the animal in the ring.

The tables and scoring-cards will be for sale for the first time at the New York show. CONVEN.

ENGLISH FASHIONS IN DOG FLESH.

FASHION in dog flesh is a curious subject for contemplation, but it is nevertheless an interesting one. Where the various breeds which have occupied the highest position in the estimation of the public come to be considered, the truth of the aphorism that "Every dog has his day" is forcibly brought before us. The rage to possess St. Bernards has somewhat cooled before the advance in later years of mastiffs, and the ownership of the former breed has lapsed into the hands of a few but select body of admirers. Irish wolf-hounds are practically extinct, since Mr. G. A. Graham, but German mastiffs seem taking root amongst us. Unfortunately for themselves, however, all the larger breeds require space and special care, which precludes their being kept in numbers in intimate kennels, and the affection of the public has perforce to be directed toward the lesser varieties of dog. Here, at the present time, the fox-terrier reigns supreme. Presenting as this class of dog does such a diversity of type and coloring, it can hardly be a matter for astonishment that his friends are legion. A fox-terrier is usually a peaceably inclined and vivacious dog, and even if not pretty may have those pretty ways which endear him to a certain class, whose great ambition is the acquisition of something with hair on it that will bark. To such, the excess of three or four pounds over the correct standard of heaviness, does not depreciate the value of their pets; and as the breed is a variety of gaudily-marked dogs in the sale-list, a deficiency in symmetry can be compensated for by plenty of pretty spots. However, with all their present popularity, fox-terriers must look to their laurels, for Irish terriers are surely gaining ground. Patriotism, and love of what they call their "national dog," has caused our friends across the Channel to exert themselves to the utmost to push the Irish terrier; and their efforts are not without fruit, and will bear merrily in toys, the little black and tan terrier has almost gone from sight, as ladies now prefer a more robust companion, and a colley is more often seen than the pigmy black and tan in the society of the gentler sex. Pugs have held their own, but Yorkshire terriers are but seldom met with beyond the limits of their native country. Toy spaniels may be reckoned as looking up, but the attention which must be bestowed on their toilet renders them as it does Maltese and Yorkshires, a trouble to their owners which the latter are often glad to escape. Dachshunds were at one time, and that not long ago, looked upon as the coming race of dog, but their reign was brief and inglorious.

Having thus referred to dogs which are looked upon as pets, it may be well to turn for a moment to the various sorts of vermin dogs, which have been popular from time to time. Here there has been but little change, the dandies, Skyes and Scotch terriers of the North, and the bull and black and tan terriers of this country, and the Irish terriers having managed to retain their several supporters in the face of every opposition. This being so, it would be dangerous to prophesy ill luck for any of them; but it may be safely hinted that as vermin dogs, the bull-terrier, the Irish terrier and the Skye are superior to the other varieties most usually associated with this class of sport.

A somewhat curious system adopted by admirers of certain classes of dogs, is the custom of improving the appearance of these varieties by recourse to mutilation. The ears of certain working breeds of terriers are cropped for beauty and for use, we know, but what advantage is there in removing the ears of a toy spaniel or a fox-terrier. In former days both Dalmatians and pugs used to have their ears entirely removed; but of late, the barbarous practice has been discontinued. As regards the clipping of a poodle, opinions differ with respect to the orthodox crop, many holding for the style of one professional clipper, while other fanciers patronize his rival; all which considerations tend to prove that in dogs, as in other things, so much depends on caprice that there is even yet a chance for the most univerting and unlovable to succeed with patience. —*Live Stock Journal*.

THE RINGING AND THE DINGING OF THE BELL.

MONTREAL, April 13th.

SOME three years ago, when on a visit to a friend, I was very much taken with the looks of a little spaniel puppy that he showed me. He was not by any means thoroughbred, for though his sire was a thoroughbred Irish water-spaniel, his mother was crossed with a cocker. The puppy was dark liver-colored, rather curly, and, what attracted me, had the broad forehead and frank, honest eyes that always mark a dog of genius. I traded another dog for him and took him home, and a more really intellectual dog I never owned. I was an invalid at the time, or partly so—too sick to go to school, but just well enough to play, as my father said, consequently I had plenty of time to train him; and, in eleven months old he would go back a mile for my whip, would pick up either my whip, hat or handkerchief, always taking the right one, no matter how I tried to puzzle him, would down-charge so suddenly that you could hear his bones strike the floor as he fell, would roll over, sit up, do the "serpent," walk on his hind or front legs, walk lame on any foot, and a thousand and one tricks that I have forgotten by this time. His special favorite was an old soft felt hat that I wore knocking round the yard, and he would pick it out from any number of other hats, and would go home and get it off the rack and bring it to me, from almost any distance. Many a time

he pulled the whole rack over in his efforts to get it when hung too high. At that time I used to go for a walk every morning before breakfast, and it was during those walks that Leo got most of his training; and as I was, and am, a very heavy sleeper, I had great difficulty waking early enough. I had heard of dogs waking their masters at regular hours, and as I firmly believed Leo capable of anything ever done by another dog, I thought I would teach him to wake me every morning at day-break. How I succeeded you will read below.

I occupied a large room at the back of the house, with a window opening on the yard occupied by master Leo. Around the sides of the room I had great rows of two rows of pegs for hanging clothes, and in this corner was my bed. I tied a cord across the corner about a foot out, and to this cord I fastened a large bell, such as are used by milkmen, which was thus suspended immediately above my head. To the bell was fastened a cord, which after passing through a loop of wire fastened to the ceiling, went out through the window, and had for its termination an old felt hat, which hung about two feet from the ground. I had tied the hat there loosely before, and made Leo fetch it, so that when he awoke at daylight and saw the hat he would try to take it, and thus ring the bell. I had misgivings that he might possibly see the hat sooner than I wished, but the first night being cloudy my plan worked like a charm. Leo, on waking, espied the hat, pulled it, rang the bell, and I, waking, ran down in a garb more cool than voluminous, put on my dressing gown, and gave him a piece of sugar, his usual reward. The next night was bright moonlight, and when I went to bed I heard Leo playing about the yard with a neighbor's dog about 1 A.M. In his peregrinations he ran across the hat and commenced to pull with a will. Ding! ding! ding! I went the bell, but I calmly slept on. I was in my first sleep, out of which it is almost impossible to wake me, and it only gave a reluctant turn to my dream. For I imagined that it was Sunday, and that the church bells were ringing. Any outside noise almost invariably works itself into my dreams in that way. My mother was restless that night from neuralgia, and she felt so nervous at last that she sent my father, to my room to see what was the matter.

"George! George!"

"Yes."

"For goodness sake stop that bell."

At that moment the bell stopped, and my father, having told me to fix it so that it would not ring again, went back to bed, and hardly was his back turned than I was fast asleep. About an hour after, the bell started again, and after standing it as long as she could, mother sent father in again, with precisely the same result; bell stopped for a time and then went on with renewed vigor. At last, when poor mother had had her night's rest hopelessly ruined she came in herself, and insisted on my getting up there and then. This thoroughly awakened me and I pulled up the string, leaving the hat, however, in Mister Leo's teeth, and next morning that hat was scattered to the four winds of heaven. I got an awful chaffing at breakfast, and even yet they have not forgotten the incident, and as a punishment I had to experience further, but as the other members objected to having that infernal bell dingling all night, I had to give in to the majority.

My early morning walks came to an end about the same time, so Leo's occupation as a bell-ringer was gone. How he would have succeeded in a more legitimate line of business, namely, retrieving, I cannot say, as I sold him for the time, to me, my neighbor, and I had cried all night at losing my playmate. I was but a lad at the time, and but that I wanted to buy another dog, my cocker bitch Brownie, nothing would have induced me to sell him. His purchaser was a kind-hearted gentleman who had taken a fancy to him on seeing him fetch a refractory baby brother to me by the skirt of his dress. He very soon became as fond of Leo as I had been, and there were tears in his eyes when he said in voice which told me that the fellow had been poisoned. I will not soon forget the choking sensation to my throat as, after having with mingled pride and grief, made Leo do all his tricks, and kissed him good-by. I walked down stairs from Mr. A.'s office with a \$10 bill in my hand; and what a void there seemed to be, without the patter of his feet and the jingle of his collar attending my every step. The fellow was a dog, was a dog, and I had called him my very own, but I felt then, and I feel now, that no amount of money can compensate for the loss of such a faithful friend.

I became very much attached to his successor, Brownie, so much so that when she too was poisoned last summer, after three years of companionship, when I looked back at all the comfort she had been to me during my first year away from home, and thought of the many, many hours I had spent, happy in her companionship, and when I thought what a blank her death had left in my little world, and how deep my grief was, I determined never again to have a single dog; either none, or two or three. I have four now, two of them daughters of Brownie, and although they are, perhaps, not so well-trained, nor so much company, my affection is divided amongst them, and I grow old and not miss any one of them so much. Besides, my fondness for them is largely composed of pride in their beauty, which is not inconsiderable, and their prize-winning, which are neither few nor unimportant. To these I hope to add during the present month. I sometimes regret this change in my feelings, and wish for the old style of thing, in fact I have serious thoughts of getting a little pet dog of my own. No friend of mine so loving and forgiving as a favorite dog, and this fact entitles them to every consideration. Be kind to your pets and give them a little affection in return for the adoration that is lavished on you. Dido.

PROF. HUXLEY ON DOGS.

SO distinguished a scientist as Prof. Huxley has been giving his attention to the Dog, and the problems connected with its origin and proper place in nature. He has recently delivered two lectures upon the subject, a digest of which, taken from the *London Live Stock Journal*, we reproduce below:—

Prof. Huxley delivered on Tuesday afternoon, to a distinguished audience, at the Royal Institution, the first of two lectures on "Dogs, and the problems connected

with them." He commenced by remarking that there was no animal in which man took so profound an interest as the dog. There was no animal treated so completely in the same manner as man treated the most valued and trusty friends of his own species. Man admitted the dog to share his own courts, to the intimacy of his own hearths and homes; and to complete the parallel, he commonly treated him with as great neglect and carelessness, yet ever turning to the dog in the fulfilled expectation that he would obtain from him undiminished affection. Therefore, he thought his hearers might take some interest in endeavoring to ascertain what was the place of the dog in the economy of Nature.

Now, it might have surprised some people to discover that they have been in the habit of using terms which, when they came to be put straight out, appeared to contradict convictions which they held very strongly. That was very much the case of the dog; for taking the physical nature of that animal to begin with, there was probably no one present who had not, in regard to it, repeatedly employed such terms as head, eyes, ears, nose, neck, trunk, chest, limbs, skull, back-bone, or leg-bone. Those terms applied to a considerable extent in precisely the same sense to parts of the human body; and therein was an implication that the users of such languages had unconsciously become aware of a fundamental similarity between the physical and mental organization of the dog, and the physical and mental organization of man. And this unity existing between the dog and man was very striking, not only in relation to the physical nature but the moral nature of the two animals.

Taking first the question of physical similarity, Prof. Huxley pointed out by the aid of a diagram, in which force was given to the illustration by the skeleton of the animal being raised on hind legs, that in internal construction the only difference between man and dog was one of size and proportion. There was not a bone in the one which did not exist in the other—not a single constituent in the one that was not to be found in the other. In the case of the dog there was not that which, on superficial examination, answered to the collar-bone of man; but close dissection would disclose, in the case of the lower animal, a similar bone, varying in length from a third to half an inch, occupying the same place as the human collar-bone, and which was indubitably a rudimentary collar-bone. It appeared to be of no functional importance, but there it was. The great toe, which was conspicuous in the man, was only rudimentarily represented in the dog; but that was a difference only of form and proportion and of attitude. Man and dog were constructed by the same plan as the human and the dog in the same style of architecture, but differing in detail.

Considering the psychological nature of the dog, the lecturer remarked that he might be met at the outset with the objection, "Talk of the mind of a dog; why, I don't believe he has a mind." Well, the only reason he had for assuming that the dog had a mind was the same reason by which he assumed that all present had minds; there was no direct evidence of the fact any more in the one than in the other. He proceeded in this matter on the plain ground of common sense, which led them aright in their daily affairs, and upon which was founded the general axiom that, where there was nothing to the contrary, like causes produced like effect. Run a pin into a man, and there was a start and a cry, by which they came to the conclusion that pain had resulted. Run a pin into a dog, and there was a howl and attempt, perhaps, to bite, by which we inferred that the animal was in a state of consciousness in which it also suffered pain. Could they say that the dog was a mere piece of animate machinery? It was quite true that certain philosophers had held views of that kind, but common sense people would not have it, and he believed the common sense people were right. And once they denied that there was the smallest foundation for supposing that under the same condition which produced pain to humans, it produced no sensation of feeling, then the whole question of the mind of the dog was granted. At the same time he was disposed to think that in dogs the feeling of pain was infinitely duller than in human beings.

As to the other senses belonging to dogs, he was inclined to doubt very much if dogs could see with anything like the distinctness of men. Their hearing was indisputably very acute; but it was a remarkable fact that sense was regulated on a totally different scale in dogs as compared with humans. They were not over-keen of ear of a dog taking a pleasure in music? On the contrary, the sound of music seem to cause him acute pain, accompanied by a horrible sort of fascination, which fastened him to the spot at which he was subjected to the torture. Else, when a German band was doing its worst in the streets, why did he sit upon his haunches and howl when he might get up and run away. Yet he often wondered whether dogs really did suffer pain from music, or whether they howled purely in sympathy, as did the jackals of the prairies. The sense of smell in a dog was something marvelous—marvelous not only for its delicacy, but for the fact that its discrimination of what was agreeable and disagreeable was exactly the reverse of ours. They never heard of a dog being infatuated with lavender water, or eau de Cologne, or Eau de Cologne; he rather recoiled in the smells which to men were a source of unfeigned horror and disgust.

He once possessed a dog which he frequently left among the thousands frequenting Regent's Park, to secrete himself behind a tree. So soon as the animal found that he had lost his master he laid his nose to the ground, and in that manner very soon tracked him to his hiding place. That showed that the dog had the power of distinguishing the particular modification of the least of the boots caused by the wearing of his master in contradistinction to the modification produced by hundreds of thousands of other people present at the moment. As to the ability of dogs to find their way from place to place, he believed there was an unconscious registration in their minds of the visual pictures presented to it in the various tracks through which they passed, and that the memory worked backward until the animal reached its destination.

No one could doubt the moral disposition of dogs. Some were trustworthy, others more or less thieves; some were amiable, others vicious, and so on. Neither was there any doubt that a dog had ideas of equality and inequality. They could easily settle that point by offering a dog a large and a small piece of meat on the same dish, and by observing which he took first. Indeed there was

no fundamental faculty connected with the reasoning powers that might not be demonstrated to exist in dogs. Now, while there was this unity between dog and man, he did not mean to say that the difference between them was not very great, but the difference was strictly a measurable one. In the one case, the intellectual product of the individual was limited to the individual. It could not get any further, and the individual had no power of acquiring sensation or experience except for himself. In the other case, where there was speech and the experience implied by speech, together with the capitalization, so to speak, of the cooperative senses, there was no reason why the progress of man in the direction of divergence from the dog should not be infinite—and that was exactly what had happened. Man had left the dog behind, as their poor fifth cousin, ever faithful, ever intelligent, and with all mental gifts and capacity, but sadly ignorant of the three R's and all the learning that followed thereon.

After illustrating by means of diagrams the variations of the dog as now extant, in the wolf, jackal, and other animals, Prof. Huxley concluded his lecture amid hearty applause.

SECOND LECTURE.

Prof. Huxley began by stating that in his last lecture he had endeavored to fix the position of dogs in the scale of animated nature. He pointed out that within the carnivora there was a particular division embracing some thirty or fifty different forms which constituted the dog kind, and which had a much closer community of structure, both physical and mental, with one another than they had with other members of the carnivora family. The points on which they presented a great and remarkable difference from other animals built on the same plan were in the structure of the skull and in the organs contained in it—the teeth. It was on these points that he desired to ascertain the amount and extent of the difference which obtained between different forms of dog-like animals.

First, as to the skull, if they looked at the skull of the fox, they found that the shape of the brow was very different, and there was no cavity at all. They could arrange all the skulls of the dog-like animals into two series—in which one had essentially the character of the wolf skull, and the other had essentially the character of the fox skull. He could not tell the significance of these differences, but the fact remained that the skulls of dog-like animals could be arranged into two series—the *Alpeoids*, at the head of which was the fox, and the other the *Theoids*, at the head of which was the wolf.

This enabled them to place the position of the domestic dog still more definitely, and it would occupy a place in the series corresponding with that in which they had placed the jackals and wolves. With regard to the stag-hound, the shepherd's dog, and many of their cur dogs, no one would have the smallest hesitation in placing them just between the wolf and the jackal. Some of the domestic dogs presented some curious features. The Newfoundland dog had a large development of skull, which gave it a great appearance of sagacity. This appearance of sagacity in the contour of the skull, like that appearance in man, was not always genuine, but turned very largely on their being there a considerable empty space. In some cases, as in the English spaniel, this development was due to real *bona fide* brain; and the Blenheim spaniel was undoubtedly the product of domestication, and great selected breeding. They now came to speculations and problems which could only be solved by a careful interpretation of the facts within their knowledge.

The first of these problems was the origin of the domestic dog, and he thought they could see their way to solving it, if they could obtain on a solid basis of fact. The basis of fact was supplied by what they knew of the origin of dogs in America. The Indians of the north-western parts of America were all in possession of half-tame cur-like dogs, living in the same way as the dogs in Egypt in a semi-independent condition. In the same country there existed a wild animal—the *Canis latrans*, or prairie wolf. It was impossible to point out any distinction between these two species, and the domesticated dog of the Indians. It was somewhat difficult to understand how these wild and fierce animals could be tamed; and yet, when one knew their habits, it was easy enough. The smaller wolves and jackals, although precarious and fierce, were endowed with singular curiosity; that curiosity directed them toward man and his doings. There was not one of these animals which, if caught by a man, would not be tamed and made as attached and devoted to man as any ordinary dog. It was not difficult to understand, therefore, how these animals became acquainted with man, how they became tamed, and how from them sprang a race of domesticated animals which, curiously enough, were far more attached to their masters and the animals with which they were brought up, than to members of their own kind.

If they could depend upon the fact that this one domestic dog originated in the taming of an indigenous wild origin, then the general problem of the origin of domestic dogs would take this form: Could they find, in all parts of the world in which domestic dogs were known, wild stock so similar to the existing race of dogs that there was nothing unusual in supposing that they had these as origin? The Indian dogs? They might have dog-like animals further and further west, until in Northern Africa they had a whole series of kinds of dog-like animals, usually known as jackals. He believed that these wild stocks were the source from which, in each case, the savages who originally began to tame dogs had derived the stock. This view was confirmed by archeological researches. They had preserved to them, on the monuments of ancient Egypt, a great variety of forms of dogs, and it was significant that the further back they went the fewer were the varieties, until at the time of the third and fourth dynasties—that is, about 6,000 years ago—there were only two well-marked forms of dogs. One of them was a comparatively small, cur-like dog, similar to that which was to be seen in the streets of Cairo at the present day, and the other was like a greyhound. The cur was, no doubt, a tamer species of the wild jackal, which was still to be found in the same country. As they respected to the greyhound, there was in Abyssinia a very long-headed dog, which was very much of the same form as the greyhound, and which, it could hardly be doubted, was the source from which it sprang. Assuming that there was

no doubt that the origin of dogs could be traced to these sources, the more modified forms of the domestic animal were simply the result of the selected breeding, which had given rise to the same modification in dogs as it had done in the case of pigeons. This was the solution of the origin of domestic dogs, to which all their information and inquiries pointed, and there remained the question of the origin of dogs in general.

A DOG STORY FROM GIBRALTAIR.—A horrible tragedy was nearly enacted the other day at Gibraltar, just when the *Himalaya* was about to weigh anchor off the New Mole. In the excitement of the moment a pet dog fell into the water, when a large octopus rose to the surface and gave chase, making greedy grabs at it with arms quite two feet long from end to end. When the enemy was about to close on its victim, a sailor fresh from foreign parts appeared on the scene, and dragging from his much-tattooed breast a rival pot in the shape of a marmoset, sent it to the rescue in a basket.

The little creature, half cat and half monkey, must have been acquainted alike with its duties and the English language, for it did not seize the octopus, but, laying hands on the dog, was safely drawn up, to the disgust of the enemy and joy of friends. Altogether it was a pretty piece of byplay, when tender hearts were sobbing alacrity to brown hands waving affectionately from every port-hole to the military strains of "Auld Lang Syne."

THE WATCH-DOG INSTINCT.—On a high shelf behind his counter a Mexican trader kept a cage, containing a more or less happy family of squirrels and opossums and two monkeys, a capuchin and a young cebu (*Atles maderia*); and one night, between 2 and 3 a.m., a snoring animal of the latter animal screaming away with all its might, and soon after hurried footsteps on the veranda in front of his store. *** The would-be marauder had left a track of dirty boots between the wharf and the store, but, as there were no marks on the counter, he could not have hurt the monkeys or even troubled their cage; and the alarming of the little cebu is therefore a curious instance of the manifestation in a spectacled animal of an instinct, which in general may be said to be confined to one species of mammals and a single genus of birds—the canines and the goose. All other domestic animals witness the plunder of their master's property with perfect unconcern; and even the sagacious horse may be abducted by midnight thieves, without betraying its fear by the slightest sound.—Dr. F. L. Oswald, in *Lippincott's*.

Archery.

ADDRESS all communications "Forest and Stream Publishing Company, New York."

THE HIGHLAND PARK ARCHERS.

FIRST TARGET MEETING FOR 1890.

THIS flourishing society, one of the oldest and best organized in the United States, held the first of its four annual target days at the club grounds, Highland Park, on the 27th of April, in the presence of a large and enthusiastic concourse of spectators.

Highland Park is one of the most delightful suburbs in the West; located twenty miles north of Chicago on the shores of Lake Michigan, it lies 100 feet above the water, and forms a perfect network of beautiful flower-decked ravines. The breeze from the lake are always cooling and refreshing, and no more lovely spot for archery could be found.

After a continuous down-pour of rain up to the evening of April 26th, accompanied by bleak March winds, the morning of the 27th opened with a clear sky and a balmy spring atmosphere, and the hearts of the archers who had taken target tickets were made glad with the auspicious brightness. At 11:30 a.m. the train from Chicago brought a large number of visiting archers and spectators, among whom were Mr. S. E. Egan, Mr. W. J. E. Schindler, Mr. Jno. Wilkinson, Mr. J. O. Blake, Mr. J. R. Adams, Mr. W. L. Shepard, Mr. Walter Burnham, Mr. J. M. Fairfield and Mr. Brown, guests of Mr. H. C. Carver, and A. C. Spalding, Esq., guest of Mr. Geo. Hall.

The targets were placed 30 yards apart, the ladies facing F and G, and the gentlemen, A, B, C, D and E. Promptly at 2:30 p.m. the shooting commenced at the Double Club Round, viz: 76 arrows at 50 yards, and 18 arrows at 40 yards, for ladies, and 96 arrows at 50 yards, and 48 arrows at 60 yards, for gentlemen. In view of the ladies having had no practice this season they did not unexpectedly well. On the first round good scoring was done by Miss Street, Miss Denison, Mrs. Lasher and Mrs. Goodridge, at the longer range, and by Miss Denison and Miss Street at the 40 yards range. Mrs. Swartwout shot steadily and well throughout the day. Mrs. Carver got 3 hits with her last end at 40 yards, and considering that she had no experience as an archer, her record on this occasion was remarkable. Mrs. Ball, Mrs. Carver, Mrs. R. J. Street and Miss Hammond did easy and graceful execution, and gave promise of high scores ere the season closes.

Of the gentlemen, Mr. Carver led the score on the first round at the 50 yards range, getting 78-116 with his 45 arrows, followed closely by Mr. Hall with 77-107, Mr. Fairfield (visitor) leading at 60 yards with 21-80, Mr. Burnham a good second with 18-82. On the second round Mr. Hall shot best and in good form, by scoring 21-80 at the lower range, Mr. Adams (visitor) closely following with 21-85, and Mr. Burnham (visitor) getting the best 60 yards score of the day, 19-103.

Special mention should be made of the skill shown by Mr. Adams, who first commenced shooting late last fall, having had no out-of-door practice. He recently scored, with 21 arrows at 60 yards, 21-151 in the Exposition Building, Chicago. Mr. Burnham at the same time getting 23-138 at the same distance, and at 80 yards with 21 arrows, 21-138. Mr. Wilkinson shot 21-138 at the lower range, and precision, his total score being sixth best of the day. The occasion was one of gala good cheer from beginning to end, and every archer and spectator felt that the archery season at the Park had commenced well. Letters of regret were received from many archers who were invited to be present. The second regular target day of this society will take place in June.

PRIZES: 1st \$10.

LADIES.—First score, 50 yards, Miss Jane Street, 27-125; second, Mrs. E. Swartwout, 27-124; third, Mrs. R. Street, 27-123; fourth, Mrs. W. S. Lasher, 25-92; fifth, Mrs. J. M. Goodridge, 22-74; sixth, Miss Denison, 19-75; poorest score, Miss Hammond, 10-31. First score, 40 yards, Miss Denison, 32-133; second, Miss Street, 29-114; third, Mrs. Lasher, 29-94; fourth, Mrs. Swartwout, 18-84; fifth, Mrs. Carver, 16-62; sixth, Mrs. Goodridge, 15-61; poorest score,

Mrs. Street, 4-14; greatest gross score, Miss Street, 61-230; greatest gross score, not having won a prize, Mrs. Carver, 39-119; greatest gross score, nearest approaching 100, Mrs. Geo. Ball, 23-38; most gold, Miss Denison, 5.

GENTLEMEN.—First score, 80 yards, Mr. Hall, 55-236; second, Mr. Carver, 53-211; third, Mr. Kyle, 35-163; fourth, Dr. Weston, 35-131; fifth, N. B. Swartwout, 27-125; sixth, Mr. Hammond, 30-110; poorest score, Rev. G. L. Wrenn, 13-18. First score, 60 yards, Mr. Hall, 56-260; second, Mr. Carver, 33-158; third, Mr. Hammond, 34-153; fourth, B. G. Street, 33-123; fifth, Dr. Weston, 34-130; sixth, Mr. Kyle, 33-117; poorest score, Rev. G. L. Wrenn, 2-14; greatest gross score, Mr. Hall, 92-394; most gold, Mr. Carver, 7. Mr. Will H. Thompson's prize to the archer whose 50 yards' score should exceed his 70 yards' score by the greatest number of points, Mr. Hall, 63; visitors' prize, for greatest gross score, Mr. Adams, 65-201. Special prizes, consisting of fancy design work, lawn rocks, quivers, tassels, etc., were presented.

The most prominent personal contest, during the shooting, occurred between Mr. Schuyler M. Cox and the Rev. G. L. Wrenn, for the two prizes (rubber target guns) for the poorest score, both of which were fairly won, and earned, by the Rev. Mr. Wrenn. It is expected that he will commence immediately a system of practice with his new implements, which will enable him to retain the reputation which he has always enjoyed at the Park as an archer. It is earnestly hoped that Mr. Cox will not be discouraged because of his failure, but gather courage and comfort in reflecting upon the well-known formidable strength of his competitor.

Following are the scores of the lady shooters; 90 arrows, 50 yards, and 48 arrows, 40 yards:—

Names.	50 Yds.	40 Yds.	Total.
Target F—			
Mrs. W. M. Goodridge	18	78	95
Mrs. W. S. Street	13	75	88
Miss H. Denison	19	75	94
Miss L. Carter	27	101	128
Mrs. A. Hammond	10	36	46
Target G—			
Miss Jamie Street	33	125	158
Mrs. W. M. Goodridge	23	116	139
Mrs. H. C. Carver	20	102	122
Mrs. N. B. Swartwout	23	116	139
Mrs. George Ball	10	44	54

Following are the scores of the gentlemen shooters; 90 arrows, 50 yards, and 48 arrows, 40 yards:—

Names.	50 Yds.	40 Yds.	Total.
Target A—			
W. M. Goodridge	19	49	68
C. G. Hammond	39	110	149
H. Carter	23	101	124
J. Williamson (V)	18	146	164
Target B—			
M. S. Crosby	27	80	107
A. Adams (V)	23	116	139
Dr. E. B. Weston	33	133	166
O. W. Kyle	28	102	130
N. B. Swartwout (V)	18	66	84
Target C—			
N. B. Swartwout	27	121	148
Dr. E. B. Weston	33	133	166
N. M. Cox	5	15	20
Rev. G. L. Wrenn	3	13	16
Target D—			
Geo. Ball	28	98	126
F. P. Hall	25	100	125
H. Wrenn	26	98	124
R. J. Street	28	94	122
H. C. Carver	23	116	139
J. Williamson	18	146	164
J. O. Blake (V)	18	54	72

Note—"V" stands for visitor.

Mr. S. E. Egan and Mr. W. B. E. Shufeldt, of Chicago, were present, but did not shoot. Forty-one prizes were contested for, and will be awarded with appropriate speeches by the president, Dr. E. B. Weston, at the regular meeting of the society, the first Tuesday in May.

EASTERN ARCHERY ASSOCIATION.—The regular annual business meeting of this Association was held at Boston, April 28th, Pres. Brownell in the chair and the following delegates present: P. Quessette Archery Club, Miss Alice Ingraham, Saml. P. Abbott; Hawthorne Archers, Miss J. Wilson, Dr. Jas. Dwight; West Newton Archery Club, Miss Rosa S. Allen, Geo. A. Mower; Lynn Archery Club, Miss L. S. Clark, Herbert W. Newhall; Orlani Archers, W. Holberton; Brookline Archery Club, E. L. Foreman; Lewiston Trophites, Dr. O. A. Horr. It was voted to hold the annual meeting at Beacon Park the first week in September. The following officers were elected for the following year: President, A. S. Brownell; First Vice-President, Miss Josephine Wilson; Second Vice-President, Col. Frank Brandreth; Corresponding Secretary, John Worcester; Recording Secretary, N. D. Abbott; Treasurer, Miss Alma C. Walker; Executive Committee, George Smith, G. A. Mower, Dr. James Dwight, John B. Cotton, S. P. Abbott, E. R. Dwight. This is substantially a re-election of the old board of officers.

ARCHERY IN THE SANDWICH ISLANDS.—*Phithih, Maui, Hawaiian Islands, April 13th.*—Editor Forest and Stream.—Though Mr. Thompson asserts that our English friends have given the natives of these islands some thorough study that it would be folly for those less experienced to make a change, is there not an almost self-evident blunder in the present method of scoring? If so, will any reasonable person object to a change which will insure greater accuracy.

By the present method, counting from the center, each ring decreases in value by two, as far as the white; but the difference in value of an arrow in the white, and one that misses the target is but one. Here, surely, is an error; it is not more accurate to adopt the series 9, 7, 5, 3, 1, —; or, 11, 9, 7, 5, 3, 1—a miss having the value of 1.

Would it not be still better to give the gold a value of 1, and the other colors the values of 3, 5, 7, 9, 11; for thus the true relative values of scores would be given.

At present an arrow in the gold has a value only 1-4-5 times greater than one in the blue; whereas, by the above method, its value would be five times as great. This is the correct ratio, for the average gold is 14 inches from the center, or five times nearer than the average blue, which is 11 inches from the center.

The values 5, 4, 3, 2, 1, 0, suggested by Mr. Brownell, would clearly be more accurate than the present values, for they decrease uniformly to zero.

It may interest some of your readers to learn that a club, styled the East Maui Archers, has recently been formed in this place, and it is rumored that one will soon be started in Honolulu. As all seasons here are equally delightful for out-door practice, we have hopes of hitting the gold by-and-by.

W. C. DIXBY.

Answers to Correspondents.

Correspondents who may send us their proper name and address will always receive prompt attention in these columns. We require a man's name for two reasons: (1) sometimes as a guarantee of good faith, and (2) always as a matter of common courtesy. As a rule we do not reply to inquiries by mail, except in cases demanding immediate advice.

E. E. Lawrence, Mass.—Impossible to suggest treatment from your description; write more fully, stating length of time your setter has been sick.

EVANS, Philadelphia.—Try Glover's imperial mange cure, which can be had of Joseph C. Grubb & Co., 112 Market street, your city. It is said to be excellent.

H. H., Pittsburg, Pa.—Three injections, one a day, of salt and water, will rid your setter of pin worms. Precede by several hours the first enema by full dose of castor oil.

H. H. H.—Canvas cannot be very serviceable for your purpose. Directions for building will be found in our issue of Aug. 7th, 1879. Nothing like experience to produce a finished and satisfactory boat.

H. W. J., Chicago.—No invoice of new edition of Dixon Kemp's Yacht and Boat Sailing received in America yet. Will not arrive for six weeks yet, the enterprise of American book houses being about equal to that of a fossil.

SUBSCRIBER.—You neglect to state the length of time your setter has been sick. If the dog has never had distemper before, was probably a light attack of the disease. Keep warm and dry, and give him two grains of quinine three times a day for several weeks. Exercise and proper food will bring him about all right.

INQUIRER.—Roughly speaking, we should say that two tons on the keel, as you propose, will have as much effect as three tons inside. Would advise experimenting with one ton this season. Light displacement is, however, no longer viewed with the same favor as it once was, and the tendency is in the opposite direction, as heavy displacement produces abler and roomier boats.

POINTER, Camden, N. J.—Dogs can be broken either to point dead or not. We do not see any occasion for making any dog do so, however, and cannot see what benefit is derived from training a young dog to point dead, except in teaching him, when first introduced to game, to retrieve it without biting or gripping it. Dogs can distinguish at once, by the scent, whether the bird is alive or dead. In paper fish on "Dog Breaking," this disputed point will be fully discussed. We refer you to it, as it will appear shortly.

J. W. R., St. David's, Ont.—Your setter puppy has internal canker. Wash out daily each ear with Castile soap and tepid water; fill with piece of soft sponge. Fill each ear twice a day with following lotion: one teaspoonful of Goulard's extract mixed in two tablespoonfuls of water. The cap over head to prevent flapping of the ears, and dispense with all meat in dog's diet. A mild dose of Epsom salts once a week, with water, will be found beneficial. Mix vegetables with dog's food.

M. J. N., Oneida, N. Y.—No solid food should be given, but food such as strong meat broth and mush, with which mix well boiled vegetables. Give two grains of quinine three times a day for several weeks, and should there be any constipation give castor oil. Should the mucus choke or stop up the throat, give doses of salt and water. Keep dry and warm. Allow free exercise and fresh water. Persevere in this treatment, and you will find your puppy will soon be off the sick list.

J. F. P., Augusta, Me.—My pointer, three years old, drools from the mouth, and has since he was a year old. Can anything be done for him? Ans. The drooling is one of the results of distemper; a judicious course of treatment may lessen the difficulty, but it is doubtful if any effect can be effected at this late day. You may, however, give small doses of calomel, say three grains twice a week for three weeks, and commence after first dose of calomel administering quinine, two grains three times a day, this to be continued for same length of time.

CANARIE.—Strictly speaking, the term "cutter" applies only to a certain style of rig, the same as the terms "schooner," "sloop," etc. The cutter has a fore staysail and a jib, generally set flying, or upon its own huff. In the discussion of the qualities of different kinds of yachts, a wider meaning is generally attached to the term "cutter," implying not only a boat rigged as such, but also one having moderate beam and greater depth than the sloop, and supplied with a keel with more or less ballast outside. It is a mistake to suppose that cutters are necessarily of much larger displacement than sloops. Such sloops as *Mischief*, *Maicap*, *Violet*, *Arrow*, and many of the best craft we have, displace as much water as an average cutter.

T. T. P., Pearisburg, Va.—You have given dog No. 1 overdoses of sulphur; discontinue it at once. Give from one-eighth to one-quarter of a grain of nux vomica three times a day, and also two grains of quinine three times a day. Continue this treatment for some time, and write result. Your dog No. 2 has evidently passed several segments of tape worm. Fast dog twenty-four hours, give twenty grains a male fern, half hour later, repeat same dose in castor oil. Dog No. 3, two or three grains of quinine three times a week, and proper food, such as meat, brot, boiled liver, bullock's tripe, vegetables, etc., mixed with well boiled oatmeal and vegetables, will put your dog all right.

Dr. C. S., New York City.—Dew-claws are a sort of rudimentary fifth toe on the inside of the leg of a hound. The food of a dog should depend upon the exercise that is given him. When a dog is being worked he requires plenty of good strengthening food; and when he is chained up during the close season, a lesser quantity of meat should suffice. Young dogs and puppies should have several feeds a day, but one meal at evening time is considered the best way of keeping a full-grown dog in condition. All dogs should have more or less vegetables mixed with their food, both winter and summer, the quantity to be regulated as regards the health of the animals.

W. R. F., Brooklyn, N. Y.—Your dog has the mange; it is abso-

tutely necessary that great cleanliness must be observed. His bed must be repeatedly changed, and he be allowed free exercise with wholesome, not stimulating food, and plenty of fresh water. In no case should the dog, suffering under this complaint, be allowed to gorge or cram himself, but the vitals must be withdrawn the instant he has swallowed sufficient to support nature. The diet of your dog may consist of coarse oatmeal, well boiled, mixed with boiled potatoes, and other vegetables. Stale bread and ship biscuits may be used for a change. Four to seven drops of Fowler's solution of arsenic twice a day in food. Send us your name and address in full and we will give you the information you desire.

J. K. R., New Orleans.—On March 31st I hunted my pointer all day. On April 2nd I found him dead. He was very restless the night and day previous to his death. He urinated so freely I thought his kidneys affected. I cut him open, and to the last of my belief found all his organs in good condition. I have been told that the owner of the ground over which I shot had scattered poisoned meat in order to kill sheep-killing dogs. Would a dog live two days after taking poison? The dog had been shot with No. 10 shot two months previous at fifty yards, and bled badly on left side. Could that have affected his health? Ans. Quite possible that one of the grains of shot penetrated a vital part, which only required time to render fatal. The poison theory is very improbable.

T. O. S., Boston, Mass.—I have a pointer bitch puppy eight weeks old now recovering from the distemper, from which her dam and three litter brothers died. My puppy is suffering from weakness in hind parts; throat seems filled with mucus at evening, and always after active play. She was covered with sores, which are now partly healed; appetite good; diet consists of boiled milk with bread crumbed in it; once a day, give beef tea and cod-liver oil. Please inform me what I shall do to strengthen her and relieve trouble in her throat? Ans. We would recommend a counter irritation about the throat, which can be effected by rubbing several times a day with some stimulating liniment. Continue to give teaspoonful of cod-liver oil once a day, and feed with the beef broth. Dry and warm bed, fresh air and sunlight and clean water, will bring about the desired result.

C. G. F., Frederick, Md.—A pointer dog has for some time been unwell. The symptoms are at times dryness and excessive heat of nose, and costiveness; sometimes he will not eat; recently yawn several times. I sometimes think there was a great deal written in your paper about holding ahead and holding on a bird. Do you not think this is regulated very much by the gun? I have shot a great many geese and ducks, and have made many good shots, and I always hold on or aim directly at the object. My opinion is, that, with a choke-bore, one should hold ahead, and with a cylinder bore, on the object. Ans. I. Give your pointer three compound cathartic pills, follow on the next or fourth day, with castor oil. Allow plenty of exercise, and one good feed a day, sufficient to keep your dog in condition. He has probably been over fed. 2. It is a simple law of natural philosophy which both theory and practice demonstrate.

J. B. B., Ontario.—My setter, three years old, was attacked last summer with a sore on the bottom of one of his feet, the sore had a hot burn and burnt it. It did not get well until I shouldered broke out in a fearful mass. This spring the other toe, on the same foot, is attacked in same way. The dog is well cared for and has plenty of exercise. What shall I do for him? Ans. Your dog has one of the many kinds of mange. Dress every day with following mixture: Powdered bicarbonate of potash, one ounce; powdered white vitriol, one-quarter of an ounce; sublimed sulphur, two ounces; lard, eight ounces. Rub thoroughly into skin. Wash feet with Castile soap and water, and dry immediately. Rub the toes with the toes. You had then better put boots, made either of soft leather or canvas, on the sore feet. Give five drops of Fowler's solution of arsenic, twice a day, and gradually increase dose to seven drops. It may be given in food, and must be continued for some time to be beneficial. See answer No. 1 to "W. R. P." in this column, regarding proper diet, etc. The disease is contagious.

G. A. S., Westfield, Mass.—You are perfectly correct in your diagnosis of the case of the dog—he is in a terrible condition. There is something else to be learned than how to dose a dog when he is sick, that is, how to keep him from having to be dosed—when he is well. From want of regular exercise, proper food and care, the dog has become debilitated and weak, and is suffering from a disease which will put him all right again. Begin by giving him light, wholesome feed, from which exclude all meat and grease. The blood having become heated, you should give an aperient of Epsom salts once a week, and a dessert spoonful of sulphur and magnesia in food every morning. Regular exercise should be given, and the dog allowed to have his freedom in some inclosure, where he will be unable to pick up any improper food. Let him run in the fields in the country, where he can get grass if he chooses. Observe cleanliness, and make use of Ans. I to W. R. P. in this column. Apply one of the mange dressings recommended in this column; that given to J. B. B. will answer. After giving this treatment a thorough trial, write fully. Should the internal canker increase, which will be shown by the dog's shaking his head and scratching the part afflicted the following lotion poured in the ear and held there for a few moments, twice a day, will probably effect a cure: diluted liver water, one ounce; sulphate of zinc, one drachm; and water, twelve ounces. The inside of the ear must be kept from shaking by a cap tied over the head. Read the paper.

VELOCITY OF RIFLE BALLS.—Prof. Spie recently measured before a large audience, the velocity of a rifle ball fired across the stage. The distance was only thirty-three feet. Lieut. Merriam cooperated, and his duty was to shoot away, with a Creedmoor rifle, two loose wires, each of which connected in an electric circuit two globes of mercury. One wire was placed just in front of the supported muzzle of the rifle, the other thirty-three feet distant. Two levers were arranged, with bent wire points, over a piece of smoked glass to which a uniform motion could be imparted, and the electric connections were such that on the first wire being broken the point of the corresponding lever descended on the glass; but when the bullet broke the second wire it immediately rose again by the action of a spring. The result of this was that the point connected with the second wire descended on the smoked glass. The other point, being kept down during the swing of a seconds pendulum, scraped a longer space. After firing, the glass was withdrawn, and a magnified image of the lines thrown on a screen. The relative lengths of these lines were then ascertained, the longer being found 110 inches, the shorter five inches, making the duration of flight of the ball 5-110ths or 1-22d of a second, its velocity being $31\frac{1}{2} \times 2200$ feet per second, or at the rate of a little under 500 miles per hour.—*Scientific American.*

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL ANGLING, HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

NO. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK.

[Post Office Box 532.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible. All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on our terms. Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the *FOREST AND STREAM* for one year.

NEW YORK, THURSDAY, MAY 6, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions. Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost. Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

WHO GOES WITH YOU?

A POPULAR Boston lecturer, who has visited almost every important Mecca of the European tourist, once gave as his advice concerning the choice of a traveling companion: "First, be sure to select a person whose pocket book is as deep as your own and no deeper; second, select a man whose tastes are similar to your own, who will wish to go where you wish to go, and to see what you wish to see; third, select one of the same mental caliber as yourself; and fourth, select one possessing culture equal to your own. I always travel alone." That last sentence is not so egotistical as it may appear; for it probably epitomizes the lesson learned from a series of wearisome trials of experimental traveling companionships. The experienced tourist is shy of untried fellows.

The hints just given are also applicable to sporting excursions. Whether the man who goes fishing, shooting and camping shall go alone, with a single friend or with a party, depends upon such a multiplicity of "ifs" and "ands" in each individual case that it is impossible to formulate any general rule which shall apply to each particular case. Upon the choice of comrades, however, quite as much as upon the selection of place and time, depends the enjoyment of the trip. Genial companionship will brighten up the most dismal fortnight of cloudy days; and, on the other hand, just as surely will an unsympathetic association convert into jarring discord all the melody of rustling leaf, singing bird and falling water. It must be remembered that two persons, who each possess a taste for camp life or sporting excursions, may yet differ very much in the particular way in which they would gratify such a taste.

For one there is pleasure and profit to be gained by withdrawing from his fellow creatures for a season, to dwell in solitude and retirement amid the influences and studies of the silent forest arches. The old anchorites of the deserts were lunatics in their way, and doubtless deserved their self-imposed austerities. But there was after all a spark of common sense in their creed and practice; and scores of business and professional men to-day, who are constantly thrown into sharp contact with their fellow-men, and who have a very large share

of the cares and troubles of others thrust upon them, might with great profit to body and soul assume for a brief season the tunic of the hermit and his fare of lentils and leeks. There are two ways in which the benefit of such a retirement may be rendered naught: a man may bear unto the woods with him all the perplexing details of his business, and there revolve them over and over again, and so return to his home without once having surrendered himself to the healing influences of the wild woods; and again, the unfortunate pleasure-seeker may be bored beyond endurance by the constant annoyance of an uncongenial and irritating companion. Fortunate is he who has for his coming excursion a friend tried and true, who has been tested of old. With such a comrade the pleasures of the camp are trebled, and about the fire at night one may live again the summers of the past.

It is an almost universal experience, when viewing alone an impressive scene of nature, to feel a longing for the presence of another to share the emotions aroused by the occasion. Only as we grow older do we learn that, were that visionary kindred spirit to draw near, the inspiration of the moment would be dispelled. Some men never see anything in the changing glories of a sunset. There are souls so bemanacled in this earthly prison house that they can never appreciate a higher gratification than that afforded by plenty of good, cold corned beef and beans—and plenty of mustard. He who does stand silent before the trailing clouds of glory will be a wise man in his day and generation; if he leave the corned beef and beans weight to his dish.

GEORGE WASHINGTON AND IRISH WOLF-HOUNDS.

THOSE who read the letter of John Quincy Adams, published in our issue of March 25th, will be interested in the following letter, written by George Washington, about the Irish wolf-hound. We are indebted to Mr. R. T. Greene, of Jersey City Heights, N. J., for the copy of the same. It will be remembered that about a year ago there was quite an animated discussion carried on through the medium of the sporting papers, here and abroad, in regard to the extinction of the type of dog called the Irish wolf-hound.

"B. St. George," in his letter which appeared in the *FOREST AND STREAM* of March 13th, 1879, states in the first part of that communication, that it was generally accepted as a fact that these dogs had ceased to exist; although, a little further on, he writes that there still exists sufficient of the true breed, both in the race still known in Ireland as the Irish wolf-hound, and in our modern deer-hound, to allow of the complete recovery of the breed. Interested parties at once made an effort to create a class in the Dublin Show, and the Irish Kennel Club and others were successful in rescussitating the breed, as twelve were entered, and eleven put in an appearance. This certainly was a good beginning toward renewing an extinct type, although, according to "I. D.'s" letter in the *FOREST AND STREAM*, of April 17th following, they were a slightly mixed class.

It may interest the readers of the *FOREST AND STREAM* to know how nearly extinct they were considered a hundred years ago, and, at the same time, have the pleasure of reading a copy of a letter written by George Washington. By the way, our friends, who have been abused for selling and buying dog flesh, may find some comfort in the evidence below that so eminent a man as our first President did not consider it beneath his manhood to act as a party to dog sales. The individuals who are inclined to write down all dealers in dog flesh as knaves, might profitably examine the records of the past, and possibly turn their discoveries to political ends.

The letter is addressed to Charles Carter, of Ludlow Farm, Fredericksburg, Va., and reads as follows:—

MOUNT VERNON, Feb. 5th, 1778.

DEAR SIR:—At length I have got some answer to my application for Wolf Dogs. I wish it was more satisfactory; but such as it is, I give it, as suspense of our situation is the most disagreeable.

The information comes from Sir Edward Newenham, a gentleman of family and fortune in Ireland, and is in these words:—

"I have just received a letter from your noble and virtuous friend, the Marquis de la Fayette, in which he communicates your wish to obtain a breed of the true Irish Wolf Dog, and desires me to procure it. I have been these several years endeavoring to get that breed without success. It is nearly annihilated. I have heard of a dog in the South, and a bitch in the North of Ireland but not of a couple anywhere. I am also told that the 'Earl of Ailmor' has a breed that is nearly genuine; if he has, I will procure two from him. The Marquis also wants some at his domain, where he is troubled by the wolves. If Mastiff would be of any service, I could send you some valuable large ones, which are our guard dogs. You will honor me with your commands about them. They are very fierce, faithful and long-lived."

If upon this information you think I can be further useful, I shall be happy to render any service in my power. Mastiff I conceive will not answer the purpose for which the Wolf Dog is wanted. They will guard a pen—which pen may be secured by its situation, by our dogs and various other ways—but your object, if I have a right conception of it, is to hunt and destroy wolves by pursuit, for which end the Mastiff is altogether unfit. If the proper kind can be had, I have no doubt of their being sent by Sir Edward, who has sought an occasion to be obliging to me. I am, dear sir,

Your most obedient and affectionate servant,
GEORGE WASHINGTON.

SPRING FEVER.—There is a peculiar disease, not treated of in general therapeutics, and yet one so prevalent when the season opens and the game law becomes inoperative, when the spring bursts forth renewing its lusty life and inspiring poet and artist, that it becomes a subject of serious inquiry why the medical profession has so entirely disregarded it and ignored its claims to a place in the catalogue of human ailments. When the robins and the meadow larks return; when the sparrows commence to mate and the ground birds look about for building sites; when the pansies and the violets emit their perfume and display their charms, there comes stealing over such as are susceptible to it the inevitable spring fever. It comes with the ices of March. Here in New York it begins to appear when the Governor's Island gun booms sundown at 6 o'clock. It comes with the snipe and shad, and casts over its victims an intense and irresistible yearning to visit some favorite trout stream—a yearning so keenly developed that it transforms the best of us into lazy, useless beings, in our own way and in the way of everybody else.

It is not attended with the dangerous characteristics that distinguish typhoid, intermittent, yellow and other fevers. It is not provocative of a desire to die and be done with bodily suffering; but it is attended by a delicious languor, an elegant stupidity, and a lazy worthlessness refreshing to behold. Spring fever does not crowd the hospitals, nor call physicians at the midnight hour, nor fill the heart with alternating hopes and fears. It only makes one an annoyance and hindrance that ought to be banished to the woods, and the woods and the waters are the sovereign remedies, the panacea for it when it assumes its most aggravating form.

The principal symptoms are indicated by fondly caressing your rods, every joint of which is a reminiscence; overhauling and taking account of your flies, in which you evince more interest than ever a girl did over a piece of pretty ribbon; studying maps, telling fish stories and altogether acting as irrational as a man on the verge of marrying. It incapacitates a man for any serious work, and something must be found to relieve it. Be sure that your diagnosis is correct, and that the symptoms indicate an attack of spring fever, then consult the physician, who will prescribe about as follows:—

Rambou rod, 3 joints, 8oz.

Assorted flies, 5 doz.

Vacation, 2 to 4 weeks.

Pure oxygen, wild woods, 99999999 gallons.

Eat regularly 2, 4, 6, or 8 times a day. To be taken in the open air.

Be sure of your physician, and do not stifle your chances of living by following the advice of any one who prescribes differently from the formula above. There is nothing else in the pharmacopoeia half so efficacious.

MILLARD.

A BRACE OF GESE.—The season in which it is lawful to kill wild geese in this State closed last Saturday. The sport has been excellent at many of the most popular grounds, and gunners have had all the fun they could reasonably ask for. Many a man who has been taught that the saying, "as silly as a goose," as a sufficient index to the true character of the wild bird, has learned the fallacy of such an opinion.

Proverbs and folk sayings are crystallizations of wisdom and native wit. A proverb cannot live if it has no deep tap-root in the common experience of mankind. No man can sit down and write a book of original proverbs. Solomon did not originate all the wisdom credited to him.

Many of the popular sayings of different peoples, especially among savage and primitive races, are founded upon their observations of the characters and habits of the different members of the animal world; and much of the unwritten literature or folk tales of these races is made up of animal legends and stories of birds and beasts. Their wisest saws have reference to the silliness of some animals and the subtle cunning of others. So full of wisdom and truth are some of these fables that they have lived for centuries and thousands of years, transmitted from generation to generation by word of mouth, perpetuated in parchments, and disseminated in varying forms over very wide portions of the world. Since the investigation of the race relations of different peoples has been stimulated by the study of comparative philology, these legends, myths and proverbs have assumed importance, and such eminent scholars as Max Müller, Ralston, Thoms, Dasent, and others have recognized their value as links in the chain of historical inquiry.

This is wandering away off from our geese and stools and batteries, and we must return to bag our brace of birds, or rather our brace of proverbs. The man who has been cramped up in a warm battery hour after hour, patiently and persistently pitting his skill against the wary cunning of a goose, only to betake himself home at last stiff-legged and sore, as best he can, is probably in a suitable state of mind to appreciate the truth contained in the expression, "a wild-geese chase."

We are not disposed to argue with those who think that the other expression, "as silly as a goose," is an erroneous one, and who would have us believe that this

term of contempt passes current only because those who employ it don't know what they are talking about. Each expression is true, and bears inherent evidence of its origin. The comparison of a foolish man to a goose evidently arose in the town, among men who knew only the barnyard fowl, the tenant of the village green and waiside puddles, the stupid, waddling, hissing and uncouth creature bred for its feathers. The other figure, on the contrary, the comparison of an unsuccessful pursuit to the fruitless chasing of a wild goose, is plainly an outgrowth of the country, where the wild bird is found in its first estate, a worthy subject of the sportsman's most ingenious devices. Thus each of these figures is true and each is false. If a man think the goose a silly bird, let him try to capture a wild one; if he think the goose a cunning bird, show him a mud-bedrabbled tame one.

NOTES AND QUERIES.

UNDER this heading we propose, as occasion shall demand, to offer an opportunity for the exchange of notes and queries, and invite our readers to contribute both queries and answers to the inquiries propounded. There are many topics connected with the different branches of sport which afford room for investigation, and sometimes recendite study, while there are a thousand and one bits of local information, like that sent us by Mr. Van Sieten, which would be of general interest if published in the FOREST AND STREAM. It must be understood that matters legitimately belonging to our Answers to Correspondents column proper, will be confined to that department. Now let us hear from that man who always bends his fishing rod into the form of a quotation mark.

THE MEANING OF "WILLOWMOOC."—SHAWANGUNK.—*Boyle's Club, May 18th.*—Over the hill from the Beaverkill is the Willowmooc. It is almost as good a trout stream as the former, but the trout are more capricious. The weather must be just right for you to fill your creel in the Willowmooc. Late Mr. Dr. J. P. Secor (I believe, of the Secor sewing machine), happened in by accident, and the beautiful trout of Scribner & Son's "Game Fish of America" caught his eye. This led to a pleasant conversation, in which he informed me that he came from the town of "Cone-had, Sullivan County; that his uncle "Rome" (I believe) Secor lived there at Westfield Flats, the next station below Westerson, Co. W. Lawrence; near Peter Stewart, who is now for his banks. Do you not find the name singularly appropriate? Those streams run down the steep hills so fast that it is a wonder that any water is left in them. I wish that now some one who knows would tell me the meaning of the Indian word "Shawangunk," which is pronounced "Shongum," up in the neighborhood of the mountains so called.

GEO. W. VAN SIETEN.

GUN FLINTS.—*Cardville, Pa., April 24.*—There is a man in our town who says that he has never found any one that can tell him where gun flints come from, or how or by whom they were made. Please answer through your paper, if you can throw any light on the subject.

R.T.C.S.

GEORGE C. COLBURN.—George C. Colburn, whose name has been for many years so familiar to the sportsmen of America, died at his residence in this city, after a brief illness, last Saturday, May 1st. Mr. Colburn was for many years a prominent dry goods merchant in New York, and was at the time of his death about fifty years of age. As the owner of the Gordon setter Dash, of the lemon and white pointer bitch Belle, and other famous dogs, Mr. Colburn was widely known, and always held a prominent position among those who were interested in the importation and breeding of fine stock in this country. Mr. Colburn was a genial, generous man, possessed of many warm friends, and highly esteemed in his business and social relations. The news of his death will be learned with a unfeigned sadness by many of our readers who enjoyed his friendship.

NOTES.—The course of civilization has ever been westward, and it is in conformity to this rule that archery has crossed the Rocky Mountains, and has extended its gentle sway to the isles of the Pacific. It was not so many years ago that we were reading about the Sandwich Islanders putting aside their bows and clubs and nakedness to assume the utensils and habiliments of civilization.

A hint to some five or six of our esteemed daily contemporaries: The mere fact that a gentleman is connected with the editorial staff of a sporting weekly is not a sufficient reason for dubbing him "Colonel."

The Blooming Grove Park is advertised to be sold at Sheriff's sale on May 17th, to satisfy a debt of \$71,000. This is an amicable sale, made to re-transfer the property to the club, and to reduce the interest on the indebtedness. The Blooming Grove Park is perhaps the finest game preserve in the country. \$100,000 has been put into it since the inception of the project. The property comprises 12,000 acres of land, of which 700 acres are inclosed by a wire fence seven feet high, and a fine club house, where the best of fare is served at a low rate. The park is well stocked with large and small game, and is pro-

tected by special police. Easy of access, being situated ten miles from Lackawaxen station, on the New York, Erie and Western Railroad, and seven miles from Millville, on the Honesdale branch, Blooming Grove Park is a desirable property for a club of sportsmen. We understand that the Association propose to bid in the property for the fixed sum of \$34,000. Mr. Fayette S. Giles has been most active in the work of establishing this preserve, and it is to his enthusiasm and activity that the formation of the Association was due. The trustees of the property are Messrs. Giles, Avery, Reed, Fearing, Maginnis, Robinson, Grimes and Mouzille.

—The FOREST AND STREAM is now published at 39 and 40 Park Row, Times building.

Two moose have been added to the Central Park Menagerie. They came from Halifax, Nova Scotia, and are worth visiting.

GAME PROTECTION.

ANOTHER GOOD SUGGESTION.

PHILADELPHIA, Pa., April 13th.

Editor Forest and Stream.—"New Jersey," in his letter published in FOREST AND STREAM April 8th, says: "If many of the sportsmen of that State are in doubt whether or not the law has jurisdiction over the deeds of a proprietor on his own estate, as stated in your notes last week, it must be because they have very slight acquaintance with the laws."

Now I say, if any sportsman of that State is in doubt whether or not any proprietor of an estate has any regard "except contempt for game law that ever was enacted" now exists, or is proposed for the future, let him get better acquainted with the above-mentioned proprietor, and his doubts will be cleared up on that score. It is a notorious fact that the majority of them believe that they have a constitutional right to kill and destroy all kinds of game birds and fish in season or out, provided they do not go off their own land to do it. Now what is the remedy? Certainly not more nor more stringent laws. They help make these game laws, they are all in favor of them; but "again" carrying them out—that is, so far as applying them to their own actions. Those laws were made to govern the true sportsman.

It is seldom I go out into the State that I do not learn something that does not substantiate the above, and I am persuaded that the remedy is not in laws; but to educate the proprietors and their sons to the fact that it is much better for them and every one interested to protect the game birds in their nesting season and fish on their spawning beds. There has to be a revolution in sentiment on the part of the proprietors before the game laws will be respected, and I think it can be best done through the medium of the country papers.

Let suitable articles appear from time to time, contritions of sportsmen of that State, who know and respect by the land-owners, then the proprietor will become a respecter of the game laws himself and will see that the true sportsman does the same on his premises, and we shall have the most efficient game wardens possible.

R. T. G.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Reports, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; seasons and other accommodations; Game and Fish Reports; Fish and Game Season; Bait, Guides, etc. Name of the person to whom orders should be sent.

—ADDRESS all communications "Forest and Stream Publishing Company, New York."

TEXAS DEER SHOOTING.

THIS has been an unfavorable spring for "gobbler" hunting. Too much cloudy and windy weather. I have taken only one little hunt of a week; got four shots with my Wesson, and bagged four old gobblers—beards from 9 to 12½ inches—weights from 20 to 23 lbs. We have plenty of nearly all kinds of game, from a snipe to a bear. The latter especially are numerous. Our friend, Capt. Highower, has killed twenty-three bears this season, up to last accounts. They are quite fat this year from an abundant mast, and the Captain has killed some fine ones.

Deer are also plentiful here, but are fearfully butchered at all seasons, and will be decimated soon unless some measures are taken to stop it by legislative action, and I for one would like to call the attention of the sporting clubs all over this State to this subject, and urge them to action in trying to have good, wholesome and effective game laws established in this State, as in other States.

There was some "stagger" at a game law made and provided at the last sitting of the Legislature, but any schoolboy could see at a glance that not a line of it is worth the paper it is printed on. The little game that yet remains in Texas is mostly confined to the borders of streams, and in the wooded districts, where in the latter the deer are killed by hundreds at all seasons of the year, for their hides alone in many instances. The law now stands, that "it shall be unlawful to kill (within certain months) any female deer knowingly." "Knowingly?" Does any man, with a tea-spoonful of brains, "knowingly" know what harm that one word in the law has done? Did he ever think how many thousands of helpless little fawns have been left to starve, because their mothers have been slain by careless and heartless persons? Since that miserable farce was placed on the statute, I have never known nor

heard of a doe being killed in this county. All are bucks that are killed now. Oh, yes, all bucks—although their udders filled with milk are dissected and thrown in the bush, and their heads, feet and other evidences of sex are cut off and thrown aside in the woods—yet they are all "bucks."

I, for one, would appeal to every sportsman, naturalist, or other person, who has a spark of humanity in his heart, and who lives in this great State, to try and impress this matter upon their representatives in the Legislature, to frame some worthy method of protecting the game and fish while there is yet some little left. It seems to me that the next month or two of a year is long enough to hunt one variety of game. Let the closed season for deer be, from Dec. 1st to the 15th June; for in those months are the breeding season, and the deer are poor, musky and unfit for food; and before the 15th of June, or 1st of July, the fawns are too young to care for themselves if their mothers are killed; and many other reasons I can give, if necessary. Sportsmen of Texas, think of it, and set your minds to work by the time the next Legislature convenes.

Willis, Tex., April 20th.

A CAROM IN GOOSE SHOOTING.—One day, a few years ago, I started out for an all-day's squirrel hunt. I was armed with a Lamb rifle, carrying a ball weighing seventy-eight to the pound, and with the aid of a closed season of full execution among game of all kind in the several years that I had owned it. The early morning was unusually pleasant for the season, and I anticipated a delightful still-hunt and a big bag. My objective point was what is known as Blue's Swamp, a dry swamp running parallel with and a short distance from the river, and some five or six miles in length. Squirrels were always plentiful in this swamp, and on a pleasant day it was easy to bag a large number.

To my dismay, by the time I reached the swamp, the sun had disappeared and a cold northeast wind was blowing, and I found I was in for a regular "blue day." I did not turn back, however, but pushed along with very little prospect though of seeing anything to shoot. Toward noon I branched off to the river, where was an area of some two miles in length. By means of a dug-out I reached the island, crossing it and coming to a beach on the banks of the main river, which was here some two hundred yards in width. Finding a convenient place at the edge of the water, I sat down and commenced eating my lunch. My attention was at once attracted to a large flock of geese, perhaps numbering more than two hundred, right opposite me, and almost two hundred yards away. Ah, how I wished I was seated on the beach just above them; but it was no use to wish, so I finished my lunch and stooped for a flask of water, and, just as I stooped, I heard the peculiar "swish" made by geese in lighting upon the water, and peeping through the willows which lined the banks of the island I saw two geese, probably the advance guard of another flock. Pushing my rifle through the willows I prepared to fire, when my finger was stayed from the trigger by the thought that I might get them in range, and as yet two instances of. They had not yet begun to feed, when this thought occurred, and, knowing I could not be seen by them, I quietly rested my rifle on a point of the rock behind which I was hid and awaited their first move.

I had not long to await. They soon crossed, and I fired. There they lay—two beauties. The nearest one to me was lying from five feet away, and the second was probably some five or six feet further. They were all along this side of the island did not average a depth of more than ten or twelve inches, and the bed of the river, as also the banks of the island, was covered with rocks of all shapes and sizes. There was no current, owing to the peculiar form of the island on this side, and this was a favorite feeding place of both ducks and geese. Prodding a willow limb, as a soundly-able to avoid holes, I waded out after the dead geese. They had been shot, I moved an inch since the ball struck them, but imagine my astonishment, on rounding the bend that had been my hiding place, to behold a third goose, not yet quite dead, struggling in the water nearly thirty feet away from either of the others. I had seen but two, and I could scarcely believe my eyes now when I saw three. I had heard of other shot fired, else I might have thought this goose killed by some one else. But speculations as to its death were useless, so I at once made an examination. The first goose, the one nearest me when I fired, was shot through the head; the head, in fact, was torn to pieces by the ball. The second goose, five or six feet further away, was shot just at the junction of the neck with the body, the ball passing entirely through, making a large, ragged wound causing instant death. Now, as I sat on the island, these two geese were in a line leading directly north, while the third goose was fully thirty feet away on a line a little south of west. Examining the third goose, I found the ball had shattered the butt of the left wing and had buried itself in the body, there being but the one wound. Going back to where the second goose had been killed, I made a careful examination, and was at last rewarded by finding a large slate rock just reaching the surface of the water, and upon this rock was a small white spot, the imprint of my rifle ball. The surface of the rock toward the spot from which I fired was almost perpendicular, with a very slight inclination or twist to the southwest, being of just the peculiar shape to send the ball glancing in the direction it did. What happened, very fortunately for me, to be caused by the direction of the wind. But what a relief in my fortune in getting three geese at one shot, and of not having to go home empty handed, as I had certainly calculated on doing, I was not really satisfied as to the cause of death of the third goose; nor did I become fully satisfied until I had taken the ball from the body and weighed it, when I found it was indeed my own rifle ball.

HAIR TRIGGER.

Washington, Feb. 14th.

PENNSYLVANIA.—Pittsburg, S. S., May 1st.—Our friends —H. Smalley and Charles Gaul, members of the South Side Gun Club—have just returned from "Seven-Mile Island" after a week's shoot, having bagged 21 ducks. They report ducks very scarce and wild, and that they secured only one of the 1878-79 season's greatly diminished numbers; but this winter has been very hard upon them, and I earnestly hope there will be enough of them left, so that we may have a little quail-shooting this fall.

J. E.

LUNCHING WITH A GRIZZLY.—The following is a reminiscence of my lonely travel down the Missouri in the spring and summer of 1841: Some time during my captivity among the Indians in the mountains near the head waters of the Jefferson Fork, I had seen and secured a piece of an old file they had. This afterward proved of great value to me, for I could, by striking it with any hard stone, get sparks, and so secure a fire. I was given an old kind of a knife, which, although very poor and clumsy, was invaluable. After the fight I escaped among the willows, and was, doubtless, supposed to have been killed, as I never was pursued, to my knowledge, and so I wandered like a frightened deer down the river, fleeing from every creature that looked dangerous. I secured from the scaffold sepulchre of an Indian a very good, long spear and a large apron which seemed to be made of tanned rattlesnake-skin, with a large pocket in it, the whole lined with finely tanned deer-skin, and in the pocket were some small shells and bones and other things, which led me to think it was the grave of an Indian doctor. Near the Upper Falls the buffalo were very plenty, and here I drove away some wolves from a buffalo calf they had just killed. I took the saddle and liver, and soon found a good place under a large rocky cliff and built my fire, and was broiling the liver on a piece of flat stone, and had a piece of the loin on the end of my spear, holding it in the fire. Looking through the blaze I saw a large bear which had approached and was eating the rest of the meat, which I had left within some ten feet of the fire. I think he had not seen me. He noticed that bag or apron near the meat, and stretched out his nose and smelt of it, and seemed afraid of it, for he jumped on one side and moved away sideways, sharply eyeing it, and so went off. I never saw him again. All kinds of creatures seemed to be afraid of that rattlesnake apron or pouch, and I always kept it by me, and with hot ashes on one side and that rattlesnake-skin pouch on the other, I slept quite safely. This was the only time I lunched with a bear.

I once saw a terrible fight between two bears of about the same size, and once came across a large dead one in the river. I secured two very large claws, which I brought home with me. G. F. W.

THE LE ROY SHOT CO. BADGE.

ANENT THE CATS.—Lynn, Mass., April 26th.—Was glad to see your caution against the domestic cat as a game destroyer. This animal ought to be exterminated. All insectivorous birds ought to be protected and encouraged to breed in our gardens and near our dwellings as much as possible; and, as they have plenty of natural enemies, the cat can be well dispensed with.

There is a locality near here where the young quail are annually caught up by cats, and when the season comes in, there are but four or five birds where there ought to be forty. Last fall, a farmer back here in the country said his cat had caught a whole brood of young partridges, his bringing in one every day or two until they were all gone, and that brood was known to have had twelve birds in it the first of the summer. "That cat isn't catching any this year," Snarens are nowhere alongside of these pests. Many farmers have three or four that get their living in the woods all summer, and the amount of destruction to game birds must be immensely large in a season.

When my dog points at in the woods, I always make it a point to scoop in that feline, if I can, regardless of her color or politics, and shall continue to do so as long as I can stand behind four drachms of powder.

As a cat is said to have nine lives, a half-dozenn thrown out of a Bogardus trap would give a fellow some good practice once in a while during the close season; and a man that could shoot ten straight, or shoot them so they would lie straight, I should call a good shooter to a public benefactor.

New York.—Plattsburg, April 25th.—I shot four snipe on the 23d. This is the first bag of snipe that has been made here this season.

New York.—Rochester, April 23th.—Snipe shooting is

at its height with us of this region, and the game has not been so abundant in the spring for many years. Parties drive or take the cars out to the various known resorts of the birds every day, and few return empty-handed. I know that several good bags have been made, and have heard of almost fabulous numbers of the long bills falling to the guns of peculiarly lucky shooters. A dealer in game told me this morning that a man yesterday wanted to sell him half a bushel basket full of snipe.

While out shooting this week with a friend, after snipe, we came across some young wild pigeons on the railroad track feeding on grain dropped from the cars. Quail and ruffed grouse are often seen on the Central tracks picking up corn, wheat, etc.

There is a good deal of ball shooting carried on here by clubs and in private matches. It answers the purpose of testing comparative skill quite as well as pigeon-shooting, and is free from objections that may be urged against the latter. In time ball shooting will nearly supersede pigeon shooting.

KANSAS.—Abilene, April 23th.—Our usual spring flight of plover commenced about April 4th, and they have been, and are now, very plenty, and large bags have been made—Stevens and Wemyss killing 76 in three hours' shooting. Ducks have been more than usually plenty. Some few geese; but no brant on the wheat, this spring. Three years ago I noticed the first robin, now they are plenty. DIRIGO.

SHOOTING MATCHES.

MAINE.—Topham, April 30th.—Annual shoot of the Riverside Shooting Club. A very strong wind blowing. The following is the score:—

York-Rotary, 1 1 1 1 1 0 1 0 1-8; Bogardus, 1 1 1 1 1 1 1 0-8; Doubles, 10 0 1 0 1 1-5. Total 21.	
Kent-Rotary, 1 0 1 0 1 0 1 0-4; Bogardus, 0 1 0 1 0 0 1 0-3; Doubles, 10 0 1 0 1 0-3. Total 9.	
A. E. Hall-Rotary, 0 1 1 0 1 1 1 1-8; Bogardus, 1 0 1 1 0 1 0 1-8; Doubles, 10 0 1 0 1 0-4. Total 15.	
Ken-Rotary, 0 1 1 1 1 1 1 0-8; Bogardus, 1 0 0 0 1 0 1 1-5; Doubles, 10 1 1 1 1 0-7. Total 18.	
G. H. Goud-Rotary, 1 0 0 1 1 1 1 1 0-7; Bogardus, 1 0 0 1 1 0 1 0-5; Doubles, 10 0 1 0 1 0-4. Total 19.	
M. C. Hall-Rotary, 0 1 1 0 1 0 1 1 0-8; Bogardus, 0 1 1 1 1 1 1 0-8; Doubles, 10 0 1 0 1 0-5. Total 19.	
Q. Goud-Rotary, 1 1 1 1 1 1 1 0-8; Bogardus, 0 1 0 1 0 1 0 1 1-5; Doubles, 10 1 1 1 1 0-8. Total 21.	
C. Goud-Rotary, 1 1 1 1 1 1 1 0-7; Bogardus, 1 1 0 1 0 1 1 1-5; Doubles, 10 0 1 0 1 0-4. Total 16.	
Stetson-Rotary, 1 1 1 0 1 0 1 0 1-5; Bogardus, 1 0 0 1 1 1 1 0-8; Doubles, 10 0 1 0 1 0-4. Total 16.	

At the annual meeting, held Thursday evening, the following officers were chosen for the ensuing year: President, G. Gram; Secretary, J. S. Bonney; Treasurer, S. Knight, Jr.

NEW HAVEN GUN CLUB.—New Haven, Conn., April 28th.—The New Haven Gun Club held its regular medal shoot on Wednesday, April 28th. Can not account for the small number of sweepstakes and medal shoots, unless they knew that Mervin was to be present. But, very unfortunately, Mervin was hardly able to shoot, being sick; but he was present at the medal shoot, hardly able to resist the recoil of 30s. But he did not do so badly. Would some of our brother sportsmen had a little more backbone on medal shoot days and ewepestake shooting. They might make as good a record. Following is ewepestake shooting. All shooting from 3 traps and Bogardus rules.

Sweep No. 1; one money:—	
Lee.....1 0 0 0-1	Folsom.....1 1 1 1-5
Beers.....1 0 1 1-4	Jorey.....1 1 1 1-5
Folsom and Jorey divided.	
Sweep No. 2; one money:—	
Lee.....0 1 0 0-1	Jorey.....1 1 1 1-5
Beers.....1 1 1 0-3	Penn.....1 1 1 1-5
Folsom.....1 0 1 0-3	
Jorey and Penn divided.	
Sweep No. 3; two moneys:—	
Folsom.....1 1 1 1 1 0 1 1-9	Hanson.....1 1 1 1 1 1 1 1-10
Jorey.....1 1 1 1 1 1 1 1-10	Penn.....1 0 1 1 1 1 0 1-8
On ties, Jorey won first money.	
Sweep No. 4:—	
Folsom.....1 0 0 1 1-3	Mervin.....1 1 1 0-4
Beers.....0 1 1 0-2	Jorey.....1 1 1 1-5
Hanson.....1 1 1 1-5	Penn.....1 1 1 1-5
On ties, Jorey won first money.	
Sweep No. 5; one money:—	
Folsom.....1 1 1 1-5	Jorey.....1 1 1 0-4
Hanson.....0 1 1 1-4	Colvin.....1 0 0 1-3
Sweep No. 6; one money:—	
Hanson.....1 1 1 1-5	Jorey.....1 0 1 1-4
Penn.....0 0 0 0-0	Folsom.....1 1 1 1-5
On ties, Hanson won first.	
Medal shoot:—	
Mervin.....1 1 1 1 1 1 0 0 1 1 1 1 1-17	
Folsom.....1 1 1 1 0 1 1 1 1 1 1 1 1-19	
Colvin.....1 1 1 1 1 1 1 1 1 1 1 1 1-20	
Penn.....0 1 1 1 1 1 1 1 1 1 1 1 1-20	
Beers.....1 1 1 1 1 1 1 1 1 1 1 1 1-20	
Lee.....1 0 0 1 1 1 1 1 1 1 1 1 1-20	
Hanson.....1 1 1 1 1 1 1 1 1 1 1 1 1-20	
Jorey.....1 1 1 1 1 1 1 1 1 1 1 1 1-20	

Mr. Colvin was handicapped one ball, and won the badge. Mr. Jorey broke 57 consecutive balls, and would have been a hard party to tie with on the badge shoot, although his gun was drawing blood on his arm at every shot.

New York.—Syracuse, April 25th.—The members of the Onondaga County Sportsmen's Club held a shoot today for their gold badge. The wind was blowing a terrific gale from the south, and the results were very unsatisfactory to the participants. The following is the score:—

E. Hudson.....11 00 11-4	1 1 1 1 1 1-5	Total.....9
H. Drury.....11 01 01-4	1 1 1 0 1 1-5	8
T. Kimber.....10 01 01-3	1 1 1 1 1 1-5	7
G. Crouch.....10 01 01-3	1 1 1 1 1 1-5	7
G. Luther.....10 00 10-3	1 1 1 1 1 1-5	7
E. Lodder.....10 10 10-3	0 1 0 1 1 1-5	5
K. Strong.....10 00 00-1	1 0 0 1 1 1-5	5

E. Hudson won the medal for the second time. E. Lodder and W. Page have also won it twice. It becomes the property of the member winning it three times.

After the conclusion of the above shoot a sweepstakes was indulged in with the following result: G. Luther, H. Strong and H. Drury killing 8; Hudson, Morse and Crouch 7; G. Luther and H. Drury again tied at 7 yards, each killing 3; H. Drury killed 3; Luther, none at 31 yards; Hudson, Morse and Crouch again tied at 29 yards, but at 31 yards shot them out by killing 2.

Rochester, N. Y., April 25th.—The annual trap shoot of the Monroe County Club took place on the Rochester Driving Park yesterday at wild furs. No prizes were offered, and members of the Genesee and Rochester Gun Club took part in the shooting. Hon. S. S. P. President of the State Association, came on the ground in the afternoon, and proved that his hand has not lost

its cunning with the gun. Everything went off pleasantly. I include scores:—

Single rises—twenty-one yards:—	
P. Moller.....6	W. J. Hahcock.....8
H. Andrews.....6	J. C. Hart.....8
M. A. Stearns.....6	H. Knapp.....8
E. H. Pope.....6	G. Geo. Stillson.....8
W. S. Kinsmill.....6	A. J. Bonmouth.....8
E. H. Pope.....6	E. A. Adams.....8
H. H. Morse.....6	H. B. Hooker.....8
H. Knapp.....6	H. Knapp.....8
J. H. Jeffries.....6	A. Brownell.....8
N. Dunn.....6	H. J. Rubcock.....8
A. J. Bonmouth.....6	H. H. Morse.....8
G. D. Butler.....6	E. O. Sarge.....8
Q. S. Farquharson.....6	J. C. Hart.....8
J. C. Hart.....6	H. Knapp.....8
Jones.....6	H. Knapp.....8
C. G. Morse.....6	Chas. Green.....8
E. G. Billings.....6	E. G. Billings.....8
C. C. Morse.....6	

Single rises—thirty-one yards:—	
I. W. Butts.....7	J. K. Brockwith.....9
A. A. Stearns.....7	T. T. Curtis.....9
G. W. Crouch, Jr.....7	H. Selsby.....9

Double rises:—	
H. B. Hooker.....11 11 11 10-9	E. O. Sarge.....0 10 11 01 01-5
J. K. Brockwith.....10 11 10 10-9	H. B. Hooker.....10 11 10 10-9
J. C. Hart.....10 11 10 10-9	Dr. Adams.....10 11 10 10-9
E. Redmond.....11 11 10 11-9	C. G. Morse.....11 11 10 11-9
H. H. Morse.....10 11 11 11-9	H. J. Rubcock.....10 11 11 11-9
E. H. Pope.....10 11 10 10-8	H. S. Stillson.....10 11 10 10-8
E. H. Pope.....10 11 10 10-8	H. W. Crouch, Jr.....10 11 10 10-8
J. C. Hart.....10 11 10 10-6	E. Redmond.....11 11 10 10-6
W. S. Kinsmill.....00 11 10 11-9	H. Selsby.....10 11 10 11-9

MINER ROD AND GUN CLUB.—Pigeon shoot at club grounds, Springfield, L. A., April 15th; 5 traps; 25 yards rise; 80 yards boundary:—

Aery.....1 0 0 1 1 1 0 0 0 1-5	
Vescom.....1 0 1 1 1 1 0 0 0 0-5	
Mine.....1 0 1 1 1 1 1 1 0 0-5	
Davis.....1 0 1 1 1 1 1 1 0 1-6	
England.....1 0 1 1 1 1 0 1 1 1-7	
Wood.....1 0 1 1 1 1 0 1 1 0-8	

CAPITAL CITY GUN CLUB.—Washington, D. C., May 1st.—At a recent meeting of this club it was voted to shoot a match of twenty single balls, weekly, for two gold medals, to be known as the "Selsby" and "Hahcock" medals, and the prize was to be won by the member who had secured the most medals at the close of the season to the members, respectively, making the best percentage in at least thirteen regular matches. The first shoot for these badges took place on the grounds of the club this afternoon, when the first prize was won by Mr. Woodbury and the second by Mr. McCleod, the latter having to shoot off the tie with Mr. Shepard for the sumo. Mr. Mills shot at 25 yards rise, Mr. McCleod at 25, and the other at 20, from Card's rotary trap, secured the smoke target balls were used. The practice match at double rises was shot at 15 yards, Bogardus rules. Mr. Wm. Wagner acted as referee and gave general satisfaction. The following are the scores. Match for gold medal:—

Levi Woodbury.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
H. L. Shephard.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
E. M. McCleod.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
H. L. Mills.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
W. B. McCleod.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
T. E. King.....1 0 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
W. W. Eldridge.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
W. W. Eldridge.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
H. L. Wadsworth.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
H. L. Wadsworth.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
Harry King.....0 0 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
L. F. Nagle.....0 0 1 1 1 1 1 1 1 1 1 1 1 1 1-17	

E. M. McCleod, for second medal:—

H. L. Shephard.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
Double ball match:—	
H. L. Shephard.....11 10 11 11-9	W. W. Eldridge.....01 11 10 11-8
Levi Woodbury.....11 11 10 11-9	E. S. Peck.....11 11 10 11-7
S. J. Wadsworth.....11 11 10 11-9	H. L. Wadsworth.....11 11 10 11-9
W. B. McCleod.....11 10 11-8	Harry King.....10 11 01 01-5
T. E. King.....11 01 11-8	C. J. Stoddard.....10 10 10 10-3

W. W. L.

THE WASHINGTON CLUB.—Washington, D. C., May 2d.—A number of preliminary business were met at the residence of J. W. Van Arnum on last Wednesday evening, to take into consideration the organization of a shooting club. After interchanging opinions a constitution and by-laws were adopted. The following officers were elected: President, Dr. J. W. Van Arnum; Vice-President, C. H. Dufour; Secretary, C. M. Ozden; Treasurer, William Holmead; Captain, George A. Bentley; Scorer, W. E. Buford. The club have selected shooting grounds at Holmead, and are having them placed in fine condition. It is the intention of the club to inaugurate a tournament on the 1st of June, the summer, when it is expected that crack shots from the best clubs in the country will participate. The club meets twice a week for practice.

VIRGINIA.—Portsmouth, May 1st.—At a regular contest of the Seaboard Shooting Association for the gold badge, held yesterday, the following score was made with a heavy wind blowing, shooting from Card's rotating trap:—

A. C. Fiedlin.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
W. S. Riddick.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
G. C. Hobbs.....0 1 1 1 1 1 1 1 1 1 1 1 1 1 1-19	
H. G. Williams.....1 0 0 1 1 1 1 1 1 1 1 1 1 1 1-18	
Jas. F. Carr.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
W. W. Williams.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
W. S. Gary.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
C. F. Edwards.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
W. W. Williams.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	
J. P. Baird.....0 1 1 1 1 0 0 1 1 1 1 1 1 1 1-17	
J. M. Binford.....1 1 1 0 0 1 1 0 0 0 1 1 1 1 1-17	
W. P. Lynch.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1-17	

ERB-BOGARDUS MATCH.—St. Louis, Mo., May 1st.—Bogardus told me he never shot before such a crowd as was present. No arrangements had been made to keep the crowd within bounds, and before the first ten birds were shot, the operators formed a letter V from the shooters, and several birds, flying to left and right, were shot at the imminent peril of the crowd. When Bogardus refused to shoot at a bird flying toward the crowd, and several times he and Erb intentionally gave him a peppering. It was the intention to shoot at tame birds; but the party who was to have secured the birds, failed to do it, though there were hundreds caught, and easily to be had; and wild ones were used. They were not a good lot. Erb missed several of his easiest birds, and struck several of them hard with both barrels—the feathers flying at each shot—but he was using miserably poor powder, and early in the shoot Bogardus told him that he was beaten by H. Olden. Erb, having cleaned his gun after each shot, said, "Erb deserves to be beaten for using such powder." As you see by the result, the match was close, and the shooting good. At its close, Erb told Bogardus he wanted some more of it, and no doubt another match will be arranged soon. The game money, which was divided between the contestants, pays them handsomely for their trouble. Notwithstanding the result of this match, I consider Erb the better shot; but he does not stand the excitement of the crowd as well as the old champion. I predict that Bogardus will lower his colors to him within a year. The

to-forest in her performance, including Com. Latham, Fish, and Com. Thayer, of the A. Y. C.; Vice-Coms. Hathaway, N. B. Y. C.; Messrs. C. S. Lee, Lawton, Max. Wrigley, L. C. Maxwell, and others, including representatives from the FOREST AND STREAM, and World.

The wind was blowing stiff from west southwest, the gusts whistling through the rigging, which produced visions of wet decks and snug canvas. The mainsail, forestaysail and jib were up on her, and the hard blows could not make her "drink water" to leeward. Her stiffness was a matter of favorable comment, and after a few boards, the forestail was set and the schooner sailed out the Narrows with a rap pull. Even the worst of the squalls could do no more than just fetch her "deck to," and there she seemed to hang. It would have taken a young gale to send her over any further, for she began to feel her ballast in a telling way. Perhaps the most remarkable feature of her sailing is the easy manner in which she parts the water forward and the rest she leaves it from about the quarters. Even when down to the cuppers she was never a breaker under her lee bow, nor along her side. She goes through the water like a steamboat, and there is actually no more commotion to leeward than to windward, hardly the inconstant surface agitation. The *Cruiser* will have to be pushed very hard indeed if she is ever to carry a "bone in her teeth." Certainly it must be granted that her entrance is about perfect. It is 6.6 of the length, and her arcs forward correspond to the wave line ordinates; facts which offer a solution of her almost unequalled excellence in this respect. Not even the *America* goes through with less ease. And what has been said about her entrance applies to the run, for the *Cruiser* draws no quarter wave, no stern wave, does not drop by the stern or bore by the head. She is one of the cleanest-sailing vessels that have come under our observation. Add to this the fact that she carries a large spread, and carries it in a stiffish wind without flinching, that the more it blows the faster she goes, showing no burying proclivities, lively and sensitive to every puff, well balanced, very quick in stays, easy as an old shoe in the moderate swell met on Saturday, and the opinion may well be hazarded that she will be in the taste. With her owner at the helm, and some of the *Peerless* old cornhorns talking on to the gear, *Cruiser* will be a hard one to beat, and the craft that gets away with her will be a hard indeed. If the new schooner fulfills our expectations her success will go far toward the introduction of a healthy yacht and healthy yachting in New York waters, and no little credit must be awarded to her owner for the step he has taken in the right direction.

AN EASTERN ASSOCIATION.

Editor Forest and Stream:—

I write call for the formation of the Massachusetts Yachting Association was issued by the D. Y. C. mainly to settle the question of measurement. The system adopted is simply that in use by the D. Y. C., and may be the best, but for my part I do not believe that it is. My reason for saying so is this: There are two yachts in this vicinity that often sail together in regattas, one of which is 21.5 tons and 10ft. beam, the other 23ft. long and less than 6ft. beam. The result of the contests is invariably the same—the longer boat getting in ahead, and being figured out of the prize by the time allowance now in vogue, with the simple factor of length considered; the shorter boat not being taxed for the foot of extra beam, which gives her so much extra sail-carrying power. Yet if they should sail under the rules of the Salem May Y. C. they would sail on even terms. Does not this seem to be fair?

As the plan proposed by myself, and adopted at several regattas I was connected with in the management, some seven years ago, is preferable to this. It was as follows: Starting from the stem at the water line, carry the tape around along the water line to the stern in line with the stem. The only person who made the slightest complaint was the owner of a very wide sloop, which had been a very profitable craft in taking prizes, owing to the simple length measurement making her so much shorter than most of the yachts of her class, although more powerful, but by the "right" method she was much more fairly estimated. I do not wish to say that this is the correct system, but is, in my mind, preferable to a simple length measurement. The Massachusetts Association has, therefore, grievously failed, and disappointed many in this respect.

At the meeting for the organization of the Eastern division of the N. Y. A. five were clubs represented by delegates having authority from their respective clubs, and at the next perhaps two more clubs will be represented, these clubs not having felt authorized to send representatives unless they were appointed at a regular meeting.

The Washington Village Y. C. is a new club organized a year ago, and at the present time is in quite a prosperous condition. At their last meeting they voted in some twenty new members, drawn from the Dorchester and South Boston clubs. They intend to be very rigid in their choice, and to admit none but those who would make desirable members. M.

Salem, April 26th.

CANOE AND THE CANOE CONGRESS.

Editor Forest and Stream:—

I am pleased to learn from Commodore Chase's letter, which appeared in a recent issue, that the promoters of the Canoe Congress, to be held at Caldwell next August, have become charitably disposed, and made arrangements to take in Canadians as members and having all the rights and privileges of their American cousins. It is a step in the right direction for canoe paddling and canoe building are nothing new in Canada; and I will here suggest to my brother canoeists in the Dominion that we turn out in full force next August.

As for canoe cruising with decked canoes in large open water, I have seen very little of it in this country. In our inland lakes and streams we feel tolerably safe in an open canoe, and for that reason decked ones are rarely seen, although sailing is indulged in to a considerable extent. In their description of what constitutes a canoe, I would say a little farther than the three commandments did, and say that the canoe should not be clinker built, but perfectly smooth on the outside, in fact as nearly the type of the birch-bark of the North American Indian as is conformable with the great requisites—speed and safety. I trust this subject, what constitutes a canoe, will be taken up and discussed at the coming congress. I am aware you have builders of fine canoes in the United States, but I think the Canadian builders are prepared to offer strong opposition in that line. For myself, I should like to see a congress canoeists of the very best builders of both countries, and I would suggest that the committee having charge of the call, shall *FOREST AND STREAM* to donate a prize for the best canoe exhibited at the congress. I intend to do what I can to induce the following builders to send a canoe each: Stephenson & English, of Peterboro; Herald, of Rice Lake, and Gordon, of Lakefield. Nothing interests an enthusiastic canoeist more

than a fine canoe, and the meeting must be made interesting in every way possible.

In describing how a canoe should be propelled, the commodore says that the paddle or sail only may be used. Although Mr. Bishop used oars and outriggers on his paper canoe, *Maria Theresa*, during his 2,500 mile voyage from the Gulf of St. Lawrence to the great southern sea, they were only used to break the monotony of constant paddling, and to bring into action sets of muscles that were not used in paddling. Mr. Bishop scouts the idea of using oars as a means of propelling the canoe, except in extreme cases, where long journeys were to be made.

Commodore Chase very correctly remarks that in Canada the single blade paddle is almost entirely used, and these are made of ash, maple, and sometimes of cedar. Light in weight, yet sufficient strength, are the requisites for a man that paddles ten or twelve hours a day.

Guelph, Canada, April 13th.

A TEN DAYS' CRUISE IN '79.

(Continued.)

THE next day, Tuesday, broke fine, clear and warm, without a breath of wind, and if we had entertained any idea of leaving, we should have had to have given it up. As the day passed we amused the time by playing *for* us, with our awnings spread fore and aft we prepared for a "loaf." Nothing is easier than this aboard a yacht, provided the "loafer" has no nervous disease—a thing not common in the species—and can do absolutely nothing, and enjoy himself. The "captain" and "Eben" seated on the starboard side of the cockpit, carried on a desultory game of poker, for half dollars the game, to the huge delight of numerous urchins on the wharf close by. Some one of an uneasy turn of mind proposed that we should visit Goss & Sawyer's ship-yard, so they put off for a time the much-loved pajamas, the "Cap" and "Eben" left their game, and joined the crowd.

All over the yard we went, from steam boat to nearly finished vessel, and many interesting things we saw. This yard is said to be one of the finest in the country, and it undoubtedly has every appliance for turning out vessels at short notice that ingenuity could suggest. The inside finish of the coasting vessels caused us no little surprise, as did also that of a steam screw tender for a whaling fleet. Maple and mahogany panels, with rich plush seatings, formed a yacht-like cabin, which was in good taste, and showed that the caterer and waiter have their comforts as well as the yeasmen. Enormous timbers from the bending machine were being put in almost as soft and pliable as molasses candy, but soon to harden, and take heavy blows from many a good sea, some to succumb to their force, others to last out year after year till burned for the iron that is in them. Such is the gratitude of man, that after the good old vessel has carried him and his over many a wide stretch of water, through many a blow, and has, perhaps, brought him his fortune, that he makes a funeral pile out of it and makes what he calls out of the ashes.

As it grew very warm toward noon, we wandered back to the yacht, and once more toward the light and airy costume of the morning. Some mortal suggested that we should take a bath, and before the words were fairly out of his mouth two of us were over the side, and paddling round in the shadow of the yacht. The water was delicious, and it was not long before all hands were disposing themselves round the yacht like so many tame porpoises.

There was some talk of going over the town in the afternoon, but the town is not excessively interesting or exciting. It is the surroundings which impress one with their beauty. The shipyards are unsurpassed, but otherwise Bath is like any other Eastern town.

Later in the afternoon, however, "Gasket" and "Eben" hired a trap, and went off on a jaunt through the city's principal streets. "Silly" and the "Infant" betook themselves to the port boat and a sail on the river, while the "Captain" smoked, read and slept on board in solitary grandeur. All turned in time for dinner with their habitual punctuality, and it was unanimously decided that we "do" the town by daylight, as we were to leave the next morning, D. V. We found the tramp ashore rather slow, however, and so set out again toward the yacht with pleasure. On the way down we listened to the "Bath band," which was rehearsing, and were regaled with the latest popular music. The night was fine and clear, but the cabin glass threatened wet and bad weather, much to our disgust, as we wanted to sail the next day without fail. We were doomed to our disappointment, as the wind next morning was heavy from the south-southwest, bringing with it fog and rain. It was a head wind to go down the river, and though we sent word for a tug, none approached. This was quite as well, perhaps, as we still pride ourselves on never having had to use steam since the yacht was built. The gusts tore up the river in heavy bursts, and the fog and rain shut us in like a wall, so that we could not see the opposite bank of the river. Well, there we were, so we had to make the best of a bad bargain.

Reading, smoking and drinking, and the "diver's hand" left us, and to these we turned for consolation. The "Captain," believing in detaching himself from unpleasant surroundings by the aid of one's inner consciousness, lit a cigar, took down "The Voyage of the Sunbeam," and curled up in a corner on the starboard side. This seemed to strike the crowd as a good idea, and two of them immediately followed it. The others were seated at the table, engaged in some sort of incipient gambling, for there is nothing that a man won't do—even if his principles are of a high order—if he should happen to become a storm-bound. This was discovered in '77, on our way home from a two weeks' cruise, which was extended to three weeks when we were fore-buried at Seal Harbor, and Stockholm and ten miles away. A stern fog-horn drove us almost wild, and we were reduced to shooting crows and trying to shoot a lamb which the owner offered us at a discount provided we killed it. The sportsman who undertook to slay the unsuspecting beast took the mate on shore with him, and, according to the latter's account, seemed more inclined to shoot him than the lamb; but then sheep are by no means easy to get at when they were as wild as these were, for we could see them rushing gaily about from point to point, while K— vainly essayed to diminish the flock. Lunch made a delightful break in the day, and we made a decided hole in the grub stock.

Thursday, the 21st, found us all on deck before 5 o'clock, a slight seldom seen, and therefore to be taken advantage of. One energetic member had been awakened by the noise on deck, and had aroused the rest, who, for a wonder, all turned out, and went to the wharf. The crowd of sailors and castles off from the wharf. Quarter of 5 saw us gliding quietly down the river under all sail. The sky was perfectly clear, and the weather pleasant. No noise was to be heard, except the crash of our gun, which woke the echoes for a few moments, and the rattle of the blocks, as we gibed at each turn in the river. Once out of the river, our nose was pointed in the direction of home, and we made for Portland. The wind blew light at first, but freshened at about 9, and we ran in among the islands, casting anchors in

Portland Harbor at 10:30 A.M., between the revenue cutters *Dallas* and the *Grant*. Steamers loaded with passengers, towing lighters, and sailboats, were going down to the island to a great picnic. The schooner *Tarantula*, B. Y. C., ran by, bound for Mt. Desert. An officer from the *Dallas* came alongside to take our name, port, etc., but could not be induced to come on board, as he had to return and make out his report. Virtuous official! At about 11 we adjourned on shore, and "did" as much of the town as was compatible with the heat; but it must be confessed that the ice-cream saloon had more attractions for us than all the places of interest. Having discovered that there was to be a variety show in the evening at one of the halls, we bought tickets, and then bent our steps to the yacht by a circuitous route, bound to take in all of the place that we could with the least inconvenience to ourselves. We sent an invitation to the *Dallas* officers to spend the afternoon on the yacht, and dine; but, unfortunately, the government inspector was expected that afternoon, and they could not leave much to our regret, as I trust they will understand if these lines should ever meet their eyes. The afternoon and evening were the most beautiful I have ever seen. The harbor was like a mirror and the sun setting behind the city threw it into silhouette against the yellow-tinted sky, making a truly brilliant sight. All the shipping was reflected in the water, the rays of the setting sun giving color to the surroundings, strongly reminding one of some of the pictures one sees of Venice.

Early in the afternoon the *Peerless*, E. Y. C., made the harbor, and later the *Ideal* (steamer), N. Y. Y. C., making quite a little fleet. After dinner, we saw, to the evident enjoyment of the crew of the *Grant*, who collected in her bow and listened. Several boats filled with Portland's fair sex seemed interested in our appearance, but kept at a respectful distance, probably remembering that though "music hath charms," still, "distance lends enchantment."

In the evening we went to the before-mentioned variety show and ran across an old acquaintance, who was here in his yacht and proved a great addition to the party. We spent a lively evening, and turned in very near the "twelve" hours."

YOUNG AMERICA vs. TWELVE OF OXFORD.—At Stenton, Philadelphia, May 1st. Al. Reach knocked the ball round in base-ball style, and R. S. Newhall, a strong, reliable batter, was bowled by MacNutt on the first ball. Pease was missed at slip by Wilberham after he had 11, and when the score of the Young America stood at 40 it looked as if the Oxford would win. Pease, however, pulled his club through.

Sutherland, and Ed. McCormick. Property Committee—Messrs. Geo. Ashworth, F. Bentley and J. Townley.

Cricket Goods.

Alfred Shaw & Arthur Shrewsbury

(Members of the Anglo-American Team and All-England Eleven).

HAYE pleasure in informing their American friends that they have opened the Midland Cricket, Lawn Tennis, Football and General Athletic Sports Warehouse,

CARRINGTON STREET BRIDGE, NOTTINGHAM, ENGLAND.

The most unique and comprehensive establishment of its kind in England. Their stock comprises well-seasoned Cricket Bats, Balls, Boots, Shoes, Leg Guards, Stumps, Bage, Lawn Tennis Sets, Racquets, Footballs, Jerseys, Shirts, silk or woolen (as worn by the team in America), and every article in great variety suitable to athletes.

S. & S. being members of the late American Team, know the requirements of their transatlantic friends, and if favored with an order may be relied upon to send goods of first-class quality only. Clubs, colleges and schools provided with professional bowlers. First class men, personally known to S. & S., well bred and of high character, only sent out. Price lists, with batting averages and bowling analysis of the American Team, may be had on application to GEORGE LANE, Professional Cricketer, Staten Island Cricket Club.

Guns, Ammunition, Etc.

The "STANDARD TARGET," "For Rifle Practice. Size 6 inches. Bulls-eye 1 inch. Ranges, 100 feet, off-hand. The zones rise by area instead of diameter.

Marksmen will appreciate the new departure which this target has inaugurated. The accurate rifleman now gets the true value of his shots, while on old-style targets the record was so falsified by the element of chance as to give but a vague idea of the shooter's skill. For instance, on a 30 yard Creedmoor "center," scoring 4 has ten times the area of a "bull," scoring 5. Every rifleman knows that no degree of skill or care will give immunity from occasional misses, and under the old system it was almost the rule for good marksmen to be beaten by bad ones. One man would pile up eight snare bulls out of ten, but lose the other two, while his competitor, "shooting for fours," would scatter his shots all over the board center, blunder one shot into the edge of the bull, and win! Now in deer stalking, and shooting at 30 yards, the winner would have wounded and lost one deer, while the loser would have struck down eight, all shot through the heart. Of course there are people who still contend that under the old method a bull had an equal chance; which is very true. But it is also true that their equality of chance would have been in no wise improved if the bull had been down and thrown dice to determine who was the better shot. In contests of skill every element of chance should be eliminated.

Arrangements have been made for supplying these targets at a merely nominal price, and it is now an easy matter to gauge results to skill by uniform practice, and to communicate definite results without obscuring them by explanatory details. The targets are mailed, post-paid, to any address in the United States at fifty cents per hundred, and quite a liberal discount is made to galleries and dealers. Send orders to CROSSBOW, MAY & SHEPARD, Glen Allen, Virginia.

(RED LABEL.)

GIVES GREATER PENETRATION and BETTER PATTERN than ordinary shot. Equally well adapted to choke-bored, modified chokes and cylinders.

Beware of Imitations.

Our Chilled Shot will be found to be more free from shrapnel, more spherical, more uniform in size, heavier and of brighter and cleaner finish than any other.

Send for circular.

"Spanule," the wonderful Glycerine Lotion, is a positive cure; it has never failed.

"Spanule" has no equal for Chronic Lameness, Lame Back, Lumbago, Sprains, Piles, Clapped Hands, Chills, Jaundice, and all diseases of the Skin, Erysipelas, Salt Rheum, Eczema, Humors of the Scalp, Diphtheria, Sore Throat, Pneumonia, and all inflammatory diseases. Ladies who suffer from local difficulties find immediate relief, and a permanent cure by using "Spanule." Used in sponge or foot bath removes all soreness of body, limbs and feet. Satisfaction guaranteed or money refunded.

Sold by all Druggists. Price, 50c., and \$1 per bottle. Send for illuminated circular and cards.

Syeledobsis and Passadumkeag.

THE northern and eastern portions of the counties of Penobscot and Washington, in the old Pine Tree State, contain a remarkable lake region, unsurpassed in extent and diversity of scenery, affording variety for the sportsman who, with rod and gun, is willing to rough it for ten days. The everlasting hills and meadows are supplied in unlimited quantity with deer, black bear and ruffed grouse, and the lakes and rivers with duck, land-locked salmon and trout. The variety of routes this region affords is not the least of its attractions, and has only to become more widely known to be visited and appreciated by a large number of sportsmen who cannot afford the expense of long trips West.

Parties can leave Boston by rail at night, and next morning reach the pleasant town of Lincoln, Me., the most central point from which to reach the lakes. A charming drive of twenty miles to the town of Springfield brings you to Gowell's, at the head of Duck Lake, where you can find Indians and canoes. Crossing Duck and Junior lakes, through Junior stream into Grand Lake, all well-stocked with land-locked salmon, you have the choice of several routes, either of them offering sufficient attractions to render them enjoyable, and not to be forgotten. You may cross Grand Lake to the falls, and by a short carry enter Big Lake, thence into Long Lake to Princeton. Carrying by the mills a short distance you can continue your route by the St. Croix River to Calais. At Grand Lake Falls is unexcelled land-locked salmon fishing in the season. There Mr. Atkins, the agreeable fish commissioner, has charge of the breeding houses, and has had uniform success, sending fish from this station all over the country.

Another route from Grand Lake, some distance longer, is through Pocompas Lake and stream into the beautiful Syeledobsis Lake, crossing a short carry into the chain lakes, headwaters of Machias River, down which you can reach Machias. In this region is one of the most remarkable watersheds in existence. The lakes—Chain, First, Second, Third, Duck, Unknown and several smaller ones—are nestled together in a comparatively small space, all easy of access to each other by short carries. We have here the waters of Machias, St. Croix, Union and

Penobscot rivers. From this point many excursions may be made into the surrounding wilderness, or by lakes almost endless in extent, and one can pass the time with profit and enjoyment.

Still another route presents itself from Syeledobsis Lake, which is the one we have just completed. I subjoin a few notes from a journal kept during the trip, trusting they will be of sufficient interest to warrant their reading.

Through the genial landlord of the Lincoln House, Mr. David Stockbridge, familiarly known as "David," we secured canoes and a man to do general work, who proved efficient in the canoe and an excellent cook. Under David's good management we had the canoes and supplies properly loaded and sent on ahead, and on the arrival of the train, Tuesday, Sept. 9th, he was in readiness with a first-class team to convey us to Gowell's. It had rained during the previous night sufficient to lay the dust, and we had a most agreeable ride through the green wilderness, over a good road, reaching Duck Lake about 3 p.m. On the shore of the lake is a club house, owned by Boston parties, under the care of Mr. Gowell, and twice a year they visit here, having fine success and exhilarating sport hunting and fishing. We shortly had the canoes aloft, loaded and under way. Our man Henry was in charge of one canoe, and "Brick Top," having been over the route before, was appointed guide of the squadron, and took the lead with the other canoe. Besides the mentioned, our party consisted of Mr. E. V. Cross, of Lawrence, Mass., an expert disciple of "Izaak," and a thorough sportsman, and Prof. Mills, well known in Eastern Maine as a "dead-shot" and taxidermist, and for his agreeable loquacity on hunting subjects, which afforded us much enjoyment and instruction. We paddled leisurely across the lake and entered its stream, nearly hidden by dense alders, and being exceedingly narrow and rapid we soon reached the beautiful, clear water of Junior, as the sun, sinking behind the high ridge on our right, was illuminating the entire surface in gorgeous colors, which we accepted as a welcome and good omen for our success. About a mile below the mouth of the stream we found on our left an excellent camping spot, and while some were engaged in gathering boughs and making camp the rest were busily employed in getting supper. David had accompanied us thus far for the purpose of being with us one night in the camp, and he proved a pioneer in the work.

Camp and supper were soon in readiness, and under the combined inspiring effects of juniper tea, camp fire and a feeling of freedom from all care, the Professor began a relation of some of his wonderful experiences by land and water. We had then field entirely to himself, and we listened long in admiration until he began a thrilling narration of his experience at Bar Harbor during a gale of wind, when we quietly dropped out one by one, and left him talking to the stars. We had an excellent bed, and slept tranquilly until the rays of the rising sun, shining in our faces, awakened us to a day of sport. While we were seated about the breakfast table an exclamation from the Professor fixed our attention to the lake. His experienced eye had discerned in the distance a flock of ducks approaching us. We all made preparations for their reception, and began the day with seven black ducks, handsomely stopped by the Professor and "Brick Top." While Henry was gone to Gowell's, with David, we broke camp and were ready to start on his return. The day was warm and clear, and the six mile stretch of water before us was calm and transparent as glass. The numerous islands at the head of this lake, closely crowded together, somewhat interfere with its outline, but after passing them it expands into beautiful shape nearly two miles in width and the shores handsomely wooded. Near the islands land-locked salmon are found in plenty, of good weight and game. Vose tried them with good success, while the Professor and the rest of us gave exhibition of skill in shooting king-fishers on the wing.

The high ridge on our right, about a mile in width, is all that separates us from the Syeledobsis lakes, and is the home of the deer in great numbers, many of them being taken every season. We paddled lazily along, reaching Junior stream at noon, and proceeded down its placid length, not a sound disturbing the solemn quiet about us—conducing to reflection and study. Near its mouth the stream widens considerably, its shores becoming meadow and marsh. This place seemed a perfect rendezvous for wood, black duck, and blue-winged teal. The Professor shot very handsome specimens of wood duck and blue-winged teal, while our success was excellent in shooting snipe and sheldrake. A tongue of land about twenty feet wide on our left extends up the stream nearly a mile, and we heard the waves of Grand Lake beating on its shore. The Professor and I entered this passage through just a narrow break in this narrow strip of land, we enter at once on the lake, most appropriately named Grand. Looking by the point of Big Island, the expanse of water seems almost limitless until we notice the high hills about the stream at the foot of the lake, blue in the distance. The shores of the lake seem almost straight, looking like a huge canal, but there are deep coves, in

crossing which a person with a canoe will have to exercise due caution when there is any wind. We took dinner on the beach, with this handsome view before us, and Vose, noticing the peculiar formation of the point of land opposite us, drew from the Professor this story, which he told with thrilling effect:—

"Several years ago the enterprising lumbermen of Calais sent men into this region to secure the pine. During the season of rafting, men were employed in squads of three and four to pick up the scattered logs. One of these squads, while so engaged, went ashore on this point to prepare their breakfast. Just as they got it in readiness they discovered their bateau adrift, and one of them started to recover it, saying in reply to one of his mates, who urged him to eat his breakfast first, that he 'would get that bateau or eat his breakfast in h—.' He swam out to the boat, and put his hands on it to get in, when he gave one despairing yell and went down. After several hours' search his mates recovered his body, took it back to the point, and tied it to a tree near the shore with a two inch hawser, and then started to the settlement to procure a coffin. They returned the next day, bearing the coffin, but found their mate gone and the hawser broken in two. They left the coffin and retraced their steps to the settlement, saying their mate had dragged into the lake by a large serpent, who chose track they plainly saw."

From that day the point has been known as "Coffin Point," and the story of the man's disappearance is firmly believed by the Professor and every one about the mills below. The Professor confirms this story by finding the bottom of the coffin five years afterward, while there winter fishing, and using it to make a pair of snow shoes.

We passed into the lovely Pocompas Lake, apparently as primitive and wild as when the Indian alone canoed its waters and hunted its majestic shores. Entering its stream, we passed up two miles and camped for the night. While supper was in progress "Brick Top" started on an exploring expedition on his own account, and shortly returned with the intelligence that we were on the right stream, but a few rods below Syeledobsis dam. This so relieved the anxiety of Vose and the Professor that they became at once animated and happy, particularly the Professor, who felt somewhat limited in time, having an engagement to deliver a lecture on natural history toward the close of the month.

Thursday morning was bright and warm. Soon after breaking camp we reached the dam. We found Mr. Ball here, one of the assistant fish commissioners, who has admirably arranged breeding houses, and being an enthusiast in his work, is very successful. He also has care of the house owned by the "Dolbeis Club," which club is composed of several prominent gentlemen of Massachusetts, who visit here regularly. Their catch of land-locked salmon in May was fully up to the average for several years, which is large. We passed the morning here, visiting the hatching works, and getting much useful information from Mr. Ball. He and his wife remain here the year round, twenty miles from any settlement, their mode of locomotion being canoes in summer and snowshoes in winter. We left the dam, accompanied by them, about 3 o'clock, and started around Big Island and up the lake to our camping spot, selected for us while at the dam. We met here two gentlemen from Boston, returning from a cruise in Chain lakes, reporting excellent success. Reaching the head of Big Island, we bade adieu to Mr. Ball and wife. Following their instructions, we rolled for salmon in both canoes, and caught several beauties, some weighing five pounds.

We reached our camping spot about dark, and found it a dry, sandy beach. After supper we prepared birch bark torches, and lashing the canoes together started around the shore of the lake to spear any luckless fish we should see. Vose made a striking tableau as he stood motionless in the bow with the spear poised aloft, the lurid light of the torches casting a brilliant halo about him, showing him in bold relief against the surrounding darkness. Suddenly he made a vigorous thrust, and in a second landed a huge sucker. So we fished for an hour, catching nothing but those big, listless fellows who gave up the ghost with a squeak like a guinea pig.

Friday morning was rare and beautiful, even in this, our best season of the year in Maine, and the glorious prospect before us of water and wilderness was sufficient to repay us for our journey thither. After an early breakfast, Vose and Henry went up the lake to try the salmon, while the Professor and "Brick Top" took the high ridge behind us. In two hours we were assembled about the camp fire comparing notes, with the following results: Five land-locked salmon, averaging three pounds; two salmon trout, weighing respectively one pound and one pound and a half (these are the handsomest fish that swim); seven partridges, one white-headed eagle, shot by the Professor on the wing, and one red-headed woodpecker. While the Professor was busily employed with knife and scissors preserving the eagle and woodpecker, we had camp broken and were in readiness to start.

Pushing out into the lake, we had a beautiful scene

will be furnished on application to the Smithsonian Institution. Medical officers receiving this circular are requested to bring it to the notice of officers who may be interested in it, and are cordially invited to open correspondence with the writer upon the subject.

It is proper to add, that, for all information or specimens furnished, full credit will be given in every instance, both in the text of the treatise in which such material is utilized, and in the records and publications of the museum in which it is finally deposited; and that the author will regard cooperation in the work as a personal favor, to be fully appreciated and gratefully acknowledged.

EDWARD COULTER,
Assistant Surgeon, U. S. Army.

SOME SOUTHERN REPTILES.—The chameleon of the South is a very interesting saurian, and belongs to the family of Anoles. What its specific name is I am not naturalist enough to determine, but think it is *A. opalinus*. They are beautiful little creatures, and are met with everywhere in the Gulf States. I have often amused myself by the hour watching their playful gambols with one another, or the skill and agility displayed in catching flies and insects. Their normal color is a bright green, but they can change it almost instantly to dark brown, ash grey, grey suffused with red, and all shades between. They change to these different colors when alarmed or angry, or when they wish to avoid observation. When in their joyous moods they protrude the skin of the throat in the form of a brilliant red frill or goitre. They are easily tamed, and soon learn to know their friends, evincing much pleasure when petted. They are very useful, also, and will keep a house free from flies, roaches and ants, if allowed to roam at will.

In one of my rambles in the scrub bordering the St. John's River I killed a snake about eighteen inches long, three inches diameter of body; tail, two inches in diameter, very obtuse—leaving me to infer that the reptile had lost a portion of his caudal appendage; head as large and triangular as a six-foot rattlesnake; eyes very large and brilliant, at least one half-inch diameter; fangs, very long and large. The snake was very brilliantly marked with red and yellow on a black ground, and was killed in his tracks, either unwilling or unable to move. Was very savage, and fastened himself on the stick with which I killed him. Can any of your readers name the reptile?

NAUTICS.

NOR "EVERLASTINGLY."—In his note last week our correspondent wrote: "If 'Peregrine,' who chatted so entertainingly in your last issue," etc.; and he did not write, as the types made him say, "chatted so everlastingly." We make this explanation in justice both to "H. H. T." and to "Peregrine," and we hope that the blunder may not deter them from sending further contributions to our columns.

MANY-COLORED SQUIRRELS.—*Washington, March 19th.*—I read an article in *FOREST AND STREAM* of March 11th, taken from the *San Francisco Chronicle* of Feb. 7th, in relation to the results of nature in changing the colors of various birds the present season, and it brought to mind the birds detailed below, which I think have never been published.

A gentleman named K— owned a considerable plantation in the county of Marlborough, S. C. His dwelling was some two or two and a half miles east of the Big Pee Dee River, and a short distance east of the public road leading north to the North Carolina line. Like most of the planters of that section, he owned a body of land reaching from the sand-hills to the river banks, and the "barrens," or river portion of the land, was most productive, and therefore most thoroughly cultivated. There was quite a large tract of woodland surrounding the dwelling, and here were to be found oak, hickory, beach, maple and gum, all furnishing food in great abundance for the common gray or "cat" squirrel, which could be found in very large numbers all over the plantation. Very few fox or black squirrels were ever seen in that particular section, but these were quite numerous in the pines and also in the cypress swamps, some distance away.

Some thirty-five or forty years ago Mr. K— had presented to him a pair of milk-white squirrels. Where they came from, or of what species they were, I do not know. I never saw them, but I have heard them described as being of the same size and appearance of the grey, but their coats were milk-white, and something finer than that of the grey. Mr. K— prized highly his new pets, and after getting them thoroughly tamed, gave them the run of the woods adjoining the home-place. When the season arrived, they selected a tree only a few rods from the dwelling, built their nest, and in due course of time produced two young ones, also milk-white. Mr. K— then posted his land—i. e., advertised it according to the laws of the State, and refused to allow a gun to be fired on his plantation.

The squirrels were very prolific, and in course of time spread to the adjoining plantations, both north and south, and many of them took to the immense swamps bordering the river. And now, strange to relate, they began to change their color, and from being pure white, could be met with occasionally, marked with every possible variation of black and white. On one occasion I was hunting in the swamp on the west bank of the river, fully ten miles from the nearest point of the K— property, and came across one. He was sitting on a limb of a large pine, eating a nut, and although I tried very hard, I failed to get within shooting distance before he disappeared in a hollow of the tree; but he was so beautifully marked with black and white, and so very cautiously approached within easy range, and seated myself to await his pleasure in making his appearance. It was near the middle of the day, and doubtless he went in for his noon nap. Anyhow I had to wait nearly three hours before he again came out, but this time I was ready for him, and soon had a bullet hole through his neck. His coat was just perfectly beautiful, being a deep, sparkling black, except the ears and the large, bushy tail, which were

snow white, save a small commingling of the black and white at the root of the tail, and the lower part of the belly and inner edge of the flanks, which were a clear ash-gray; altogether one of the prettiest things I ever saw. Unfortunately my rifle bullet had almost severed the head from the body. I saw other specimens almost as pretty as this.

I think they have almost disappeared now—at least, I have seen and heard of but one since the war, and this had been killed by a negro boy with an ex-army musket. I examined this one, and found the marking not near so pretty, or the color so distinct—in fact, the white was turning to ash and the black to brown—the consequence, I suppose, of wild breeding.

HARR-TRIGGER.

AN INTRODUCED SHELL.—*Baldwinsville.*—While at Oswego, N. Y., in June, 1879, I found a small shell in great abundance on the docks, which was new to me, and which I could not assign to any American species, and Lewis at once pronounced it a *Bythinia*, a genus hitherto unknown in this country, but was not quite sure of the species, and so sent it to Mr. G. W. Tryon, who identified it as *B. tentaculata*, Linn. It was in such abundance that I collected some thousands. A few weeks later Dr. Lewis received it from Troy, N. Y., and this spring I found it placed in the Canal at Syracuse. It had probably come in water-casks to Canadian ports, and thence been distributed by other vessels. It seems likely to increase and spread as rapidly as English sparrows, and is rather a pretty little shell, brown or yellowish, and intermingled in size and form between *Melantho* and *Annicula*. Apropos to migrations of this kind, I may say that I found two western unios at Syracuse (*U. parvus* and *rubiginosus*), while some eastern species were as clearly working their way west.

W. M. BEAUCHAMP.

TAME RUFFED GROUSE.—An Ontario, Canada, correspondent, who writes under the initials of "J. J. B.," has been moved by the communication of "E. S. K.," of Worcester, Mass., which appeared in a recent number of *FOREST AND STREAM*, to give us, at second hand to Canadian ports, and incident, related to him over thirty-five years ago by one of his father's farm hands. He says: "I am the son of a farmer who was one of the earliest settlers of this part of Canada—the old Niagara district. In old times peas were raised for feed, and were considered a good crop for clearing land for fall wheat. While James McDonald, my father's man, an Irishman from the 'ould sod,' was sowing peas ground adjoining his, I was walking, a fine ruffed grouse came out of the brush for the peas, and seemed well pleased with the food; so much so that when McDonald came up to where it was, it did not fly, but merely moved out of his way, as a common fowl might do. The bird returned the next day, and the man declared that before he had finished the field, it came up to him and took peas from his hand. Shortly after this, however, it disappeared, having, very likely, fallen a prey to some pothunter. The above account, narrated to me when a small boy, made a great impression on me. It was my first lesson in game protection, and will not soon be forgotten."

PUGNACITY OF THE ENGLISH SPAIROW.—Our correspondent, Mr. J. Otis Fellows, writing to us from Hornellsville, N. Y., is thus describing an extraordinary incident: "He says: 'A short time since, I was walking in my wife in one of the principal streets of this city, when a sparrow furiously attacked a stuffed oriole my wife wore on her hat. The oriole is very life-like, and was set up by Charles Benzinger, taxidermist, of this place. The sparrow was a cock, and very dark colored.'"

AN ALBINISTIC ROBIN.—Ais robin was killed April 16th by a friend, who kindly gave it to me. It presented rather an odd appearance with the following albinistic traits: Its tail is pure white, with a broad band of black across the tip; two of the secondaries of the left wing are partially white, the half nearest the tips being of the normal color. There are, in addition to these peculiar markings, two white feathers in about the middle of the back. Otherwise this bird is not dissimilar to the ordinary ones seen about our door-ways.

Minneapolis, Minn. WM. L. WOLFORD.

ARRIVALS AT THE ZOOLOGICAL GARDEN, CINCINNATI, UP TO MAY 1st.—1 bonnet monkey (*Macaca mulatta*), 2 aoudads (*Antelope tragelaphus*), 1 horn in garden; 6 wild geese (*Anser canadensis*), 10 undated geese; 12 mallards (*Meleptastacus undulatus*), all hatched in garden; 1 pintail (*Querquedula discolor*), 2 tufted titmice (*Parus bicolor*), 1 Bonaparte's gull (*Chroicocephalus philadelphia*), 2 alligators (*A. mississippiensis*), 1 woodcock (*Philohela minor*)—all presented; 2 lions (*Felis leo*), 1 leopard (*P. pardus*)—all deposited; 1 cross fox (*V. fulvus*, var. *leucostatus*), 1 English pheasant (*P. colchicus*), 2 ponies (*E. caballus*)—all received in exchange; 1 jaguar (*P. onca*), 1 puma (*P. concolor*), 2 Burrell zebras (*E. burchellii*), 2 weaver capans (*Coccyz capensis*), 1 white-throated catbird (*C. hypoleuca*), 2 bent-necked (*M. rubicollis*), 1 common macaque (*M. cynomolgus*), 4 pintail whistling birds (*Vidua principalis*), 4 grenadier weaver birds (*Euplectes oryx*), 4 yellow-shouldered weaver birds (*E. capensis*), 4 red-headed cardinals (*Parvula parvula*), 4 red-crested cardinals (*P. cucullata*), 6 cardinal grosbeaks (*C. virginiana*), 6 grass parakeets (*M. undulata*), 4 bullfinches (*Pyrrhula rubicollis*), 4 yellow-bellied larks (*Loxia alpestris*), 3 crowned pigeons (*Goura cristata*), 2 lesser sulphur-crested cockatoos (*Coccyz alphurata*), 4 blue-fronted amazons (*Chrysotis castaneus*), 1 male parrot (*C. agilis*)—all purchased.

FRANK J. THOMPSON, Supr.

—One feels the pleasant breath of the May breeze in reading the *FOREST AND STREAM* for this week. Its varied and interesting matter deals with all healthy and mainly out-door sports in a way which is both instructive and attractive. Those who contribute to its pages have abundant knowledge and experience of the things whereof they write, and have the happy knack of imparting a portion of their enthusiasm about favorite sports to their readers. The *FOREST AND STREAM* has lately become our neighbor in Park Row, and we esteem ourselves fortunate in having such a neighbor.—*New York Evening Mail.*

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

THE BERLIN FISHERY EXPOSITION.

NUMBER II.

[From our Staff Correspondent.]

BERLIN, April 23d.

THE opening of the World's Fishery Fair at Berlin took place on April 20th, in strict accordance with the programme, and the city was in a high state of enthusiasm over the event which had so long been talked of and was now made a reality. As early as 8 o'clock the people began to assemble to see the invited guests arrive in their carriages, and perhaps to get a glimpse of the Crown Prince himself, the most popular man in Germany, and who, in presence of invited guests and exhibitors only, was to formally open the first "Internationale Fischerei Ausstellung" which the world has seen, the birth of which has been watched with so much interest lest it should prove abortive, but whose success was assured on the second day, when it was estimated to have been visited by 20,000 persons, who were by turns surprised and delighted.

One is struck at first by the beauty of the exhibition, and soon sees that this is the element which attracts so many ladies; for beauty and good taste are everywhere displayed in close proximity to the objects of interest to a student of the fisheries which are not in themselves beautiful, while there are portions where the ornamental is the main feature, such as the groto of rock work with openings on four sides, showing broad views of the Bay of Naples, while living fish swim in the pools beneath, and stalactites drop from the overhanging rocks, the great fountain of Neptune, with parterres of flowers, and the aquaria.

Berlin has a fine aquarium on the main street, Unter den Linden, and its Director, Dr. Hermes, makes a display of his transporting apparatus, live fishes, etc., and among the latter we find a tank of small eels, perhaps six inches in length, which are labelled "male eels," and he announces that the male is seldom larger, and that by the investigations of Dr. Syrsik, of Trieste, it is now possible to distinguish the sexes with certainty. This will be referred to again after a closer examination, and a more complete explanation may be obtained; but all is yet in a state of busy preparation for the jury of awards, and the American Commission, whose goods arrived so late, have been too busy to see anything, and hence no information on the subject of the sexes of eels is to be derived from them. They had their different departments in order just in time for inspection by the Crown Prince and no one seeing them in full dress escorting the Prince and suit through their great exhibit, and explaining the uses of the articles, would have suspected that they had been up nearly all night working like beavers to have their house in order in time for the opening. In the Department of Natural History, the finest display is made by Italy; but in this, as in all others, it is too soon to attempt a description of the articles, on account of the size of the exhibition being so much greater than was expected, at least by the writer, and the additional fact that there are many goods yet to be placed in position.

In the exhibit of the United States there are but few private exhibitors, the main portion being owned by the National Museum, and it is therefore to be returned. There are also but few articles in the American exhibit to be sold, and these are the oil paintings of *Salmo salar*, *S. gairdneri*, and *S. trutta*, the common English and Spanish mackerel, by S. A. Kilbourne; a *Salmo salar*, by W. N. Brackley; a shadow canoe and a Shattuck boat. The display of angling apparatus is mainly made by England and America, the countries where the art is practiced in the greatest perfection, and where the rest of the world gets its fine tackle from, always provided that the rest of the world uses any. The split-bamboo rods are mostly made and used in America, the English hardly not caring to pay the price which these luxuries require when made in the best style of our celebrated makers; therefore the demand for them is limited in England, and they are not made to any extent, while the display of reels, line lines, and all the accessories of the modern angler shown by these countries, is so complete, and the articles are so perfectly finished and elegant, combining the maximum of strength with the minimum of lightness, that it seems as though the point had been reached when invention and improvement in matters pertaining to the success, comfort and convenience of the angler must stop for lack of obstacles to encounter.

It is a matter of regret among the Germans that Prof. Baird did not come, and although it has been explained to them many times that the important work of gathering statistics concerning the fisheries now in progress in connection with the census of 1880, whereby it is hoped that it will not again be necessary to pay five and a half million dollars for privileges of questionable value, the work on the new National Museum, together with his other labors in the Smithsonian Institution and with the Fish Commission, all rendered it impossible for him to leave the country at this time, still they regret it; and only a few days ago, at a state party, Herr von Behr, President of the Deutsche Fischerei Verein, proposed the least: "Prof. Spencer F. Baird, the man who has done more in fish culture and to advance its interests than any other man in the world," and afterward added: "The only thing in connection with the International Fishery Exhibition which I regret is, that Prof. Baird could not do us the honor to be present at it."

Next week, when all is in smooth running order and the anglers are corrected, it will be possible to get definite information concerning the special features shown by each country, and perhaps to get a peep into the mysterious processes of fish culture in all these countries, gathered here to vie with each other in presenting their scaly products to the world.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salvelinus fontinalis*. Salmon Trout, *Salmo confinis*.
Salmon, *Salmo salar*. Shad, *Alosa*.
Grayling, *Thymallus tricolor*. Land-locked Salmon, *Salmo gairdneri*.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; Means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—The angling season is in full blast, and the disciple of the gentle art is rewarded by fat creels and novel experiences, as is shown by the pleasant notes sent to us and published herewith.

QUOQUOSSO ANGLING ASSOCIATION.—The ice will soon leave the Rangeley lakes, and the spring season will then open. The club was never in a more prosperous condition than now. Its membership, which is limited to fifty, is full, and several applicants are awaiting vacancies. There are about \$500 in the treasury, and no floating debt. The officers are: President, John H. Kimball, Bath, Me.; Vice President, Lewis B. Reed, New York; Secretary and Treasurer, James A. Williamson, New York.

RANGELEY LAKES.—Large preparations are being made in our Rangeley region this spring, and the fun will soon commence, as the lakes will be clear of ice by the 12th, and good fishing is expected early on account of the lowness of the water. **FRED.**

MAINE—Indian Rock, May 9th.—The ice left the Rangeley Lakes on the 7th. **F. C. B.**

NEW HAMPSHIRE NOTES—Nashua, May 8th.—Trout fishing opened with us the first of the month, and the disciples of Izaak have not been idle. The past week some fine baskets have been shown, one numbering nineteen trout, weighing nine pounds, being "high hook." A shad was seen in the fishway to-day, the first that has been seen in the Nashua for nearly forty years, when they were plenty. The Fish, Game and Gun Club held their annual meeting on the 6th—President, Dr. Edward Spalding; Vice President, V. C. Gillman; Executive Committee, A. W. Greeley, Aaron King and Gill Shattuck; Secretary, Geo. H. Wilkins; Treasurer, Geo. F. Andrews; Attorney, E. E. Parker. A rifle club has been organized by some of our best shots, with Dr. Geo. P. Greeley as President. Their first meet was held this afternoon, which resulted in finescores for new men with new rifles. The Ballard is the correct thing with them, the majority being equipped with that arm. The glass ball club have weekly meetings, Edward Towne and Henry Paine carry off the honors, which are about equally divided between them. The interest in out-door sports shows a healthy growth, the latest thing being an archery club, which bids fair to become an institution among us. So mote it be. **WEBB.**

MASSACHUSETTS.—One of the Boston papers reports that a string of nine-inch trout was taken by an accomplished angler within ten miles of Boston a few days ago; and we presume that the artist is Mr. Walter Brackett.

—W. Holberton showed us a very handsome lot of trout from Long Island, caught on flies, and all wild. We can vouch for the flavor of them from personal investigation.

FLY CASTING AT THE CONVENTION.—Escanaba, Mich., April 26th.—Why bar out such men as Green and Wood with the rod at the State meeting? It looks to me like small boys quarreling for dad's boots and vest, when the boys would come up to the arms, and the vest would be but a little above the floor. What can be done by one can be done by others, if they will go in and practice. It takes years to get up to a high standard, say ninety to one hundred feet, with 12½ foot rod. I think it can be done. **A. F. Y.**

A WIDE-AWAKE CLUB.—Rome, New York, May 6th.—There is probably no other city in the State that is so accessible to a great number of small and large trout streams as Rome. Thus far the trout season has been a most auspicious one; this is true to the extent of taking fish that weigh from two to six ounces as yet. Those of greater size do not seem to take a bait or fly. A good many large ones have been killed, but in comparison to the number taken of the sizes noted above, the larger ones are few. The successful fisherman still keeps on the small brooks, as the larger creeks contain too much water. The well-known sportsmen Cal. Link and Wm. E. Scripture, after whipping the surface of some of the smaller brooks for one day, brought in thirty pounds. For some years quite a number of the brooks that are tributaries to the Hudson have been "fished out." This spring these have been restocked with trout from the State hatcheries. This noble work has been done by the Rome Sportsmen's Club, a club which is one of the most active, vigorous and healthy organizations in the State, its rolls containing the names of persons who are of the most influential and respectable in this city. At their spacious and elegantly furnished club parlors last evening, the following officers were elected for the ensuing year: President, B. Whitman Williams; First Vice-President, Dr. A. T. Van; Second Vice-President, Hugh H. Jones; Secretary, Chas. F. Sturdevant; Treasurer, Ackley P. Tuller. Executive Committee: W. C. Wheeler, Henry M. Lawton, Wm. E. Scripture, Lewis Gaylord, Jas. Elwell. **FRA DIAYOLO.**

PENNSYLVANIA.—Bethlehem, May 4th.—It is pleasant to know that, even in the cultivated portions of this State, *Salvelinus fontinalis* is not entirely extinct. A few days ago I saw a dozen handsome ones taken within twelve miles of this place. Of course, it would be useless to form an angling fraternity here to tell just where they were taken, and so that must remain a secret.

THE "REDFISH" IDENTIFIED.—San Francisco, Cal., April 23d.—Editor *Forest and Stream*.—Through the kindness of B. B. Redding, fish commissioner of California, I have lately been enabled to examine a specimen of the Idaho red-fish, of which species you published a figure in *FOREST AND STREAM*, Nov. 13th, 1877, but of which no authentic example has hitherto reached the eastern ichthyologists.

As I suspected from your figure, this fish is one of the species of Alaska salmon, the *Oncorhynchus nerka* (Walbaum), Gill and Jordan. Dr. Günther remarks of this species (which he calls *Oncorhynchus tshawytscha*)—Pallas and Richardson agree that this is a migratory species, which according to the former ascends the rivers entering the sea of Okhotsk in the month of May. It is equally abundant on the American side of Behring Sea, and known to the fur-hunters on the Ykhon River by the name of redfish.

Dr. Suchley speaks of it as *Salmo cooperi*, as he is called in the Okinokano River, "the little red salmon." "It frequents this river and the lakes above it in immense numbers, its peculiar color actually reddening the bed of the river."

So far as we know at present all the fall-spawning, large-scaled (lateral line with 130 to 140 scales) salmon in the Columbia belong to this one species, although Dr. Suchley has made five or six out of it.

It is not impossible, however, that the "dog-salmon" (*Salmo canis*), and perhaps others of his species, may be something different.

Our expedition to this coast has been thus far very successful. We have already forwarded to the National Museum upwards of 2,500 pounds of specimens of fishes, representing about 200 species, thirty-five of which have been hitherto new to science. **DAVID S. JORDAN.**

REMARKABLE FREAK OF A TROUT.—West Meriden, Conn., May 7th.—Editor *Forest and Stream*.—One of the most remarkable freaks of a trout that ever came to the notice of the writer occurred this week to Frank Stevenson, Jr., and George H. Wilcox of this place while trout fishing in a neighboring stream. Both were fishing in the same pool, with worms for bait, when the latter experienced a bite and immediately "struck," apparently sending the hook home, and he commenced reeling it in. In a moment his line slackened, and supposing it off, he began leisurely retrieving his line. While doing so Stevenson got a bite, and proceeded to land his fish. Mr. Wilcox, perceiving it was a large fish, dropped his rod and went to Stevenson's assistance, and with his aid it was safely brought to crest, but you can readily imagine the surprise of both, upon its being taken from the water, to find both hooks thoroughly imbedded in the throat of the trout, and both hooks and lines attached to their rods intact. So neatly both had captured the same trout at the same time, on two different lines. The trout was weighed on the spot, and touched the beam at a fraction over one pound.

It is supposed that the slackness of Mr. Wilcox's line, after he struck the fish, must have resulted from the fish having made a rush up stream as soon as it felt the hook, and as Mr. W. did not retrieve his line rapidly enough to discover that fact, supposed it off, and the fish being relieved from the pressure of the line, and being very hungry, was tempted to take the second bait. As the writer did not witness this himself, he would be loth to believe it did it not come from the thorough and reliable source; but as I know both gentlemen to be truthful, I most cheerfully indorse their statement. Both lines were severed from their hooks, and the fish was brought home as above described. **GEO. A. FAX.**

A SIMPLE MINNOW NET.—Baltimore, May 8th.—As I hear so many men complaining that they cannot find a net suitable to catch minnows, that is easily carried, I thought it might be of service to the fishing fraternity in general if I were to describe a net of my own invention that is easily carried in the pocket, can be adjusted in a minute, and has never failed to provide me with plenty of minnows. I take a bung or round block of wood of two and one-half to three inches in diameter, and bore four holes opposite to each other in the edge of it. I then insert a piece of umbrella rib, about twelve to fourteen inches long, in each hole. The holes must be made deep and small enough for the wire to fit tight. The paragon wire is the best. I leave the end of the rib that has the little eye in it outside. I then lay the bung and wires on a square piece of mosquito netting, and stretch it and sew it firmly at the four corners to the eyes in the ribs. In the center of the bung I put a screw-eye, and in the center of the mosquito net I sew a piece of string, leaving ends about eight inches long. Any straight, stiff stick picked up on the shore serves as a handle, being made fast to the net by a strong piece of twine through the screw-eye, and with a piece of bread tied in the net with the string, and perhaps a small flat stone to make it sink, it is ready to catch minnows. They will come over the net for the bread, and when it is raised up quickly, the resistance of the water causes it to belly, and the minnows will not get out. When bait enough has been taken, I pull the wires out of the holes, drop the bung into the net, and roll it up on the wires. **E. A. R.**

ST. CLAIR FLATS.—Detroit, Mich., May 3d.—I think your notice of sportsmen's resorts would be incomplete without a notice of our famous St. Clair Flats. Nowhere can the sportsman find finer fishing than there, or better or cheaper accommodations. Good boats, good punters and a first class hotel—the Star Island House—with rates but \$2 per day; very easy of access, and good fishing at the very door. The hotel is presided over by the genial Jim Slocom, who knows how to make one feel at home. The waters are broad enough for all, and will well repay a visit. I shall be glad to give any assistance I can. Address through *FOREST AND STREAM*. **—UNO.**

The Kennel.

THE NEW YORK DOG SHOW.

LIST OF JUDGES.

MASTIFFS. St. Bernards, Irish water spaniels, clumber and cocker or field spaniels, fox terriers, bull dogs, bull terriers, pugs, dandie dimont terriers, and Yorkshire terriers, and miscellaneous or foreign class. Hugh Dalziel, Esq., The Laurels, New Thornton Heath, Croydon, England.

Newfoundlands, Siberians or Ulum greyhounds, Scotch deerhounds, collies, dachshunde, King Charles, Blenheim and Japanese spaniels, Italian greyhounds, black and tan terriers, Scott terriers, skyes, and toy terriers. Dr. Gordon Stables, Surgeon Royal Navy, Twyford, Berks, England.

Fox hounds and beagles: Hon. John S. Wise, Richmond, Va.

Native English setters: S. T. Hammond, Esq., Springfield, Mass; Hon. John S. Wise with Hugh Dalziel, Esq., for referee.

Pointers, imported English setters, black and tan setters, and red Irish setters: Hugh Dalziel, Esq., S. T. Hammond, Esq., Hon. John S. Wise.

In despite of the postponement, the fourth annual New York dog show, which opened on Tuesday last, may be called a success as far as the mustering of the entries is concerned, and the general excellence of the classes. On Monday the dogs began to arrive at the Garden in goodly numbers, and by 10 o'clock Tuesday morning, the hour appointed for the judging to commence, there were comparatively but few absentees to be checked on the list. When the uncertainty of the coming off of the show is taken into account, the lateness in the season, and the hot weather of the past week, it is remarkable that there were not many empty pens. The arrangement of the stalls was entirely different from that of previous years, and a decided improvement in many respects upon the shows of the past. As we have already described all this in a previous issue, it is unnecessary to refer to it again.

We believe, however, that the stalls for the large dogs are raised too high from the ground, and that a better view of the animals could be had if the floors were elevated only about eighteen inches. If this plan was adopted it would be more convenient for the exhibitors and less likely to injure the dogs by straining in taking them in and out. Many of the pens were draped and carpeted, several of them quite handsomely. Mr. A. E. Godefroy, of the Neversink Farms, added to the attractions by having a large rustic house of unique shape erected at the west end of the garden, which was tastefully decorated with bear and deer heads, stuffed birds, and the furs of many of the American and European animals of the chase.

The attendance up to the time of our going to press has been exceedingly small, although there has been a fair sprinkling of the sportsmen of the country. The judging began at 10 o'clock each morning, and continued until 5.30 P.M., with an hour's intermission for lunch. We trust to be able to announce in next week's paper that the public has recovered from its fright and that the exhibition received the patronage it most certainly deserves. Until then we defer all detailed criticism of the dogs.

LIST OF AWARDS MADE UP TO WEDNESDAY NOON.

MASTIFFS.—**DOGS.**—First, Charles C. Bull, Turk; second, Albert Hoysradt, Warwick; V. H. C., Dr. Albert H. Buck, Garm; H. C., Oliver K. Hand, Harold. First prize, \$20; second, \$10; third, silver medal.

MASTIFFS.—**BITCHES.**—First, Albert Hoysradt, Rab; second, J. M. Underwood, Queen; third, Richard Lehmann, Juno. First prize, \$20; second, \$10; third, silver medal.

MASTIFF-PUPPIES.—**DOGS AND BITCHES.**—First, S. C. Hewitt, Brenda; second, R. L. Belknap, Venus; V. H. C., C. D. Arthur, Pluto. First prize, \$10; second, silver medal.

ST. BERNARDS.—**ROUGH-COATED.**—**DOGS.**—First, A. E. Godefroy, Marco; second, D. P. Foster, Marco; third, Richard Lehmann, Rolf. First prize, \$20; second, \$10; third, silver medal.

ST. BERNARDS.—**ROUGH-COATED.**—**BITCHES.**—First, H. S. V. S. Thorne, Sheila; second, A. E. Godefroy, Braunsfels. First prize, \$20; second, \$10.

ST. BERNARDS.—**SMOOTH-COATED.**—**DOGS.**—First, John P. Haines, Harold. Price, \$20.

ST. BERNARDS.—**SMOOTH-COATED.**—**BITCHES.**—First, John P. Haines, Judy; second, Isaac Weighell, Maria; third, John P. Haines, Tilly. First prize, \$20; second, \$10; third, silver medal.

ST. BERNARDS.—**PUPPIES.**—**DOGS AND BITCHES.**—First, John P. Haines, Askin; second, John P. Haines, Tiff; third, John P. Haines, Bex; H. C., John P. Haines, Rigi; C., John P. Haines, Vix. First prize, \$10; second, silver medal.

NEWFOUNDLANDS.—**DOGS AND BITCHES.**—First, E. E. McCormick, Charlie; second, Gen. Roger A. Fryer, Charlie; V. H. C., Louis Alexander, Pluto; V. H. C., J. Springstead, Jr., Fleet; V. H. C., Albert Meier, Turk; H. C., M. Tuchband, Jim Fisk; C. J. O. Thurston, Nero; C., Dr. Thos. C. Stellwagen, Neptune. First prize, \$20; second, silver medal.

We now come to the mooted question of whether a dog should or should not be broken to point his dead birds. Our experience has shown us that as there is a difference in the scent of a dead, wounded, and an unwounded bird, we cannot see why valuable time should be wasted in having the dog point a bird that he knows is in a condition to be retrieved. Dogs that point "dead" are apt to become hard in the mouth. While waiting to receive the command to fetch, they prepare themselves for a spring and upon being ordered on their feet, they spring forward with a powerful grip. A dog is less likely to mount a bird while in motion than when standing still; therefore, if he be allowed to go to the bird in an orderly manner, pick it up, and return without stopping where the bird fell, much time

THE dog could be taught, as we have already said, to obey the eye and the hand, rather than the voice. A dog that will do so is invaluable in open grounds when birds are wild. But although we advocate a system of instruction in the first place, that will teach a young dog to quarter his ground with precision and take as much advantage of the wind as possible, yet we would at all times allow the youngster to make use of his discretionary instinct, and have a look for himself if he persistently shows any desire to reconnoiter any particular spot. It is a common fault with many breakers to think that they know better than their dogs the exact spot where the game is lying. Should the dog prove shy and refuse to beat, then an older companion must be made to show him the way, as most puppies have enough of the faculty of imitation to be led to follow. But after a few days out with the old dog, the youngster will have picked up enough of the idea of what is required of him, and then the old dog must be left at home, otherwise the puppy will fall into the habit of entirely depending on his senior, and will do little else but follow at his heels. There is nothing so dispiriting to a youngster, one that cannot be expected to keep up with his much esteemed field companion, than to see him always keep ahead and scent out all the birds. If this course is continued he will soon show a disinclination to hunt, as his natural cunning will teach him that it is of no use. From that moment you will possess a very uncertain animal, on whose working you will be unable to depend, and who will be of no use to your humor suits him. Should the rabbit start, and the puppy show the least signs of giving chase, at once administer a severe rating, and have recourse to the whip. In case he should prove so unruly that he pays

Indicates that in a moment more the supreme chance will present! Up goes the bow hand, the shaft is ready for the swiftest draw an archer ever makes, and perhaps the most perfect, both in the draw and loose. We have watched a fellow archer in doing it. The clumsiest are graceful then. The long deep line of coming birds are overhead; they reach out right and left; they cover fifty yards from front to rear. Let drive: a shaft going up among them may find a way through, as in the "many holes in a skimmer" seven times in ten usually does; but to-night it plunged itself through the breast of a handsome male. How angry nerve tingles when he has, with a thud, as though weighing fifty pounds avoirdupois! "Tray," the liver and white pointer, picked him up and brought him to his master's feet, as proud and happy, and equally as eager for a tid-bit from the savory breast when both reach home. M. D. Detroit, Minn., March 10th.

ORITANI ARCHERS—Thereseack, N. J., May 1st.—The Oritani Archers held their third annual meeting, May 1st. The following officers were elected: President, Wakeman Holberton; Vice-President, Miss T. J. Van Buren; Secretary and Treasurer, Irving Wood; Executive Committee, in addition to the officers in Miss S. C. Hopper, Mrs. W. Holberton. The President reported in substance as follows: Active members, 34; club free from debt, with a balance on hand; number of challenges sent out, 4, none of which were accepted. The club will hold practice meetings twice a week, and a monthly meeting for ladies and gentlemen's badges. W. HOLBERTON.

NEW YORK ARCHERY CLUB.—The New York Archery Club have erected their tents on the Lawn at Central Park and practice there every Tuesday, Thursday and Saturday afternoons. The club and its belongings make a striking addition to the scenery of the Park. The picture formed by the tents, targets, gay pennants and the archery dresses of the contestants is picturesque and beautiful.

The club give a concert next Monday evening, tickets to which may be secured of the President, Dr. A. B. De Luna, or of the Secretary, Mr. Jas. W. Auten, Jr., 127 Pearl street, New York.

Cricket.

—ADDRESS all communications "Forest and Stream Publishing Company, New York."

FIXTURES.

May 13, at Hoboken, N. J.—Columbia College vs. St. Georges (24).
May 15, at Staten Island—Staten Island vs. St. Georges.
May 15, at Prospect Park—Columbia College vs. Manhattan.
May 15, at Niagara—Belmont vs. Germantown.
May 15, at West Philadelphia—Belmont (24) vs. Young America (24).
May 15, at Baltimore—Young America vs. Baltimore.
May 15, at Haverford—Dorian vs. Merion.
May 15, at Frankford—Oxford vs. Chestnut Hill (24).
May 15, at Chester—Vanderbilt vs. Chester City.
May 15, at Haverford—Dorian vs. Old Haverfordians.

YOUNG AMERICA vs. MERION.—The first really important match of the season came off at Stenton, Phila., on May 8th, between the first elevens of the above named clubs. Only one innings each was played, the game resulting in the victory of the home club by 22 runs. The play was commenced promptly at 11 o'clock, and Captain George Ashbridge, of Young America, was chosen to take the innings. The two halves, however, were the only two of the Merion team to make a stand, and the innings closed for the small total of 69. Dan Newhall and Baird were the first Young America batsmen, and they settled all doubt as to the issue of the game by running up the score of 41 before they were parted. It is unnecessary to particularize each individual play, but a stupendous smite to leg, for six, over the fence by Van Rensselaer, and the fine bowling of Law deserve special mention. Annexed is the score:—

STATEN ISLAND (24) vs. COLUMBIA COLLEGE.—The opening match of the New York season was played at Staten Island on May 8th, between teams representing the above clubs, and had the game begun at the hour named the Collegians would probably have landed themselves two victors. As it was, the match was a close one, but being unfinished was decided in favor of the home club on the first innings, by 58 runs. The ground was in a very lumpy condition, and not up to its usual excellence. The features of the match were the good cricket keeping of Inman, and the batting of the junior members, the brothers Rich, for the Islanders. The batting of Westfield, of the St. Georges, who was admitted to play on the College team, and the bowling of Hyde-

Clark and Conover in the second innings. The following score will show others that did their club service:—

Umpires: For Staten Island, M. G. Haughton; for Columbia College, G. Giles, Jr.

—Bromhead, the new professional of the Germantown Cricket Club, and Tyres, the new professional of the Chestnut Hill Cricket Club, will arrive from England this week. Both players are Nottingham men, and were selected and sent out to the above-named clubs by Capt. Richard Dair.

THE NORTHWESTERN CRICKET TEAM.—Most of the players consisting of this team sailed on the 29th ult., and Mr. Kearney followed on the steamer of May 24 from Halifax, N. S. At the last moment Messrs. Armstrong and Jordan withdrew from the team, and Mr. H. Lemonson, said to be a promising young player, was substituted with Mr. Miller, who also decided to don the flannels during the tour. We have not space to give the personnel of the team in this issue, but will recapitulate their capabilities before they begin play on the other side. The following are the fixtures additional to the list already published: St. Orleans Club, at London; County of Surrey, London, and Newbury Club, North London.

—The Paisley Cricket Club, of Canada, has reorganized, Mr. John Collie, Secretary.

—The Port Elgin Cricket Club, of Canada, has organized for the season, Mr. D. J. Izard, Secretary.

SARATOGA CRICKET CLUB.—At the annual meeting of this Canadian club, held April 17th, the following officers were elected: Honorary President, Hon. T. B. Parker; Honorary Vice-President, Mr. M. Fleming; President, Mr. Julius H. Bucke; Vice-President, Mr. John H. Jones, P. L. S.; Captain, Cayendish Neville; Treasurer, E. B. Walker; Secretary, Fred. Kittermaster; Management Committee, Messrs. Parker and Silson, together with the officers. Honorary Members—Messrs. John A. Mackenzie, T. Gleason, R. Girdlestone, Geo. Lays, E. R. Jones, J. F. Lister and Dr. Poussette.

THE LINDSAY SCHOOL CRICKET CLUB held their annual meeting on Tuesday evening, when they organized for the coming season and elected the following officers: President, W. E. Tilley, M. A.; Vice-President, H. B. Van der Vliet; Secretary, S. C. Callaghan; Secretary, R. J. McLennan; Treasurer, G. A. Irwin; Managing Committee, D. Hampton, W. Smith, C. J. Logan, G. Bigelow, W. H. Dean.

TRINITY COLLEGE SCHOOL.—Port Hope.—At a meeting of the T. C. S. Cricket Club, the following officers were elected: President, Rev. C. J. S. Bethune; Committee, Messrs. Wood (Chairman), Perry (Sec-Treas.), Roberts, Major Jones, Broughall. Matches have been arranged with Trinity College, Upper Canada College, Whitby, Cobourg, Peterborough, and Port Hope.

THE CRICKET CLUB OF MOUNT FOREST.—The following officers were recently elected for the coming season: President, J. F. Treasler, re-elected; Vice-President, W. H. Kingston; Secretary, Treasurer, R. J. Hewitt; Managing Committee, Messrs. Fiddle, Haines, H. H. Haines, J. H. Coyne, S. A. Dunbar, H. Yarrow, C. O. Connolly, and F. Pickering.

—The Hastings Club, of Canada, has organized for this year, Mr. H. F. Sharpe, Secretary.

OUR LETTER FROM THE WEST.—St. Louis, May 8th.—Cricket out here, if anything, better than one would expect. The Mount City boys are not only willing, but anxious to play any body or every body of cricketers they can get anywhere near. Unfortunately, however, there is no club nearer than Springfield (about 20 miles from St. Louis), and that organization is not a strong one; consequently, the cricketers in this city have difficulty in getting any man to play their club ones. They opened the season on St. George's day, Friday, April 24.—English vs. Scotch. The Britishers proved the players by a score of 72 to 68, doubtless being patriotically inspired by the day. The Mount City Cricket Club is fortunate in having for its president such a true lover of the game as Mr. Geo. F. Neil, of Crystal City. The club will increase in numbers as the season progresses; what it needs, however, are matches with outside clubs. Mr. W. H. Chambers has therefore entered into a correspondence with the secretary of the Chicago Club, with a view of having a match sometime during this summer. They have received several of the members, and they seem to think it the duty of the old St. Georges of New York to come out here and play them a return match for the one they lost in 1875—only seven years ago. But I tell them the "Old Georges" are getting rickety, and instead of slaying the cricket Dragons, are getting "thrown," more or less, every season—and rather more than less, of late years.

Treolar, one of the best cricketers in St. Louis, is now on his way to England with Miller's Northwestern Team, and is expected to uphold the reputation of this city. The C. C. have an excellent ground in Grand Avenue Park, which they have from year to year at a very reasonable rate, and are anxious to secure a permanent one. Some of the "old-uns" inquired after "Giles, the steady old boss," of the St. Georges, and wish they had him back in St. Louis; but the club's expenses are rather heavy, and as the members only number between 50 and 100 (including 40 active ones), they intend to dispense with the luxury of a "pro" until a more convenient season. The FOREST AND STREAM is beginning to be known as a cricket paper out here, and its columns much liked. NEW YORKER.

Answers to Correspondents.

J. A., Hannibal, Mo.—Take the model of '73. You will find it all sufficient.

W. H. H.—Lyman's bow-facing gear is the only one in the market. See his card.

F. J. W., West Meriden, Conn.—The rifle is serviceable for its caliber and charge.

P. H. O.—For a fair rig, 0.85 w. l. for holst; boom, 0.55 w. l.; gaff, 0.50 w. l.; jib on foot, 0.75 w. l.

Hicks, Osceola Mills, Pa.—An advertisement in this paper will find a purchaser for your articles.

H. R. J., Boston, Mass.—The gun is an excellent one for Florida, and, so far as we know, is reliable.

J. H. H., Providence, R. I.—We do not know the gun, but the manufacturers are reliable and trustworthy.

T. B. D., Middleport, N. Y.—The book for you is Coues' "Key to North American Birds," Naturalist's Agency, Salem, Mass.

D. H. S., Holyoke, Mass.—The best book on trout raising is Livingston Stone's "Domesticated Trout." For sale at this office; price \$2.

C. O. M.—See advertisement of Mr. E. B. Goldsmith, Custom House Broker, in another column. He can inform you all about cost of importing dogs.

C. O. S., Sawyer's Bay, Cal.—There is no monthly of the kind published in this country. You may perhaps procure the book through the Orange Judd Co., of this city.

MELRODARE.—To waterproof canvas, coat with the following mixture: 6 ozs. hard yellow soap, 1 pint of water; when boiling, add 5 lbs. ground spruce oil, 1 lb. patent dryer, and 5 lbs. boiled linseed oil. Or simply paint.

M. P. McK., Franklin, N. Y.—The fee for a club entering the State Association is \$10. No annual dues. Privilege of engaging in yearly tournaments upon payment of regular entrance fee.

YOUNG SPORTSMAN.—1. The so-called pheasants are properly grouse. 2. The gun is not useless, but we should prefer a larger bore. 3. See answers in last paper about proper food for dogs.

A. B. K.—Nelson's "Boat Building for Amateurs," price \$1.25; Williams & Co., 323 Washington street, Boston. It contains many practical hints, but no models or plans for boats suitable to your purpose. See our back files for 1877 and 1878.

G. J., Wyandotte, Mich.—1. Send your frogs to Chappell & Storor, Fulton Market, New York. 2. You can probably procure the paper of newswomen, but to make sure of it had better subscribe regularly. Your address on our books can be changed when you change your residence.

C. B. P., South Britain, Conn.—Plants of land-locked salmon seem to have turned out very well in Connecticut lakes. They will probably do well in your waters. Write to Dr. H. N. Hudson, Hartford, Conn., who is State Fish Commissioner, and he will give you directions for securing supply.

S. E. B., Tiffin, N. Y.—1. The best book for you is Jordan's "Manual of Vertebrates," Jansen, McClurg & Co., Chicago. 2. The fish is undoubtedly the pike perch, *Stizostedion americanum*, which is variously known as wall-eyed pike, glass-eyed pike, yellow pike, Ohio salmon, white salmon, and western salmon. It is a true perch.

T. J. Y., Philadelphia.—1. No wild rice to be had now. Harvests will be gathered, and when crop is ready will be advertised in this paper. We shall then give full and explicit directions for where to find it. Success has attended its introduction into waters where food for wild fowl has been exhausted. 2. No journal in the country devoted exclusively to the yachting interest; has been tried and proved unsuccessful. The FOREST AND STREAM is the only publication that now fills the bill.

LANDLUBBER, N. O.—The wind is said to be a five knot or a seven knot breeze when a full rigged ship would be driven at about those rates. It is ascertained merely by experience, and is an expression in use among sailors. A one to two knot breeze is a light air with a velocity of 1 to 3 miles; a two to three knot breeze has a velocity of 3 to 6 miles; a three to five knot wind has a velocity of 5 to 8 miles; five to six knots, 8 to 10 miles; six to seven knots, 10 to 16 miles; seven to eight knots, 16 to 24 miles; eight to ten knots, 24 to 35 miles.

CAUTION.—The yawl rig will suit you very well, especially if you propose sailing single handed. Step a pole mast near the bows, standing bowsprit, single jib, boom ends at rudder head, long gaff and mizzenmast just abaft the rudder. Use lug for mizzen; it gives you a shorter mast, and keeps the sail down. For San Francisco yawl see issue of March 13th, '79. Never mind what the rustics or natives say. They are not capable of comprehending anything but the doguots they are brought up in. The yawl will be common enough in a year or two.

H., Princeton, N. J.—It does not depend upon the excellence of training whether a dog will point a dead game bird or not, but on the keenness of scent he may possess. Many dogs are broken not to point dead, and again, there are others that are trained to do so. We consider it unnecessary for an old field dog to waste his time stopping on dead birds, because he can readily distinguish the difference between the two scents of "alive" and "dead." If a means that a dog that has been broken to point dead cannot scent out and point a cold bird, or one that has been dropped accidentally, perhaps, the day before from the sportsman's pocket, he is mistaken, for we have often seen it done by both well-broken setters and pointers.

M., New York.—The list of Natural History books of reference was published in the issue of March 11th. The one on Herpetology there mentioned were: R. H. Holbrook, "North American Herpetology," 5 vols., Philadelphia, 1842; Baird and Girard, "Catalogue of North American Reptiles," Part I, Serpents, 1853; Agassiz, "Contributions to the Natural History of North America," Part II, "North American Testudinata," 1857; Cope, "Check List of North American Batrachia and Reptilia;" Cope, "Partial Catalogue of the Cold-blooded Vertebrata of Michigan," 1884-5. See also many minor papers in Government Reports, and elsewhere.

E. J., New York City.—My imported fox terrier bitch, eight months old, has been bitten by her full litter brother, under her neck, sometimes in play, sometimes in real earnest. There is no sign of tick or mange, only the places are red, all over the throat and on her hind quarters. The places are sometimes bare of hair. The dogs are washed every other day, and have been for months. Ans. Your dog has the mange. Dress dog all over with following lotion: oxide of zinc, two drachms; water, three ounces; to be well mixed in a mortar. This lotion should be used three or four times a day. Give once a week for a few times a drachm and a half of Rissum salts, dissolved in water, for a purgative. Give vegetables with ordinary diet; allow plenty of exercise.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

NO. 59 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

[POST OFFICE BOX 2322.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted. No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 13, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guarantee of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

*We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

NOTES.—Central Park has a new attraction, the tents of the New York Archery Club.

The description of bowshooting in Northern Minnesota, published elsewhere, will be found entertaining to the general reader, as well as to the archer.

We shall soon lay before our readers the plan of a fall campaign among the mountains of Virginia, which promises to be an admirable opportunity for sport and sight-seeing combined.

Northern Michigan will be one of the most popular sections of country visited by sportsmen this summer. We have again and again referred to its rare attractions for the sportsman tourist, and we are glad to see that these attractions are becoming better known.

Among those who called at our office during the past week were: Mr. John H. Kimball, Bath, Me., President of the Quosocuss Angling Association; Mr. George D. Macdougall, of Montreal, Can.; Mr. H. B. Roney, of East Saginaw, Mich., Secretary of the Michigan State Sportsmen's Association; Capt. C. E. McMurdo, of Elvington, Va.; Mr. John Davidson, Monroe, Mich.; Mr. G. C. Richards, Chelsea, Mass.; Mr. S. T. Hammond, Springfield, Mass.

If we were to gather a convention of anglers we should take particular pains to insure the attendance of a goodly number of men with silvery hair. An angler is always entertaining when discoursing on his favorite pastime, and the older a man is, the richer store has he of memories and reminiscences. If you are a young man, and want a companion for your fishing tramp, get the company of some genial old gentleman; then you are sure of having a pleasant time, whether you bring any fish home or not.

We are in receipt of a series of three articles descriptive of Nepigon trout fishing, the first of which will be published next week, and the same number will contain also the first of a series of practical articles on black bass fishing, prepared for this journal by Dr. J. A. Henshall, who is *facile princeps* as an instructor in this branch of angling. With the trout and the black bass we shall not forget King Salmon. In short, the coming numbers of the FOREST AND STREAM will be of special interest to anglers.

THE TRUE HISTORY OF ALASKA GOLD MINING.

SITKA, ALASKA, Feb. 23d.

Editor Forest and Stream:—

I promised you, in my last, an authentic history of the discovery of gold-bearing ledges in this vicinity, and of operations connected with them. To enable myself to carry out my promise, I have held interviews with Messrs. Helstead, Doyle, Mahoney, Haley, Sam. and Alex. Milletich and A. G. Cozian, all of whom have been more or less connected with the enterprise from its inception. I have read and examined records, deeds, contracts and letters, and believe that from the immense mass of information I have obtained, I can, by leaving out all history of disputes, be able to give you the history of the enterprise in condensed form. Each of the above men know more or less, but none know all of the story I shall tell you. All are well-known in this country, and their statements, many of which have been confirmed, are worthy of credit.

In the beginning, the Russian Fur Company had a contract by which they controlled this country, the Russian government retaining the right to take from them the control of any land in which mineral deposits were found. This will account for their hostility, if it did exist, as is here asserted, to prospecting in search of minerals, and to any enterprise which would tend to lessen their power or revenues.

From time to time reports were brought in from the mountains by Indian fur hunters, of marble quarries, and one such quarry was actually found and examined in Nagnashonskay Bay (about fourteen miles from here to the north and west). Very little attention was paid to these rumors. In 1855, the Russian Government sent an engineer officer named Darvelan to examine into the mineralogical resources. He spent two years in Alaska, visiting Kodiak, Cook's Inlet, Cross Sound, Peril Straits, Whale Bay, and most of the Aleutian Islands.

While in Sitka his time was principally employed, so say my informants, and from my experience with what is left of Sitka I can readily believe them, in the more agreeable pastimes of dancing and feasting, and very little was given up to prospecting. He never visited the range of mountains on which are situated nearly all of the ledges which have since been discovered. His report on the mineralogical resources was unfavorable, and from that date, 1855, to the date of transfer, 1868, nothing was done. The Russian Governor kept strict discipline, and no person was permitted to go into the interior. Mr. Helstead, a Swedish engineer, who is now employed running the Stuart mill, is my informant up to this point. He says that the Russian engineer, while prospecting the mouth of a creek which empties into a bay, which is now known as "Silver Bay," found some pieces of detached quartz known as "float," but did not prosecute the search for their origin.

In 1871 a soldier named Doyle discovered the first ledge of quartz known to exist in this vicinity. Mr. Sam. Milletich, a saloon-keeper, having heard the various rumors as to the existence of marble mines in the mountains, which, brought in by Indians, were more or less prevalent among the Russians, and passed on to be camp gossip among the soldiers, and knowing also of the indications found at head of Silver Bay, in the shape of "float," employed Doyle, a discharged soldier, to go on a prospecting trip. Doyle landed on the south side of Silver Bay, and on Round Mountain discovered a stringer of quartz. Subsequently, in the same employ, Doyle prospected Indian River, a creek about a mile to the eastward of Sitka, and found on its east bank a stringer of auriferous quartz, which Milletich undertook to develop, but it proving very narrow, and not rich, very little work was done.

Early in the spring of 1873, Messrs. Doyle and Frank Mahoney, both of whom are now here, and have furnished me with the information, resolved to prospect the creek which empties into Silver Bay. Fitted with pans and otherwise for placer work, they did so. Following up the creek to where it forked, about half a mile from the bay, they took the western branch, and washed out many pansful of the debris found in the crevices of the bed rock, finding in nearly all of the pans a very small quantity of free gold; not enough to pay. Coming down the stream, they discovered on the eastern branch the outcropping of a quartz ledge, which is now recorded as the "Haley and Milletich." They were unprovided with tools to break into it to any extent, and contented themselves with washing out "over a hundred pansful" of the adjacent soil, finding no gold. The ledge was composed of white and barren-looking quartz, and they concluded that it was of no value. They procured, however, a few pieces of rock and returned with them to Sitka. The rock was not assayed and they lost track of it, but I have been able to trace its disposition. This rock started Nicholas Haley.

A history of the progress of mining affairs in this vicinity becomes, to a certain extent, from this point an autobiography of Nicholas Haley, the soldier, prospector and miner, who has done more than all others toward developing the resources. In June, 1873, Haley, then a

United States soldier, arrived at Sitka. Soon after arrival he saw the rock brought in by Messrs. Doyle and Mahoney, which was lying in the saloon of Mr. Sam. Milletich. He having had considerable experience in quartz mining, detected at once certain indications in the apparently barren white quartz which led him to believe that the rock was gold-bearing. Here and there were specks of black sulphurets, which contained specks of gold, so small, however, as to hardly attract attention. The specimen marked No. 1 in the collection I send you is of this character, and with a magnifier you will detect the gold.

Ascertaining from Doyle the approximate locality, he, accompanied by two of the officers of the post and a soldier named Ingard, started on a prospecting tour. The two officers camped at the head of Silver Bay; the two soldiers went on up the mountains—no easy task without a trail, as I judge by my own experience over what is considered a good one, since built. On his way to the "Haley & Milletich Ledge" he discovered, lower down the ravine, another, now known as "Bear Ledge," from an adventure of his with a large bear in the vicinity, during which, although he killed the bear, he got badly mauled. After thoroughly examining the vein, then known as the "Upper Ledge," he returned to the head of Silver Bay next day, and reported that in his judgment it was valuable. The party returned to Sitka without further work.

In the following December, Haley, with the same soldier and a working party of Creoles, again visited the ledges, having been fitted out by the officers, who thus acquired what is termed in miners' parlance a "grub stake" in his hands. Having a ten days' leave of absence, nine were devoted to clearing away the trees and turf, and exposing the surface of the ledge, which proved to be "about eleven feet wide, between well-defined slate walls, trending northwest and southeast, and having near its center a seam of iron sulphurets about a foot wide." On the ninth day the first blast ever made in Alaska quartz was exploded, and from the rock thrown out and broken up by it about sixty dollars' worth of free gold was obtained.

Returning to Sitka on the tenth day, the sight of the gold convinced the officers that they had struck a good thing, and two or three days after they, with Haley, went to the ledge, and posted the necessary notices of claiming. On return to the post a company was at once organized, composed of United States army officers and Haley, and the latter, with a working party, returned to the ledge to develop it.

On Christmas Day, 1873, Haley with a companion went prospecting, and about a quarter mile higher up the cañon discovered another quartz ledge. Haley having his name on the ledge below, and not certain but that the newly found one might be an extension, posted a notice in the name of his companion, a soldier named Ingard, claiming the ledge.

In the spring of 1873, Ingard having gone East and abandoned his claim, Haley assumed possession, and informed Major Stewart of the find and its location, and with Haley's consent Major S. took the necessary steps to claim the ledge in his own name, which it now bears, and an extension was at the same time claimed by Messrs. H. Clay Wood and Alexander Milletich, and the various claimants and parties interested, viz., Messrs. Stewart, Haley, Milletich, Cozian, Mahoney and Prince, organized a company to develop the mine; their copartnership deed dated May, 1873. Thus, in 1873 two companies, owning two mines, existed, both formed of citizens of Sitka and army officers. And up to this date it is very positive that no "attempts had been made to float worthless stock." The owners, all men in moderate circumstances, put in what they could afford to examine into the value of their property.

During 1873 the officers interested in the Lower Ledge having gone East, and abandoned their claim, it was left with Haley as sole owner, and Mr. Samuel Milletich bought in a coownership with him. After various vicissitudes this ledge was in 1877 sold to a San Francisco firm, who organized a company called the "Barranoff Island Gold and Silver Mining Company. Capital, one million dollars, in shares of one hundred dollars each," Haley and Milletich receiving one-third of the stock.

Undoubtedly the operations based upon this ledge are those which have drawn forth the animadversions of Prof. Elliott. As usual, when I differ from him, it is only in degree; his assertions are well founded for about three-quarters of their strength, but they are too sweeping. The stock is not "worthless," for the ledge is undoubtedly auriferous, and of considerable extent, no one knows how great, and a shaft which is down fifty feet is in good ore all the way, as I know from personal inspection; but I shouldn't like to invest in the stock while the capital retains its present dimensions, which are enormously disproportionate to the present developments. I will say that I think that at a more moderate price, and in the hands of parties capable of developing and desirous to develop the mine, it could be made to pay. It is easy of access, and so situated that fuel and water are very plentiful and convenient.

In May, 1873, the Stewart mine was owned by the seven men named. From this date to 1876 very little work was done on the mine, none of the owners being capitalists (Government officers and miners). During the winter of this year five of the company, who held that the two others had forfeited their rights, sold the mine to a company composed of business men of Portland, Oregon, and the Alaska Gold and Silver Mining Company—capital, \$300,000; in shares of par value \$1 each—was organized, Haley, the discoverer, receiving 15,000 paid up shares, and the other four 10,000 each, to which was credited a certain amount against future assessments.

Since its organization, this company has made endeavors to develop the mine; it has met with losses through mismanagement, and has had, as is usual, quarrels among its members, but at this date it possesses a steam 10-stamp mill, shops, cabins and full outfit. A tunnel is in over 100 feet, in good ore all the way. Another, 100 feet above it, is in 84 feet, and another is to be started 300 feet below, where a distance of 350 feet will probably strike the ledge as indicated by the shaft. This mill, this month, in eleven days' work, produced bullion valued at about \$1,800, and has ready for shipment over fourteen pounds of amalgam produced from free gold alone, the sulphurets not having been treated.

During the years 1874 to 1878 Haley, having procured his discharge from the army, devoted himself to prospecting, and upon the same range discovered many other ledges, of which those which are considered to be the most valuable are known as the "Haley and Francis," "Wicket Fall," "Witch" and "Last Chance," and other prospectors have discovered and located about a dozen more. The "Haley and Francis," "Witch" and "Last Chance" I have visited. The first two are possibly pockets, inasmuch as their trend is east and west, but both are very rich. From the first named the first blast threw out and exposed over \$300 worth of gold, some nuggets ranging in value from \$15 to \$20.

From the rock of the "Witch," which is decomposed quartz, of which I send you specimen marked 4, Haley has nearly supported himself and large family for two years, he and his boys packing in bags the broken up rock, crushing it evenings in a large hand mortar, extracting the gold with quicksilver, and selling the amalgam. I have watched Haley at this work, and know that what I say is true.

Haley's "Last Chance" was, until 1870, the easternmost discovered ledge. During this year a number of other edges of probable value have been found still further east on the same range. From one, the "Great Eastern," I procured myself specimens which, when assayed by Messrs. Selby & Co., of San Francisco, yielded \$175 gold and \$5.20 silver per ton. I have seen their assay certificate, and this specimen came from the surface, and showed no free gold whatever.

Now, Mr. Editor, I have taken great pains to thoroughly sift all of the statements I have collected. All of the parties who possess knowledge on the subject have been carefully interviewed. When there were discrepancies, as in the matter of dates there sometimes was, I have got hold of letters and papers and straightened out the account. And I feel satisfied that you have in this paper the first and only authentic history of the development of this region up to the present date. I have not told you a thing which I do not thoroughly believe myself. Before leaving the subject, I will describe just how Haley gets his gold from the rock, which is mining on a small scale, as I saw it to-day.

Scene—Haley's front room, temperature way up, for on the stove, cooling by a brisk yellow cedar fire, stands a six quart pan, half full of apparently sand and water, actually powdered quartz from the bagful standing in the corner—while Haley has packed in from the Witch during the fall—water, and a few ounces of quicksilver. This mess he is stirring up with his bare hand, while I, with my briar root for company, sit in his rocking chair and watch and listen to his descriptions.

This rock he has powdered, or "pulped," in a big iron mortar, by hand, roasted four hours, with a sprinkling of salt "to kill the sulphurets," and is now amalgamating. About five pounds of rock, less a few rather pretty specimens on which free gold was visible, and which I appropriated and sent to you, constitute the charge. When it was "done" (he couldn't tell me how he knew it was "done," it being entirely a matter of experience; but he could tell when the quicksilver had gathered up its affinity) he carried the pan to a washing tub, a third full of water, and washed, or panned it, by a circular motion, which looks easy enough, but is apt to result in a spill with a green hand, until at last nothing but the quicksilver remained. This he washed thoroughly in saucers of clear water, enveloped in a buckskin cloth, and squeezed by means of a strong cord, which he wound round and round, the mercury spurting in spray through the pores, until but a little hard lump remained. He opened his buckskin, and there was a lump about as big as an ordinary bean, looking like tin foil; this was amalgam, and in it was nearly all of the amalgam that the five pounds of rock had contained. Not all, for had I not hurried him he would have re-

peated the washing and squeezing to save "waste," and had he retorted the amalgam he would have obtained somewhat better results than his home resources (which consisted of a spade, on which he laid and roasted for a few minutes the button) permitted. As the quicksilver passed away the button turned yellow, and he scraped from the spade twenty-three grains of flour gold, which I inclose to you, as tolerable good evidence that the stories of gold mines near Sitka are not absolutely "fairy tales." I don't own any of this mine, Mr. Editor, but I wish I did. Flour gold is worth four cents a grain, and if five pounds of rock produce, with two hours' labor of one man, nearly a dollar, a ton of the rock is worth nearly \$450.

It is probable that the sulphurets will yield as much more. Of course, Mr. Editor, I can't vouch positively for everything I have told you, but I can assure you that I myself believe every word to be true.

Feb. 23d.—The steamer is four days overdue, and her coming day is very uncertain, for we are having regular spring weather, rain and fogs and snow, which tend to make navigation hazardous.

During the month the temperature has averaged about 35 degs., but the snow that fell in January don't go. This has been the coldest winter that has occurred for thirty years. It is very evident that the season is backward, for the woods are becoming populous with returning birds. Fish eagles, which left us last fall, have returned, and innumerable ducks, which come in good time, as the venison is getting bad.

I find Coues' "Key" invaluable. I have already identified as follows: Old wives, surf-ducks, mallard, harlequin, Canada goose, Hutchinsin, scaup, lesser scaup, Barrow's golden-eye, butter-balls, mergansers, and several grebes, etc. Not having enjoyed very favorable weather for hunting, we have been compelled to seek other amusements, among which have been a couple of weddings of members of the *Junestown* complement and of Sitka's. First, one of the crew led off; and on the 9th inst. one of the officers. Mr. Frank Guerton, with the Rev. Father Metropolsky united to Miss Nija Kastromitenoff, who is a cousin of the wife of Prof. Elliott, a young lady of Russian parentage, born in Alaska, and one whom we were all glad to welcome into the service.

March 26th.—This letter should have reached you ere this, but for sixty days we have been cut off from all communication with the world. The *California*, on her up trip in February, knocked her rudder off on Columbia Bar, and after a hazardous passage to Victoria has been there detained for repairs. She came through yesterday, and goes to-day.

We are having the pleasantest March I ever spent in the temperate zone, having had but four days which were not bright and warm; that is, it felt warm, although the thermometer did not go above 45 degs., and the snow goes off very slowly. The steamer's arrival was a god-send. We were out of most everything, including patience, but not including those watery walnuts, dubbed potatoes, which have during the last few days rewarded me for the battle I have given in their cause.

One note more about mining. By this steamer there goes down four bars, each weighing seventy-two ounces, of gold produced from the free gold, the sulphurets not having been treated, during about thirty days' work of the Pioneer Mill.

PISCEO.

GAME PROTECTION.

NEW YORK ASSOCIATION.—At the last meeting of the New York Association for the Protection of Game, Mr. Wm. M. Fleiss, of the Committee on Amendments to the Game Laws, reported that the various matters referred to his committee had been carefully attended to, and he had no doubt that when the laws, as amended, should be printed, it would be found everything desired by the Association had been carried out. Dr. John W. Greene called the attention of the meeting to the recent death of Mr. Geo. C. Colburn, one of their most active members, and passed a high eulogium on his character as a sportsman and a gentleman. A resolution on the same subject was proposed by Mr. Townsend and adopted, and on the motion of Dr. Stephen A. Main, the Secretary was directed to send a copy of it to the family of the deceased. President R. B. Roosevelt, Dr. Greene, Chas. E. Whitehead, C. Dubois Wagstaff and T. B. Baldwin were appointed a committee to attend the annual convention of the New York State Association for the Protection of Fish and Game, at Seneca Falls, N. Y. A communication was received from the Secretary of the Long Island Sportsmen's Association, requesting the cooperation of the New York Association in endeavoring to have the State Association's convention for the year 1881 held on Long Island. After a discussion, the delegates to the convention were instructed to favor the holding of the convention of 1881 in the vicinity of New York.

MIGRATORY QUAIL.—Boston, May 11th.—Editor *Forest and Stream*.—For the information of those interested in the importation of migratory quail, I send you the following extracts from letters received from Mr. Braun, being my latest advices. Under date of April 17th, he writes: "My orders from England have been received to buy as many quail as possible, without limiting the price. This, as well as the restriction of the law for catching the birds, and the higher cost of the licenses, will, no doubt, make the quail very expensive; but you may rest assured that I shall do all in my power to secure them. We have had Scirocco for the last ten days, and

not a single quail has been seen, as yet, upon one island. Let us hope that the wind will soon change, so that I can purchase and ship the quail as soon as possible." Under date of April 19th, he writes: "The first quail made their appearance this morning, but in very insignificant quantity. I shot only five. If this wind (Eocene W. S. W.) continues, we will see more to-morrow."

HORACE P. TOBBY.

MIGRATORY QUAIL.—Rockland, Me., May 3d.—I have seen, in a Rockland paper, that the quail which I released last spring, and which bred here to some extent, had returned, and had been seen by a number of parties. I should be very happy to confirm the report; but the evidence I have received I do not consider reliable enough to warrant publication. As soon as I learn for a certainty of their return, I will write you of the fact.

JAMES WIGHT.

We hope soon to receive authentication of the return of these birds, and would remind others of our readers who are interested in the introduction of the birds, to gather such information as they may of the return of the quail this spring.

ONTARIO.—Welland, May 8th.—S. D. Woodruff, Esq., of St. Catharines, President of the Long Point Game Club, was on the 4th brought up before the Mayor of Welland to answer to a charge of shooting snipe out of season. He pleaded guilty to the charge of having shot four birds, and was fined \$40 and \$5.00 costs. He was prosecuted by the Game Inspector of the County of Welland Game Protective Association.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Reports, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—ADDRESS all communications to "Forest and Stream Publishing Company, New York."

HOW TO MAKE A CAMP.

BETHEL, MAINE.

IN some former issue of FOREST AND STREAM the past winter, an appeal was made to practical hunters to give information in regard to building camps, as I understand it, for temporary use in the wilderness. I will give my method in as few words as possible, so that my ideas may be reached and utilized, if desired.

A water-tight camp may be made of fir boughs, or even hemlock, by making the roof steep, and lapping the boughs on thick, in courses, with the butt up. The form of the framework may be in several ways. I will mention only two: First, cut poles with crotch at upper end, ten or twelve feet long, say six or eight of them. Stick the top crotches together, and spread the bottoms to any desired diameter—according to the size of your party—in a circle; then commence to spread on the boughs, beginning at the bottom, and carefully and thickly lapping them to the top, leaving a parting between two poles for a door. This is also the Indian method, and is called a wigwam. Second, cut two poles seven or eight feet long, with crotch at top. Stick these in the ground, but down, as far apart as you wish the length of your camp to be; say for four men, make your camp ten feet long, and more or less according to your number. The two corner stakes being fixed, cut a pole reaching from one to the other for a ridge-pole, then cut shorter poles to reach from your ridge-pole to the ground, and put them near enough together to hold the covering, be it boughs or bark.

It is what we call a shed camp, open in front, where we build our fire at our feet when we lie down.

Two of these camps made together, facing each other, form what we call a tight camp, by standing small evergreens up thickly at each end, and leaving a door at one end. These camps are easily and quickly made, and may be covered with bark, if desired, of the white birch, at any time of the year, or spruce or hemlock in the season of peeling; viz. June and July.

For a more substantial lodge, find two large trees far enough apart for the length of your camp, cut notches in each of the trees as high as you wish your ridge-pole to be, say seven feet, more or less. Place your ridge-pole in these notches, and with it solid to the trees. Be sure the pole is stout enough; then roll up a good heavy log for the back of your camp. Split fir or cedar trees in halves to the desired length, and place them, the lower end on the log at the back of camp, and upper end on your ridge-pole, in the following manner: Lay two half logs flat side up, and another flat side down, lapping on each, and so on over the whole. Stand splits on end to cover end of camp. This is the same form as the temporary bough camp, and by covering two together, will make a very durable tight camp for winter or summer. If for cold weather, throw on plenty of green boughs over the splits, to stop all air-holes.

Another more, or substantial camp, is made of logs notched at the ends, and cob-housed together, cutting out door after the body is up, laying gable ends on top of the body and rafters, one at each end of every log, shortening the logs as you go up, until you reach the ridge-pole, and cobbling up the chimney-hole with smaller halves, to center from body of camp, and cover with bark or splits.

Cover the ground for sleeping with fine fir or hemlock boughs to the depth of a foot in thick, soft layers, which is the most delicious, as well as healthy bed that can be made. For covering camps you can also make cedar

split, with a draw-knife and axe. Cut a straight-grained cedar in four or six feet joints, split them in two with your axe, then into one inch thickness with axe and draw-knife, which can easily and quickly be done.

J. G. ITCR.

NEW YORK.—*Lowville, May 5th.*—A few Wilson snipe and big yellowlegs have been killed by our sportsmen. A shot a fine goshawk recently, and last week I received a prize, a *Florida*, the first that I have known of being taken in this vicinity.

H. W. H.

SENECA GUN CLUB.—THE STATE ASSOCIATION.—*Seneca Falls, N. Y., May 10th.*—The recently listed, with three spacious rooms, richly furnished. For the entertainment of our friends nothing more could be desired. The Twenty-second Annual Convention promises exceedingly well. Messrs. Hoag, Parrish, Lawrence, Williams and Sellock are working like beavers, and nothing is left undone that will contribute to a successful meeting. The grounds (which are located within three minutes' walk of the main business street) are being staked out. Tens for 12,000 birds are being staked out. Half the birds are here, with 1,000 to 1,500 coming on every train, and a fine lot they are, too! A grand stand, reporters' stand, benches and covering overhead for judges, secretary's office, etc., are being built, and much interest is exhibited by all our people. The valuable articles in the prize list are not overrated, and many gold purses speak for themselves. Fortunate is the man who wins W. E. McNamee's "Spring in Normandy" in double bird shooting. Our Reception Committee are exerting themselves in the endeavor to make the coming visitors comfortable, and ample accommodations will be found for all. We look for a large party from Brooklyn and New York. The Seneca Gun Club most cordially invite the sportsmen of New York State to meet here May 24th, and promise that everything shall be done to make their stay pleasant. X.

GEORGIA NOTES.—*Macon, Ga., April 26th.*—We have a gun club of fifty members (Glasgow Shooting Club), but this is our second year, because glass shooting has lost most of its interest. Through the club's influence, our two representatives, who are members, has secured the enactment of a game law, which we hope will result in much good. Macon can boast of some very fine shots, and as our principal game is quail and doves, it behooves us to protect these birds, and we now hope to have a large increase by enforcing the game law. A few weeks ago I made a visit to Eastman, in Dodge County—both named after an excellent and honorable man. I proceeded by buggy to the Oconee River (the same we have here) to hunt turkeys; but failed to bag any, though I saw and heard several—also jumped two deer. Spending the night with a saw mill man, I learned of a novel duck's nest. I mention my visit more to ask of this than anything else. The mill is located by a small pond, which is in a natural basin, the hills on all sides throwing the water into this basin, and the ducks roost every night. One pair of these ducks have a nest thirty feet above the ground in a large pine tree, entering through a hole 4x6 or 5x8. Is this a common thing? It strikes me as very unnatural.

L.H.J.

ARKANSAS IN WINTER.—*Jacksonport, Ark., May 1st.*—In your last issue, a very interesting article by "Dardanelle" struck my attention. I can endorse every statement "Dardanelle" makes, except one, with a qualification. It is true that malaria, and all which that implies, is prevalent all over the lower portions of this State. The summer is the sickly season. After first frost, the tourist will have nothing to fear. It is true there are plenty of reptiles and insects. They are only troublesome in summer. The winter cold lays them. The winter climate is admirable—almost perfect. Our summers are too hot; the winter is our sporting season. Visiting sportsmen should come during that season. The statement I can not endorse is in regard to musquitos. They are unusually numerous and attentive in every part of the State, but not so numerous as it is ten years since I lived here in Yell County; the supply was in the excess of the demand then in those days. I think "Dardanelle" will cheerfully admit that most, if not all, the non-attractions of which he speaks, are applicable only to the warm season.

YELL.

CANADA.—*Montreal, April 19th.*—There has been a fearful slaughter of ducks and geese at the foot of the Lachine Rapids. One man is credited with killing over a thousand last week. They have actually taken carts up the lower Lachine road to bring them to the market, not being able to carry them otherwise. I was told this morning that all one has to do is point your gun at the flocks as they approach, pull the trigger, and they can not help getting lots.

ESCALAPUS.

AUDIT ALTERNUM PARTEM.—*Cheap Guns Again.*—Editor *Forest and Stream*.—Several articles have recently appeared in your paper strongly censuring the practice of several manufacturers and importers of guns in selling guns at a considerable discount to those who use them.

Now there is something to be said on the other side; will you allow me space to say it?

There are a very large number of sportsmen (perhaps the majority) who wish to secure the best gun that their means will allow, and who yet are unable to pay the high prices asked by most retail dealers. To this class I freely confess that I belong. Must we, then, content ourselves with an inferior arm because we cannot pay the 25 or 30 per cent. profit asked by the retail dealer? In such a course we should be shut up, if the advice of your former correspondents be followed, and manufacturers and importers be compelled to discontinue the discount to actual users of the goods.

"But," say your correspondents, "it is a manifest injustice to the retail dealer, which in the end must drive him out of business." Let us look a little closer at the matter before we assent to this as unanswerable. It is quite true that we must and ought to pay cheerfully for whatever is necessary. In many lines of trade, middlemen, so called, are a necessity; for example, I cannot order a suit of cloth of the manufacturer or dealer of custom in New England. His business forbids that. Nor can my tailor order his goods direct from the manufacturer. Hence I am compelled to pay the profit of the jobber and the tailor, and I do so cheerfully because the necessities of the case require it. In the East, at least, there is no necessity that I should go to the retail dealer in guns. I maintain that if I can I ought to buy direct from the

manufacturer, because there is no sort of necessity for the retail dealer; the exigencies of trade do not require him; he is not a necessity, nor even a convenience, and hence there is no reason why I should pay his profit, because it is just as easy for me to deal with the manufacturer or importer directly.

Our country is cursed with the enormous number of "middlemen." It is perhaps more manifest in the dry goods trade than any other. When the goods pass out of the hands of the manufacturer they are handled by the commission merchant, the jobber and the retail dealer, and to each one of these the consumer must pay a profit; and it is wrong, because unnecessary. People everywhere feel and understand the truth and justice of the position that I am trying to maintain, and no clearer proof that they do understand it could be adduced than the success of such houses as that of Lord & Taylor of your city; houses that buy directly from the manufacturers in this country and abroad, and so are enabled to sell goods without the additional profits of the commission merchant and jobber. A similar success does and will attend any other business where the effort is made to save profits to the consumer. It is this same principle which lies at the bottom of the "Orange" as a whole, this foundation principle is true.

But it will be urged, "You will ruin the business of the retail dealers in guns." Well, if he is not a real necessity, he ought to be made to yield; and that he is a necessity can scarcely be shown. "But if you drive him out of business what will he do?" Again, let me reply in general terms, and I leave the objector to draw his own conclusions. It is a crying, glaring evil of the times that men leave the country and rush to the cities. The result is that agricultural interests are neglected, while mercantile life is overcrowded. The consequence is that the whole land, city and country, suffer. It is well known that not only does the "backbone" of any country lie in its rural population, but that its prosperity is always in direct proportion to its agriculture. Let the men, then, who in our country are driving the "backbone" out of the great majority of cases are not making it, fill up this broad land of ours; let them become sturdy sons of toil, and we shall have a healthier, happier, richer and more prosperous nation than we have ever seen before.

But I beg pardon for these truisms in Political Economy. My pen ran on to a greater length than I intended. What I want to say is, that we need good guns at low prices, and that I trust the manufacturers and importers will be brightened out of their present practices. There is and there can be no reason in the nature of things, why they should not deal directly with those who use the guns.

ONE OF THE LATTER CLASS.

PATTERN AND PENETRATION.

HILLSBOROUGH, N. B., April 19th.

WE left the bluebirds (true harbingers of spring) far behind us, and got home to find all nature still locked in the embrace of winter, ice and snow, and the gray goose (characteristic of the British Isles) the great majority of cases are not making it, fill up this broad land of ours; let them become sturdy sons of toil, and we shall have a healthier, happier, richer and more prosperous nation than we have ever seen before.

The weekly advent of the *FOREST AND STREAM* is a pleasing circumstance in our life out here, and I can almost imagine a gleam of delight in the eye of the great antlered moose head, over the gun rack in the hall, when it comes in with the Monday post. It mingles with less fraternal feelings since you abandoned your old cover.

In looking over the numbers which had come through the winter, I came across an article on "Pattern and Penetration," by "Au Sauble," which recalled a very interesting contribution of last December, "Various Guns and Gun Makers."

It seems to me that in both of these the writer omits elements or facts necessary for a full comparison. I am under the impression that most, if not all good makers buy their barrels in the rough, and in this respect are equal; hence the difference in the shooting of guns may depend upon the quality and disposition of metal, and form of bore in all barrels of the same weight.

We have a mathematical conception of a cylinder; but in the term choke have on the idea of converging lines. Now is it imprudent to adopt in the common gun language, the elements of distance, and possibly force, in connection with the word choke, so that it may convey some intelligible impression? It strikes me this might properly be associated with pattern; and penetration—be associated with powder. If the foregoing inferences are true, all makers should be able to make the best shooting guns of a given quality. Style, action and shape are outside of this, and comprise taste, ingenuity and fit.

My experience in guns is not various; but for many years I have done considerable hammering, mostly with one tool, with possibly more damage to the cupboard than cock. It has been an excuse for keeping a dog around, and a capital substitute for blue pills.

However, the ease, cleanliness and convenience of a breech loader has conquered the common opinion. I have a fine Remington-Union hammerless Greener, perfect in style and action, and a less symmetrical Fox gun, with side action. I wished to use it in moose hunting in winter, and, as I have experienced difficulty with a drop action rifle, by its freezing fast in sleet storms, and by snow falling from the branches upon the barrel, and thwarted by the grip of the hand near the break-off, I was attracted strongly to the side movement, and decided to get an inexpensive one, to try how I would like it. So I gave my order for one. It was to be a perfectly plain, good-shooting gun, with a charge of one ounce of shot over two pink wads and four drachms of No. 7, Curtis & Harvey's Diamond powder. Barrels plain twist, 12-28", with right cylindrical for ball, the left modified choke (so-called); without limit in price. It cost within the price named by "Au Sauble" for a good gun, and weighed 12 lbs. 10 oz.

I used it some in the fall of '78; but, as I was weak from sickness found it both too heavy and too stiff in its movement to give me pleasure, so I went back to my old 6 lb. Deane, Allan & Deane.

However, I used it all just full upon English snipe and black ducks, and found it soon wore smooth, and very handy and agreeable. It was all that was promised, and

more than I expected. I am not speaking "by the card," for I find my nose too near my thumb in deliberate shooting, and avoid it when I can. I know it comes from holding too snug to the shoulder. When shooting quick, it is a light touch and go, and not felt; but a good gun is a good gun, and we don't want to see the pattern to know it. "Au Sauble" touches the true spirit of investigation at the close of his letter of December 4th; but when he refers to the excellence of fitting in a Williams & Powell gun as a defect I fear few will agree with him in that respect. If it is a fault, it is in design, and loose fitting cannot cure it.

The fact is, all else being equal, every man to his taste—drop action, or side action, the difference is a refinement beyond utility.

I knocked the right hammer off last fall, and for about two weeks carried a double gun to shoot a single one. I am now decidedly for hammers under deck; but still divided in opinion between the "crop-eared terrier" and cunning fox.

SIRIODY.

SHOOTING MATCHES.

MAINE.—*Peck's Island, Portland Harbor.*—At a shot of the Peck's Island Shooting Club, Friday, May 7th, for the Secretary's gold badge, Card's rotary trap, 18 yards, 20 single and 10 double rises, the following scores were made:—

W. S. Jones	11111111111111111111	20
W. S. Brackett	11111111111111111111	17
H. Trefethen, Jr.	01111011111111111111	15

MASSACHUSETTS YACHTING ASSOCIATION.

The following circular has been sent to all Massachusetts yacht clubs—

At a meeting of the yacht clubs, held at the Parker House, for the purpose of forming an Association, and adopting rules and regulations to govern Union Regattas, Mr. W. Lloyd Jeffries, of the Beverly Club, was chosen President, and Mr. Coolidge Barnard, of the Dorchester Club, Secretary.

- Voted, 1. Name—Massachusetts Yachting Association.
 2. All Massachusetts yacht clubs invited to join Association.
 3. Measurement—One-third or over—hang added to water-line.
 4. Allowance—Horse-shoof tables adopted.
 5. Classification—For center boards, 1st class, 40 feet and under to 22 feet. 2d class, 22 feet and under to 22 feet. 3d class, 22 feet and under to 18 feet. 4th class, 18 feet and under. For keels, 1st class, 40 feet and under to 30 feet. 2d class, 30 feet and under to 25 feet. 3d class, 25 feet and under.
 6. Telling—No hauls to be shifted.
 7. Starts—No restriction.
 8. Crews—One man to every five feet of sailing length or fraction thereof.
 9. Additional entries allowed in postponed races.
 10. Secretary to keep record of dates of races and prevent, as far as possible, races of different clubs coming same day, the clubs to communicate with him before advertising their races. The clubs also to furnish him, as far as possible, with the measurement of their yachts.
 11. Association measurer shall measure any yacht in question, in presence of judges of race.

If your club adopts these rules, and will join the Association please inform me, and oblige,

Yours truly,

COOLIDGE BARNARD,

May 1st, 1890. Mill street, Harrison Square, Mass.

BOSTON.—Your last edition spoke of measurement only as the main idea of the Massachusetts Yachting Association. If your correspondent, "M," can give some table to allow by, and some rule for his measurement, we should like to see it. The clubs represented were the Boston, S. Boston, Bunker Hill, Beverly, Duxbury, Quincy, Dorchester and Jeffries. The S. Boston and Dorchester clubs have voted to adopt the rules.

The Union Regatta for May 29th will be settled by the withdrawal of the Dorchester Club, although they decided first to have theirs on that date. Two open races within such a short distance of each other would both be well attended; and, as the Dorchester club always gives good prizes, they would likely draw many boats from S. Boston.

At a meeting of the former club, held May 7th, Mr. H. S. Mann was elected Fleet Captain, in place of Mr. Geo. S. Rice—gone west—and Mr. Wm. Grey, Jr., was placed on the Regatta Committee in place of ex-Com. Barnard, resigned. Twelve new members were elected, and the Dorchester Y. C. is in a flourishing condition.

MAINMAST.

YACHTING NEWS.

STEAM YACHTS FOR SALE.—The Horreshoff Manufacturing Company offer the *Lella* and a smaller steam launch for sale. Both have safety coil boilers, and can be had at a bargain.

THE GLAM.—On her recent trial the *Glam* made sixteen miles readily, and the possibilities are that she can be driven up to twenty when her owner, Mr. W. H. Graham, of Baltimore, has been sent her.

YACHTS' PHOTOS.—The enterprising house of G. W. Black & Co., 323 Washington street, Boston, has issued a printed circular, *"A Yacht's Photo"*, of the yachts' photos they have for sale. It is proposed to add materially to their stock this year. Boston once more has taken the lead of New York. Photographers here are still asleep, though we have done our best to poke them up.

CIRCULAR YACHT.—Says the *Oscar Times*: "The Chicago Dry

Dock Company is now completing for Capt. Thomas Parker, Oceanview, one of the queerest looking yachts that has ever been known. The craft has an 18ft. keel, a 15ft. beam and what is known as a saucer bottom, and when completed will draw but ten inches of water with a full load of passengers. She has but one mast, which is located pretty well forward, and a mainboom that extends a considerable distance over her taffrail. She will have no gaff, and the mainmast will be attached only to the mast and the boom. Then above that, from the topmast to the extreme end of the boom, will be what is known as a ringtail, the purpose being to aid in shortening or making sail.

YONKES YACHT CLUB.—The spring regatta of this club was sailed May 3th. Course from Biegan's dock up river to block-house of Glenwary, thence to the foot of the Jersey shore, and back to start, then across to the Jersey shore again, and down river to Shellton's dock, and return to start. Sail over three times. Distance, fifteen miles, giving a great variety of sailing. Judges, Messrs. Robert Fawcett, Ed. Connell and W. H. Veitch. *Pinafore*, in third class, not timed, as she had a sail-over. The summary is appended:—

FIRST CLASS—SLOOPS.			
Yacht.	Owner.	Length.	Time.
Send	A. J. Prime	23 1/2	3 15 00
Nellie C.	A. O. Gould	20 0	3 29 00

SECOND CLASS—CATS OVER 20FT.			
Yankee Bird	S. C. Kolalet	23 4	3 17 15
Minnie	H. L. Garrison	23 8	3 21 40

Time all boats sailed the foot of the Jersey shore, and down river to Shellton's dock, and return to start. Sail over three times. Distance, fifteen miles, giving a great variety of sailing. Judges, Messrs. Robert Fawcett, Ed. Connell and W. H. Veitch. *Pinafore*, in third class, not timed, as she had a sail-over. The summary is appended:—

ILLUSTRATED

BOOK OF THE DOG.

YEARLY SUBSCRIPTION, \$4.50.

In 30 Monthly Parts, 40 cents each.

BY VERO SHAW,

Assisted by many of the most eminent authorities of the day.

WITH THIRTY FAC-SIMILE COLORED PLATES (drawn from Life expressly for the work) of typical specimens of the various Breeds of Dogs now in existence, and with numerous Wood Engravings. Embracing a full description of EVERY KNOWN BREED OF DOG, with the standard by which he can be judged.

Subscriptions received for all or part of this Work, and Sample Part sent post-paid on receipt of price.

The Practical Kennel Guide, with plain instructions how to Rear and Breed Dogs for Pleasure, Show and Profit. By GOMMON STANLEY, M.D., C.M., R.N. Illustrated. 102 pages. 12mo, cloth, \$1.50.

Americans who are fond of a good dog can from this book secure important information, as no book ever published embraces such a wide range of study.—*Spirit of the Times*.

Dr. Stables is one of the spiciest, brightest, and most intelligent writers about dogs. This little manual from his sterling pen is all good.—*Real and Gun*.

We can recommend this book as a most valuable and interesting one to the breeder and exhibitor.—*Forest and Stream*.

THE DOG. By LINDSEY. With twelve full page engravings from Life, by GEO. EARL. New and cheaper edition. Cloth, \$1.25.

The directions for the treatment of dogs are given clearly and fully, and the result of considerable experience, backed by sound common sense.—*Sporting Gazette*.

Hotels and Resorts for Sportsmen

OCEAN HOUSE, Speonk, L. I.—First-class board; near bay and ocean, forest and lakes; gunning, fishing, riding, sailing, bathing and rowing. Parties will be met at L. I. R. R. depot by appointment.
J. W. TUTTILL, Proprietor.

HO! for TROUT FISHING.

THE FAR-FAMED waters of the Maganetewan are now within easy access of Toronto and the outside world. We have created a large and comfortable hotel in Maganetewan Village, and are prepared to offer every facility to our sporting friends by way of canoes and guides to the trout lakes and streams tributary to the Maganetewan, and can offer the best of trout fishing within a mile of our hotel. We will have a large fleet for packing fish, so that they can be taken fresh by any part of the Northern States. The road from Rousseau (the head of steam travel) has been Macadamized and the journey shortened by half a day, so that parties leaving Toronto can get here in one day and a half days. Come up and see.
IRWIN & CLARKE, Proprietors.
Maganetewan Post-Office, Ontario, Canada.

DAVIS HOUSE.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line.

FOR THE

Trout, Grayling, and Black Bass Fisheries, and THE FAMOUS SUMMER RESORTS AND LAKES

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONG are also abundant in these waters.

The sportsman can readily send trophies of his skill to his friends or to his home, as no fee for packing fish can be had at any point.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods is of a most beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average of the country, new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates and attractive travel facilities offered to tourists and sportsmen.

Dogs, Guns and Fishing Tackle Carried Free of Charge.

It is our aim to make sportsmen feel at home in this route. P. Tourist's Guide (an attractive pocket book, 12 pages), containing full information and accurate maps of the Grand Rapids and Iron Car, address A. B. LEBET, Gen. Pass. Agent, Grand Rapids, Mich.

Sportsmen's Routes.

TO SPORTSMEN.

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONVENIENT FROM IMPROVEDLY LOCATED, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth tracks enable SPORTS MEN TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

In Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities of KANE, PENNSYLVANIA, BEDFORD, CHESTER, BALTIMORE, MINNEAPOLIS, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Medical.

WONDERFUL POPULARITY OF THE RENOWNED MEDICINE.

The Greatest Curative Success of the Age—A Voice from the People.

NO MEDICINE introduced to the public

has ever met with the success accorded to Hop Bitters. It stands to-day the best known curative article in the world. Its marvelous success is due not to the advertising it has received. It is famous by reason of its inherent virtues. It does all that is claimed for it. It is the most powerful, perfectly effective agent known for the building up of debilitated systems. The following witnesses are offered to prove this:

What It Did For An Old Lady.

Cocheson Station, N. Y., Dec. 28, 1878.
GENT—A number of years ago I had been using your Bitters here and with marked effect. In fact, one case, a lady of over seventy years, had been sick for years, and for the past ten years I have known her she has not been able to get around half the time. About six months ago she wrote me a letter saying she was well and recovered. It is famous by reason of its inherent virtues. It does all that is claimed for it. It is the most powerful, perfectly effective agent known for the building up of debilitated systems. The following witnesses are offered to prove this:

What It Did For An Old Lady.

It is famous by reason of its inherent virtues. It does all that is claimed for it. It is the most powerful, perfectly effective agent known for the building up of debilitated systems.

The following witnesses are offered to prove this:

What It Did For An Old Lady.

Cocheson Station, N. Y., Dec. 28, 1878.

GENT—A number of years ago I had been using your Bitters here and with marked effect.

In fact, one case, a lady of over seventy years, had been sick for years, and for the past ten years I have known her she has not been able to get around half the time.

About six months ago she wrote me a letter saying she was well and recovered.

It is famous by reason of its inherent virtues. It does all that is claimed for it. It is the most powerful, perfectly effective agent known for the building up of debilitated systems.

The following witnesses are offered to prove this:

**KENDALL'S**
SPAVIN
CURE.
The Most Successful Remedy
ever discovered, as it is certain in its ef-
fects and does not blister. READ PROOF
Below.
From Rev. P. N. GRANGER,
Presiding Elder of the St. Albans District.
St. Albans, Vt., Jan. 24th, 1880.
DR. KENDALL & CO. Gentlemen: In your let-
ter I will say that my experience with Kendall's
Spavin Cure has been very satisfactory indeed.
Three or four years ago I procured a bottle of
your agent, and with it cured a horse of lam-
eness caused by a spavin. Last season my horse
became very lame and I carried him out for a few
weeks when he became better, but when I put
him on the road he grew worse, when I discover-
ed that a ring-bone was forming. I procured a
bottle of Kendall's Spavin Cure, and with less
than a bottle cured him so that he is not lame,
neither can the bunch be found.
Respectfully yours,
P. N. GRANGER.
Price, \$1 per bottle, or six bottles for \$5. All
Druggists have it or can get it for you, or it will
be sent to any address on receipt of price by the

AND LEATHER JACKETS. }
TRADE--"BEATS THE WORLD."--MARK.
Old Judge Smoking Tobacco.
The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.
MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878,
by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious
effects of the OLD OF OLD CIGARETTES thrown off when burning is completely neutralized or destroyed,
and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage
and importance of this invention will at once be recognized by all smokers, and its truth de-
monstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed
certificate from any eminent Professor of Chemistry to convince them they have heretofore, in
smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

Cricket Goods.

Alfred Shaw & Arthur Shrewsbury

(Members of the Anglo-American Team and All-England Eleven.)

HAVE pleasure in informing their American friends that they have opened the Midland Cricket, Lawn Tennis, Football and General Athletic Sports Warehouse,

CARRINGTON STREET BRIDGE, NOTTINGHAM, ENGLAND.

The most unique and comprehensive establishment of its kind in England. Their stock comprises well-seasoned Cricket Bats, Balls, Boots, Shoes, Leg Guards, Stumps, Bags, Lawn Tennis Sets, Lacquets, Footballs, Jerseys, Shirts, Socks, and woolen (as worn by the team in America), and every article in a great variety suitable to athletes.

S. & S. being members of the late American Team, know the requirements of their trans-Atlantic friends, and if favored with an order may be relied upon to send goods of first-class quality only. Clubs, colleges and schools provided with professional bowlers. First class men, personally known to S. & S., well bred and of high character, only sent out. Price lists, with batting averages and bowling analysis of the American Team, may be had on application to GEORGE LANE, Professional Cricketer, Staten Island Cricket Club.

RICHARD DAFT

(CAPTAIN OF ALL ENGLAND ELEVEN.)

CHICKETING, Foot Ball and Lawn Tennis outfit for the Army and Navy, begs to inform Secretaries of Clubs, Colleges and Schools, that his new and enlarged Illustrated Price List for season 1880 is now ready, and will be sent post-free upon application. Address: RICHARD DAFT, No. 1 Lister Gate, Nottingham, England. To Agents: Goods can also be had from Mr. A. J. REACH, Philadelphia Pa.

Guns, Ammunition, Etc.

The "STANDARD TARGET"—For Rifle Practice. Size 6 inches. Bulls-eye 1 1/2 inches. Range, 100 feet, off-hand. The zones rise by arc instead of by degrees.

Marksmen will appreciate the new departure which this target has inaugurated. The accurate riflemen now get the true value of his shot, while on old-style targets the record was so faintly by the element of chance as to give but a vague idea of the shooter's skill. For instance on a 200 yard Creedmoor a "center," scoring 4 has ten times the area of a "bull," scoring 5. Every riflemen knows that mode of shooting will give immunity from occasional misses, and under the old system it was almost the rule for good marksmen to be beaten by hitless ones. One would pile up eight snug bulls out of ten, but lose the other two, while his competitor, "shoot- ing for fours," would scatter his hitless ones on the board center, blunder one shot into the edge of the bull, and win! Now in deer stalking, and shooting at 50 yards, the winner would have wounded and lost one deer, while the loser would have struck down eight, all shot through the heart. Of course there are people who still contend that under the old method "all had an equal chance," which is very true. But it is also true that their equal chance would have been in no wise impaired if they should have sub- down and thrown dice to determine who was the better shot. In contests of skill every element of chance should be eliminated.

Arrangements have been made for supplying these targets at a nominal price, and it is now an easy matter to manage relative skill by uniform practice, and to communicate definite results without obscuring them by explanatory details. The targets are mailed, post-paid to any address in the United States at fifty cents per hundred, and quite as liberal discount is made to galleries and dealers. Send orders to CUSSENS, MAY & SHEPARD, Glen Allen, Virginia.

Eaton's Rust Preventer.

FOR GUNS, CUTLERY, AND SURGICAL INSTRUMENTS. Safe to handle, WILL NOT GUM, and will keep in any climate. Sold everywhere in the United States pronounced the best gun oil in the market. Judge Holmes, of New York, writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns."

The rust-preventer supplied by sole manufacturer, GEO. B. EATON, 510 Poyonia Avenue, Jersey City Heights, N. J.

Sole principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; H. Kirtledge & Co., Cincinnati, O.; E. B. Eaton, Chicago, Ill.; Brown & Hilder, St. Louis, Mo.; Thos. Y. Van Cleave, and O. Trimble & Kleibacker, Baltimore, Md.; Cropley & Sons, Georgetown, D. C.; Jos. C. Grubb & Co., Philadelphia.

**KENDALL'S**
SPAVIN
CURE.

The Most Successful Remedy ever discovered, as it is certain in its effects and does not blister. READ PROOF BELOW.

From Rev. P. N. GRANGER,
Presiding Elder of the St. Albans District,
St. Albans, Vt., Jan. 24th, 1880.
DR. KENDALL & CO., GENTS: In reply to your letter I will say that my experience with Kendall's Spavin Cure has been very satisfactory indeed. Three or four years ago I procured a bottle of your agent, and with it cured a horse of lameness caused by a spavin. Last season my horse became very lame and I turned him out for a few weeks when he became better, but when I put him on the road he grew worse, when I discovered that a ring-bone was forming. I procured a bottle of Kendall's Spavin Cure, and with less than a bottle cured him so that he is not lame, neither can the bunch be found.
Respectfully yours,
P. N. GRANGER.
Price, \$1 per bottle or six bottles for \$5. All Druggists have it or can get it for you, or it will be sent to any address on receipt of price by the proprietors,

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emory, March 5, 1878, by which the cigarette used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made salubrious proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PUBEKOP PAPER, been inhaling one of the deadliest poisons known.

Special to the Readers of this Journal!!

THE UNDERSIGNED respectfully invite an examination of this page, and promise that the time thus spent by any person interested in sewing, shall be profitably invested.

DO NOT BE PREVENTED from doing this because you think you know all about Sewing Machines, or imagine that one machine is just as good as another, or that the one you have is the best.

We freely admit the comparative merits of the leading machines now on the Market, but claim that

This Machine stands far apart from and ahead of all others in the World,

—ON THE SIMPLE GROUND OF—

The GREAT DIFFERENCE and SUPERIORITY of its MAKE and LEADING FEATURES.

To make this apparent, we submit the following Illustrations showing different parts of the Machine:—

Fig. 1—Descriptive Cut of the "Automatic."

The Spool is placed in a horizontal position on Spool pin, from which the thread is unwound, without revolving the spool, by Pull-off; the thread is then taken by the "Automatic Tension Device," and perfect seams obtained on all the various kinds of material, with any size of thread or silk, *without depending in the least upon the judgment, skill or experience* of the operator. This cannot be truthfully said of any other Sewing Machine.

Most of the movements of this machine are rotary, the reciprocating motions being produced by eccentrics, and a very high rate of speed being consequently attainable—as high as three thousand stitches per minute—with perfection of ease and light running, and without the slightest detriment to the machine, or to the regularity or strength of the seam. No other sewing machine can approach it in this respect. It is absolutely silent and unequaled in durability.

The Term "Automatic" or "No Tension," was never used in connection with Sewing Machines until we introduced this Machine in 1875. The popular favor awarded to it instantly caused other Companies to imitate the phraseology of our advertisements. No person who takes the trouble to investigate can be deceived by such a course, but unfortunately for themselves, many persons do not investigate, but allow themselves to be prejudiced.

Fig. 2—Showing manner of obtaining correct length of Stitch.

To make length of stitch required, move the handle of Stitch Regulator till the proper number appears through the opening. It is impossible to get imperfect work, and accidental ripping is entirely avoided.

THE "AUTOMATIC"

Or "No Tension Sewing Machine"

(On account of its distinctive merits)

Commands a Higher Price
than any other in the World.

AND IS BY FAR THE CHEAPEST

When its

QUALITIES AND MERITS

Are Considered.

Fig. 3.—Cut Showing No. 5 Stand or Table with Cover.
Machine is mounted on a Black Walnut Table, with three side drawers (with locks,) Extension Table, and Ornamented Iron Stand on Casters; has Paneled Cover with Lock and Hinges.

The Stand is a model of perfection. The treadle requires no oil, and therefore soiling of Carpets is avoided. Notice the safety Pitman and patent Brake, &c.

No Lady Careful of Health will use any other Sewing Machine

In replying to this advertisement, please quote its number (No. 932.) This will accommodate us, and will be of some benefit to you.

** It will be to your interest to deal direct with the Company, and we shall be happy to arrange for you to have a full and free trial of the Machine in your own home. Address:—

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1822, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN. Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING. Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE. A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING." FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS, of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Minnie Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland game shooting. Well adapted to shot guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFG, FFG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder, GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Fly Fishing on the Nepigon.

CHICAGO LAWYERS IN THE BRITISH WILDERNESS.

God never did make a more calm, quiet and innocent recreation than angling.—ISAAC WATSON.

WE pity the man who would not gladly travel a thousand miles for the sport we are now enjoying. The scenery, the climate and the fishing continue to fill our bodies with vigor and our spirits with enthusiasm.

We had long heard of this as a famous trout stream, and in no respect are we disappointed. If the traveler on the Hudson admires its Palisades, we look in admiration on towering cliffs two hundred feet high; if other fishermen glow with enthusiasm in capturing the trout of Northern Michigan, or Maine and the Adirondacks, we are landing those which, in a nobler stream, grow to far larger proportions. A single trout landed yesterday would fully furnish the head of the family table of any of our friends, and our saddest thought is that we are so far away as to render that impossible.

Our party is organized with a view to do ample justice to the attractions of this northern wilderness: James L. High, John Lyle King, Joseph E. Bonfield and myself, lawyers, and Lorenzo Pratt, Esq., who, though not technically a lawyer, has mingled sufficiently with the profession to entitle him to associate in the ranks established by good old Father Isaac of "anglers and very honest men."

Why is it that lawyers are such fishermen? There are two parties now on the river besides our own, and nearly every member is a lawyer. To atone for the two non-professionals, two of the lawyers from Louisiana have brought their wives, said to be the first white women who have ever ascended this river. We have found the same thing true in other trips.

This river being the outlet of the lake of the same name lying about forty miles north, is one of the most important streams on the north shore of Lake Superior, and except when contracted into narrows or rapids, is from fifteen to thirty rods wide, and for about ten miles of its length it widens into lakes varying from half a mile to two miles in width. Most of the good fishing is in the upper half of the river, and much of that is of such a character that no experienced angler would think of fishing it. The good fishing lies in the pools, rapids

and other short stretches, which would aggregate probably four or five miles of river, within which the fisherman should confine his efforts.

For years we had had this trip in expectation—not accomplished on account of the reported difficulty of reaching here, and the time occupied in going and returning. But having set our hearts on coming this season, diligent investigation revealed a practicable and speedy route, and the trip has developed less delays and difficulties than we had feared. The trouble has been that in order to reach Red Rock, at the mouth of Nepigon River, it is necessary for the steamers to ascend Nepigon Bay, nearly forty miles, thus carrying them farther out of their course than they are willing to go. But now two steamers of the North Shore Line stop regularly at Red Rock, and by arranging to meet one of these at Sault St. Marie or Duluth the whole trip is made easy and delightful. It is probable that the accommodations for next season will be more complete and better understood.

Like ancient Gaul, this journey was divided into three parts—the first by rail to Duluth, the second by steamer to Red Rock, the third, which is the only one which now concerns us, is by birch bark canoes, which are the inseparable companions of sportsmen on these waters. In just three days after leaving Chicago we were on this river, which, though flowing through an unbroken wilderness to-day, has been regularly traveled by the hardy agents of the Hudson Bay Company long before the first white settler arrived in Chicago.

THE INDIANS.

From the various wigwags, as well as from the Mission two miles up the river, the Indians flocked about, not thrusting their services upon us as guides, but judiciously waiting to be engaged; and when the six were selected they commenced getting the canoes in readiness and packing up the camp equipment and supplies, while we were discarding the garments which Chesterfield considered the true test of an English gentleman, and substituting those which would better answer our present purpose. It was a handsome sight—our three canoes working up the rapids, the Indians shouting and whooping, apparently chaffing one another in their rude Chipewia dialect, and as they disappeared around a bend in the river we less romantically followed the track across the point, and in a few moments were joined by our Indians, when we learned that they must stop for breakfast. To those unfamiliar with Indian ways, it may seem a little strange that these simple children of nature should not have breakfasted, as usual, several hours before. It was a lucky thing that High's letter to the Company's agent had not arrived, as expected, three days before us. For if, as could easily be demonstrated, no Indian within two miles of the post, capable of acting as a guide, had breakfasted at 11 o'clock, and all in anticipation of a contingent breakfast as guide to five unheralded sportsmen arriving late the evening before, what must have been the result had the vision of these possible breakfasts in expectation, or contingency, been opened before a larger number of these innocent wards of the nation? But once in a canoe the Indian appears at his best. He knows just what he can safely do and what he cannot; what rapids he can run; how much wind and wave he can paddle her through; how swift a current he can pole her up, and how many awkward white men he can carry in her without letting any of them tumble out. He is also good in an emergency. The first day out our largest canoe, valued as carrying our respected friends High and Pratt, and also as transporting our principal commissary supplies, ran upon a rock and stove a hole in the bottom, through which the water rushed in furiously, half filling her before she could reach the shore. She was emptied instantly, turned on the bank and quickly inspected. The bark covering was torn off over a space at least two feet square. Of the four Indians in council, one started into the woods with an axe, another built a fire and prepared the pan of pitchy compound which they always carry, while the others, with their knives, cut away all the damaged bark, and then moved the ribs and lining until a regular hole was exposed, through which a man might easily crawl. By this time the first craftsman had returned from the woods with an ample supply of birch bark, which they fitted in from the inside of the canoe, leaving a wide lapping of the bark on every side. Then they replaced the ribs and lining, bored little holes all along the edges of the original bark, into which they drove wooden pegs, and finally, after a liberal smearing with pitch, a strip of cotton cloth and another smearing of pitch are added, and the frail craft is launched as seaworthy as ever, and rides as beautifully as though she were built by a worthy master, and might long "laugh at all disaster."

There is an Indian legend to the effect that once the birch trees grew perfectly smooth and straight, and with

no branches till near the top. But as the Great Spirit—Nana-Bijoo—was going through the country, to see whether everything was as it should be, he found that the Indians were too lazy; so he took a bunch of willow twigs and whipped the birch trees, bringing out knots all over them, thus making it much harder to build a canoe. This is the only thing which the Indian has against his God, and for this he has never quite forgiven him.

But aside from a few good points in woodcraft and watercraft, it is difficult to find anyone who has ever had much to do with the Indian who has much faith in him, or in the prospect of doing anything for him. In his native state he is a weakling. Brought into contact with the white race, he at once contracts their vices, and cannot be taught their virtues. His last condition is worse than his first. The Jesuits have sustained missions along the north shore for over two hundred years, and what have they accomplished? His destiny is like that of other inferior races—to die out before the superior, and because they are not, except in rare instances, capable of civilization.

THE PERFECTION OF FISHING.

Saturday morning, as the Indians were breaking camp, Bonfield and myself ran out in the smallest canoe to a rifle opposite the point, where we had raised several fish the evening before, and anchored in the stream. At almost the first cast a two pounder rose to his fly, and in another moment I had his mate running down stream at the end of my line. Before I had landed my fish Bonfield had hooked his second, and while he was plunging him Pratt came to the point and shouted to us to come in, as they were ready to go on. But after weighing my fish, and finding that Bonfield had at least five minutes' work before him yet, I naturally throw my fly in again, and quick as a flash out spun the line as a noble fish struck out for the middle of the river. This was encouraging to us, but discouraging to the others, who had set their hearts on pushing ahead. Pratt, at the point, was reinforced by High and King, who exacted the promise that we would come in as soon as we had landed our present fish. While we were thus enjoying the first really fine fishing on the river they were suggesting all sorts of speedy methods, not content with giving the lively creatures their legitimate enjoyment of the angler's skill. Bonfield, on landing his second fish, considerably placed his rod in the boat, lest another cast should anchor him to a third, and then all the energies of the party were concentrated upon my expeditious capture of every part, and with every variety of fly. We tried the shallow water and the deep, the swift water and the quiet, the eddies and the swirls, the center and the circumference, the foam at the foot of the falls and the rapids and rocks opposite—but all in vain. Not a single trout showed his glittering side, or even deigned to inspect the feathery cheat which we lightly drew over the surface of the water.

At noon we pitched our camp at the edge of a small waterfall, the large pool below which promised well. From 3 to 4 o'clock the whole party whipped this pool in every part, and with every variety of fly. We tried the shallow water and the deep, the swift water and the quiet, the eddies and the swirls, the center and the circumference, the foam at the foot of the falls and the rapids and rocks opposite—but all in vain. Not a single trout showed his glittering side, or even deigned to inspect the feathery cheat which we lightly drew over the surface of the water. Bonfield and I were in agony, and our sorrow's crown of sorrow was remembering happier things. Feeling that our only hope now was in the swift water above, we made the short portage around the falls, and worked our way upward toward a broad and handsome rifle, where for at least forty yards the roughness of the rocky bottom was duplicated at the surface of the swift water six feet above. Across half its breadth the current was rapid as a mill tail, and the united efforts of our Indians at their setting poles were required to hold the canoe in position. Only when they could get their wedged into crevices between the rocks could they succeed in holding her against the sweeping current of the full river, rushing to ward the falls.

TRUE HAPPINESS.

Now began the true happiness of the angler, and the reward of his toils, the solace for any disappointments, the balm for any woes. Each of us struck a fish at almost the same instant, and our first rods bent and waved with every motion of the flexed captives. The Indians joined in the passion of the contest. The rapid current aided the fish and added momentum to his every run. The contest called forth all our energy and skill. The fish living in the swift current were quicker, stronger and gamier than those found in the pools. Bonfield's stuck persistently to the bottom; mine dashed desperately about, as though determined to free from the torturing hook. Our light poles swayed and waved with every severest pressure, which is the highest test of excellence of material and workmanship. We must give the fish reasonable play, or they would break our light tackle; we must keep them under some control, or our lines would be crossed and entangled, and both fish prob-

this year take charge. He is a very pleasant gentleman, and one whose well and neatly spread table, under the supervision of his handsome daughter, all will remember who have stopped for meals at Marcelona.

On the inland route, at the head of Crooked Lake, are a couple of smaller hotels and a couple of "floating palaces," i. e., large flat boats decked, roomed, carpeted and fitted up in shape to be towed to any point on the inland river parties who charter them may wish; and on Crooked River there are a couple of primitives.

At the head of Indian River we came to our old and true friend, Capt. Dave. Smith, at whose place I make my headquarters, and whose equal in the woods I have never met. Go there; stop with him; he will take care of you, and well, too.

At the head of Mullet Lake a new building has gone up, which looks large enough for a seaside house; and thence on across Mullet Lake into Cheboygan River, passing the mouth of our Black River to Cheboygan, from which point I started for Black Lake.

MY TAME OWL.

Editor Forest and Stream:—

Noticing some letters in the paper recently about owls, I want to give my experience in taming one. Some time ago I decided about a tame starling. At the time we kept Jack (the starling), we were never without something in the house that belonged to species supposed to be wild, and impossible to tame, but my mother never gave up until her kindness and love for these wild creatures overcame their fear; and they would soon come at her call and feed from her hands. We have kept a young leveret, a hedge-hog (*Eriacus europæus*), a woolly rabbit, and the tame starling, all at the same time, and it was fun to watch a big, fat, fatomcat sitting on the broad window sill, with eyes dilated and tail quivering, yet not daring to spring at any of them. I presume we were never without a hedge-hog in the kitchen. My home was the manager's house in a large mill, and sometimes beetles and such insects would find their way into the kitchen. Dick would keep the place clear of them, and sit watching for them as eagerly as does a cat for mice.

I grew up from boyhood with the love of such animals and birds strongly ingrained in my nature.

In the happy courting days, the younger brother of the family where I visited caught a young owl and brought it home. The girls, of course, were scared at the fussing, spiteful young thing. How to feed it was the question. It was a fair shot, and had a strong-shooting, 10-gauge Manton gun. Around the old mill sparrows fairly swarmed, so we easily got young sparrows and mice for him.

He grew famously strong of wing and a fine bird, and soon began to know my voice, and unless some one opened the door of the out-house or kitchen where he was kept, he would commence such a hissing that would surprise any one not knowing him. One of the family opened the door he was instantly swept along the hall, without a sound, into the room where I was quietly talking to my lady friend, and drop on my shoulder. If I pretended not to notice him he would turn his head to my ear and let out a gentle h-i-s-s. Sometimes we would say: "Well, what do you want?" He would stick his head around to my face and give another gentle h-i-s-s. Sometimes we would tease him by taking him before a large mirror, and he would go his feathers in an instant, and h-i-s-s, almost like a growl, would greet the ear, but he became too smart to get fooled that way, and when I took him to the mirror he was instantly on the lookout for sparrows. When he was on the right shoulder, I would pull a sparrow quietly out of my pocket, hold it up in the left hand so that he could see it in the glass. He was around to that shoulder and the sparrow in his beak or talons as quick as a flash. Often, before I could take him, he would go his feathers through the door, along the hall, and into the cage. One sparrow at night generally satisfied him. I supplied him with small game for nearly a year. To me he was ever gentle, never scratching, or pecking me, even though I did tease him a little. The mother of the family died, the brother was to go away as apprentice in a machine shop; it was a difficult matter to have the owl properly fed and cleaned, and they disliked putting him in a stranger's hands who did not understand him, so he was taken to a taxidermist, who killed and mounted him. I married soon after, and one of the principal ornaments of my first nest was the rogue. He was a handsome bird, admired by all who visited us in our new home, and certainly looked larger than owls do in a wild state.

Chicago, April 26th.

A VOICE FOR THE SPARROWS.

Editor Forest and Stream:—

I am no ornithologist, and aside from a lively interest in birds as harbingers of spring and beautifiers of our fields and woods by their presence and songs, know very little about them. But it seems to me all this big talk about "the sparrow nuisance" is decidedly far fetched; that "profession" the contrary notwithstanding. It would seem that the tree-destroyer *Prater domestica* does not accord with the proverbial friendliness of the American people toward foreign visitors. It is unseemly and wrong, because the English sparrow would not consent to act as a vermin for the Park Commissioners, to breathe out threatenings and slaughter through the medium of exterminatory laws.

In the village where I live the sparrow has been a resident about four years, and in that time (I say it unblushingly) I have learned to love him. And who with any abatement for bustle and stir could help loving this brisk, cheery little fellow? He is not beautiful, but there is a staid respectability about that sober, mottled coat that commands a certain degree of deference from thinking people. In midwinter, when the snow is deepest and the

air coldest; when even the hardy snow-bird thinks twice before venturing out, then the sparrow is in the height of his glory. His unmusical but not disagreeable "tweet, tweet," rings through the frosty air with an irresistibly exhilarating effect, and in passing back and forth between my business and home I have started the compact little flocks from their foraging grounds in the snow; and at their startling "whirr," up would come my cat with an instinct born of a little field experience, and I would almost imagine myself covering a bevy as they whisked over the nearest wall.

Sparrows may destroy fruit, but I never noticed them working on mine, and have never heard any complaints from my neighbors in that direction, although I have seen them often in my yard in considerable numbers. The nearest approach to fruit-flicking that ever came under my observation was one day last winter, when I noticed a flock vainly pecking away at some frozen apples left hanging on a neighboring tree. But they acted as if they were working under protest, and soon gave up.

That they are omnivorous I know, not from dissection, but observation. They will eat anything, and the sweepings of a restaurant are "nuts" to them. Good scavengers are they, and the sportsman of Alexandria made a mistake when he offered a bounty on their heads; for unless a marked change has come over that ancient "burg" since I visited it a year ago—it is as dirty a place as lies unquantured.

The question now will be, Which is preferable, the small bird armed with a pot-metal gun loaded with mustard seed shot, scouring the streets of Alexandria for a pot shot at the sparrows, or the birds themselves?

In the face of all opposition I boldly assert that the sparrow has not yet been proven a nuisance in the full sense of the term. Flaws may be picked in his character, no doubt, but the same may be said of any bird, and so long as he is non-migratory, giving us the benefit of his cheering presence during the winter, when all the other so-called native birds have deserted us, let us welcome him, pass over his little idiosyncrasies, and instead of exterminating him foster and cherish him, and there is no doubt but that the people will soon learn to love this little stranger.

H. W. D. L.
Dansville, N. Y., April 22d.

SPRING FIELD NOTES.—Cleveland, Ohio, May 5th.—Editor Forest and Stream:—I killed a Kirtland warbler yesterday—male bird, in perfect plumage. So little is known of this—one of the rarest of warblers—that I hasten to give the result of my five minutes' observations. I found him in a patch of bushes and briars. When I first saw him, he was perched on a low bush, and several times made sallies after insects, returning to the same perch. At no time was he over two feet from the ground. He was more like a small flycatcher than a warbler in his actions, and for quite a while I took him to be one, paying no particular attention to him. A short flight, a change of base, and an un-flycatcher-like hop after alighting, sealed his fate. His measurements are: stretch, 9; length, 5.80; wing, 2.75; tail, 2.35.

My record of arrivals this spring, dating somewhat from one of the places which you printed a short time ago, I send a copy, mentioning only the results of my own observations.

- Feb. 12th.—Robin.
- Feb. 19th.—Bluebird.
- Feb. 21st.—Woodcock.
- Feb. 24th.—Blackbirds, redwing and rusty.
- Feb. 25th.—Killdeer, song sparrow.
- March 4th.—Snipe.
- March 10th.—Fox sparrow.
- March 22d.—Ground robin.
- March 26th.—Pewee flycatcher.
- April 1st.—Field and chipping sparrows.
- April 4th.—White-bellied swallow, kingfisher.
- April 6th.—Virginia rail.
- April 9th.—Saw a brood of woodcock with feathers showing among the down.
- April 10th.—Brown and hermit thrushes, yellow-bellied woodpecker.
- April 15th.—Yellow rump warbler, ruby crown kinglet, swamp sparrow, barn swallow.
- April 16th.—Bittern.
- April 17th.—Purple martin.
- April 19th.—Catbird, blue-gray gnatcatcher, green heron, veery, white-throated sparrow, house wren, Florida gallinule, yellow-throated gray warbler, water thrush, king and Carolina rails.
- April 20th.—Least flycatcher.
- April 21st.—Wood thrush.
- April 23d.—Whip-poor-will.
- April 24th.—Black and white creeping warbler, black-throated green warbler, pine creeping warbler, yellow red-poll warbler, golden-crowned thrush, large-billed water thrush, Maryland yellow-throat, greater yellow-legs, long-billed curlew, little yellow rail.
- April 25th.—Scarlet tanager, kingbird, great blue heron.
- April 26th.—Long-billed marsh wren, cliff-swallow, bank-swallow, golden plover, red-headed woodpecker.
- April 27th.—Chimney swift.
- April 28th.—Blackburnian warbler, blue-wing yellow warbler, red-start, spotted sandpiper, white-crowned sparrow.
- April 29th.—Lesser yellow-legs.
- April 30th.—Bobolink, red-throated diver, horned grebe.

- May 1st.—Chestnut-sided warbler, warbling vireo, Baltimore oriole.
- May 2d.—Red-eyed vireo, orchard oriole, great crested flycatcher, Canadian flycatcher, night heron.
- May 3d.—Nashville warbler, black-throated blue warbler, yellow-throated vireo, solitary vireo, indigo bird.
- May 4th.—Wilson's thrush, blue yellow-back warbler, blue warbler, Kirtland warbler, Canadian fly-catching warbler, rose-breasted grosbeak.

The vernal migration of birds to Nova Scotia has been characterized this spring by very unusual occurrences. The regular migration has, no doubt, much to do with this; for, owing to its unusual severity from the first to the third week in March, we did not observe the wild geese going north before the 21st. A few days of mild weather then brought large numbers to our eastern shores, but during the last week of the month a relapse to bitter cold winds and hard frost took place, which had a terrible effect upon the poor geese, rendering them so

weak and tame that numbers were killed, some even without the aid of powder and shot. Quantities were sent for sale to Halifax, some selling as low as 25 cents apiece. The spring of 1889 will long be remembered on our coast, for the most remarkable visitation of wild geese known in the memory of the present generation.

The cold weather continued without intermission, accompanied by one or two heavy snow-storms, until April 19th, when the thermometer rapidly rose, and the weather became mild, and to the astonishment of the most observant, Halifax and its neighborhood was visited by such a concourse of fox sparrows (*Passerella iliaca*), song sparrows (*Melospiza melodia*), robins (*Turdus migratorius*), snow birds (*Junco hyemalis*) and a few others that the very streets of the suburbs were literally covered with them; all apparently busily searching for food. A naturalist friend, who lives just on the outskirts of the city, assured me that he did not think there was a single foot of ground in his garden that was not occupied by one or more birds of the species mentioned, the fox sparrow exceeded all others in numbers, and it would be no exaggeration to say that within an area of one square mile there were several thousands.

Such a concourse of migratory birds has never been seen before, either in Europe or America, and it reminded us, more than anything else, of one of those gatherings of storm-blown birds which every few years, about the month of October, alight upon the Bermudas, when the cedar trees and grassy slopes appear alive with myriads of feathered forms.

J. MATTHEW JONES.
We make a few extracts from our own notebook, some of which may be of a little interest to our readers. April 17th, took male *Porzana novboracensis* near Milford, Conn. This is the earliest record that we have of this species in this latitude, and we should be glad to learn if others have found it earlier.

April 26th.—Observed in Central Park male and female *Cardinalis virginianus*. A male of this species was reported to us a week earlier, but we are not quite certain as to its identification.

May 1st.—*Pipilo erythrophthalmus*, *Mimus carolinensis* and *Tetris baltimore*.

According to our limited observations this spring, most birds are about eight or ten days in advance of the usual time.

THAT SHOWER OF WORMS.—I have been under the impression myself until this spring, from many assurances, that, as mentioned by "J. C. B.," such showers do occur; but upon examination I am satisfied the belief is erroneous. In front of our State Capitol building, extending from the flight of stairs at its entrance to the main street, is an asphaltum walk about sixty feet wide by two hundred and fifty feet long, with quite an extensive grass plot on either side. Extending around the State House, raised about five feet from the ground, is a terrace. Noticing a few mornings since, after a brisk shower which had fallen during the night, a great many worms on the walk I followed a number of their trails, and they all lead to the grass plot. I then examined the steps and terrace and found a few on the first step, which is only a couple of inches rise from the walk, but none on the balance of the flight or the terrace, which to my mind conclusively exploded the "showers" business.

FRANK N. BEEDE.
Columbus, O.

TAMING RUFFED GROUSE.—Our correspondent ("G. W. B.," writing from Maine, briefly relates his experience with ruffed grouse in captivity. He says:—

Two years ago I caught a cock and hen partridge in the fall. I kept them in a common poultry cage, and they became perfectly tame so as to feed freely from my hand. I let them go after keeping them about one year. It is very easy to tame the birds if they are properly fed.

PRAIRIE CHICKENS DRINKING.—Our readers will remember that some time since we published under this heading a note from a correspondent, "N. W.," of New Bedford, Neb. A somewhat more detailed account of the circumstance having been sent to Prof. S. F. Baird, he has kindly forwarded it to us for publication. It reads as follows:—

New Bedford, Neb., Nov. 9th, 1879.—A flock of nine prairie chickens flew down, lit on a sand bar in the Platte River, and after looking around for a few minutes walked into the water and began to drink. "They did it in rather a peculiar manner. They would open their bills and act just as though they were taking a bit out of something solid, and would then hold up their heads to swallow;" not as high as barn-yard fowl generally do. They stayed on the plot about half an hour, and at times were within thirty feet of me. They were very deliberate about drinking. At other times have seen huge flocks of them on the sand flats drinking just before sunrise and just after sunset, but was never able to get nearer to them than thirty yards.

DOES THE GRAY SQUIRREL LAY UP A WINTER STORE?—*Perrysburgh, Vt., May 8th.*—"Shrapney," in the FOREST AND STREAM, doubts, very justly as I think, whether our common gray squirrel lays up any store for winter. It is the opinion of wood-hunters here that they do not, for what chopper ever found their store? and who that has frequented woods in winter where these squirrels were living, has not seen where they have dug under the snow for fallen nuts? Our hunters think that they do store up in the winters of poor nuts and acorns. They are apt to be plenty in the summer and fall of a year following a season when there were many nuts, but if this fall's nut supply is short, there will be almost no gray squirrel the next year. The red squirrel has more resources—the pine and hemlock cones hold a store for him always ready to his paw. John Burroughs, indefatigable writer as he is, is not always infallible, as when he says: "The fox bailes the hound most upon a hard crust of frozen snow." Any northern fox hunter knows that glass ice is a greater puzzle, to say nothing of shallow water.

AWAHOOSE.

LIST OF ARRIVALS LATELY RECEIVED AT CENTRAL PARK MENAGERIE.—2 moose (*Alces americana*), from Shelby, Nova Scotia; 2 yellow-headed blackbirds (*Xanthocephalus tatercephalus*), hab. Western States; 1 lot Amazonian parrots, various species; 1 rook (*Corvus frugilegus*), hab. Europe; 1 three-banded douroucou (*Nyctiphetus trivirgatus*), hab. Guiana; 1 yellow-headed howler (*Myiotes belzebub*), hab. Brazil; 1 white-thighed colubus (*Colubus bicolor*), hab. West Africa; 4 barnacle geese (*Bernicula leucopsis*), hab. Europe; 1 Chinese mynah (*Acridotheres cristatellus*), hab. China. All of the above purchased. The following birds have taken part of 1 lion (*Lion americana*), 1 camel (*Camelus dromedarius*), 2 zebras (*Bos taurus*), 2 black swans (*Cygnus atratus*), 6 wild geese (*Bernicula canadensis*), 6 opossums (*Didelphys virginica*).

W. A. CONKLIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—April 23d to May 12th, 1890.—One alligator (*Alligator mississippiensis*), 1 great-horned owl (*Bubo virginianus*), 1 Florida terrapin (*Pseudemys floridana*), 1 red-tailed hawk (*Buteo borealis*), 1 hog-nosed snake (*Heterodon platyrhinos*), 1 cardinal redbird (*Cardinalis virginianus*), 1 opossum (*Didelphys virginianus*), 1 chain snake (*Ophiodon elongatus*), 1 triangle, 1 Salles American (*Chrysotis sallesii*)—all presented, and 1 great ant-eater (*Myrmecophaga jubata*)—purchased.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; Means of access; Hotel and other accommodations; Game and its season; Fish and its season; Boats, Guides, etc.; Name of person to address.

—Address all communications to "Forest and Stream Publishing Company, New York."

FLY-FISHING FOR BLACK BASS.

FIRST PAPER.

I HAVE, heretofore, confined my remarks on black-bass angling almost exclusively to natural bait-fishing, and have endeavored to instruct the novice in the use of the most suitable tackle for that method before taking up the subject of artificial fly-fishing. I have also, I hope, been instrumental in causing some of the "angler" to discard his long, clumsy and ungainly rod and coarse tackle, and to substitute more delicate and elegant implements, which, while adding a hundred fold to his own pleasure, has, at the same time, enabled him by precept and example to assist in elevating the noble sport of black-bass angling.

And now, if I can persuade the expert bait fisher to advance still further, and can induce him to mount the top round of the pedestal of the leader and to take up the fly-rod, my object will have been accomplished, and my fondest hopes and earnest efforts in behalf of the black bass as a game fish, will thus happily end in fruition.

Artificial fly-fishing holds the same relation to bait-fishing that poetry does to prose, and, while each method will ever have its enthusiastic admirers, only he who can skillfully handle the comely fly-rod, and deftly cast the delicate fly, can enjoy the full pleasure of the gentle art. As the lover naturally "drops into poetry" to express the ardent feelings of his soul, "with a woful ballad made to his mistress' eyebrow," so the real lover of nature and the finny tribe as naturally takes to fly-fishing, and finds lyrical poems in gurgling streams, and pastoral idyls in leafy woods.

THE BLACK BASS FLY-ROD.

In a paper on rods, several years ago, I made the statement that the American trout fly-rod was the very perfection of fishing rods, and that all other rods should conform as nearly as possible to said model or typical rod, commensurate with the manner of service required of them. Upon this principle, an honest and well-made trout fly-rod, weighing from eight to nine ounces, answers admirably for black bass fly-fishing; and, fortunately, a suitable rod of this character can be procured from any first-class maker; but I would caution the new hand against the many cheap rods now in the market. A good rod can only be obtained at a fair price. At the same time I would here enter my protest against the lightest and "withiest" trout fly-rods, weighing from six to seven ounces, being used or recommended for black bass fishing. Such rods are but toys at the best, and only admissible for fingerlings or trout weighing from a half pound downwards. I know that some anglers make a boast of using such rods, but it is on a par with some gunners who risk to the extreme in light shot guns, and claim that a sixteen or twenty bore is capable of as good general execution as the larger gauges. Now these are both palpable fallacies, as great as that of "sending a boy to mill" in the "History of the Four Kings," as many have found to their cost.

I am a great stickler for extreme lightness in rods when compatible with strength and action, as all who have read my previous papers on black-bass minnow-rod will affirm; but there is a certain limit in weight that must be observed, so as to conform to and preserve other and equally essential qualities in a good working rod. Now, while I will guarantee, in open water, to land any black bass that swims with a well-made six ounce split bamboo fly-rod, I will not undertake to say how much time would be consumed in the operation; nor do I envy the general demoralization and used up condition of the fisherman and his game, that would ensue at the close of the contest. With a rod of suitable weight the largest bass can be safely and pleasantly handled, and it is worse than useless to make a toil of a pleasure by using inadequate means.

I have a Leonard split bamboo fly-rod, weighing eight ounces, which I find "fills the bill" exactly in all ordi-

nary black bass fly-fishing; but while in Florida I used a twelve foot, twelve ounce ash and lancewood fly-rod, made by Abbey & Imbrie, or at least by their predecessors, Andrew Clerk & Co., ten years ago, which I found none too heavy for the large bass of the waters of that State, and, in fact, there were times when I wished for an additional ounce or two in weight.

A trout fly-rod, then, weighing eight or nine ounces, and about eleven feet long, is just about right for ordinary black bass fly-fishing; but where the bass run large, averaging nearly or quite three pounds, a somewhat heavier rod, say ten ounces, and six inches added to the length, will be found a more suitable and pleasanter rod to handle, though the eight ounce rod will do even here for one who is an expert fly-fisher, and who does not mind a little extra straining of the brachial muscles.

But while an ounce more or less hardly seems an appreciable quantity in the abstract, yet when added to or taken from a fly-rod, like the fraction of an inch as applied to a man's nose, it makes a very great difference in practice and reality; and in the former case it is better to have an ounce too much than a half ounce too little; for, like the Winchester repeating rifle when tackling a grizzly, it gives one confidence in his resources which adds materially to the zest of his sport.

Cynthiana, Ky., May 10th.

J. A. HENSHELL.

NOTES FROM VIRGINIA.

THE spring of 1890 will be long remembered by sportsmen in this district for the unusual and almost unprecedented influx of duck and snipe. Great quantities of both have been killed on grounds where hitherto they have been but rare visitors, and certainly never counted as forming part of the game list of the locality.

One gentleman of my acquaintance must have killed at least fifty couple of snipe and over forty ducks on his own and the adjoining plantation alone, which beneath the shadow of the "Peaks of Otter," is entirely a new feature added to our sporting year. The unusual mildness of the winter was of course the prime cause of this change of flight, and I am afraid, unless there is some other agency at work, few of us will live to see such another shower of feathered emigrants.

The gun, however, has been assigned to its case, and the disciples of Isaac have commenced operations, and as time or opportunity permits, every trout fisherman, either with bait-box or fly-hook, betakes himself to the hollow gorges and mountain valleys, where the crystal streams foam and tumble from their aerial springs. The forests on the mountains have now burst into full leaf. The calmes, the rhododendron and the dogwood relieve the deep green of the evergreens, and the warm sun has pierced the deepest and blackest pools, and the wriggling worm of the bait fisher must now give way to the feathery charm.

I have lately ridden for seventy miles along the eastern base of the Blue Ridge, fishing some streams and stopping to gossip on troutling matters as I crossed others, and the universal accounts of the one correspond exactly with my personal investigations of the other. There is an immense supply of this year's fish everywhere. Large bigs and small fish have been the order of the day in every stream. I fished a day and a half on what is perhaps our best river, with one hundred and twenty-five fish as the result, but so small in size that I shall certainly leave it alone till next year, and go further afield to satisfy my piscatorial appetite.

Last year, on the same stream, it took a favorable day and a good hand to basket twenty-five, but they would weigh eight pounds. The story of this stream is that of all other tributaries of the James that flow eastward, in a relative degree. Next year the fishing in all—more especially as the laws are gaining force—will return to the fertility of three years ago, let us hope. The explanation is simple; the hard winter of '78-'79, and the breaking up of the ice gorges that had blocked up every mountain stream, destroyed the greater portion of the young fish.

There was considerable discussion among our anglers last year as to the extent of damage done in this wise—some scoffing at it, and saying the streams were "fished out." This was illogical, as even a considerable increase in the number of anglers would not make a river that had kept up its supply for years, under a good deal of person, cold and steady, and an almost imperceptible addition to those who whipped its surface would certainly not of a sudden commit such havoc on its finny inhabitants. However, we now know for certain that exceptionally hard winters will cause an enormous decrease for a year or so in the quantity of fish.

Fly-fishing is a new thing here, comparatively, and is now pretty well limited to two or three of the Piedmont counties. Great enthusiasm, however, prevails along the course of one or two of our most beautiful streams, and the talk around the blacksmith's shop and the village stores is all of March browns and red hackles, of "thumpers" and "whalers." The fish laws are carried out to the letter, and the mountaineers don't slip a bag or a net into the creek now to save their lives. Two of them tried it on in a sequestered glen the other day, but were reported on and promptly marched down to jail amid the jeers of their countrymen.

"You drop a net into that stream, you darnedascal, you," says the mountain magistrate (himself a keen fly-fisherman, and elected with a view to that), "and dawg my skin if I don't hev you grinnin' thro' them iron bars in a hurry."

Few people are aware that there is a waterfall in Nelson County, Va., nine hundred feet high—on a leap of two hundred yards, and that a break in the line of the maining seven hundred are a succession of leaps, varying from forty to two hundred feet, but pausing on narrow ledges that, from the road which winds along the side of the opposite mountain, are scarcely noticeable. The grandeur of this fall, made as it is by a stream of considerable size, may be imagined; and the strangest part of the whole thing is, that I question whether its extent or even its name is known in the cities, except by those who may be connected with the neighborhood.

Very few bass were caught, to my knowledge, before the 1st of May, on which day the close time commenced. The late season, opening on July 1st, is, of course, principally relied on for sport. There is every reason to expect better bass fishing than ever, in the higher reaches of the James this fall. The fly proved a great success there

in September last, Gen. Wade Hampton killing something like six hundred to his own rod in three weeks, near Dagger Springs. RINGWOOD.

MICHIGAN GRAYLING.—The grayling season in Michigan opens June 1st.

VERMONT—Ferrisburg, May 8th.—Bass are beginning to bite, and have greatly increased in numbers since the passage of the protective law of 1874, wherever it has been enforced. AWAHOOSE.

THE RANGELEYS.—The Eastern Railroad has tickets from Boston to the Rangeleys and Moosehead and return: Rangeley, \$12.50; Rangeley Outlet, \$13.75; Indian Rock, \$15.25; Upper Dam, \$14; Middle Dam, \$13; Mt. Kineo (Moosehead Lake), \$15; Dead River, \$13; Forks of the Kennebec, \$13.

MOOSEHEAD LAKE.—Patrons of Moosehead Lake and vicinity will be pleased to know that the ice left the lake on the 10th inst., and before many days elapse the trouting carnival of that region will begin. Extensive hatchling houses were erected on the lake in September last, and have proved a great success. Fifty thousand land-locked salmon and one hundred and fifty thousand trout, recently hatched, will be ready to turn into the waters of the lake in June, which will increase the fishing facilities of the place, and add new attractions for its many visitors.

Under the bold face of Mount Kineo stands the Kineo House, a convenient center of attraction to the sportsman, and where he can fill his camp bags with provisions before starting on the many tours through the picturesque rivers of Maine. Thus early last Maine began to restock her waters with salmon and trout, learning by the lack of early effort in sister States the necessity of the hour. T. S. S.

TIN POND—New York City, May 14th.—Editor Forest and Stream:—I have just received the following, which seems to have items of interest and information to the multitude of readers of your increasingly valuable paper, which for years has had no superior as a gazetteer of facts, science, literature, and healthful amusement. The letter is dated at Bristol, Me., and reads as follows:

"Friend H. I have not been to Tin Pond for several days. When I was there last the ice was breaking up, and I expect that before this it is all gone, and probably the trout bite sharp. I have never seen partridges as plenty in the spring as this year. Every where I go I see them, and people generally speak of how numerous they are. If they are lucky in their nesting the chickens will enliven the forest this fall. Deer and caribou are very plenty, having had an open winter, with little snow, they have escaped the usual massacre by the natives. My bear traps are not set now, though bruin is busy killing sheep near our houses. When I was at the pond last I found where a hunter had killed and dressed a deer in the dooryard of my camps, and put the head on the corner of one of my camps. Government has given us two snails per week from Kinsfield, and Cleve, the owner, who is a sportsman, has put on a daily sale to Kingfield. He has good teams. Dr. Hill, of Biddeford, writes he will be here in a few days with a party of friends. He comes early to escape the flies and get ahead of the rush. The party with him last autumn came later. Have not heard from Col. Hayden lately. He spent the winter in Kansas City, and is better in health, as his army friend will be glad to hear. KENNEDY SMITH."

MASSACHUSETTS—New Bedford, May 14th.—But few catches of trout have been made in this vicinity, and those mostly just coming out of salt water, near the mouth of the Neversink. Great fishing there is an abundance of variety—striped bass, tautog, scup, bluefish, etc. Several trout were caught in this vicinity last week weighing over nine pounds—one fourteen and one quarter pounds. Striped bass fishing at the Vineyard and Noman's Land will soon be in order. CORCORAN.

Bolton, May 14th.—Mr. R. Barrett has a large cistern running spring water in his kitchen, in which he kept two tame, pet pickerel, and has had much amusement in seeing them catch flies and other food which he placed on the surface of the water. A few days since he found both of them dead. Pickerel No. 1, being a larger, had caught the other by the head, and was about to swallow him about half his length, but could get him no further, and, owing to the curved form of his teeth, he could not disgorge him. In this condition of things, pickerel No. 2 was suffocated, and pickerel No. 1 died from exhaustion.

ADIRONDACKS—Boonville, May 10th.—I have just returned from Forge House, Fulton Chain, Brown's Pond, where I had three days' very good fishing. On May 5 I caught a speckled trout in Nick's Lake; dimensions as follows: weight, three pounds; length, twenty inches; girth, eleven and a half inches. This trout was in fine condition. Along with it I got several fine trout, one to one and three quarter pounds; all those with big and light rod. Also caught six good trout on the rapid Moose River, with fly. I think by the 26th inst. fly-fishing will be good, as the trout are getting on to the water; that is, if we don't have very heavy rains. Four the lakes and streams very high, but falling rapidly. Very hot; regular fly weather, but no flies. R. F.

TROUT IN THE ADIRONDACKS.—Letter received from E. E. Brown, Saranac Lake, states that the trout fishery in the North Woods is good, and, in fact, never better. His address is Saranac Lake, and he is a good and reliable man, and thoroughly posted in the North Woods. EZEKIEL.

NEW JERSEY—Red Bank, May 17th.—The fishing season has commenced in the North Shrewsbury River. I took the first striped bass this A.M.; weight, two and half pounds. WILD.

KENTUCKY NOTES.—Mill Spring, May 14th.—An angler has been exceptionally good in Big South Fork of Cumberland this season. Winter mild, and spring was good as early as January. Strings have been let and the average weight much beyond that of last year before. We had begun to think that last year's record afforded no black bass larger than three pounds, but such have been comparatively fingerlings on some

this year's strings. A couple of slatherers in a few minutes took six from one pool, with bait, ranging from three to five pounds honest weight, and after losing a very large pike secured a thirty-six-inch by dispatching him with a pistol-bait after he threw up the sponge.

J. W. McLister, of Stanford, Ky., the youngest National Game president in the United States and a recent convert to the refining persuasion of angling, has made a score in points of numbers and weights which thrills the professors hopelessly rearward for the season. Our Legislature acted liberally with the Fish Commission, and a revived fish law inspired a hope that hot times are in wait for malefactors. A close season for some of the central streams has aroused a recklessly rebellious spirit in many whose indulgence in seining and other violations promises fun and profit to Messrs. Grab, Snatch & Keepem, of the legal profession.

A "hauling over the coals" of one or two parties will satisfactorily demonstrate the beauties of the state and quickly awaken a reverence of the "majesty of the law. The sooner the better, say we, and we warn "Dilsey" and others that our tender-hearted Governor has even thus early exhausted his enormous stock of pardons. KENTUCKIAN.

Mt. Sterling, Ky., May 13th.—Fishing has been better than for many years, I think, in much high water that prevailed all winter. Bass fishing affords fine sport. "New lights" abundant, with an occasional California salmon, the result of the plant of 1878. Bass are now on their beds hatching. Prospects good for fine partridge shooting (*O. virginianus*) next fall, as there are more brooders about the country than I have known for ten years, but our leatherheaded Legislators have passed a law making this season, until December, open season. Clark, Fleuning and Montgomery counties. I don't know why this (Montgomery County) should be included, without it is to give the netters and pot hunters full sway, to the exclusion of a few law abiding sportsmen. VAN.

Trout in Tennessee.—*Nashville, May 12th.*—Genuine brook trout have been taken in the headwaters of Harpeth River, a tributary of the Cumberland. Col. John B. McEwen, of Williamson County, is the authority. He took one there last week weighing three-quarters of a pound, and says that he has heard of others being taken, and that he believes they are quite abundant higher up the stream, but owing to the dense undergrowth, snakes at the wild state of the country, no one has ventured there this season. They are not indigenous to our waters, but are the result of a lot of fry procured from Seth Green in the month of February, 1859, and placed in the streams. Col. McEwen believes that these streams—Lick Creek, Turnbull and South Harpeth—take their source from a subterranean lake in Williamson County, the waters of which are exceedingly cold, and where these timid, delicious fish have taken refuge and procreated.

Another interesting statement from the same authority is that this summer there has appeared in countless numbers a fish hitherto unknown to him. He has called them forked mouth suckers, in contradistinction to the common white sucker, and on account of the peculiarly shaped mouth, which is like a cross. In color they are similar to our bass, and average in weight from two and three to four pounds. They are very quick-acting fish, and took the hook voraciously. One which he knew taking between forty and fifty pounds in about one hour. This last statement, and the one concerning the subterranean lake, deserve scientific investigation. As authority, Col. John B. McEwen stands preëminent in this country. J. D. H.

IOWA.—Keokuk, May 10th.—It may interest some of your readers to know that shad have been seized here, at the mouth of Des Moines, this spring, weighing from one to one and three-fourth pounds. F. W.

HE IS RIGHT.—*Brookville, Ont., Canada, May 4th.*—Mr. Van Slicen's observations, in No. 19, of trout striking at flies, out of water, with their tails, remind me of my own conclusions on the same subject. The first time I have seen trout jump or strike at my flies was in June, 1872, at or below the great falls of the Grand Metis River, P. Q. I had occasion to hook one particular old fellow, who had been striking two or three times at my fly, not only in water, but on the surface of the rather foaming water, but also when the fly was quite motionless. I had last hooked and lauded him in this way: he struck again with his tail at the fly, which effort drove him a foot or two behind his prey, and then turned, like a flash, and hooked. He weighed over two pounds, and I believe he exerted his maneuvers for the purpose of drowning or drowning the fly, so as to make sure of his succeeding upon the surface. I have seen the same action of trout on Lake Superior waters, and that always when the fly was thrown below little rapids on calm surface, but never when I moved it with the current down. In that case the fish hooked directly. I had concluded that the fish attempted first to drown the winged victim, because they returned at once to bite, after making a violent spurge at the fly on the surface. Leaving the fly quietly where it then was, the trout invariably returned and took it.

Are my conclusions correct? V.

CAPE COD AS A RESORT FOR SPORTSMEN.—Probably no section of country on the whole Atlantic Coast can furnish so many varieties of game and so many enjoyments to the sportsman as good old Cape Cod. Speaking of Cape Cod as a resort for sportsmen, I am reminded of the allowed to use that term, meaning the character of the country and not the condition of the people.

Take it from Middleboro down the Cape, and any person, no matter where he has traveled, will find many things that will interest him. In the first place, he is heartily welcomed by the good old honest Capers, some of whom have not seen a city for twenty years, and are never so pleased as when listening to the traveler retailing out his budget of city news.

To the traveler visiting the Cape for the first time the people may seem to be too avaricious, but after he has made one or two visits, and sees on what the people depend for their daily bread, he feels happy that he is able to help increase the little pile that is put away for the rainy days that some times come during the winter. In fact, he is not so much interested in the people as he is simple, and he would err if they would remain the same were the association is changed. But these associations

are just what make the people so peculiar. The men, the greater part of them, living, as they do, the hardy lives of fishermen, regard life in a far different manner from what most of us do. They are always ready to help one another.

The towns on the Cape resemble each other very much. A hotel, which is generally pretty comfortable, but not as good as a private boarding house; a lively stable, which is the most profitable investment in the town; a public library, a town hall, and anywhere from four to six churches, form the public buildings of a town on the Cape; and then there is the post office, but it is hardly a public building on account of its size. The majority of the buildings are of the most ancient type. But taking things as they are, I feel confident that no one who visits the Cape for pleasure would have anything changed.

As regards prosperity, the Cape is falling behind a little each year. The fisheries have of late years been but a poor investment, both to the fishermen and the owners; and the young people, becoming satisfied that the Cape is not to be made at home, strike out for the large cities, and with the exception of an occasional visit, soon forget their native land. The farming on the Cape, with some exceptions, is, of course, a failure, so that, taking into account all these drawbacks, it is no wonder the country is making little progress. But what the Cape lacks in prosperity is made up in the natural advantages offered to sportsmen. I have had the pleasure of visiting the Cape year after year for the past eight years, and I have not had a dull season's sport during all that time. The scenery on the coast is wild and picturesque; the fishing is good, and considering all in all, the Cape, as a sporting ground, is first class, as good, if not better than Prince Edward Island. L. M. H.

THE NEW AUGUSTA FISHWAY.—The new fishway in the Kennebec River, at Augusta, Me., has just been completed, and the river, it is hoped, will again be restocked with the Salmon once so plenty there.

The fishway has been built under the personal supervision of Everett Smith, Civil Engineer, of Portland, Me., and several important changes and improvements made in the original plan, whereby a great saving in cost has been effected, as well as rendering the fishway more efficient. Mr. Smith regards one improvement especially as an innovation in regards to fishways that is of great value, and one applicable to any form of fishway or any dam. The fall at the Augusta dam is about 18 feet, and as this is the first lower dam, it forms the key to the Kennebec river, as regards the ascent of fish. From the West end of the dam a massive crib pier extends down stream, and the space between this pier and the canal wall is filled by the fishway, which is about the shape of a diamond in its general exterior form. The head of this protecting pier has an elevation of 12 feet above the dam, to insure safety to the fishway, from logs or ice during the greater part of the year. The river is subject to the water for the fishway flows from the river above the dam by a passage through the head of this pier. This passage may be closed by a drop-gate; there is a waist-way across the pier, and still farther along is the flume from which the water is delivered directly to the upper portion of the fishway by means of gateways occupied by iron swing-gates.

These gates are so arranged, that when one is submerged it may be closed and the next higher one opened. Thus the water may always be delivered gently without any "head." The fishway is three stories high, and the interior divided into a series of chambers through which the water flows in a uniform descent, twice making the entire circuit of the structure, which it finally leaves at the outlet. In making a descent of eighteen feet the water flows an extreme distance of 594 feet, although, as measured by the center of the current, the distance is considerably less. The floors are paved with stone, which serves to lead the structure, to retard the current of the water flowing over it, and to present to the fish a bottom resembling the natural bed of a stream.

At the lower end of the flume there is a wasteway, and the water flowing from it unites with that flowing through the fishway at its outlet. The volume of water is thus increased at the outlet in order to attract fish to the center of the current, and after entering the fishway at its outlet, will ascend the current that flows therein, until the flume is reached, whence they pass to the river above.

The Kennel.

THE NEW YORK DOG SHOW

SINCE the institution of dog shows at Newcastle, England, in 1858, up to the present time, there has never passed in review such a splendid lot of sporting dogs as that exhibited during the three days of the bench show of last week. This fact was universally acknowledged by all the American critics present, and heartily indorsed by both of the visiting English judges, who said that even in their own country no such sight had ever been witnessed. The non-sporting classes were also above the usual average of similar exhibits, and with two or three exceptions showed plainly the advance made since the initial shows in 1877. Almost all the old leading breeding kennels, that are scattered over the length and breadth of the land, had entered their typical representatives, and in many cases their owners accompanied their favorites to insure their being shown to the best advantage before the eyes of the judges. Many of the crack dogs, however, were not in bench show condition, the

lateness of the season, and the unfortunate postponement, having something to do with their not appearing in first-class trim. Conspicuous among the absentees were the dogs of the St. Louis Kennel Club, whose collection of pointers is acknowledged to be the finest in America. It was found, early in April, that this kennel would be unable to put in an appearance, and as several of the dogs in the first place had been entered conditionally their withdrawal was in no way connected with the change of dates. Faust had engagements that prevented his coming, Jaunty was due to whelp on May 5th, June ten days later, and Clytie the latter part of this month. Jessamine gave signs of coming in season, and she was to be bred to Bow. This only left Lassie and Zeal, which it was deemed not worth while to send. J. H. Whitman, of Chicago, was also not represented, and several other noted kennels were not in condition to show.

The building is well adapted on many accounts, as the high roof gives plenty of ventilation, so necessary for the comfort of visitors and the welfare of the animals; and as clear weather prevailed, the skylights remained open, somewhat abating the stifling heat of the first day. As we have already said, the arrangements for benching were good, nor did the judges suffer from the usual delay caused by an insufficiency of keepers to lead out the dogs during the judging. But before going further, we may remark that in our opinion it should be an imperative rule that all dogs should be led into the ring by keepers, and by keepers only. A dog will show to much better advantage in the hands of his master, and a well known owner commands more attention than a uniform attendant. Therefore the dog that is led by an uninterested stranger is at a great disadvantage, and the frequent passing by of splendid animals can generally be traced to this cause. It is the more necessary, too, that this reform should be adopted, that the exhibitors can hold the proper authorities to an account, and oblige them to rectify such mistakes as occurred in the judging of Class 29, native English setter bitches, when Mr. Well's dog was taken from the ring without even a simple mention, and the rejudging of the whole class had to be gone over again. As it was, the fault was placed on one of the employees of the Committee, and the error at once properly rectified, the bitch then receiving the third prize. But if the owner had been exhibiting the dog in question, and he also had mistaken the directions of the judges, he would have had no redress, for it appears that the keeper, in the din of the barking and howling, did not hear that he was to move the dog to the further side of the enclosure, but carelessly withdrew her from the ring.

This was not the only class that had to be rejudged, as a protest was entered by several of the largest exhibitors to the awards given in Classes 19, 20, 28, 32, 33, 31 and 40. After talking the matter over, the Board of Appeals entertained only the protest applying to Class 40, in which Mr. John Davidson's Byron, a red and white dog, had received the first prize, and the red Irish setter dogs were ordered back into the ring. Admitting the erroneous award in this case, we consider the precedent of rejudging a very bad one, and it should be discouraged by those who do not desire to see our shows turned into bear gardens, just because Mr. Jones or Mr. Robinson thinks that he is aggrieved. Believing this to be a very important matter of consideration for managers of future shows, and wishing to place before our readers in as simple a manner as possible the rulings on which the two above named classes were rejudged, we cannot point out the difference in a clearer way than by first introducing Rule 10 of the show, which is supposed to govern both cases: "The decision of the judges will be final in all cases, except where mistake, fraud, misrepresentation or collusion can be shown; in any such case the committee of appeal must decide all questions, except those of merit, and the dogs may be rejudged."

It will thus be seen that there was just ground for rejudging Class 29, because one of the dogs had been taken from the ring by a mistake of an attendant; but we utterly fail to see upon what sufficient grounds Class 40 was rejudged, as Rule 10 plainly states that the decision of the judges shall be final, and they alone to decide upon the merits of each entry. That they did decide and award Mr. Davidson's dog the first prize is on record, and they should have adhered to it. Therefore, the rejudging of this class was a very weak performance, and the creating of an extra first prize for Mr. Davidson's entry inconsistent.

As we have already stated, the general arrangements were excellent, but the blot on the show was the admission of many many animals, and the neglect to have a proper veterinary inspection of each animal as it was presented for admission. We believe with Stonehenge that as large sums of money are annually spent in rearing and feeding dogs with the express purpose of exhibiting them, it may be admitted with argument that it is desirable to conduct these shows in a way most likely to give satisfaction to their supporters. This is not done save by a careful and competent inspection of each animal as it is exposed, and a disease that is contagious. We know of several of the most noted breeders in the country who refuse to make their entries solely on this account.

That much dissatisfaction was expressed at the judging has now been heralded through the land. But we can only reiterate what we have already written on the subject. It is to be presumed that every one that places his animal in a bench show, or runs him in a field trial, is aware that the dog is intended for competition, and that there are to be judges to pass on his merits and failings. That the exhibitor should know the names of the judges is of paramount importance. Once knowing their names, he can determine for himself whether they are fitted for the position or not, and whether they will be perfectly unbiased in their decisions. If he resolves that they are

not, he should not enter his dogs, there being no obligation for his doing so. But if he does enter his animals he thus accepts these individuals as fit persons to judge his entries, and thus binds himself to abide by their judgments. If, then, he adopts the latter course, and finds too late that he has been wronged in a willful manner, he would show more spirit, good sense and manliness by quietly submitting to the injustice which he has no power to remedy, and ever afterward refusing to enter his stock in any show or trial conducted by the same management. Therefore, let gentlemen of universal experience fill the list of judges; their names should be announced when the entry roll is open. Then will the exhibitors commit themselves morally, and either courtesy or a sense of shame will oblige them to quietly abide by the decisions of the judges whom they have practically accepted.

We are pleased to state that these opinions have received the hearty indorsement of many prominent exhibitors, the *Live Stock Journal*, of London, and that of the eminent authority, Mr. Vero Shaw, who states that as they exactly represent his views he reproduces them for the benefit of his readers.

The judging of the show was spun out through the three days of the exhibition, and on the last day the special prizes were awarded that are noticed further on.

MASTIFFS.—The first three classes were devoted to what is known as the national dog of England. They were not a representative lot. Our preference in the dog class was in favor of Dr. Albert H. Buck's Garm, V. H. C., who was more massive in shoulders, with good body and younger than his two mates who received the first and second prizes. We also liked Lehmann's Cesar much better than the winners, although he was poor in color and received no notice. In the bitches, Lehmann's Juno, an animal of splendid size, rose superior to the first and second choice. Mastiff puppies contained several promising youngsters, but puppies are always dangerous and unsatisfactory things to judge and criticize, as they alter so much.

ST. BERNARDS.—Godeffroy's rough coated Marco, by Macdonald's Dash, out of Prince Solms' King, deservedly received the blue ribbon. He was an animal of perfect form, of lion color, with yellow and black markings, and a typical dog of his class. The second and third are also excellent specimens. It was a class to be proud to win in. Only two entries marked the rough coated bitch class, Thorne's Sheila coming first. The smooth strain were a fair lot, especially those of Haine's kennel. Only belonging to his owner, orange tawny and white in color, of good size and substance, with excellent legs and feet, received first, with Weighell's Maria a good second.

NEWFOUNDLANDS.—This was a grand class, one of the best in the show, and in looking at McCormick's Charlie a lover of this breed had a thoroughly typical dog to study from. This winner of first was of the black type, so fashionable now in England; a splendid animal, with absence of the faulty curl on the head. Pryor's Charley, second prize, was not like as well as Alexander's Plato, although he had the "Cato" coat. The latter, however, was very highly mentioned, was a grand animal, but deficient in coat, as it was too curly. Meier's Turk, V. H. C., was a very representative type of the Landseer Newfoundland. He was the only one in his class, and he received in his recumbent position the ovation which the great artist's picture has won for him the world over. Being cow-headed was his principal fault. Our remarks about puppies in this class, but we consider them at best but a poor lot.

SIBERIAN.—Another of the grandest classes in the show. They were all very large and powerful, but some of them showed too much of the mastiff and too little of the hound. First went to a fine black and spotted dog, Van Schade's Sultan. Second prize, Keller's Lyon, also to a good dog, but not of as good form as first. This dog was won last year. A third prize, extra, was begged by the judge, Dr. Stables, for Mrs. Rutan's, a remarkably fine animal, who promises later on to come to the front in any show. Dr. Marshall's Bosko, a mouse colored dog, received a V. H. C. He was the Goliath of the show, and weighed 170 lbs.

GREYHOUNDS.—This was a fair class, with fifteen entries. Siner's mouse colored Prince, a rare good dog, received first, with Colt's Rose, a pretty and really bitch, as second. We rather fancied Bartlett's Viscount, a splendid dog of good color, grand depth of chest, with muscles in hind quarters and shoulders showing power enough to carry him to the fore, but with a too great circumference of the loin. Walton's thoroughbred also received mention, but though an excellent animal there was deficiency in loin to place him alongside of the winners.

DEERHOUNDS.—This class of highly more ornamental than useful breed of dogs was mainly full, with excellent specimens from the kennels of the two neighbors, Messrs. Dana and Barlow. As a rule, however, the whole lot had bad feet, Dana's iron gray dog, Glen, and Barlow's grayish brindles, both excellent in coat, received first and second. But taking the class from a deerstalker's point of view, we were particularly well pleased with Howard's Moliant, which was deservedly very highly commended. It must always be remembered that the dog that is strong in neck and combines power of body and legs, is the only one for practical use. These characteristics marked the Howard entry.

CHAMPION POINTERS, LARGE SIZE.—Howe's well-known winner, Rex, in the absence of the St. Louis Kennel Club's Bow, received the prize in the dog class, while Whitehead's Fan gathered in the laurels for the best bitch.

POINTERS, LARGE SIZE.—This class, in our mind, was not up to the mark, and the medal went to the "Wilkes' Tramp" to make him worthy of a first we could not discover. He is handsome in coat and color, but too long and weak in the loins, with an exaggerated and disproportioned head. Second prize in this lottery fell to Aldrich's Ray, a pointer of the old type. Coffin's Rake II. drew third. His size must have taken the judge's eye, for he is a large animal. Wagstaff's Lud Dorrfin justly received very high notice, and Goodman's Ratler, unnoticed, was a magnificent fellow. Our only regret, however, taking all in all, was Godeffroy's Croxteth (champion Barry-Macdonald's Jane), only lightly mentioned, but unfortunately he was shown in very poor condition. He is a really first-class animal when in trim, with a grand head and good ears and immense propelling powers. In

the bitch class, Moore's Stella, a liver and white animal, properly received the first. She has a fine head joined to an excellent, well-shaped body by an almost faultless neck. Hart's Flash, a fine two year old liver and white, was awarded second.

CHAMPION POINTERS, SMALL SIZE.—In the dog class the redoubtable Edmund Orgill turned up with Rush and swept the board. He also was winner with this superb animal of two of the special prizes. We may here remark that the Orgill kennel is always in prime order to show, as we have never yet seen the owner bench an entry that was not in "bang-up" condition. In the bitch class Van Wagenen showed Dutchess in perfect condition, and defeated Moore's Rose, who was not in her usual good show form. It would be simply impossible to find two more perfect pointer bitches. Dutchess shows the benefit of the freedom that is allowed her, for she has no run of her owner's power, and as a result, consequently more power in body, while Rose has if anything a better head. Barker's Princess, also exhibited, but not for competition, was a superb black animal from the tip of her nose to the end of her tail. She was grand in her glossy coat, with wonderful legs and feet.

POINTERS, SMALL SIZE.—There were many good dogs in this class, and many were passed unnoticed that deserved the highest mention. In the dog class Richmond's Snipe secured first, a fine lemon and white, sprightly-looking fellow. Tenslow's Range followed with second, with a very much better head than Snipe's. Third was awarded to a liver and white dog of three years old, yclept Sam, exhibited by Horace Smith, which in our judgment was far better than either first or second. He was all over a very handsome animal, with an exceedingly fine head, many points of which were unusually well defined—such as the character and position of the eyes, breadth of forehead, line of the snout, indicating the division between the lobes of the prebium and the drop below the forehead almost perfect. Wood's Ponto deserved mention, as he had an excellent head, and Price's Setton II., also unnoticed, took too much after his sire to be passed without notice. In the bitches Symington's Rose (Lanke-Lilly) received first, Livingston's Rose, lemon and white, whom we liked, second; and Cornell's Queen May, third, and Roach's Queen II., fourth. Fricke's Lady Sefton was a very worthy of high commendation, and the other entries that were ribboned deserved all they got. We cannot quite follow the judges in their awards here, recognized authority that they are. How they passed unnoticed Moore's Countess Bang, when she was the best in the class, shows that it is full time that some new system to prevent such mistakes was adopted. Can it be that there are too many cooks? and would it not be better to have one? Moore's Countess Bang is one of Moore's recent importations; she is by Bang, out of Bella; a remarkably fine little bitch, with great depth of chest, good body and a clean, neat, well-proportioned head, with unusual muscular development in hind quarters. Bred to go—as she does—like a flash, and said to have an excellent nose. The dog puppies numbered twenty-six entries, and for the number were a good deal of better than the number. There were, however, several excellent youngsters. Lamb's Flash (Snapshot-Elf) headed the list with first, a very promising puppy. Stout's Pico (Rake II.-Juno), a white and liver dog of eight months, second. The others of the class that received mention got only their due. Orgill's Snapshot-Ruby puppy was a very handsome little fellow, with a good head, and promises in time to be one of the best. He deserved a better showing than he got. Thirty-one entries covered the puppies bitch class, and there was a lot of weeds among the lot. First was given to Lamb's Flirt, litter sister to winner in the dog puppies dog class. Second was awarded to Howo's Neva (Pete-Princess), a black and white ticked bitch, with no strong developments. Roach's Prudence (Rush-Dutchess), a much better animal than second, received a V. H. C. and a litter sister, a very taking-looking bitch, than-me-got, she was much deserving than her relation. The judgment was exceedingly faulty in this class, as Orgill's coming bitch Rue (Snapshot-Ruby) certainly should have had second place. She is a charming little beauty, and her first appearance deserved better treatment.

CHAMPION ENGLISH SETTERS.—This class of dogs, which may be aptly termed the seven champions of Christianity, was a sight well worth seeing. Speir's Francis St. Elmo adding another ribbon to his large collection of trophies, and to winning the special prize, the best English setter at the show. Moore's Leicester was absent, but Burges' Druid and Livingston's Ray both crowded the winner, Mrs. Moore's Lark being out of the race. Magraw's Royal Duke and Lincoln & Hellyar's Frank H., the two other entries, made up the complement above named. In the bitches, Arnold Burges won in a canter with Queen Mab. Stearns' Pearl, a finely developed and well proportioned bitch, with superb limbs, also attracted our attention. Charles's Rose Nina, Florence and Daisy were benched together in one stall; they are a handsomely marked lot of blue Beltons, and show to best advantage when grouped together.

IMPORTED ENGLISH SETTERS.—By far the best class of the show, combining a splendid lot of dogs, such as are seldom ever seen at any exhibition. Fay's Coin (Leicester-Rose) received first, and Drane's Lofty second. It was nip and tuck between these superb animals, and, on the whole, a fairly judged class. Moore's Leicester was the best English setter at the show. Moore's Leicester was absent, but Burges' Druid and Livingston's Ray both crowded the winner, Mrs. Moore's Lark being out of the race. Magraw's Royal Duke and Lincoln & Hellyar's Frank H., the two other entries, made up the complement above named. In the bitches, Arnold Burges won in a canter with Queen Mab. Stearns' Pearl, a finely developed and well proportioned bitch, with superb limbs, also attracted our attention. Charles's Rose Nina, Florence and Daisy were benched together in one stall; they are a handsomely marked lot of blue Beltons, and show to best advantage when grouped together.

a charming animal, as is also Davidson's Aika (Royal-Nina), White's Queen Annie (Carlowitz-Queen Bess) and Godeffroy's little Silk (Dash-Daisy) deserved all they got.

NATIVE ENGLISH SETTERS.—The dog class being the largest in the show, it closed with sixty-five entries. There was an immense number of weeds, as may be supposed, but when these were gone rid of there were left some splendid specimens. We were disappointed with the entries as a class, and more so with the judging. By the selection of Walter's Grouse, a fine, large American orange and white, and then turning to Lincoln & Hellyar's Afton, a small roan of entirely different type, for second, the classifying became hopelessly mixed, as no direct line of breed or type was followed out. To our mind Afton was by far the best of the lot, and he was backed in this opinion by Mr. Dalziel, who did not judge in this class. Davidson's Cassils justly got third, and should have been second. Goodwin's Grouse Dale, of field trial note, came in for a V. H. C.; this splendid animal is certainly of better type than his sire, the first winner. Dunne's large black dog, Chance, deservedly received high mention, and later on secured the club medal, in the special prizes. We best liked dog backed in this opinion by Mr. Dalziel, who did not judge in this class. Davidson's Cassils justly got third, and should have been second. Goodwin's Grouse Dale, of field trial note, came in for a V. H. C.; this splendid animal is certainly of better type than his sire, the first winner. Dunne's large black dog, Chance, deservedly received high mention, and later on secured the club medal, in the special prizes. We best liked dog backed in this opinion by Mr. Dalziel, who did not judge in this class. Davidson's Cassils justly got third, and should have been second. Goodwin's Grouse Dale, of field trial note, came in for a V. H. C.; this splendid animal is certainly of better type than his sire, the first winner. A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NOS. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

[POST OFFICE BOX 2823.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 20, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home of a gentleman.

•We cannot be responsible for dereliction of mail service if money remitted to us is lost.

•Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

TWENTY-EIGHT PAGES.—The pressure upon our columns this week, caused by the very full report of the Dog Show, obliges us to add four extra pages to our regular number, twenty-four. By doing this we are enabled to do full justice to the show, and at the same time to give the other departments of the paper their usual amount of space.

—Under the heading "Pedestrianism" a western paper notes Col. Bodine's selection as Captain of the American Rifle Team to visit Ireland. The editor probably means to intimate that our boys will have a walk over and walk away with the prize.

—Two prize fighters, with their crowds of hangers-on, have been skulking about for more than a week trying to find a spot on the Canadian border where they may indulge in a bout. The authorities have so far proved too alert, and the probability is that the contemplated fight will, in consequence, be frustrated. All of which is to the credit of the Canadian authorities.

—The list of prizes to be given at the Seneca Falls Convention next week is large and attractive. The prospect is that the convention will be largely attended, and marked by some close competitions. We bespeak for all attending sportsmen an enjoyable visit at Seneca Falls, and for the convention harmony and the best of feeling. Next year the FOREST AND STREAM hopes to welcome the clubs to the eastern part of the State.

—Yesterday was the one hundredth anniversary of the New England "dark day." The Connecticut Legislature was in session at the time, discussing the laws regulating the shad and alewife fisheries. One of the number, thinking that the Day of Judgment had come, moved an adjournment, but Abraham Davenport, who would be ready and at his post of duty when the Lord called, directed the candles to be brought in, and then, amid the thunders of the tempest, discussed the bill. No more picturesque incident ever occurred in the history of game and fish legislation.

—Every member of the Long Island Sportsman's Association should be present at the meeting to-morrow night. All who may desire to attend the Convention will then be furnished reduced excursion tickets.

THE NEW YORK DOG SHOW.

THE brilliant display of dogs which, during the past week, drew thousands of delighted admirers to the Madison Square Garden, adds another to the many claims which the Westminster Kennel Club have to the gratitude of the citizens of this city in particular and the country in general. In a thousand or more stalls were gathered sample animals, illustrating the perfection of canine breeding, and showing to what a fine result an intelligent selection of sires may reach. An analysis of the list of entries shows that there is enough of fine dog stock owned and bred in the city of New York to make a creditable display, for beyond the dog dealers of the country and the kennels whose interest it is that representation should be made at every important bench show, the bulk of the entries came from the metropolis. This is the more noteworthy in the classes of hunting dogs, enough pointers and setters being owned in the city to supply a small army of gunners.

When the assertion is made by critics of narrow view that the desire for field sports of a legitimate sort is waning, and that the segregation of people in cities crushes out the desire for a run over the stubble in search of game, reply may be pointed at the dog show. The true sporting idea is strong in New York, and the number of fine guns owned in this city is in good proportion to the number of fine dogs, while the rush that takes place at the opening of the trout season, and the steady stream of anglers who go out from the city to the Long Island ponds, to the Pennsylvania brooks, or even to the rivers of Canada, testify that this branch of the sportsman's guild has its many votaries. The dog show goes to demonstrate in another way what the subscription books of the FOREST AND STREAM may furnish documentary evidence of—that the great cities of this country are full of men who are sportsmen in spirit, of skill in woodcraft, and able to hold their own in the field, able to cast a fly or send a long, killing shot after duck or woodcock, while to the superficial observer they are the busy men of the counting room or the shop. Bench shows may aid to swell this class by inculcating a love of the dog where it may not now exist, for it seems to us that no one could pass up and down the long aisles of the show last week and not be possessed with a desire to own one or another of the fine specimens there on exhibition.

The show had, besides, a missionary effect in another way—in teaching dog owners and dog lovers what is really good in their specialty. There are in this city to-day thousands of dogs whose only claim to an existence is that they exist, and their only salvation from the destruction of the dog pound is the fact that they have owners who have not yet been brought up to the point of noting the good from the bad in a dog way. There should be a grand clearing out of the mongrel curs that infest our streets and bring bad reputations on man's best friend by becoming man's nearest enemy. Bench shows, properly conducted, will demonstrate that there are dogs worth even the seemingly fabulous prices of the fanciers' catalogue, while there are others to whom a speedy termination of their existence would be a godsend indeed. Every properly constituted person is a natural dog lover; false teaching or erroneous early impressions may leave, through life, antipathies to the animal, but these cases are rare and abnormal. While this fact of a general love between dog and man holds, it does not follow that the ability to distinguish the good from the bad in dogdom is equally wide. One may learn to love even a "yaller dog," but such affection is misplaced, when there is the possibility of owning animals so intelligent and so near the speaking level as were to be seen on the Madison Square Garden benches. With them we should have none of this hydrophobia excitement, which now and then sweeps over the community when some snappish Spitz or still more ignoble dog shows its bad blood by inserting its poison-laden fangs into friend and foe indifferently. The condemnation is general, while the real blame and danger is very circumscribed. We want sharp, clear and well-enforced dog laws, rooting out the sheep-killing, manger-occupying, howling brutes that are a curse alike to city and country. But we want with them a clear appreciation of the fact that a dog, *per se*, is not an animal to be hunted after or treated with neglect. "Love me love my dog" is a good motto where the dog is worth the loving, and where it is not it is pretty certain that the owner, too, lacks some lovable qualities. While every one may not own dogs, it is but just that every one should have a clear appreciation of the important place which the animal fills, and have an intelligent comprehension of his good and bad points, as shown in the various classes. This is the mission of the bench show. Field trials are well in their way, and as the necessary complement of the bench show their importance is beyond question. There is no antagonism between them, and the tests by one set of rules are to be completed by tests under the other set; but there are a hundred points of importance to be reached by a bench show which the field trial fails entirely to touch. Thousands who should become intelligent champions of the dog may be drawn to a bench show, where one may attend a dog trial in the open; hence, the importance of an earnest support of

the one class of show without making any disparagement of the other. Herein lies the mission of the Westminster Kennel Club in this city.

There are points against which criticism may fairly be launched in connection with such displays, and where the element of competition is brought so prominently forward there are always certain to be heart burnings, deep and many, where there are forty eager and expectant owners, each seeing all perfection in his particular favorite, and only one blue ribbon to be awarded. The past show has, however, been fairly above the suspicion of a grumble on this ground. No one doubts but that the judging was fearlessly, ably and impartially conducted; each dog got his due, or very nearly it, and while the blue ribbon dog may not have been, in each class, a perfect model of that particular breed, still, in that particular collection of dogs brought before the judge there is no room to doubt that it was the best. There are differences in the classes of dogs shown, and there is yet much to be done in developing a higher standard and a nearer approach to the model dog in many of the classes. Still, this remark does not apply to the most important class of the show, if it is proper to place the setters in that position, and the judges who came over and so kindly gave New York and the Westminster Kennel Club the benefit of their experience and special knowledge, were indeed within bounds when they used such adjectives as "superb," "grand," and "magnificent," in speaking of the pointer and setter classes. The club has done good service at home, and it has done more; this show just closed is bound to produce good results abroad. We have secured the best that English kennels can furnish; and soon our Parole exploits on the turf will be followed by equally signal victories on the bench and in the field trial. There are many to-day who would not exchange their American breech-loader for any of the vaunted English makes of guns, and to-day any one in search of a fine sporting dog need look no further than the advertising columns of the FOREST AND STREAM to find the proper place to buy. He will secure the very best by staying on this side the ocean, and there never yet, at any bench show, was collected a finer lot of animals; and the quality of the late show may best be judged when the numbers in each class are taken into account.

LESSONS FROM ANOTHER LOG.—As will be seen from our special correspondence from the Pacific, yachting on the Western shores has taken a boom. This is due in no small measure to the untiring energy and zeal displayed by the officers of the San Francisco Yacht Club. The stuff they are made of appears from the following extract from their gallant Commodore's annual report, and we only regret that want of space prevents our printing his remarks in full:—

"I point to our fleet of yachts with pride, for although inferior in number to some of the Eastern clubs, it will compare with them very favorably in all that pertains to seamanship, outfit, maintenance, comfort, sea-going qualities and speed; and it is with pleasure that I congratulate you upon the marked improvement in the style and manner in which your yachts are now kept. . . . Your Commodore certainly set you a good example last year, for out of 193 days that the *Etoile* was in commission she was cruising 104 days, and I sincerely hope to be able to do quite as well this season. . . ."

Eastern men who keep their yachts rotting at their moorings seven days a week can well follow the example of the *Etoile*, and if the "fixtures" of some of our clubs exhibited the spirit shown on the Pacific the senseless cry about handicapping to bring enough yachts to the line to make up a race would never have originated. What our large clubs need is to take a lesson from the smaller ones, to wake up from their somnolent slough, and to put a little more life into club existence. We have taken several wrinkles already from the Pacific; we have learned from them to offer prizes for seamanship, and we have learned that the yawl is well adapted for our waters, and we can learn from them just a little more—how to arrange a series of matches and cruises that will keep the club alive and before the public and themselves a little oftener than one solitary, broiling-hot day in June, coupled with a lazy drift and a paucity of entries, and perhaps a noisy "excursion" down a mill-pond in mid-summer—the same stale old "programme" without one lot of progress or development since the days of the last generation. Have our great clubs no leaders who can see deeper into the sport than the bottom of a wine glass? Why do they not speak out; why let a club drift to leeward like a crab when slight effort on their part can readily overcome the drag of the lubber element ever present in a country where the sport is new?

THE TEAM TO IRELAND.—The exchanges from Ireland and England come laden with notes of the preparation and hospitality which the hosts on the other side are preparing for our team. Major Leech is actively at work gathering together his team, in a rather miscellaneous way, to be sure, but one which in the Major's hands seems to be as effective as any other. There is a call for a rush to practice, and while not much of team system

may be expected among the Irish riflemen, our representatives may be pretty certain of meeting a squad of the best individual shots of Ireland. The visit is attracting attention in England as well, and the *Volunteer Service Gazette*, the best authority on matters connected with the rifle in the Kingdom, has the following very sensible suggestions about a struggle at Wimbledon after the Irish match has been won or lost. It may be well to promise, before quoting the words of our esteemed contemporary, that the American Team go from these shores to shoot a match with Ireland, and that upon the completion of that match the team will be disbanded by Col. Bodine, its Captain. All of its members will no doubt run down to London and be present at the Wimbledon meeting in July. Whether they will organize as a team of American gentlemen and shoot an unofficial contest is a matter in their own hands, and no doubt they will be more than willing to do so, and then the kindly suggestions of the *Gazette* may be put into practical form. The authority above mentioned says in the issue of May 1st:—

"It will be five years next July since a team of small-bore riflemen from the United States, after giving a no less famous Irish team a sound beating on the latter's own ground came to Wimbledon for the first and only time. The American gentlemen were, of course, most welcome, and made themselves eminently popular during their short stay among us. But it cannot be denied that they did not find what they might fairly have expected to find, whether they chose or not to avail themselves of them—viz., facilities for pitting themselves, as a team, against a first-rate British or United Kingdom team. The fact was, as we remarked at the time, that everybody thought that somebody else would take the matter in hand, and that ultimately there were no arrangements made at all for making a match which would have been worthy of our visitors and of ourselves. When the Americans did come, indeed, or were just coming, all sorts of plans were proposed in haste, for there was assuredly no want of good will. But none of these proved feasible, and in the end the visitors went away having shown us, indeed, what admirable shots they were individually, but without our having had the opportunity of seeing them to the greatest advantage—viz., when working together as a team.

"A letter of Major Leech informs us that a team of the long-range riflemen of the United States is expected to land in Ireland next month, there to shoot a match with an Irish team under the Major's captainship. The latter has already taken steps to organize a body of his countrymen who will be worthy of their opponents; and we quite agree in thinking that the name of Major Leech is a sufficient guarantee that all the arrangements will be successfully carried out, and that an opportunity is given to Ireland of showing that gratitude which she undoubtedly feels sincerely and widely. We may be quite sure that for many reasons the American team will have as they have had before, a most enthusiastic welcome from their Irish friends, and the fairest of fields wherein to gain a victory or sustain a defeat. The visit will undoubtedly be a very pleasant one to the hosts, and we may hope that it will be no less pleasant to the guests. But our business on this side of the Channel is to endeavor at once to induce the American riflemen to give us, after their Irish visit, a turn at Wimbledon in July. And we cannot, we say frankly, hope to do this unless the Council of the National Rifle Association take the matter at once in hand, and make arrangements for a match at long ranges between the Americans and the very best team we can get together here. It is of course not certain that an invitation to such a match at Wimbledon would be accepted; but it certainly ought to be given, and warmly pressed upon the Americans and their countrymen. Such a match should, if possible, not be a mere replica of the Elcho competition or of the Irish match. And it seems to us that we cannot ask the Americans to compete at the Meeting of the National Rifle Association of the United Kingdom except against a team composed of the very best men that can be got together from the parts of the Kingdom, whether they happen to be Englishmen, Irishmen, or Scotchmen. The details of the invitation or challenge may well be left for further consideration; but the general composition of our team is not, we submit, a matter of detail at all. The Council of the National Rifle Association have always asserted that they represent not England, or Ireland, or Scotland alone, but the whole Kingdom, and they cannot, either consistently or with due respect for the undoubted prowess of the visitors, ask them to fight against any but the very best opponents which the whole of the United Kingdom can show. A challenge to such a contest against such opponents would, we are sure, be readily accepted if it should be at all consistent with the previous arrangements of the American team. Certainly it ought to be proffered at the earliest possible moment; and no persons should be spared to make the match one of the most important events of the Wimbledon Meeting of 1880.

"We do feel, we must say, and have always felt, that the American team, no doubt, as we have pointed out above, from unavoidable causes, were not treated in 1875 quite as they ought to have been treated. They saw that there were difficulties, and showed the most genial courtesy in accepting our excuses. This year we have an excellent opportunity of making amends for what unfortunately happened in 1875. We are quite sure that this opportunity will not be lost, and that we shall show the American team at Wimbledon next July, that though we cannot hope to vie with the splendid hospitality with which they invariably receive our riflemen on their own shores, we can at least give them a hearty welcome, and can muster opponents who will be not unworthy of their steel."

—We have received from the *San Francisco Bulletin Co.* a copy of the handsome chromo of the famous St. Julien. The picture is an admirable specimen of horse portraiture. It does great credit to the publishers.

GAME PROTECTION.

DR. JOHN P. ORDWAY.—*Boston, May 15th.*—*Editor Forest and Stream:*—In accordance with a vote passed at a meeting of the Massachusetts Fish and Game Protective Association, which was held on the 12th inst., I beg to inclose herewith a copy of the resolutions which were adopted at said meeting on the death of ex-President Dr. John P. Ordway. E. S. THOMAS, JR., Secretary.

Resolved, That in the death of Dr. John P. Ordway the society has lost a man of independent thought who always acted in accordance with his conviction and sentiment of right.

Resolved, That his manly and outspoken utterances of what he firmly believed to be for the best interests of man made him a desirable co-worker and a reliable friend.

Resolved, That his opinions were valuable and influential, being always based upon an intelligent consideration of the subject upon which they were expressed.

Resolved, That this Association regards him with grateful memory as the founder of the principles upon which this organization is based, and in no small degree do we regard his indefatigable labor as the cause of our prosperity and success.

Resolved, That a photograph or other likeness of Dr. John P. Ordway be procured and placed upon the walls of the audience room of this Association as a tribute to the memory of the founder of this Association and its first President.

Resolved, That a copy of these resolutions be placed upon the records, and that the Secretary be instructed to forward a copy to the family of our deceased associate.

DAN'L NEEDHAM,
H. H. KIMBALL,
Committee.

VIRGINIA.—*Richmond, May 15th.*—The annual meeting of the Fish and Game Association was held yesterday evening. The following officers were elected: President, Charles T. Palmer; Vice-President, Dr. O. A. Crenshaw; Secretary, E. H. Fisher; Treasurer, John Ott; Executive Committee, Moses Ellyson, Philip Haxall, W. Russell Robinson, A. L. Holladay, and W. G. Miller. A resolution was adopted calling on the minor organization to contribute to a fund for the purchase of a digest of the fish and game laws throughout the Commonwealth.

[From a Western Correspondent.]

OUR SPECIAL LETTER.

DENVER, COL., May 14th.

NOTHING could better illustrate the truth that all things are relative, than for a New Yorker to hear Chicago spoken of as the East. Should he come to Denver that is what he will hear. No New York newspaper finds its way here regularly but the *Herald*. Chicago papers arrive three days after publication, and as far as news-dealing is concerned, that city is to Denver an eastern outpost. The papers published there are regarded here as the New York dailies are regarded in Western New York. Everything east of Chicago is, so to speak, in the wilds, and the New York news sounds to us here as the Rocky Mountain intelligence strikes the inhabitant of Gotham. It seems very distant and faint.

The change is rather pleasant than otherwise, and is probably wholesome. It is so complete that the novelty is rather refreshing and invigorating. It is not, in this respect, so very different from a trip to a foreign land. All the elements of distance, change in scenery, difference in town aspects and in manners of the people, are here, inasmuch that one is rather startled to hear the people speaking the same English that is heard on the Atlantic coast. The traveler to the West, therefore—to the "far West"—can look for something of the change and diversion that he gets by going to Europe. Nor is the sensation which the man feels when he is about starting for these regions altogether different from that which he has on embarking for the old country. There is the same extent of preparation, the same close attention to the provision of proper wraps, and of the hundred little things which have to be thought of for a long journey. There is the same engagement of a berth in advance, and when one gets settled and his hand luggage stowed in the sleeping car section, the frame of mind is strikingly like that which comes when the steamship traveler finds himself first in his stateroom. In fact, the likeness between the sleeping car and steamship traveling is maintained throughout the journey. The porter is the steward, and it is only fair to say right here that as an attendant he far outdoes the average steward of the sea. Indeed, the African as a servant is seen to about as great an advantage and as near perfection in a Pullman sleeper as anywhere in the world. Here he combines the activity and thoughtfulness and training of the French waiter, the steadiness and intelligence of the American and the imitatively gratifying servility and deference of the best of the African domestics. I could not help wondering how so uniformly good a selection of servants could have been made, and I do not yet understand how so much discipline can be maintained among them, removed as they are from supervision continually during their service. Of course, it is due to the judgment and desire to please and attention to business of the managers, but it is surprising that there is not a mistake made once in a while. When to the sleeping car we add the hotel car accommodations for traveling, nothing more can be asked for. There is the whitest of linen, waiters of the best, in religiously clean, white jackets, attention to your wants

that is both full and rapid, and a breakfast that makes one think involuntarily, and without the slightest exaggeration, that one is eating at Delmonico's or the Brunswick, and at rather less than the prices at those places. In fact, as to price, the traveler could probably not live much, if any cheaper, if, in a fit of economy, he were to take his long lunch with him. And at all times he has his option between the neat, inviting table, with its delicate French cooking, that is spread before him as he looks over the morning paper, and the regular wayside eating house (which should shame many of their like in the East), at which a good twenty-five minutes is given three daily for obtaining refreshments.

I find I have unconsciously taken up a good deal of space in advertising to the incidents of getting out to the Rocky Mountains. But the remembrance of the comforts I had in traveling hither, coming, as I did, by good fortune, over a line with which there was no fault to be found, and for whose excellence of accommodations I was, in my ignorance, unprepared, my lively remembrance of those comforts, I say, has led me to talk about them in this letter at the expense of other matters. However, I will try to give attention to some other subjects in other communications, which I hope to be able to send you. Still, it is not amiss for any one who is going to come out here to try his rifle or rod, to know a good way of getting here; and to any such I would say that they probably cannot do better than by taking the route I did, which was via Pennsylvania Central and Pittsburg and Fort Wayne to Chicago, thence by Chicago and Northwestern to Omaha (or rather Council Bluffs), and thence through by the Union Pacific. Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may desire of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—Address all communications to "Forest and Stream Publishing Company, New York."

ANOTHER CAMP BED.

FROM four years' experience of actual life in camp, through summer heat and winter cold, in fields, swamp and forest, I know there can be no real labor accomplished, or enjoyment had, without a good night's rest. I will, therefore, for the benefit of my fellow sportsmen, describe a bed that never failed me, one that nightly contributed to my physical strength and comfort, thereby strengthening my pillow with pleasant dreams of home and absent wife and child; a camp bed that to this day holds a place in my memory that time can never erase. First, a full-width gum blanket; second, a mattress made after the pattern of a comfort; material—bed-ticking and cotton batting; length to suit the person; width, 26 inches. The batting to be spread over one-half of the ticking to the thickness of two inches, then cover it with the other half of the ticking, sewing up sides and ends, and tacking through and through with twine in four inch squares. This mattress is to be laid on the right hand side of the gum blanket. Third, a gum pillow, that can be expanded or emptied at pleasure. Fourth, a heavy gray blanket, army pattern. This is spread on the mattress, and the left hand half of the gum blanket. Now you may undress, if you wish, lie down, covering first with the woolen, then with the gum blanket, tucking the latter under the mattress. Let it cover your head if it rains, and, my word for it, you will enjoy a sweet, refreshing slumber. If you have no tent or shelter, and it threatens rain or snow, tuck your knife and cut a small ditch two inches deep, V-shaped, round the edges of the mattress, giving it a free descent. With these precautions you have nothing to fear; you will be warm and dry, and the sleep will be the sweeter, lulled to rest by the patter of rain.

When you rise, spread the blankets as they were while you slept, empty your pillow, and roll close and tight from the head, and at the foot you will find the two leather straps ready to bind the bundle, which will be compact, convenient for transportation under your arm or behind your saddle, ready for use on any kind of ground at the end of a day's march or sport.

Cape Girardeau, Mo.

CAPE ROCK.

VERMONT.—*Ferrisburg, May 8th.*—There is no spring shooting worth reporting here. There should be no spring duck shooting in our waters, for it never amounts to much, and drives away wood and dusky ducks that would otherwise breed here. It is strange that we have no spring snipe. I never saw half a dozen here in one spring; yet in favorable falls our marshes are sometimes swarming with them.

MASSACHUSETTS.—*Dana, May 14th.*—Mr. William B. Lincoln recently caught in a trap an eagle which measured six feet and eleven inches from tip to tip of wings.

CATSKILL MOUNTAIN BEAR HUNTING.—*Philadelpia, May 14th.*—I have read or heard that there were a large number of bears in the Catskills this season. Can you give any information on the subject as to the probability of "bar" being in sufficient numbers to be found, and where to put up, etc. C. D.

There are bears in the Catskills. We have seen them there, but we know of no spot where a man would be sure of finding them. Possibly our correspondent may secure the desired information by writing to Mr. Schutt, at the Catskill Falls. Address Catskill, N. Y.

SNIPES ON LONG ISLAND.—Letter just received from my old friend and guide, Carman Cornelius, at Seaford, L. I., states that snipe shooting is good at South Oyster Bay. To all lovers of the sport I say go, and go with Carman. No better man at the business. Can be reached by S. S. L. R. of L. I. Stop at Vandewater's; they will take care of you. EZEYKILL.

NEW JERSEY.—New York, May 11th.—I have just returned from Ocean County, N. J. Wilson's snipe have been quite plenty of late; but they being flight birds, they did not stay long. The bay birds are commencing to come, and the prospects are that there will be plenty of shooting this week and the next. The warm night we had on Saturday foretold a longer stay. The snipes we had in New Jersey did not harm the birds in the least in Ocean County, as the fires were ten to fifteen miles distant from the shooting grounds. J. A. D.

SNIPES SHOOTING AT BARNEGAT.—We took the New Jersey Southern on Monday the 10th inst., bound for Forked River to try our luck at the snipe. After a trip of three hours we arrived at our station, and were met by our most genial host, ex-sheriff Parker, and by the way, who has not heard of the good sheriff, who keeps really a sportsman's retreat of the first order, leaving nothing unmade to make it pleasant and comfortable for his guests? A wish is not made known but it is immediately attended to. Long life to the sheriff. May his eyes not grow dim, and his hair grow gray. After partaking of a hearty supper we met our old friend and prince of laymen, Capt. Firman Matthews, who was to go with us for the trip, and who had all things in readiness.

After a good night's rest we arose on Tuesday at 4 A.M., arriving at our grounds about 8.30 A.M. The weather was all that one could desire for snipe. We could now hear the yellow legs whistling all around. Soon our snipe were seen and birds rose and were ready.

"Hark! I hear them," says the Captain. Down we both are. In they come; four in a bunch, surging to the stool. Up raises Ezezykill, and down fall four nice birds. Parker 10 bore and No. 10 shot.

"Down!" says Captain; "here comes a flock of do-witches." In they come, ten of them. Two shots, and we pick up seven nice birds; and so we go for about two hours, and bag twenty-two fine birds.

In the night the wind shifted to the northwest, and commenced to blow. However, off we started in the morning, and succeeded in bagging nine on this day. The wind kept on increasing, until on Thursday it blew a gale, but with all the drawbacks we killed six on this day. It was cold and rough in the night; the wind shifted to the northeast and blew hard and cold, and not a bird to be seen or heard anywhere. So we concluded to return to headquarters—the sheriff's.

An old sheldrake is a bird which is condemned for its rank, fishy taste. The Captain killed one with a 10 bore Parker with No. 10 shot fully 40 yards off, and we concluded to try the experiment of cooking him after a peculiar fashion. I took his skin off, and all the fat that was on the body, and proceeded to cook him, and the result was that not a particle of fishy smell was noticed while the bird was cooking, nor when eaten was there any of that strong and disagreeable taste any more than there would be in the finest red-head you ever tasted.

After a hearty repast at the Parker House we retired for the night, and started for home on the 9 A.M. train, after a most enjoyable trip, and had the weather permitted it would have been a very successful one. EZEYKILL.

TWO SNIPES AT ONE SHOT.—Portland, May 10th.—Your exact and careful correspondent, "A. C. L." writes in your issue of May 6th of shooting two snipe at one shot, and adds that he never heard of this being done before in the East. To bag a brace of these wily birds at a shot when one does miss such an incomprehensible number of snipes on a single shot is a lucky fluke, and rare enough to send a thrill of exaltation through the warbler frame of the far tramp over marsh and moor; still, such good luck is not altogether unheard of even in the East.

On October 8th, 1877, a friend and I were beating up a marshy alder run. My friend, with his knickerbockers on, was bravely plunging through the swamp with the dogs while I leisurely watched outside. Soon a snipe started up out of the alder tops some thirty yards away. As I drew on him another squeaked up into range fifteen yards nearer, and I dropped both at one shot.

"Mon Dieu, what luck?" cried my comrade from the alders. This was a fluke pure and simple. But a few days after that, when out alone, my setter came to a most decided point in a tussocky field. Walking up to him three snipe flipped over two low away, quivering to the right, keeping in exact range from me in the most obliging and unselfish manner. As my gun swung up to my eye I saw them skimming along over the ground like a matched span of swallows. I pulled on them; their heads dropped and they fell together stone dead, still keeping in exact range. Turning I bowled over the first snipe, and my wile, looking to windward and almost out of range, with my left hand.

This was not a fluke, but deliberately shooting three snipes in two shots, right and left. The two snipe killed at one shot lay just three yards from each other.

MARSTLAND.

The editor of the *German-tonen* (Pa.) *Telegraph*, says: "A correspondent of FOREST AND STREAM, writing from Norwich, N. Y., brags of having killed two English snipe at one shot. Of course they happened to be crossing the space between two alders, who were near such of the readers of the *Telegraph* as are acquainted with the ground, say when we tell them that the writer of these lines killed two English snipe in what is known here in Germantown as Coulter's meadow, with right and left barrel, at one flight. This was forty years ago. There is still some swampy ground there, created by a neglected spring, and not infrequently a snipe is bagged there. Occasionally a rail-bird is shot, but we never had the pleasure formerly of seeing one."

"A. C. S." Norwich, N. Y., records an instance of killing two snipe at one shot, and states that he never saw this done before. In February, 1875, it was done at Colfax, La., three times in one day—twice by myself and once by my companion, a native Louisianian, who was receiving instruction in wing shooting. The birds were,

however, in great abundance. On the day referred to, I killed thirty-six between breakfast and noon, and thirty-nine between 1 P.M. and 6 P.M. I never before or since saw so many snipe, *i. e.*, Wilson's snipe, in one place. I was not out of sight of the camp during the day. They must have been migrating, as very few were to be found the next day. T. H. GROVES.

TEXAS NOTES.—Palestine, Texas, May 13th.—The Jackstone Gun Club, of Dallas, is making preparations for the State Sportsmen's Tournament, which opens at the above city on the 17th inst. A greater number of people will witness the contests than at any previous tournament, and extensive arrangements are being made for reception and entertainment of visitors. Arrangements have already been made for ample supply of wild pigeons. Nearly every club in the State have signified their intention of either sending delegates, or attending *en masse*. The outlook is very satisfactory to the boys. The attendance from Palestine will be scattering, but we will send some good men to the field. Six coops of wild pigeons from Michigan, intended for the use of the Houston Gun Club, and four coops of the Worth Club, passed to their destination last week, from which we may infer that the boys intend to get their hand in. The Palestine Glass-Ball Club, organized last year, in deference to the prevailing "boom," proved short lived, as no attempt has been made toward reorganization this season.

The quail are rather more plenty this than last year, owing to the comparatively dry fall and winter; but the early and continued spring rains have prevented their nesting. I went out the other morning with a young dog to see what he was made of, and found two heaves. They were rather inclined to be trod on, rather than get up.

Fishing runs about as ever. Small black bass and perch in the creeks, larger ditto in the rivers and lakes, with numerous Buffalo fish to give you a heavy pull, and finally disgust you with their coarseness and lack of flavor. At Galveston, of course, the finest of sea fishing is to be had at all times. L'ECLAIRE.

WISCONSIN.—La Crosse, May 13th.—The Gateway City Shooting Club held their annual meeting at the office of the secretary, Mr. C. C. C. Tuesday evening, May 12th, for the election of officers for the present year, resulted as follows: President, Harry E. West; Vice-President, C. F. Huntsman; Secretary, Carl Norbeck; Treasurer, Fred Bagley; Executive Committee, H. E. West, C. F. Huntsman and John McMillan. A committee was appointed to secure suitable grounds for permanent use, probably on the banks of the La Crosse River.

PENNSYLVANIA SQUIRREL SHOOTING.—New Bloomfield, Perry Co., Pa., April 21st.—Sportsmen here confidently expect more game the coming season than was to be found last. The open, mild winter just passed enabled small game to live through it with ease; the mast being heavy last fall, food was not scarce, and the absence of deep snows and continued cold seasons, turkeys, quail, etc., opportunity to hunt feed all along. Then again, the foxes have been hunted off pretty close, so that game birds were not slaughtered as they are some seasons by that thieving nuisance. Two parties in this town, who hunt foxes in partnership, got away with twelve red-ears this winter. The county pays a bounty of \$1 for every fox killed, and the skins are disposed of to men who travel through the county, the skins of all kinds for \$1.50 each. The county treasurer of Perry last year paid out nearly \$300 for fox orders, thus showing that Reynard is not on the decrease, as are squirrels, pheasants and other game here. Farmers and woodsmen say they see not a few wild turkeys in the old and unfrequented fields that last fall contained buckwheat or rye, picking up food. If there does not come a spell of cold, freezing weather to destroy the eggs, they are now laying or soon will be. There will be a pretty fair crop of turkeys for next fall's shooting. The small birds we call partridges are nearly extinct in this section, and for what reason I am unable to say, unless that crime is also to be laid at the door of the meek and gentle Reynard. "An honest fox must live, you know," Gray squirrels, once so plenty, are now only to be found in certain localities, and there only at certain times. The way to get them, here, is to go where hickory trees are when the nuts are about large enough to please a squirrel, early in the morning, just about daybreak. If they are working on the nuts you will see the cuttings under the trees. Keep still till you hear a nut drop, then examine the tree closely where it came from, and you will often find a squirrel there. If he sees you, he makes a straight coat-tail for his nest in a hollow oak tree not far distant. Then is your time, if you want the squirrel, for if you let him get in the hollow tree you won't see him soon again. To hunt squirrels in this manner one should make as little noise as possible and leave his dog at home. Dogs are only of service when late in the fall the squirrels come down on the ground to gather up the nuts that are lying there, then the dog takes the scent and shows the hunter what tree they are on.

The pheasants are killed here by those who are not wing-shots in a manner that would not be approved of by the fraternity. Hunters conceal themselves under grapevines where the birds are known to feed, and shoot them as they come on in the evening to feed. They have their regular feeding places, and these feeding places are very often the scene of their departure from this world. To the country boy who is just old enough to carry an old-fashioned musket this is the prevalent mode of killing pheasants.

No wild pigeons have put in an appearance this spring. None were here last fall. They seem to have slighted this section altogether. They used to be plenty here. There is only one good trout stream in Perry County. It is in the remote western end of the county, and hard to get at, consequently it is fished by only a few anglers. Mill-creeks, several miles long, are the only fish streams in the arena, and in some places tanneries emptying tanjuice into the waters, have used up the trout in streams where once they disported innumerable. WAYNE.

WILD PIGEONS.—The following description by a western writer supplements the recent communication on the subject in our columns:—

Something more than four weeks ago the biennial flight of pigeons to the woods of Northern Michigan, for which the hunters had long been watching, commenced. These

birds on their journeyings from the South to the far North stop every two years for two or three nestings in Michigan, usually coming in immense numbers. On the alternate years, when beech-nuts are not abundant in this State, they take some other course in their northward flight. Formerly, their first nesting was in Allegan or Ottawa County. Of late they have generally settled first in Saginaw, Oceana county, and later in the season in Benzie and Benzie counties. Two years ago they stopped both Oceana and Benzie counties and nested in Emmet near Petoskey, but they soon discovered that they had been fooled by the warm weather further South. The weather about Petoskey was still cold, the bay was frozen over, the snow was deep in the woods, the prospect for good feeding was bad, and after a day or two of apparent irresolution and many erratic flights, the birds, as if by common consent, took their course to the neighborhood of Platte River, in Benzie County. As a local publication stated at the time, "they came in clouds, millions upon millions. It seemed as if the entire world of pigeons was concentrating at this point. The air was full of them and the sun was shut out of sight, and still they came, millions upon millions more." They spread over an area of more than fifteen miles in length and six to eight miles wide, and were the prospect for a nesting of this magnitude was the most extensive ever known in the State. The news speedily reached all parts of the State, and it is said that in a fortnight's time 3,000 hunters—professionals, amateurs, green horns—had invaded the country from all directions, surrounding and penetrating the nesting grounds.

It was noticed, however, by old hunters that the birds did not settle down to nesting life as quickly as usual. The roosting birds—that is those that have not yet mated—outnumbered the nesting birds a hundred to one. Some of the more zealous and inconsiderate sportsmen entered the nesting woods and commenced popping away at the nests themselves, a snow-storm followed, high winds prevailed, and many of the roosting birds, disgusted, postponed their anticipated housekeeping and scattered. The nesting consequently falls far short of magnitude of what was at first expected, though still large in area and containing millions of birds. It scattered along the banks of the Platte River, in the townships of Almina, Zealand and Homestead. The distance from one end to the other is over ten miles, and the width varies from a few rods to three or four miles. There are, however, numerous long distances between the two extremes where no nests are to be found, and the birds have occasionally changed their ground, so that many of the hunters themselves are very uncertain as to the exact whereabouts of the birds at the present time. In the nests first made, the young are about ready to fly, and have been abandoned by the old birds, and in some places, owing to the winds and the constant shooting, the nests have been deserted before any birds were hatched.

One nesting is about the same as another, and the first nesting is the one to which the million attend in the country. When these migratory birds have mated, decided where to settle and have staked out their claim, they proceed at once to construct about the lightest nests that will hold an egg and a bird. "Three sticks and a feather" constitute about the material, according to a recent visitor here. The feather is often wanting, but a few more sticks are generally added. The nest is placed in the fork of a tree, on a tree, or a forked branch, or anywhere else in the tree where suitable support can be found. Cedar trees along the river bottom seem to be preferred, but when the nestings are large, beech and other trees are occupied. From half a dozen to fifty or sixty nests are built in a tree, and only one egg is laid in each nest.

NEW YORK STATE CONVENTION PRIZES.

Following is the programme and prize list of the Annual Convention of the New York State Association for the Protection of Fish and Game at Seneca Falls, beginning May 24th.

In accordance with the usual custom the Secretary will issue to members of clubs only, upon payment of \$5 entrance fee, and \$2.50 for two birds, a ticket bearing number of the number of shooting, and a receipt. Before shooting off ties members must pay for five birds, and their tickets will be punched. Shooters who drop out of ties will be entitled to rebate. All the contests for prizes during the convention are open to members of the Association only, and will be conducted under the rules of the Association:—

TUESDAY, MAY 25TH.

CONTEST NO. 1.—At 8 o'clock A.M. sharp; class double; ten single birds; entrance fee \$5.

First Prize—A very fine Damascus steel double-barrel breech-loading shot gun; Parker Bros., Meriden, Conn., value \$225.

Second Prize—A handsome eight-shot Bannock gun, elegantly mounted, with reel to match; A. H. Fowler, Ithaca, N. Y.; value \$120.

Third Prize—A set of "Game Fishes of the United States" in ten parts; Cass Scribner & Sons, New York; \$50. Value \$115.

Fourth Prize—An Italian-made single-barrel gun, Geo. Z. Bacon, Rochester, N. Y.; value \$30; four quarter-kegs, 6 pounds each, once ducking powder; Labin & Iand Powder Co., New York; value \$10.

Fifth Prize—Twenty-four one-pound cans Dittmar powder; Dittmar Powder Co. value \$30; a water-proof shooting coat; Wm. C. Fowler, Ithaca, N. Y.; value \$10; 200 cigars; G. W. Van Slyke & Co., Albany; value \$10. Value \$17.

CONTEST NO. 2.—At 2 o'clock P.M.; class single; ten single birds. Entrance fee, \$5. Gold, silver and bronze medals.

First Prize—Handsome gold badge; Lo Roy Shot and Lead Co., New York; value \$10.

Second Prize—Five hundred cigars; J. W. Conighy & Son, Cigarville, N. Y.; value \$35; corduroy hunting suit, made to order for winner; M. Toulman & Co., Seneca Falls; value \$50; a set of three game traps; A. H. Rogers, Chicago, Ill.; value \$15. Value \$55.

Third Prize—Twenty-four one-pound cans Dittmar powder; Dittmar Powder Co., New York; value \$30; a water-proof shooting coat; Wm. C. Fowler, Ithaca, N. Y.; value \$10; 200 cigars; G. W. Van Slyke & Co., Albany; value \$10. Value \$17.

CONTEST NO. 3.—At 5 o'clock A.M. Fifteen single rises; class shot; entrance fee \$5.

First Prize—An elegant "hammerless" breech-loading shot gun; W. H. Gifford, England, through Henry C. Squire, agent, New York; value \$30.

Second Prize—Two very handsome, richly cut decanters, made in England; the Cornhill Store, 1415 Broadway, New York; value \$50. Purchase of 250 gold; Rochester Brewing Co., Rochester, N. Y. (one hundred and fifty pounds) shot; Tatum & Sons, New York; value \$25.

Third Prize—One "Challenge" scroll saw, complete, nickel plated and finely finished; the Seneca Manufacturing Co., Seneca Falls; value \$25; a set of three game traps; A. H. Rogers, Chicago, Ill.; value \$15. Value \$35.

Fourth Prize—Twenty-four one-pound cans Dittmar powder; Dittmar Powder Co., New York; value \$30; a water-proof shooting coat; Wm. C. Fowler, Ithaca, N. Y.; value \$10; 200 cigars; G. W. Van Slyke & Co., Albany; value \$10. Value \$17.

CONTEST NO. 4.—At 8 o'clock A.M. Fifteen single rises; class shot; entrance fee \$5.

First Prize—An elegant "hammerless" breech-loading shot gun; W. H. Gifford, England, through Henry C. Squire, agent, New York; value \$30.

Second Prize—Two very handsome, richly cut decanters, made in England; the Cornhill Store, 1415 Broadway, New York; value \$50. Purchase of 250 gold; Rochester Brewing Co., Rochester, N. Y. (one hundred and fifty pounds) shot; Tatum & Sons, New York; value \$25.

Third Prize—One "Challenge" scroll saw, complete, nickel plated and finely finished; the Seneca Manufacturing Co., Seneca Falls; value \$25; a set of three game traps; A. H. Rogers, Chicago, Ill.; value \$15. Value \$35.

Fourth Prize—Twenty-four one-pound cans Dittmar powder; Dittmar Powder Co., New York; value \$30; a water-proof shooting coat; Wm. C. Fowler, Ithaca, N. Y.; value \$10; 200 cigars; G. W. Van Slyke & Co., Albany; value \$10. Value \$17.

CONTEST NO. 5.—At 8 o'clock A.M. Fifteen single rises; class shot; entrance fee \$5.

First Prize—An elegant "hammerless" breech-loading shot gun; W. H. Gifford, England, through Henry C. Squire, agent, New York; value \$30.

Second Prize—Two very handsome, richly cut decanters, made in England; the Cornhill Store, 1415 Broadway, New York; value \$50. Purchase of 250 gold; Rochester Brewing Co., Rochester, N. Y. (one hundred and fifty pounds) shot; Tatum & Sons, New York; value \$25.

Third Prize—One "Challenge" scroll saw, complete, nickel plated and finely finished; the Seneca Manufacturing Co., Seneca Falls; value \$25; a set of three game traps; A. H. Rogers, Chicago, Ill.; value \$15. Value \$35.

Fourth Prize—Twenty-four one-pound cans Dittmar powder; Dittmar Powder Co., New York; value \$30; a water-proof shooting coat; Wm. C. Fowler, Ithaca, N. Y.; value \$10; 200 cigars; G. W. Van Slyke & Co., Albany; value \$10. Value \$17.

CONTEST NO. 6.—At 8 o'clock A.M. Fifteen single rises; class shot; entrance fee \$5.

First Prize—An elegant "hammerless" breech-loading shot gun; W. H. Gifford, England, through Henry C. Squire, agent, New York; value \$30.

Second Prize—Two very handsome, richly cut decanters, made in England; the Cornhill Store, 1415 Broadway, New York; value \$50. Purchase of 250 gold; Rochester Brewing Co., Rochester, N. Y. (one hundred and fifty pounds) shot; Tatum & Sons, New York; value \$25.

Third Prize—One "Challenge" scroll saw, complete, nickel plated and finely finished; the Seneca Manufacturing Co., Seneca Falls; value \$25; a set of three game traps; A. H. Rogers, Chicago, Ill.; value \$15. Value \$35.

Fourth Prize—Twenty-four one-pound cans Dittmar powder; Dittmar Powder Co., New York; value \$30; a water-proof shooting coat; Wm. C. Fowler, Ithaca, N. Y.; value \$10; 200 cigars; G. W. Van Slyke & Co., Albany; value \$10. Value \$17.

F.—For the best English setter dog, native or imported (to be competed for by the V. H. C. winners), one rich out and engraved monogram set, thirteen pieces, with party's name engraved on each, value \$25, presented by George C. Sterling, Esq. Winner: Mr. Joseph Rosendine's Baltimore, Md. Royal Carle, presented by Messrs. John & James Dobson, New York, value \$50. There were two competitors, namely: Mr. A. H. Moore's Philadelphia, Duke of Beaufort, Frederick, Count Dan, Luna May, Sam, O'Gowrie, Ruth; D. T. Charles, Albany, N. Y. Nina, Ross, Sam, Wellington, Cricket. Mr. Charles was awarded the prize.

G.—A club medal will be given for the best black setter dog; also for the best black setter bitch. Winners: For dog, Mr. Arthur Duane's, Bergen Point, N. J., Chance. For bitch, Mr. T. M. Aldrich's, Providence, R. I., Sam.

H.—A club medal will be given for the best colley bitch, providing a bitch does not take the prize in the regular classes. Winner: Dr. J. W. Downey's, New Market, Md., Lassie.

PHOTOGRAPHS OF SIR Wm. VERNER'S DOGS.—Three excellent likenesses of the famous winners Tarquin, Superbus and Donald, have just been sent to us by Mr. Luthers, who had them in charge at the show. Mora is the artist; and he has, in his new departure, done the champion justice.

PHOTOGRAPH OF RAY.—Mr. Henry W. Livingston, of 133 West Forty-second street, this city, has kindly sent us a photograph of his champion English setter dog Ray. The picture is a good one, as pictures of this kind go. It was taken by Pach, Broadway above Thirteenth street.

ENGLISH KENNEL CLUB FIELD TRIALS.—The report of the National Spring Meeting, held on April 27th, 28th, 29th and 30th, has been unavoidably crowded out of the last two issues, on account of the unusually full and complete description of the New York Bench Show.

DOGS AT AUCTION.—About sixty dogs were offered for sale at auction, on Friday last week, at the mart of Baker & Son, Broadway and Twenty-ninth street, in this city. Some of the animals present had been exhibited at the Bench Show, but the majority of them were tolerably good-looking mongrels of the non-sporting classes, below the show standards. The prices paid for those actually sold (as some lots were merely bid in) were, in most cases, low, although a few of the finer-looking animals bearing some resemblance to Llewellyn setters, Newfoundlanders, etc., brought fair prices. A few private sales were also effected.

KENNEL NOTES.

BRED.—*Jessie-Frost*—The St. Louis Kennel Club's Faust has been bred to Mr. C. O. Pettit's (Galveston, Texas), *Jessie, Duchess-Rush*.—Mr. George Van Wageningen's champion pointer *Duchess* to Mr. Edmund Orrell's champion *Rush*. *De-Young Laverack*—Mr. W. F. Steel's half Laverack setter bitch *Dil* to Mr. John C. Higgins' Young Laverack, by Blue Prince, out of Fairy. *Dil* out of Dr. Gautier's *Roby*, by his Dan and half sister to *Daisy Dean*.

SALES.—*How-Jauntly*—*Phyllis*—The St. Louis Kennel Club has sold to Mr. P. H. Ade, of this city, a dog pup out of *Jauntly*, by *How*, and a bitch of the same litter to Mr. J. W. Jackson, of Opelousas, La.

WHEELPS.—*Rose*—Mr. L. W. Sharp's (Hammonton, N. J.) *Rose, Glacé-Lark*, whelped, May 7th, five puppies—five dogs and five bitches, by *Arctus*'s *Paul*. *Pride* of the *Penobscot*—*Jauntly*—St. Louis Kennel Club's *Jauntly* has whelped nine puppies—three dogs and six bitches—by champion *Faust*. They are all liver and white.

NAMES CLAIMED.—*Fralie and Fyke*—Mr. McDonald, of Rockland, Me., claims the names of *Fralie* and *Fyke* for his liver and white cocker spaniel, *Spot-Rice*. *Pride of the Penobscot*—Mr. McDonald, of Rockland, Me., claims the name of *Fralie* for the Penobscot for his lemon and white pointer bitch, by *Dash*, out of *Pride of the Beaver*. *Beauty*—Mr. M. L. Kline, of Kittingan, Pa., claims the name of *Beauty* for his liver and white cocker bitch, bred by Theo. Meyer, out of *Lou*, by Young *Shut*. *Lou* out of Mr. Hamilton Thompson's imported *Eureka*, by Mr. Bersley's imported *Nip*. Young *Shut* out of Watson's imported *Rose*, by Watson's champion *Shut*, whelped Dec. 23d, 1879.

NAME CHANGED.—*Donnybrook II*, to *Drake*—Lieut. C. M. Hockefeller, U. S. A., Fort McPherson, Neb., changes the name of his red Irish setter dog, by champion *Elcho*, out of *Lulu*, from *Donnybrook II*, to *Drake*.

PRESENTATION.—*Young Laverack*—Mr. John C. Higgins, of Delaware City, Del., was presented on Friday last by Mr. Charles H. Raymond, of this city, with the well-known setter *Young Laverack*. As this dog is the only orange and white Laverack in America, Mr. H. has received a prize worth having.

—One of the stands at the show was occupied by H. C. Glover, proprietor of the Imperial Kennel, Tom's River, N. J., who had an opportunity of introducing his excellent Mange Cure to the attention of owners of stock.—*Adv.*

For Mange, Surfeit, Scour, External Canker, Scratches and all other diseases in dogs, horses or cattle, use Glover's Imperial Mange Cure.—*Adv.*

Archery.

THE THEORY AND PRACTICE OF AIMING.

MR. MAURICE THOMPSON, and his brother, Mr. Will H. Thompson, have prepared a revised and enlarged edition of their manual, "How to Train in Archery," which now forms the most complete handbook on the subject published in America. We may go farther than this, and say that for one who wishes to perfect himself in bow shooting, this book is the most concise, simple and intelligible work in this whole literature of archery. We heartily commend it to novices, amateurs and experienced marksmen. It is a text-book which no one can afford to be without. The noticeable additions to the book are the chapters on *Limbs* and *the Digest*, which must have been compiled at great labor, and of all the especially notable archery gems of English and American bowmen, from an early date to the present time. This chapter also contains a complete list of all the English National meet-

ings from 1814 to 1879, with the names of champions and their winning scores.

A portion of the chapter on Aiming we have been permitted to publish here. For the complete essay we must refer our readers to the book itself.

"Mr. Horace A. Ford, the celebrated English archer, wrote a great deal in regard to the practical parts of his favorite pastime; but his system of aiming is the only really valuable addition to archery knowledge contained in his book. For target practice at the ranges of the York Round, no improvement can ever be made to his system. It is simply perfect as a theory, and its accuracy in practice has been demonstrated, not alone by his own incomparable shooting, but also by the grand scores of Holmes, Bramhall, Spotswood and Palairist in England, and by the best archers of America.

"No archer who neglects to completely master the theory of aiming can ever pass mediocrity in the use of his tackle. Aiming is, in fact, just as indispensable to the archer as to the rifleman, and the aiming must be just as carefully and correctly done in bow shooting as in rifle shooting. Why? First: To secure a uniform method of shooting. Second: Because it is the only guide to keeping both the line and the elevation.

"The most perfect eye in archery will but reflect a moment, it cannot fail to occur to him that the one great drawback to accurate bow shooting is the seeming impossibility of getting any aim with an arrow. The first question he will ask is: 'How can I take sight?' This question is the most important one in archery, and also the most difficult to answer. However, the reader need but to give careful attention to the following pages to acquire all that can be imparted by words touching Ford's theory and practice of aiming, as we have taken it from his book, and as we have proved it at the targets with scores second only to his very best.

"The first principle of aiming is to be sure to have the arrow, in drawing, directly under the right eye and lying directly in the line of vision of that eye as it looks at the point of aim. To do this perfectly, observe the following directions:—

"I.—Take position and knock the arrow as heretofore described.

"II.—Raise the bow with the left hand, drawing back the string with the right hand as the bow is lifted.

"III.—When the left hand has reached the due elevation for the shot, take aim with the right eye (without closing the left eye) over the point of the arrow.

"IV.—The aim being thus taken, finish the draw by bringing the right hand to a point just below the chin, and there loose.

"If the above rules are strictly followed, and the arrow, from the fixing of the aim to the point of losing, has been all the time kept under the right eye, the shot will be in the direct line of the vision of that eye. The reason why it must be insisted upon that the entire length of the arrow be all the time kept exactly under the aiming eye, may be thus explained: Your aim being taken over the point of your arrow in the line in which you desire to shoot, it is plain that if the neck end of your arrow be either to the right or the left of your line of vision, your missile's flight will be at an angle to that line, and consequently will be bad. In other words your right eye looks along a straight line to your point of aim.

"This line of sight lies in the vertical plane of the trajectory of your shot. To make your arrow keep in this plane, it must be straight in this plane. To start it in this plane it must be drawn straight in this plane. To keep it in this plane it must be loosed with its entire length lying therein, which can only be when it is kept directly under the aiming eye. To physically demonstrate this important principle, suppose a string stretched straight from the eye to the point of aim. The object is to keep the flight of the arrow in the vertical plane of this supposed string, which can only be done by keeping the neck as well as the point directly in the line of the vision of the aiming eye. Hence the proper point to loose or quit the string and let go the arrow is just below the chin directly under the right eye.

"In following this practice of aiming, the upper limb of the bow must be chained to the right sufficiently to carry the bow string entirely out of the vertical plane of vision of the right eye, otherwise two troubles will arise. In the first place, the string will be between the eye and the arrow; and secondly, the string will touch the chin before the draw is finished to the losing point. When the bow is slanted to the right the arrow can lie directly under the eye, while the string is drawn to the losing-point under the chin, and when let go, the arrow will fly directly away before the eye in a perfect line.

"Before a beginner in archery can successfully practice aiming on correct principles, he must fully understand the laws of vision connected therewith. By fixing the eyes steadily upon some distant point, it will be discovered that this particular point is seen by direct vision, and all others by indirect vision. Now, in aiming, the direct vision is fixed upon the point of aim, and the pile of the arrow is made to cover this point; but the gold of the target and the entire length of the arrow are seen by indirect vision, except when the gold, as in point-blank shooting, is also the point of aim.

"The first thing then to master, is perfect control of the vision of the right eye. To do this, some archers are compelled to close the left eye, a very ill appearing thing indeed, which should by all means be avoided. To test your vision take an arrow by the feathered end, and hold it in the right hand pointing it at some distant object, keeping both eyes open. When the point of the arrow seems to cover the object, close the left eye. If then the object is still covered, you are aiming with your right eye. A little practice in this way will perfect your vision so that you can aim with your right eye and at the same time keep the left one open."

The author then discusses the point-blank range, and the aim when the point of aim is above the gold. The book may be procured of E. I. Horsman, New York.

HIGHLAND PARK, May 14th.—The following scores were made this afternoon in a contest for one-half dozen arrows. Only three were allowed to compete who never at 60 yards had made a score of 100 with 24 arrows. Number of arrows 48, at 60 yards:—

Hits.	Score.	Hits.	Score.
Frank B. Green.....	32 123	R. J. Street.....	33 69
W. M. Goodridge.....	108	Hodman Carter.....	14 58

Geo. C. Hall.....	23 77		

NEW YORK ARCHERY CLUB.—The Park Commissioners having found it necessary to change the days of shooting, this club will hereafter practice upon the Archery Lawn, in the Central Park, Mondays, Wednesdays and Fridays. From appearances, it will only take one more month to complete the full membership of the club, as new members are applying very fast. The club hopes to make extra attraction on the lawn Decoration Day, and all anticipate a great success.

NEW YORK ARCHERY CLUB. New York, May 31st.—Editor *Forest and Stream*.—In your paper of last week, under the head

of "Orifant Archers," it is stated that they had sent out four challenges, none of which had been accepted. I wish to speak for one of the clubs that received a challenge from the above club, and say that the New York Archery Club did accept their challenge some months ago. The club made a serious, though a little unwise, mistake in not accepting the challenge at the time, that the team, opposed to them should be composed of two ladies and four gentlemen, and all should be members of the Orifant Club, residing in Hackensack. I will state that we have never heard anything further regarding the match, and suppose it must be off.

The reason for our action was that we did not care to shoot against a team of gentlemen entirely, or one composed of members of other clubs besides the one sending the challenge. Since the acceptance of the above challenge, as you are aware, the New York Club has put itself on record as opposed to teams composed of any but its own members, and will never place a team in contest with such a make-up. Jas. W. AUTEN, Jr., Secretary New York Archery Club.

Monday evening last the club gave a concert at the armory of the Fifth Regiment, where some five hundred of the friends of the members assembled and listened to a choice selection of singing, reading, etc., and from the hearty applause and frequent encores we are sure all spent an enjoyable evening.

We trust the New York Club will again bring talent together for their friends' amusement, and we heartily recommend the club's endeavors to increase the interest among its members by introducing social enjoyments from time to time, as they have done during the past winter.

Umpires—St. Georges, G. E. Moore; Columbia College, Alworth.

LONGWOOD vs. HARVARD COLLEGE.—On Saturday, May 8th, these clubs met and played their second match of the season. The first game was won by the Longwood in one innings with a score of 143 to 41, and in this match they were also successful, although the Harvard eleven was assisted by the well-known George Wright. Pierce kept wicket well for the Longwood, and Fearing for the College fielded perfectly. The following is the score:—

MANHATTAN vs. COLUMBIA COLLEGE.—The third match of the collegiates was played at Prospect Park, on Saturday last, against the redoubtable eleven of the old Manhattan Club. Clear weather, a fair wicket, and the smart fielding of the college team gave to the match a snap that did much to make the game interesting to the spectators and exciting to the contestants. The home team

presented an unusually strong eleven, even being the club's old stand-bys; and the addition of James Norley, brother of the St. George's old professional, Fred, did much to give the side an invulnerable look before the game commenced. However, the visitors began in a plucky way and nearly avoided a defeat, which resulted only by twelve runs. In batting, the collegiates have much to learn, as only two of their number were acquainted with the game before last season, but they shine out in their fielding, and both Clarke and Conover are first-class bowlers. Norley fell to the first ball in the first innings, but gave a sample of the orthodox English professional style, in the second. His cutting was sound and clean, and his defense admirable. Morris, behind the wicket, was in splendid form, and Torrey, in same position, showed that he is in the right place. We can only reiterate the opinion which we have frequently expressed—that the system of training and handling his men is not only a credit to himself, but to the cricketers of New York. Before passing to the score, we must mention the superb fielding of Lawson, on the college team, the patient batting of Emmet, and the finished style of both Morris and Clarke:—

Umpires: White, for Manhattan; Giles, Jr., for Columbia.

—The Morion Cricket Club, of Ardmore, entered the contract for their new club-house on May 3d. The architectural designs, in the old English style, which we have had the pleasure of inspecting, are the most perfect of the kind we have ever seen. The club-house will have a front of 72ft., and will be one of the most picturesque cricket buildings in America.

—A new club was formed at Napanee, Ont., May 1st, Mr. W. W. Daly, Secretary. There were over fifty cricketers present at the meeting, and considerable enthusiasm was manifested.

—The Newark Cricket Club, of New Jersey, has begun to chirp. It has secured a splendid location for a ground, and is erecting a club house on it. There are a number of excellent players ready to take hold of the game. JOHN MILLS, Secretary.

—The Orange Cricket Club, of New Jersey, held its annual meeting on April 29th, and elected officers for the season as follows: President, George Payne; Vice-President, A. F. Irving; Treasurer, W. Vandell; Secretary, W. Wilkinson. The Center street grounds are being put in thorough order.

—The St. Mary's Cricket Club, of Canada, was reorganized on May 1st, Mr. H. B. Morphy, Secretary. The club will present a strong eleven this season.

BELMONT CRICKET CLUB.—One year ago this rising and well-managed organization, of West Philadelphia, opened the season of 1879, with a list of active members numbering 50; contributing members, 20; juniors, 30; to-day the club commences the season of 1880 with a total membership of 569, as follows: senior members, 24; juniors, 30; and a male-door club of 155 members. Such is the grand increase, when tact is shown and good work accomplished by a capable management.

The result of last season shows that the Belmont Club played nine first eleven and nine second eleven, besides several third and junior matches, of which, unfortunately, there has been no record preserved. Of the first two were won, Philadelphia and Chestnut Hill, and seven lost, Germantown, two matches, Morion, Young America, Staten Island, Haverfordians and Girard. It is only fair to say, however, that a determined fight was made against the Young America Club, the score standing 113 to 130. Although the Belmonts contributed more runs of the bat, their fielding lost them the match. With the Girard they played a close game, 102 to 105, and were defeated by only three runs. The return match with the Germantown Club was both interesting and close, the rapid falling of that club's wickets in the second innings marking the excellence of the Belmont's bowlers. Had they more time the result might have been different.

The second eleven played nine matches, winning six and losing four; playing even games with the Morion and Philadelphia, beating Chester City twice, losing against the Dorian and Germantown, and winning against Young America. There were a few third eleven matches played, and these were a source of satisfaction to many of the younger members. The juniors were a terror to the juniors of other clubs, and carried all before them.

They won every match. We quote from a very pleasant and chatty letter, received from a prominent member of the club, on this subject and on the prospects for the coming season: "Our juniors, toward the close of the season, could not get up a match with any other club, without first promising to bar some of their best players. We heard that several of the clubs objected to the state of our juniors, and even presumed to question their age. As to their stature, we confess to the soft impeachment, they are large (the captain is over six feet in his stockings), but we cannot help it. As to their age, we kept a careful record, but if a junior should reach the age of sixteen during the playing season, we have decided that he may play as a junior during the remainder of that year. In reviewing the past season, the fact our first eleven was very often beaten is not to be overlooked, but if any cricket club should therefore have an idea that we intend to give up, they will make a great mistake. We mean to go it again, though like the man in the rhyme, who 'jumped into the Bramble bush,' we came out with a badly damaged record; we mean this coming season to jump right in again, and try if we cannot scratch some winning scores back again."

The officers recently elected are: President, John P. Green; Vice-President, Wm. N. West; Treasurer, Harrison Townsend; Secretary, Oscar A. Knipe, address, No. 213 South Fourth street, Philadelphia; Committee: The President, ex-officio, George Morgan; Clarence North, Wm. W. Porter and Chas. H. Yarnall.

The club held its opening day on May 6th, when over 500 members were present. The committee has already arranged for twelve fixtures, and shortly all the blank dates will be filled.

—Princeton College has a new cricket club.

—We have received from Wright & Ditson, of Boston, a copy of their eighth page "Journal of American Pastimes and Price List," which will be mailed free on application. See advertisement in another column.

—During the afternoon of the Staten Island Columbia College match, sneak thieves entered the club house and stole two gold watches, a pocket-book, and other articles belonging to the visitors. These robberies are becoming very common on our cricket grounds, and show the advisability of having proper notices of warning posted in every club house.

—The Young America ground has a two-ton roller. We may look for large scoring there this season.

YOUNG AMERICA (Milwaukee) vs. DAY VIEW.—The opening game of the season was played by these clubs on May 1st at Day View. Only one innings each was played, the victory resulting in favor of the former by a score of 62 to 27.

—The Toronto Cricket Club held a special meeting on May 11th, with J. O. Howard, Esq., in the chair. There was a large attendance, and after much discussion it was resolved to join the Ontario Cricket Association.

—The Longwood Cricket Club, of Boston, is entering upon its fourth season with a much better eleven than ever before. It probably will make a tour through Canada early in July.

—The Girard Club, of Philadelphia, has leased an excellent ground on the Frankfort road. The members of the club intend to turn out an eleven that will trouble the best teams of Philadelphia.

—The Fall River Club, of Massachusetts, has elected a large number of new members, among whom are several excellent players. At a recent meeting the following officers were elected for the ensuing season: President, Chas. West; Vice-President, Wm. Burgess; Treasurer, Nathan Crabtree; Financial Secretary, Wm. H. Travis; Corresponding Secretary, Alfred Clark; Captain, John Nightengale; Committee, W. Wood, Geo. Watters, George Sharpe and John Nightengale.

—The Ottawa Cricket Club opened on the 8th inst. match between Old Country and Canadians. The former won by a score of 131 against 59 in an old-time match. The Marquis of Lorne, having injured his arm playing at rackets could not captain his side.

—The Stouffville Cricket Club, of Canada, has organized with Mr. E. O'Brien, Secretary.

—The Hastings Cricket Club, of Canada, has elected officers, with Mr. H. P. Sharp as Secretary.

AN OLD NEW YORK CRICKETER.—New York, April 29th.—A few days ago, while taking a stroll through the pathways of Central Park, my attention was drawn to the notable difference between the turf bordering the west side of the big North Meadow and that by the rest of the pathways. So great and marked was the difference in keeping, that I came to inquire of a Park policeman to whom the Park Commissioners owed the extreme neatness and finish of keep; when I learned, to my astonishment, that it was due to Uncle Ben Bates, an old-time St. George's Cricket Club ground-keeper, of the days of '53, when the club had its grounds at the Red House, Harlem. Uncle Ben and Sam Wright for years kept the grounds in order, and these two favorites are as well known to the old members of the St. George's Cricket Club as the FOREST AND STREAM is to its readers. Well knowing the deep interest taken in Uncle Ben, I will give, for the benefit of your readers, a few items in his eventful life. Uncle Ben Bates was a well-to-do Englishman by birth and education and was a member of the "Red House" club, kept by Charles Brooks, at that time a great resort of the sporting gentry of the day. Here was always to be found the wealthy backer of the St. George's, Mr. Sam Nichols, who on all match occasions would tolerate no person but Uncle Ben Bates and Sam Wright to put the grounds in order. In after years Uncle Ben met with misfortunes, and his friends had him placed on the police in his honest days. In this capacity he faithfully performed his duties for the period of thirteen years, arresting in his time the noted thieves Dan Noble, Wm. Allen and Mosher and Douglas for piracy on Capt. McVoy's vessel. The last year of Uncle Ben's police life was spent at the Harlem Bridge at Third avenue, where he recovered no less than twenty-three stolen horses passing from the Westchester side en route to the New York marts. Uncle Ben met with a severe accident while in the act of arresting a noted thief at the bridge, when he had his hips crushed, and has since been employed in the Park. Here the old veteran will be pleased to have a chat with any and all cricketers, but especially the gentlemen forming the St. George's.

Sept. 23—Quaker City Y. C. Closing Cruise.
Oct. 9—Washington Village Y. C. Fall Regatta.

FIXTURES.—Our list of fixtures for the season is the most complete published. As already the dates of several clubs have been found to clash, we call attention to the growing necessity of so arranging dates that they will not interfere with one another. The increase in "union" or "open" matches will be so great the coming season that it will be worth while to give owners an opportunity of talking their own case during their rounds. A little attention to this in time will save much annoyance and make wholesale racing as popular as it ought to have become long ago. Liberal purses and combined action will produce all the entries wanted, without resorting to the old woman's cure of handicaps.

YACHTING NEWS.

BUFFALO YACHT CLUB.—At the May monthly meeting some very sensible rules were adopted. Yachts are divided into two classes—over 55ft. mean length and under 35ft. Races are to be sailed in the latter part of June, July and August; the Regatta Committee to have entire control. This is as it should be. Judges, referees and the like ought to have any existence in yacht clubs. The committee should entertain all appeals, and their decision be final, except an appeal to the Executive Committee of the N. Y. A. The start will be a flying one, at the second gun; no keey allowed for the slow-coaches or lagards, which is another good point. The new club-house is 20x24ft., one story, with balcony; finished in Eastlake style. The following new members were elected: P. H. Ordner, 384t. sloop now building; A. Lehnardt and D. T. Nicholson. Besides the above, three new yachts are building—one for J. S. Provost, one for E. P. Frank, and the third for P. H. Briggs, of Dunkirk. An active season is anticipated.

ROYAL CANADIAN YACHT CLUB.—The annual meeting was held May 8th. It was proposed to move the club house to the island owing to the encroachment of the railroads. The following officers were elected: Commodore, A. R. Boswell; Vice-Commodore John Leys; Captain, J. D. G. Hagarty; Hon. Secretary and Treasurer, J. H. Grasset; Auditors, George Bethune and John McNabb; Committee, Messrs. R. P. Stevens, A. M. of Sprague, W. G. Bains, J. H. Ferguson, S. B. Hurman, J. E. Robertson, O. F. Harman, W. Hope and H. Sprague. There were yacht races of 7 tons held for the Commodore's Cup, won by the "Hesperus" of 7 tons 10 cwt. The 10-ton yawl recently built by Cutbush, of Trenton, has given excellent satisfaction, and does well to windward, for she draws 5ft., although a center-board boat. From South Bay to Port Hope she averaged 10 miles per hour, equal to about 8 knots.

R. C. Y. C.

MONTREAL YACHT CLUB.—The fourth annual meeting of our flourishing club was held at the club house, Longueuil, May 8th, which has recently been refitted and supplied with the yachting journals of England and the FOREST AND STREAM of America. We now have 14 sailing yachts from 3 to 15 tons, 4 steamers and 18 members. Opening cruise, May 21th. The following are the officers for the year: Commodore, Dr. Chas. Brewster; Vice-Commodore, Angus J. McIntosh; Secretary, P. W. Evans; Treasurer, Henry McIntosh; Committee, A. A. Tracy, C. P. O'Connor, Z. LeFebvre, J. Lesperance and D. Easty. I send you copy of one club book.

LONGUEUIL.

MASSACHUSETTS YACHTING ASSOCIATION.—There appears to be a cloud already on the horizon of the Massachusetts Y. A., as the

PUBLISHER'S DEPARTMENT.

—Anyone desiring to elevate water for house or other purposes would do well to consult advertisement of windmills in this week's issue.

HOW TO INVEST.—The Democrat, Goshen, N. Y., says: "It may not be improper here to add that health is accumulated, the sick made well, and a large interest of comfort and happiness secured, by investing in 'Warner's Safe Remedies.'"

clubs mentioned in your notice of the Association sent only an unofficial representative to the committee meeting held last week, who complained bitterly about the way things were carried on, and rules made by one or two clubs, without any consideration whatever being made for their opinion.

In settling the question of something besides a length measurement, I am surprised that the tonnage measurement should meet with so much opposition. I think that the main trouble is that it is so little understood, and I do not doubt in the least that some of those who have so much to say in opposition to it because they do not understand it, and because it is something different from what they have been accustomed to. M.

Salem, May 10th.

COOPER'S POINT YACHT CLUB.—Our regatta came off to-day, May 17th, and was a grand success. Wind very heavy from south, southwest. Started from a lee shore. Ten boats entered, but only eight lived through it. The *Cohill* started fifth, and after a ten-mile run, when off the Block House, she took the lead, followed by *Schuck* and *Springer*. Rounded Chester buoy at 1:02 (two hours from time of starting) followed by *Schuck*, 1:02; *Springer*, 1:03; *Fitch*, 1:04. *Cohill* still led coming home, and crossed the line at Cooper's Point at 3:32; *Veronesi*, 3:37; *Schuck*, 3:37; *Fitch*, 3:37; *Kramer*, 3:38; *Giang*, 3:38. The distance run was about thirty miles. This is the fourth time the *Cohill* has won the champion flag of the Cooper's Point Y. C.; also three other champion flags in other regattas. She was sailed by Capt. "Swallow" Martin. C. M. C. C.

QUINCY YACHT CLUB.—The opening race was sailed May 15th off Quincy Point. Course for second class nine miles, for third class six miles. First and second prize in each class. Wind moderate from East. Judges: Jas. T. Pennington, Nap. B. Furdnall and Samuel Hass. Summary as under—

SECOND CLASS.

Name and Owner.	Length. ft.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Glance, Murray Knight.....	10	2 33	1 56
Topsy, Charles E. Kent.....	9	2 30	1 56
Wildfire, H. A. Keith.....	2	Time not taken.	

THIRD CLASS.

Dandelion, J. Q. Adams.....	17	5 34	4 09
Elmer, P. Chubbuck.....	17	5 33	4 12
Holly Varden, A. B. Cleverly.....	16	5 43	4 02
W. W. Morton.....	16	5 43	4 02
Adm. G. C. Adams.....	16	10	Time not taken.

EMPIRE YACHT CLUB.—The race for the Duvelling Challenge Cup was sailed on the Harlem, May 17th. Course, Eighty-ninth street to One Hundred and Sixteenth street; start and finish off the club-house at One Hundred and Fourth street. Sail over five times. Entries limited to twenty-three feet length. Only two started, *Sophia-Emma*, Jacob Varian, twenty-one feet nine inches long, and *Comet*, Van Decker, eighteen feet three inches long. The latter was overmatched, and *Sophia-Emma* won easily. The cup must be won three times to become property.

ONKOSH YACHT CLUB.—Annual cruise of our club will commence Wednesday, May 26th, and a large turnout of the fleet is expected. The Commodore will have command. The rendezvous will be at Morley's Point, where we expect to meet the Fond du Lac fleet, and sail in company to Island Park, and there fall in with the Neenah Squadron. After this a daily programme will be lived up to. The *Madaline* has been recently launched. A party of fresh water mariners got a cold bath, as they capsized their yacht in true lubbers' fashion during a run across from the eastern shore, but all hands were fished out. Yachting here is very lively. C. M. C. C.

NEW HARBOR YACHT CLUB.—A new sloop has been built by Mr. F. C. Smith for his own use. Length, 33ft.; beam, 12ft.; hold 4ft.; draft, 4ft., 8in. of which is due to keel, besides which she has a 12ft. center-board. Two state-rooms and 15ft. house. Mast, 35ft., deck to cap; topmast, 20ft., including 4ft. doublings. boom, 20ft.; gaff, 20ft.; bowsprit outboard, 17ft.; jib on foot, 25ft.

NEW JERSEY YACHT CLUB was organized 1871, and incorporated 1878. Club signal, a swallow tail, red field and white diamond in center; Commodore and Vice-Commodore, a blue and red anchor in the diamond. We are in receipt of the club book for 1880, a neat little pamphlet replete with information.

The Undine Yachting Club, of San Francisco, Cal., recently elected the following officers: President, Fred C. Farmer; Vice-President, Walter R. Eastman; Secretary, William Mitchell; Treasurer, Robert J. Coates; Captain, Thomas Robinson; Lieutenant, Charles Fuller; Board of Directors, W. R. Eastman, Harry Carlton and Horace Serle.

WARWICK YACHT CLUB.—The following officers have been elected; Andrew Tolson, of Fall River, Commodore; F. P. Stiles, of New Bedford, Vice-Commodore; Messrs. T. Parsons, Jr., Wm. H. Ballard, Albert F. Dow and Wm. B. Lowell were elected members. Rooms will be occupied in Fall River, overlooking Mount Hope Bay.

HAVERHILL YACHT CLUB.—We are informed that the H. Y. C. is not responsible for the challenge cup race which has previously figured in our fixtures. It is a private enterprise.

BUFFALO YACHT CLUB.—Official permission to build our club-house inside the Government breakwater has just been received. The *Pleaching* has been off on a two-days' cruise, and the rest of the fleet are all fitting out.

PENNA.

NEW SLOOPS.—For good substantial work commend us to the new sloop just finished by Samuel Ayers, of 744 Water street, for Mr. R. K. McMurray and others of St. Ignace. Her model was furnished by Mr. Steuler, and she will prove an excellent craft, for she is of good draft, full 4ft., without drag. Had she been cut a little more forward, and received the fashionable drag, the draft would have exceeded 5ft. In body she is a trifle full forward, but her run is long and clear on the section lines. The work on her is all of the most substantial kind, and a pleasing contrast to the gingerbread constructions which have given our race the reputation for being a "flea-fair." Length on keel, 36ft.; on w. l., 38ft. 4in.; on deck, 43ft.; beam, 15ft.; hold, 5ft. She has a raking stem, and a "fan tail" of handsome mould aft. She has without spars, weighs 13 tons, and she will take some 7 tons inside iron and lead cast to 6t; keel, white oak, 5x18in.; keelsons, pitch pine, running clear fore and aft, fayed against the trunk logs of the center-board box, each 5x5in. Frames, double, white oak and hackmatack, each 3x18in. beam and 3x34 at planksheer, spaced 18in. between centers. Deck beams, 4x34, pitch pine. Mast beams 6x7, in wake of house every other one is 8in. sided, the beams below them with 1in. galvanized iron. House beams, 2x12in. Ceiling, 1in., yellow pine. Floorboards and strops, three of the latter each top, 2x8in.; clamps 7x2 in., and an oak shelf 2in. thick, worked on top. All the beams forward of house have lodge knees and hanging knees at either end of the house. Plank from sheer to turn of bilge of 2in. oak, as well as the garboards, the rest 1in. cedar, most of it in one length. Deck 1in. square, white pine; bulwarks, 11in., tongued and

grooved. Planksheer, white oak, 2x8in. Center-board, 16ft. long, trunk 21in. thick, and 4ft. above transom. Post of same are 8x13in. oak. The inside is sheathed with 18oz. composition. The board is 21in. thick and 14ft. long, bolted with 1in. galvanized iron. House, 19ft. 9in. long, 2ft. 4in. high, of 21in. white pine, the top of 1x13in. tongued and grooved pine, and covered with canvas. Rudder, 3ft. face, well-steering gear. All fittings of mahogany. Skylight square, so that it can be turned either way and the sashes opened at willships so as to catch the breeze when at anchor. Cabin 14in. 7 to 8 ft. long, 10ft. 30in. long; stateroom on starboard side with double berth, 7x11ft. On port side is the ice box, w. c. and pantry, the water tank being placed over the forward half of the center-board trunk. Forecabin has two berths and galley. There is 6ft. 3in. head room under the house. Spars, mast, 47ft. long with 4ft. doublings; diameter at partners 12in. Bowsprit, 25ft. long, 10in. diameter at stem. Boom, 45ft. 5in. diameter; gaff, 25 ft., 10in. diameter. Topmast 31ft. Now 31ft. is something of a stick, but the owners take the right view of things, "when we want a topmast we have got one that amounts to something, whereas by the bye, we have no sticks at all together." The days of the scaly looking broomsticks afloat, copied from the oyster digger, are numbered, and it is gradually being understood that a yacht should be rigged differently from the smack. Mr. Ayers has turned out a strong, healthy job in the new *Edna*, and if other craft may surpass her in trimmings and trappings, none can beat her on sound, staunch work, and we would like to see more of the kind afloat. Blocks are supplied by the Providence Tool Co., who seem to be capturing the whole of the yachting trade with their patent anti-friction bearings. They are much to be preferred to the roller bushing arrangements, which give out when least expected.

LAUREL.—Saturday last, from the yard of E. Young, Greenpoint, was a new boat, built for Governor Kortright, N. Y. Y. C. Group model, by J. H. Allen, New York. Length on keel, 43ft.; length on w. l., 43ft.; beam, 17ft.; depth, 6ft. She resembles the *Elephant* in general type, and will be a flyer. Her internal accommodations are very roomy. A fine main cabin, 32ft. long, with 7ft. foot, is finished in mahogany and handsomely decorated. Stateroom on starboard side; pantry, closets, lockers on port side. Two berths in forecabin and a Pacific No. 6 for galley. Round frames fore and aft, a good deal of drag, fore foot cut up, overhauling stem, and 13ft. board with about 5ft. draft. Will take in the neighborhood of 100 tons of iron ballast. Cible contents calculated to official measurement, 420ft. 3in. Head, 40ft.; jib, 20ft. foot. She has been named *Wizard*. Also, the same day, from foot of Kent street, Greenpoint, a fine steam yacht for Mr. D. S. Hines, Brooklyn Y. C., built by Sam'l Pine, before noticed. She is called *Emma*, will carry no rig and is 81x18x11 with 7ft. w. l. Draft, 4ft.; cylinders, 10x13; 200 turns with 125 lbs. working pressure. Screw, 5ft. diam., 8ft. pitch. A smaller craft is also ready for launching. She is built for Mr. A. O. Wilson, of Greenpoint, and is 40ft. over all, 55ft. w. l., 8ft. 4in. beam, and 3ft. 4in. deep. Cylinders 8in. diam., 10in. stroke. Boiler 5ft. long, 41in. diam., locomotive type. Screw 5ft. diam. and 8ft. pitch. Engines by Quinard Iron Works.

A CRUISE TO THE SOUTH SEAS.—Dr. Samuel Merritt, of Oakland, Cal., will visit the San Francisco Club flag among the islands in the South Pacific this summer at the head of his fine schooner *Casco*. He expects to be gone some six months, and will take a small party of friends, among them some ladies. The Doctor's sister is of the party. The yacht is two years old, and last summer cruised south on the California coast some 500 miles as far south as San Diego, and then north to Puget Sound, Washington Territory. She is a copper keel schooner 66ft. long, with lead keel, and lead cast to fit between timbers low down inside. She is fitted to carry two topsails, staysail, square-sail, flying jib and jib topsail, and a 100 lb. sail and leg-of-mutton mainmast both, the latter for use on the windy California coast, where it has done good service. She will carry the gaff in running in the northeast trades. The Doctor modeled his own yacht and supervised her construction. It is interesting to note that she was sparred and canvassed in accordance with the results of experiments made with a small model, built on a half-inch scale from the working model. This little model was tested with the spars in different positions. After thorough experiment, the large yacht was spars and spars put on accordingly, keel, length, position, etc., agreeing with model. The Doctor has proven a first-class sea boat, fast and handy. She steers as easily as possible, being well-balanced in every respect. She is very neatly fitted with all modern conveniences. The Doctor had the lumber selected and worked up at his own mills up the coast, and brought down in one of his vessels. Everything was of the best material. The yacht cost upwards of \$30,000. She will leave San Francisco about the 10th of May, and will proceed first to the Sandwich Islands, afterwards visiting the other groups.

Y.

A SAD RELAPSE.—Only a week ago we were congratulating ourselves upon having conquered the only contemporary that deep yachts can pull out as fast as the light draft fraternity, and now our good friend perpetrates the following about Mr. Frauge's new sloop *Fantia*: "She is a deep center-board sloop, and therefore will not sail fast." Too bad; but let it go on record, and our estimate of the same vessel as well, and the future will decide. We unhesitatingly affirm that the *Fantia* can out sail anything of her length in America, because she is more than a sloop; she is a boat with draft, weight, power, sail and very easy lines, any way you look at her. Last year's *Elephant* ought to have opened our eyes to the contemporary of the sloop, but the assertions made in these columns that big-headed boat is proper and modest, and out sail the skimming dish any day, any weather, besides being infinitely preferable as a cruiser. The *Fantia* is practically uncapsizable, she is a virtue for American yachts can boast of, and though we should for rough water cruising prefer less beam more depth and lower ballast, our preferences do not blind us to the good points of other people's yachts. The *Fantia* has the room in her of most sloops twice her tonnage, and she will show the light-tons when they are beating her. A 12ft. sloop that cowering a 60ft. spar to her good is near perfection in the sloop line, and that sloop can be expected. And by this we are willing to stand or fall. At the end of the season our contemporary will be thoroughly cured of flat-iron proclivities, and Elsworth will have gained laurels by the cargo for not fighting shy of depth, in deference to the sloopish reasoning and accidental fashions of the unprofessional masses.

NEW STEAM YACHT.—The flush-deck iron steamer, which the Pioneer Iron Works of Marcus Hook, Pa., are building for Mr. C. Taylor Jackson, of Philadelphia, will be a handsome craft. She is being built from the plans of Mr. Sam'l Holmes, 122 Front street, New York, who will also superintend the work. She is to be full schooner-rigged, with full spread of canvas, commodore's tandem engines, with four cylinders, in pairs, after the White Star pattern, and will have large power. The bunkers carry 40 tons, or enough for eight days' fair steaming. She will have four
